## Executive Summary

G2S Consulting Inc. (G2S) was retained by Groupe Mach Inc. (the Client) to complete a Phase One Environmental Site Assessment (ESA) for the property located at 110 O'Connor Street in Ottawa, Ontario (hereinafter referred to as the 'Site'). Refer to Drawing 1 in Appendix A for the Site Location Plan. Authorization to proceed with the Phase One ESA was provided by Mohamad Kheir Hassoun of Groupe Mach Inc.

The rectangular shaped Site is located on the west side of O'Connor Street, located at the southwest corner of the intersection with Slater Street and O'Connor Street, and covers an approximate area of 0.21 ha (0.51 ac.). The Study Area consists of residential and commercial land use, and the Rideau Canal is located approximately 565 m northeast of the Site.

G2S understands the Client requires a Phase One ESA for due diligence purposes related to the redevelopment of the Site for residential purposes. The Site was most recently used for commercial purposes (commercial and office building) and is proposed to be used for residential use. Since there is a change in property use planned (commercial to residential), a Record of Site Condition (RSC) is required under O. Reg. 153/04, as amended. This Phase One ESA was completed in accordance with Schedule D. of O. Reg. 153/04.

This Phase One ESA was conducted to:

i. Develop a preliminary determination of the likelihood that one or more contaminants have affected any land or water on, in or under the Phase One ESA property;

ii. Determine the need for a Phase Two ESA; and

iii. Provide a basis for carrying out any Phase Two ESA required.

Based on information from the records review, the first developed use of the Site was prior to 1875, and was developed with seven residential dwellings. The Site was then developed with eight dwellings in the early 1900s. A grocery store and bakery were developed within the northern portion of the Site in 1912, as well as the central portion of the Site was occupied by a dry cleaner. The northern portion of the Site was redeveloped into a dry cleaner in the 1920s, with the central portion of the Site was developed with a residential dwelling , and the southern portion of the Site was occupied by an apartment building and a tailor. A dry cleaner was located within the central and southern portions of the Site in the 1940s to the 1950s, with the remaining Site being occupied by residential land use. The previously mentioned buildings were demolished in the 1960s, and the Site was redeveloped with an apartment building within the northern portion of the Site, and commercial buildings were developed within the southern portion of the Site. The present building configuration was developed within the 1970s and was occupied by various commercial tenants. The Site has been vacant since 2022, and is presently in the early stages of being prepared for demolition.

Historical review of the Site and surrounding properties within a 250 m radius of the Site identified nine on-Site PCAs and several off-Site PCAs, as defined in O. Reg. 153/04. The PCAs were assessed based on observations of the operations, their location relative to the Site with respect to the inferred groundwater flow direction, their tenure, expected chemical storage amounts, etc. Based on review and evaluation of the information gathered, the following APECs have been identified:

APEC 1: West central portion of Site – Current and historical presence of three diesel aboveground storage tanks (ASTs) located within the underground parking levels. Presence of fill and vent pipes associated with the ASTs.

APEC 2: Entire Site – A geotechnical report by others identified fill material present beneath the Site to a depth of 5.33 m below ground surface (bgs).

APEC 3A: Northeastern portion of Site – Historical presence of a dry cleaner from the years 1912 – 1922.

APEC 3B: East central portion of Site – Historical presence of a dry cleaner in 1912.

APEC 3C: Southeastern portion of Site – Historical presence of a dry cleaner from the years 1948 – 1955.

APEC 3D: Northwestern portion of Site – Historical use of 174 Slater Street as a dry cleaner from the years 1912 – 1922.

APEC 4: Central portion of Site – Current and historical presence of a transformer vault within the central portion of the Site.

APEC 5: Western portion of Site – Historical use of de-icing salt located on paved portions of the Site.

APEC 6: Southern portion of Site – Historical presence of a dry cleaner located at 124 O'Connor Street (south adjacent) from the years 1922 – 1941.

APEC 7A: Western portion of Site – Historical use of 170 Slater Street (west adjacent) as an autobody shop, from the years 1948 – 1966.

APEC 7B: Northwest portion of Site – Historical presence two underground storage tanks (USTs) in the 1940 - 1960 located along the northeastern portion of 170 Slater Street (west adjacent).

APEC 7C: Western portion of Site – Historical use of 170 Slater Street (west adjacent) for metal plating in the 1930s.

APEC 7D: Western portion of Site – Historical use of 170 Slater Street (west adjacent) as a metal fabricator in the 1970s.

Regarding APEC 5 (de-icing salt use), per Section 49.1 of O. Reg 153/04, assessment of this APEC is not required. Under the Regulations, where a substance has been applied to surfaces for the safety of vehicular or pedestrian traffic under conditions of snow or ice or both, the applicable standard is deemed not to be exceeded. In this regard, further assessment of this APEC is not required.

Based on the findings of this Phase One ESA, a Phase Two ESA is recommended to investigate the potential for contamination related to the above-noted APECs.

# 1. Introduction

G2S Consulting Inc. (G2S) was retained by Groupe Mach Inc. (the Client) to complete a Phase One Environmental Site Assessment (ESA) for the property located at 110 O'Connor Street in Ottawa, Ontario, hereinafter referred to as the 'Site'. Refer to Drawing 1 in Appendix A for the Site Location Plan. Authorization to proceed with the Phase One ESA was provided by Mohamad Kheir Hassoun of Groupe Mach Inc.

G2S understands the Client requires a Phase One ESA to support an application for Record of Site Condition (RSC) related to the redevelopment of the Site for residential purposes. The Site was most recently used for commercial purposes (vacant) and is proposed to be used for residential use. Since there is a change in property use planned (commercial to residential), a RSC is required under O. Reg. 153/04, as amended. This Phase One ESA was completed in accordance with Schedule D. of O. Reg. 153/04.

## 1.1 Terms of Reference

The nature of a Phase One ESA by definition is a nonintrusive site examination of "readily accessible features"; therefore, the Phase One ESA does not quantify the chemical or physical quality of the exposed or inaccessible features such as materials beneath buildings or buried on Site. In this regard, the Phase One ESA must be viewed as a mechanism that may assist in reducing, rather than eliminating, the uncertainty of encountering environmental contaminants during future use of the Site.

This Phase One ESA was conducted to:

i. Develop a preliminary determination of the likelihood that one or more contaminants have affected any land or water on, in or under the Phase One ESA property;

ii. Determine the need for a Phase Two ESA; and

iii. Provide a basis for carrying out any Phase Two ESA required.

## 1.2 Phase One ESA Property Information

**Table 1: General Site Details**

| | |
|---|---|
| Municipal Address: | 110 O'Connor Street, Ottawa, Ontario |
| General Site Location: | West side of O'Connor Street, southwest of the intersection with Slater Street and O'Connor Street |
| Approximate Plan Area: | Approximate plan area of 0.21 hectares (0.51 acres) with frontage of approximately 66 m on O'Connor Street and a depth of approximately 29 m. |
| Property Identification Number (PIN): | 04115-0095 (LT) |
| Legal Description: | PCL 42-1, SEC 3922 ; PT LT 42 & LT 43, PL 3922 , S SLATER ST ; PT LTS 42 & 43, PL 3922 , N LAURIER ST, BEING PT 1, 4R401 ; OTTAWA |
| Current Site Owner and Contact Information: | Édifice 110 O'Connor Inc. / 110 O'Connor Building |
| Current Site Occupant: | Vacant (fourteen-storey office building with mechanical penthouse and three basement levels) |

The Phase One Study Area includes the Site and lands within approximately 250 m of the Site, as shown on Drawing 2 in Appendix A (hereinafter referred to as the 'Study Area').

## 2. Scope of Investigation

This assessment was performed in accordance with the Phase One ESA protocols and included the following tasks:

1. Records review.

2. Interviews with pertinent Site contacts.

3. A Site reconnaissance to assess current Site and Study Area conditions and the presence of any visual indications or olfactory evidence of potential contamination. A detailed review of regulatory compliance issues was not within the terms of reference for this assignment.

4. An evaluation of the information gathered from the records review, interviews, and Site reconnaissance.

5. Preparation of this report discussing the information compiled and the corresponding conclusions and recommendations.

# 3. Records Review

G2S reviewed reasonably accessible information and records to determine the land use history of the Site and Study Area.

## 3.1 General

### 3.1.1 Phase One ESA Study Area Determination

In accordance with O. Reg. 153/04, the Phase One ESA must include, at a minimum the Site and any other property that is located within 250 m of the Site boundaries. This is referred to as the Phase One ESA Study Area (Study Area) as depicted on Drawing 2 in Appendix A.

### 3.1.2 First Developed Use Determination

In accordance with the O. Reg. 153/04, the following definition applies:

"First developed use" means *the earlier of,*

i. The first use of a phase one property in or after 1875 that resulted in the development of a building or structure on the property, and

ii. The first potentially contaminating use or activity on the phase one property.

Based on information from the records review, the first developed use of the Site was prior to 1875, and was developed with seven residential dwellings. The Site was then developed with eight dwellings in the early 1900s. A grocery store and bakery was developed within the northern portion of the Site in 1912, as well as the central portion of the Site was occupied by a dry cleaner. The northern portion of the Site was redeveloped into a dry cleaner in the 1920s, with the central portion of the Site was developed with a residential dwelling, and the southern portion of the Site was occupied by an apartment building and a tailor. A dry cleaner was located within the central and southern portions of the Site in the 1940s to the 1950s, with the remaining Site being occupied by residential land use. The previously mentioned buildings were demolished within the 1960s, and the Site was redeveloped with an apartment building within the northern portion of the Site, and commercial buildings were developed within the southern portion of the Site. The present building configuration was developed within the 1970s and was occupied by various commercial tenants.

### 3.1.3 Chain of Title

A land title search for the Site was conducted online at the Teranet Express website for the Ottawa Region Land Registry Office. As well, historical data including land registry information was obtained by P.L.P Titles Ltd. and Site ownership information was provided dating back to 1823.

The Land Registry documents indicates that the Site was transferred from Cominar on Real Estate Holdings Inc. to the current owner, Édifice 110 O'Connor Inc./110 O'Connor Building Inc. in 2022. For ease of reference, the Land Registry documents, and chain of title information are included in Appendix B and summarized in Section 6.1 of this report.

### 3.1.4 ERIS Database Records

An RSC Database report was requested from Environmental Risk Information Service (ERIS) for the Site and 250 m Study Area in October 2020. An EcoLog ERIS report provides environmental and historical information compiled from over 45 government and private source records covering various time periods. The report is used to aid in the identification of possible environmental concerns or risks for commercial, industrial and residential sites, including Certificates of Approval and Waste Generator Permits. The records are summarized below:

**Table 2: ERIS Database Records**

| Database | Location/ Direction and Distance from Site | Pertinent Information |
|---|---|---|
| Ontario Spills | 110 O'Connor Street (Site) | - Discharge or Emission to Air of freon from chiller to atmosphere in 2009. |
| | | - Equipment failure at Cascades Recovery Inc. of 15 L of hydraulic oil to pavement in 2011, no anticipated environmental impact. |
| | | - Equipment failure of refrigerant gas to atmosphere in 2016. |
| | Intersection of Slater Street and O'Connor Street (Northeast adjacent) | - Equipment failure of pipe or hose leak of 5 gallons of antifreeze to road and catch basin in 2007 from OC Transpo.<br>- Collision/accident of diesel to storm sewer in 2013. |
| | 171 Slater Street (~15 m north) | - Service line strike causing natural gas (methane) to discharge into air from Enbridge Gas Distribution Inc. in 2010. |
| | 151 Slater Street (~25 m northeast) | - Leak/break of natural gas (methane) into the air from Thomas Fuller Construction Co. Limited by human error in 2019. |
| | 269 Laurier Avenue West (~45 m west) | - Leak/break of glycol/water 100-gallon solution to sewer in 2019. |
| | 78 O'Connor Street (~45 m north) | - Discharge or emission to air from equipment failure, 110 kg of R134a refrigerant to atmosphere in 2003 from Bell Canada. |
| | | - Other discharges to the ground of 0.5 L diesel fuel due to equipment failure in 2007 from Bell Canada. |
| | | - Discharge or emission to air of freon R123 (CFC) due to equipment failure in 2009 from Bell Canada. |
| | | - Discharge or emission to air due to malfunction of system of 28.6 kg of refrigerant in 2009 from Bell Canada. |
| | | - Leak/break, release of 226.8 kg of refrigerant to air in 2013 from Bell Canada. |
| | | - Leak/break, release of refrigerant to air in 2017 from Bell Canada. |
| | | - Leak/break of refrigerant to air in 2018 from Bell Canada. |

| Database | Location/ Direction and Distance from Site | Pertinent Information |
|---|---|---|
| | | - Leak/break of refrigerant to air of halocarbon release from HVAC unit in 2019 from Bell Canada. |
| | 199 Slater Street (~65 m northwest) | - Other container leak due to corrosion reported by Trow Engineering of 220 L furnace/crankcase oil leak from a rusted tank in 1991. |
| | 219 Laurier Avenue West (~80 m east) | - Equipment failure, causing a spill of 15 L petroleum-based oil in a multi-commercial high rise building of oily water in an elevator pit in 2012 by Dundee Realty Management Corporation. |
| | Albert Street & O'Connor Street (~75 m north) | - Leak/break of motor oil to storm sewer due to incident in 2019. |
| | | - Fire/explosion by Waste Management of Canada due to douse water (particulate contaminant) for vehicle fire. No year was provided. |
| | Infront of 300 Laurier Avenue West (~65 m southwest) | - 25 L hydraulic oil spill to catch basin in 2005. |
| | 68 O'Connor Street (~85 m north) | - Leak/break of halon to the air due to equipment failure at Bell Canada in 2009. |
| | 130 Albert Street (~95 m northeast) | - Cooling system leak as a fire/explosion by Ottawa Hydro, 300 L non-PCB transformer oil to ground. |
| | | - Operator/water solution of glycol/water solution by Enbridge gas in 2017. |
| | 50 O'Connor Street (~100 m north) | - Used cooking grease spill from dumpster to catch basin. No year was provided. |
| | 170 Queen Street (~105 m north) | - Operator/human error of adhesives to the pavement in 2018. |
| | | - Leak/break of 2 L form release agent to gravel in 2017. |
| | | - Leak/break of 5L of hydraulic oil due to equipment failure to gravel in 2018 at OLRT Constructors. |
| | 99 Bank Street (~120 m northwest) | - Leak/break of 0.5 L of compressor oil (mineral oil) to the land of OLRT Constructors <Unofficial> |
| | 154 O'Connor Street (~120 m south) | - Possible underground tank leak of an unknown amount due to failed pressure test in 1994 at Shell Canada Products Ltd. |
| | | - Confirmed underground tank leak due to corrosion of an 1,800 L furnace oil missing from underground storage tank in 1993 by Shell Canada Products Ltd. |
| | Bank Street and Laurier Avenue West (~135 m southwest) | - Equipment failure – malfunction of system components of waste management, 9L of transmission oil to ground in 2012. |
| | 100 Metcalfe Street (~150 m northeast) | - Leak/break of glycol/water solution to catch basin in 2013 by OC Transpo Bus Service. |

| Database | Location/ Direction and Distance from Site | Pertinent Information |
|---|---|---|
| | 122 Bank Street (~150 m west) | - Cooling system leak of 741 lbs of freon to the air by Public Works ad Government Services Canada in 2004. |
| | | - Equipment failure, release of 125 kg of R11 refrigerant to atmosphere by Jackson Building in 2006. |
| | | - Equipment failure, release of 220 kg of R11 to atmosphere freon to the air in 2007. |
| | | - Release of R123 to atmosphere by SNC-Lavalin Inc. in 2010. |
| | | - Possible R123 leak from chiller to the air in 2010. |
| | | - Leak/break, release of R123 refrigerant to atmosphere in 2016. |
| | | - Release of refrigerant to atmosphere, including 167 kg of halocarbon (R123) by Brookfield Global Integrated Solutions in 2018. |
| | O.C. Transpo Mackenzie Bridge along Albert to Bank Street (~155 m northwest) | - Pipe/hose leak due to equipment failure, spill of 30 L motor oil to roadway, sanded and swept in 1999. |
| | Bank Street & Albert Street (~155 m northwest) | - Discharge or emission to air of methane gas at Enbridge Gas Distribution Inc. in 2007. |
| | 250 Albert Street (~160 m northwest) | - Air pollution, release of 45 kg freon R22 from an A/C unit in 2011 by Telus.<br>- Discharge or emission to air of 64 lbs of freon due to equipment failure by Telus Integrated Communications (2000) Inc., in 2011. |
| | 109 Albert Street (~165 m northwest) | - Leak/break, release of 3 L of hydraulic oil to ground in 2017. |
| | 100 Queen Street (~165 m northeast) | - Gasoline to sanitary sewer of light hydrocarbon to the land by OLRT in 2017. |
| | | - Leak/break of 1L hydraulic oil due to equipment failure by the City of Ottawa in 2018. |
| | 155 Queen Street at O'Connor St. to 54 Elgin St. crossing Northeast along Elgin St to 1 Rideau St and 117 Rideau (~165 m north) | - Leak/break, spill of 8-10 L of diesel fuel to rock, with the potential to impact groundwater from a container/drum/tote in 2014. |
| | 181 Queen Street (~180 m northwest) | - Road in front of 181 Queen Street, contained spill of 618 L of hydraulic oil to asphalt in 2007. |
| | | - Diesel spill to parking lot/sewer from a motor vehicle in 2011. |
| | | - Leak/break, spill of 5 gallons of hydraulic oil from truck to road due to equipment failure of OLRT by EllisDon Corporation in 2017. |
| | | - Leak/break, release of 365 kg freon refrigerant in 2019 by Morguard Investments Ltd. |
| | 131 Queen Street (~180 m northeast) | - Leak/break of 4-inch gas main strike, release of natural gas (methane) in 2017 by Enbridge Gas Distribution Inc. |

Several of the above environmental source records were deemed to represent PCAs for the Site, and are summarized in Table A of Appendix G. The ERIS report and environmental records are included in Appendix C.

### 3.1.5 Fire Insurance Plans

Fire Insurance Plans (FIPs) for the Site and surrounding properties were available through a Phase One ESA report by others requested by Opta Environmental and the FIPs available were for the years 1878, 1895, 1901, 1912, 1922, 1948, 1955 and 1963.

The FIP from 1878 indicates the Site was developed with seven residential dwellings, historical addresses included 94 to 116 O'Connor Street, and one vacant lot, historically 118 O'Connor Street. The adjacent properties were developed as residential dwellings.

The 1895 and 1901 FIPs indicate 118 O'Connor Street was developed with a residential dwelling. No other changes occurred within the Site and adjacent land uses.

The 1912 FIP indicates 94-96 O'Connor Street was occupied by a grocery store, 100 O'Connor Street was occupied by a bakery, 100-104 O'Connor Street was occupied by residential dwellings, 174 Slater Street and 106 O'Connor Street was occupied by a Chinese Laundry. Residential dwellings occupied 108-110 O'Connor Street, and The Rosslyn occupied 116 O'Connor Street, and a tailor was identified at 118 O'Connor Street.

The 1922 FIP indicated 94-96 O'Connor Street was occupied by a Cleaning and Pressing business with residential dwellings on the upper levels. Residential dwellings occupied 98-108 O'Connor Street, and a cobbler occupied 110 O'Connor Street. The Rosslyn and the tailor still occupied 116 and 118 O'Connor Street, respectively. A drycleaning business occupied 174 Slater Street.

The 1948 FIP indicated 94-100 O'Connor Street was occupied by Curtis Apartments. Residential dwellings were occupied by 102-108 O'Connor Street. 100 ½ O'Connor Street was occupied by a cobbler. A dry cleaner was indicated at 110 O'Connor Street. The Rosslyn is indicated as a rooming house at 116 O'Connor Street, and a tailor still occupies 118 O'Connor Street.

The 1955 FIP indicated 94-100 O'Connor Street was occupied by a grocery store and offices. Shop and repairs was occupied by 100 ½ O'Connor Street. 102-104 O'Connor Street was occupied by a commercial building, and 106 O'Connor Street was occupied by a grocery store. 108 O'Connor Street was occupied by a restaurant. A dry cleaner was indicted at 110 O'Connor Street and 118 O'Connor Street. An office building occupied 116 O'Connor Street.

The buildings located at 102-114 O'Connor Street have been demolished in the 1963 FIP. Apartments with a restaurant occupied 94-100 O'Connor Street. The central portion of the Site was vacant, and an office building was located at 116 O'Connor Street and 118 O'Connor Street was occupied by a dwelling.

The following Potentially Contaminating Activities (PCAs) were identified:

Several of the Site occupants were deemed to represent PCAs. Land uses for the surrounding properties as described in the reviewed directories, are included in Appendix C. PCAs identified within the Site and Study Area based on the reviewed directories and are summarized in Table A in Appendix G of this report.

### 3.1.7 Waste Management Records

The Site and properties within the Study Area were searched by company name in the Hazardous Waste Information Network (HWIN) and the Hazardous Waste Information System (HWIS) databases from 2022 – 2024. Properties within the Study Area were also searched for records currently registered with Resource Productivity & Recovery Authority (RPRA) (formerly HWIN), included in Appendix D. The following records were found:

No contaminants were identified, and no Risk Assessment (RA) was filed.<br>- 75 Slater Street (~230 northeast): APECs identified on the property as a former automotive garage, fill material of unknown quality, an existing hydro substation in 2022, a former automotive service garage, two former USTs at the southeast corner of the Site, and application of de-icing salt. Soil contamination was identified for metals, no groundwater was exceedances were identified. |
| Technical Standards and Safety Authority (TSSA) | TSSA via email | The Site and immediate properties were searched for TSSA records. No records were identified. |

None of the above noted environmental records were deemed to represent a PCA to the Site with the exception of the record for 75 Slater Street and is summarized in a Table A of Appendix G of this report.. The environmental source information is included in Appendix D.

## 3.3 Physical Setting Sources

### 3.3.1 Aerial Photographs

For ease of reference, aerial photographs are included as Drawings 4 through 9 in Appendix A. The following table summarizes the information.

**Table 7: Aerial Photographs**

| Year | Site Description | Study Area Description |
|---|---|---|
| 1928 | The Site is developed with eight buildings along the eastern portion of the Site. | All the roadways within the Study Area have been developed. Buildings are developed within the Study Area and appear to be residential and/or commercial buildings. |
| 1965 | The Site has been redeveloped with three buildings. The central portion of the Site appears to be used for storage. | The south adjacent building located at 124 O'Connor Street has been redeveloped into the present-day configuration. The west adjacent property appears to be developed for industrial or commercial land use. The Study Area is in the beginning stages of development, similar to present day. |
| 1976 | The Site has been redeveloped into the present-day multi-unit commercial building configuration. | The west adjacent property has been redeveloped into a parking lot. The Study Area is continuing to be developed with multi-tenant commercial or residential high rises. |
| 1999 | | |
| 2008 | | |
| 2024 | | 150 Slater Street (~15 m east) has been redeveloped with the current building structure. The Study Area has been developed similar to present. |

### 3.3.2 Ontario Base Maps/Topographic and Other Maps

For ease of reference, selected maps are included as Drawings 10 through 13 in Appendix A. The following table summarizes the information.

**Table 8: Topographic and Other Maps**

| Item | Year | Site Description | Study Area Description |
|---|---|---|---|
| Topographic Map | 1950 | The Site appears to be developed, no details of the buildings are depicted.<br>The ground elevation is approximately 68 m above sea level (ASL) and elevations are decreasing towards the Rideau Canal and towards the Ottawa River. | The Study Area appears fully developed; no buildings are depicted. All roadways are developed within the Study Area.<br>The Rideau Canal is located east of the Study Area, and the Ottawa River is located north of the Study Area. |

| Item | Year | Site Description | Study Area Description |
|---|---|---|---|
| Topographic Map | 1983 | The Site is shaded red indicating commercial and residential use. | The Study Area is shaded red, indicating residential/commercial use. |
| Topographic Map | 1998 | | |
| The Community Map of Canada Vector Basemap | 2024 | The Site is developed with current building footprint, similar to present. No elevations are depicted. | The Study Area is developed with commercial and residential properties. |
| Soil Associations of Southern Ontario | 1960 | The Site and Study Area is dominantly Lincoln (D.G.G.) Haldimand clay, formed on till or lacustrine sediments. | |
| Palaeozoic Geology of Southern Ontario, Map 2254, Ontario Division of Mines | 1972 | The Site and Study Area is underlain by grey and black shale of the Upper Ordovician Georgian Bay (Whitby (Eastview and Billings)) Formation. | |

### 3.3.3 Hydrology and Hydrogeology

The building covers the eastern portion of the Site and therefore limited surface water is generated at the Site; however, floor drains are located across the paved areas located throughout the underground parking levels of the Site and flow towards stormwater sumps located within the third level underground parking level. Surface water is expected to runoff the paved surfaces along the western portion of the Site towards catch basin located along the southwestern portion of the Site.

The Ottawa River is located approximately 570 m north of the Site and the Rideau Canal is located approximately 565 m northeast, flowing north/northwest towards the Ottawa River. Surface elevations in the area decrease to the north/northeast towards the Rideau Canal. Based on our observations and review, the expected direction of groundwater flow underlying the Site is northeast towards the Rideau Canal.

### 3.3.4 Water Bodies, Areas of Natural Significance and Groundwater Information

The Ottawa River is located approximately 570 m north of the Site and the Rideau Canal is located approximately 565 m northeast, no woodlands, wellhead protection zones, or areas of natural significance are not located within the Site.

Several monitoring well records were identified within the Study Area; no drinking water well records were located. The Site is within a developed urban setting and potable water is provided from a piped municipal supply that is sourced from the Ottawa River.

### 3.3.5 Well Records

According to the MECP records, there were several monitoring well records within the Study Area (included in Appendix E) and none on-Site. A record from a monitoring well located south of the Site identified soil as grey sand and gravel fill to a depth of 0.4 m below ground surface (bgs), underlain by brown sand fill to a depth of 0.5 m bgs, underlain by brown and black sandy clay fill to a depth of 1.5 m bgs. Grey silty clay with some sand was identified to a depth of 4.8 m bgs, underlain by black and brown shale at 4.8 m bgs. The static water level was not recorded.

## 3.4 Site Operating Records

Site operating records were requested via a Phase One ESA questionnaire provided by G2S at the time of this Phase One ESA report. The following chart summarizes the records:

**Table 9: Site Operating Records**

| Site Operating Records | |
|---|---|
| Regulatory Permits and Records | No records available |
| Material Safety Data Sheets | No records available |
| Underground Utility Drawings | No records available |
| Chemical Inventory and Storage | No records available |
| Storage Tanks | No records available |
| Environmental Monitoring Data | No records available |
| Waste Management Records | No records available |
| Process, Production and Maintenance Documents | No records available |
| Spills and Discharges | No records available |
| Emergency Response and Contingency Plans | No records available |
| Environmental Audit Reports | No records available |
| Facility Site Plans | No records available |

# 4. Interviews

## 4.1 Site Personnel

An interview regarding the Site was conducted with Site Representative and Designer Manager for the Site, Mr. Mohamad Kheir Hassoun on February 27, 2025. A Phase One Questionnaire has not been returned at the issuance of this report.

## 4.2 Third Party Individuals

Third party individuals were not available for interview at the time of this Phase One ESA.

## 4.3 Government Officials

The following government officials were contacted as part of this Phase One ESA:

1. Ministry of the Environment, Conservation and Parks (MECP), Freedom of Information and Protection of Privacy Office; and

2. Technical Standards and Safety Authority (TSSA).

# 5. Site Reconnaissance

Observations of the Site, adjacent, and surrounding properties were conducted by walking over the Site. Adjacent and surrounding properties were observed from within the Site or by other public means. Refer to Drawing 3 (Site Plan) in Appendix A. Photographs of the Site and the Study Area are included in Appendix F.

## 5.1 General Requirements

**Table 10: Site Reconnaissance**

| Qualified Person supervising the Site visit: | Steve Campbell, P.Geo. |
| Facility Operating: (Yes/No) | No |

## 5.2 Specific Observations at the Phase One Property

| General Observations: |
|---|
| The Site is developed as a rectangular 14-storey vacant commercial office building, with three levels of underground parking. The ground floor historically consisted of six suites: Running Room, J's Nails & Spa, The Fresh Flower & Gift Emporium, Metcalfe Hair Design, INS Market, and Right Shop Computer Shop. The Site is an active demolition zone, with the ground floor inaccessible due to active sparks. Four active elevators are present within the central portion of the building. Four elevators are located within the central portion of the Site.<br><br>The second and third floor is currently empty due to a demolition company removing the interior building materials. The remaining floors are vacant offices and historical use of a yoga studio and gym, awaiting to be demolished. Mini excavators were present within the upper levels and are associated with the demolition process.<br><br>A mechanical penthouse has an empty diesel aboveground storage tank (AST), with no details depicted. The first day tank is 458 L AST, and the second day tank is a 909 L AST, and are associated with the backup generators located on the roof. An abandoned chiller is located within the mechanical penthouse, associated with the induction units along the perimeters of each floor. Tracer dye appears to be present below the boiler loop.<br><br>The first level of underground parking consisted of an empty diesel tank and one coloured diesel tank, with approximately 700 L remaining, no details were depicted. The ASTs are connected to two sets of fill and vent pipes along the western edge of the building. The tanks were within a concrete basin, no spills or leaks were present. One propane tank is located near the AST's. A diesel AST is located within the east central portion of the first level of parking, with fill and vent pipes located within the exterior of the western building edge. The second level of underground parking lot contains miscellaneous storage of building materials. The third level of underground parking lot consists of stormwater sump pumps associated with runoff water from drains located throughout the parking levels. |

| Noise, Odours, Vibrations | Not applicable. |
| Storage Tanks and Bulk Containers | One 458 L double walled AST and one 909 L ASTs are located within the mechanical penthouse.<br>Two coloured diesel ASTs are located within a concrete basin within the first level of underground parking levels, no details are depicted. One 945 L AST is located within the west central portion of the Site. |
| Unidentified Substances | Not applicable. |
| Hazardous Materials and Special Attention Items: | It is noted that a Designated Substances Survey (DSS) was not within the requested scope of work for this Phase One ESA. In this regard, the following is provided for information purposes only and does not constitute a DSS. |
| (i) Polychlorinated Biphenyls | Polychlorinated Biphenyls (PCBs) were widely used for cooling and lubricating electrical equipment from the 1930s to the 1970s. The use of PCBs was prohibited in the late 1970s.<br>Transformers are located within the mechanical penthouse, therefore PCBs may be present on-Site. |
| (ii) Asbestos Containing Materials | Asbestos is a generic term referring to a group of naturally occurring fibrous mineral silicates. Asbestos was used in many products due to its strength and resistance characteristics. Common uses include boiler and pipe insulation, spray-on fireproofing, floor and ceiling tiles, asbestos-cement products, etc. Legislation banned the use of asbestos-containing materials (ACMs) in the mid to late 1980s.<br>Due to the age of the building, there is potential for ACMs to be present in the building. |
| (iii) Lead | Lead is a heavy metal typically found in pipes, batteries, lead solder, cabling, insecticides, paints, glass and as an additive to gasoline. In 1976, the federal government limited the amount of lead for interior paints to 0.5% by weight or 5,000 ppm. The Surface Coating Materials Regulation (SOR/2005- |

| | |
|---|---|
| | 109) dated April 19, 2005, as amended, pursuant to the 2005 Hazardous Products Act, revised the standard to limit the amount of lead in certain paints to 0.06% (600 ppm). In October 2010, this was revised to 0.009 % (90 ppm).<br>Due to the age of the building, there is potential for lead based paint to be present on-Site. |
| (iv) Mercury | Mercury is typically found in a variety of building materials including paints, thermostats and mercury-vapour lamps.<br>Potential mercury-containing equipment may be located on-Site. |
| v) Ozone Depleting Substances | Ozone-Depleting Substances (ODSs) include any substances containing chlorofluorocarbon ("CFCs"), hydro chlorofluorocarbon ("HCFCs"), halon or any other material capable of destroying ozone in the atmosphere. Federal regulations eliminated the production and import of CFCs by January 1, 1996 and put a freeze on the production and import of HCFC-22 by January 1, 1996. The regulation also requires the complete replacement of HCFC-22 equipment by the year 2020.<br>Potential ODS-containing equipment may be located on-Site including refrigerators and an air conditioning units. |
| (vi) Urea Formaldehyde Foam Insulation | Urea Formaldehyde Foam Insulation (UFFI) was used as an insulation material for existing buildings (commonly houses) from the mid-1970s until its ban in Canada in 1980. |
| Site Limitations | None observed. |
| Exterior Observations | |
| Item | Observations |
| Structure Exteriors | Temporary construction fencing is located within the northern portion of the Site. |

### 5.2.1 Enhanced Investigation Property

An enhanced investigation of the Site is necessary when the Site is being used for one of the following uses as described in clause 32 (1) (b) of Ontario Regulation 153/04 of the Environmental Protection Act (EPA). Clause 32 (1) (b) identifies properties that are being used in whole or in part for:

i. For industrial use
ii. As a garage
iii. As a bulk liquid dispensing facility including gasoline service station
iv. For the operation of dry-cleaning equipment.

The Site is currently vacant and has historically been occupied as a multi-tenant commercial building. The Site has historically been utilized by several dry cleaners; therefore, an enhanced investigation is required.

### 5.2.2 Operations

The current property use is commercial; and the previous uses were commercial and residential. In general, the first developed use of the Site was prior to 1875, and was developed with seven residential dwellings. The Site was then developed with eight dwellings in the early 1900s. A grocery store and bakery was developed within the northern portion of the Site in 1912, as well as the central portion of the Site was occupied by a dry cleaner. The northern portion of the Site was redeveloped into a dry cleaner in the 1920s, with the central portion of the Site was developed with a residential dwelling, and the southern portion of the Site was occupied by an apartment building and a tailor. A dry cleaner was located within the central and southern portions of the Site in the 1940s to the 1950s, with the remaining Site being occupied by residential land use. The previously mentioned buildings were demolished in the 1960s, and the Site was redeveloped with an apartment building within the northern portion of the Site, and commercial buildings were developed within the southern portion of the Site. The present building configuration was developed within the 1970s and was occupied by various commercial tenants, until 2022, and has been vacant until present.

According to a title search, the Sparks Estate was established in 1869 for residential use, with various owners throughout the 1900s, until 1972 when Narono Holdings Limited occupied the present-day Site configuration. Narono Holdings Limited then transferred the Site to Lehndorff United Properties (Canada) Limited in 1981, and then transferred to 110 O'Connor Fourth Holdings Ltd in 1981. Esbo Properties Ltd owned the property from 1981 to 1989, and Continental Saxon Holdings Limited from 1995 to 2008, and Cominar on Real Estate Holdings Inc. owned the property from 2007 to 2021, when the current owners of Edifice 110 O'Connor Inc./110 O'Connor Building Inc.

G2S was unable to find contact information for previous owners for 110 O'Connor Street, information regarding the former operations at the Site, including processing or manufacturing was limited.

### 5.2.3 Hazardous Materials

It is unknown if there were hazardous material on Site that were related to former industrial uses. Regulatory permits, records and material safety data sheets (MSDS) were not available.

### 5.2.4 Products Manufactured

It is unknown what products were manufactured, no previous Site occupants indicated previous industrial use.

### 5.2.5 By-Products and Wastes

It is unknown what by-products and wastes were generated, other than domestic waste as part of the former commercial use on Site:

- One record for Groupe Mach Ottawa for alkaline solutions in 2024.

### 5.2.6 Raw Materials – Handling and Storage

It is unknown which raw materials were used on Site. Inventories of chemicals, chemical usage and chemical storage areas were not available.

### 5.2.7 Details of Drums, Totes and Bins

No evidence of any former drums, totes or bins was noted on Site.

### 5.2.8 Details of all Oil/Water Separators

No evidence of oil/water separators were noted during the Site reconnaissance.

### 5.2.9 All Vehicle and Equipment Maintenance Areas

The former auto garage was located within the east central portion of the Site in the 1920s.

### 5.2.10 Details of All Spills

As previously indicated, the EcoLog ERIS report identified three spill records for the Site. One spill was indicated in 2009 of chiller leak to the atmosphere. Equipment failure of Cascades Recovery Inc. of 15 L of hydraulic oil to pavement in 2011 was reported with no environmental

impact, no details of where the spill occurred was noted within the report. The third spill reported included equipment failure of refrigerant gas to the atmosphere in 2016.

#### 5.2.11 Details of Liquid Discharge Points

Several stormwater sumps were observed in the floor of the underground levels to facilitate water run off within the basement.

#### 5.2.12 Details of Operations

Details of former operations including processing or manufacturing and equipment used in processing or manufacturing were obtained from a 1972 Opta Inspection Report.

#### 5.2.13 Details of all Hydraulic Lift Equipment

The building historically had hydraulic elevator cable style elevating devices, which was housed in an elevator service room on the mechanical penthouse. The elevator serviced all floors.

### 5.3 Written Description of Investigation

The investigation carried out by G2S included inspection and examination of the Site as well as a visual inspection of the Study Area from areas accessible to the public. The investigation included documenting Site and Study Area conditions through notes and photographs and review of reasonably accessible information. The data complied was reviewed and evaluated for APECs, as presented in this report.

# 6. Review and Evaluation of Information

## 6.1 Current and Past Uses

Based on the information gathered from the Site visit, records review and interviews, the following is a summary of the current and past uses of the Site:

## 6.2 Potentially Contaminating Activities

The following Potentially Contaminating Activities (PCAs) were identified for the Site and/or Study Area and are summarized on Table A in Appendix G and shown on Drawing 14 in Appendix A.

## 6.2 Areas of Potential Environmental Concern

Based on review and evaluation of the PCAs, APECs were identified at the Site and are summarized on Table B in Appendix G and shown on Drawing 15 in Appendix

# 7. Phase One Conceptual Site Model

## Site Description

The rectangular shaped Site is located on the west side of O'Connor Street, located at the southwest corner of the intersection with Slater Street and O'Connor Street, and covers an approximate area of 0.21 ha (0.51 ac.). The Study Area consists of residential and commercial land use, and the Rideau Canal is located approximately 565 m northeast of the Site. The Site location is illustrated on Drawing 1 in Appendix A and photographs of Site are included in Appendix F.

The first developed use of the Site was prior to 1875 and was developed with seven residential dwellings. The Site was then developed with eight dwellings in the early 1900s. A grocery store and bakery was developed within the northern portion of the Site in 1912, as well as the central portion of the Site was occupied by a dry cleaner. The northern portion of the Site was redeveloped into a dry cleaner in the 1920s, with the central portion of the Site was developed with a residential dwelling, and the southern portion of the Site was occupied by an apartment building and a tailor. A dry cleaner was located within the central and southern portions of the Site in the 1940s to the 1950s, with the remaining Site being occupied by residential land use. The previously mentioned buildings were demolished in the 1960s, and the Site was redeveloped with an apartment building within the northern portion of the Site, and commercial buildings were developed within the southern portion of the Site. The present building configuration was developed within the 1970s and was occupied by various commercial tenants. The Site building has been vacant since 2022 and is presently in the process of demolition.

## Water Bodies/Areas of Natural Significance

No waterbodies or woodlands are located within the Study Area. The City of Ottawa official plan zones the Stie and Study Area as an Urban Area; the Ministry of Natural Resources (MNR) map does not identify any areas of natural significance.

No wellhead protection areas were identified within the Study Area; however, the Site is not located within an intake protection zone.

Surface water from the Site is expected to flow across the paved areas along Metcalfe Street and Albert Street towards catch basins. Surface water is expected flow towards the catch basins and drains located within the underground parking levels and drain towards a stormwater sump.

## Drinking Water Wells

No drinking water well records were located. The Site is within a developed urban setting and potable water is provided from a piped municipal supply that is sourced from the Ottawa River.

## Geological and Hydrogeological Setting

The Site is located approximately 68 m above sea level. The Rideau Canal is located approximately 565 m northeast, flowing north towards the Ottawa River, located approximately 570 m north. Surface elevations in the area generally decrease towards the northeast. Based on our observations and review, the expected direction of groundwater flow underlying the Site is northeast towards the Rideau Canal.

**Underground Utilities**

Underground utilities were identified on-Site as part of a concurrent Phase Two ESA being completed by G2S. Based on the shallow depth of most utility lines and the expected depth of groundwater in the area, utilities are unlikely to affect contaminant distribution and transport.

**Surrounding Properties**

The Phase One ESA Study Area is developed primarily for residential and commercial land use (as shown on Drawing 2 in Appendix A). Slater Street is located north of the Site followed by a multi-unit commercial building, a parking lot is located west adjacent, a vacant office building is located south adjacent to the Site, and O'Connor Street followed by a multi-unit commercial building is located to the east.

**Potentially Contaminating Activities (PCAs)**

Historical review of the Site and surrounding properties within a 250 m radius of the Site identified nine PCAs on-Site and several off-Site PCAs, as defined in O. Reg. 153/04. PCAs identified during the Phase One ESA are summarized in Table A of Appendix G.

**Areas of Potential Environmental Concern (APECs)**

The PCAs were assessed based on observations of the operations, their location relative to the Site with respect to the inferred groundwater flow direction, their tenure, expected chemical storage amounts, etc. Based on review and evaluation of the information gathered, twelve APECs were identified on-Site and are summarized in Table B of Appendix G.

## 8. Conclusions and Recommendations

This Phase One ESA was conducted to:

i) develop a preliminary determination of the likelihood that one or more contaminants have affected any land or water on, in or under the Phase One ESA property;

ii) determine the need for a Phase Two ESA; and

iii) provide a basis for carrying out any Phase Two ESA required.

The assessment was performed in accordance with the Phase One ESA protocols outlined in O.Reg. 153/04, as amended, which came into force on July 1, 2011, and meets the requirements of Schedule D of the Regulation.

Based on information from the records review, the first developed use of the Site was prior to 1875, and was developed with seven residential dwellings. The Site was then developed with eight dwellings in the early 1900s. A grocery store and bakery was developed within the northern portion of the Site in 1912, as well as the central portion of the Site was occupied by a dry cleaner. The northern portion of the Site was redeveloped into a dry cleaner in the 1920s, with the central portion of the Site was developed with a residential dwelling, and the southern portion of the Site was occupied by an apartment building and a tailor. A dry cleaner was located within the central and southern portions of the Site in the 1940s to the 1950s, with the remaining Site being occupied by residential land use. The previously mentioned buildings were demolished in the 1960s, and the Site was redeveloped with an apartment building within the northern portion of the Site, and commercial buildings were developed within the southern portion of the Site. The present building configuration was developed within the 1970s and was occupied by various commercial tenants. The Site has been vacant since 2022 and is presently in the process of demolition.

Historical review of the Site and surrounding properties within a 250 m radius of the Site identified nine on-Site PCAs and several off-Site PCAs, as defined in O. Reg. 153/04. The PCAs were assessed based on observations of the operations, their location relative to the Site with respect to the inferred groundwater flow direction, their tenure, expected chemical storage amounts, etc. Based on review and evaluation of the information gathered, the following APECs have been identified:

APEC 1: West central portion of Site – Current and historical presence of three diesel aboveground storage tanks (ASTs) located within the underground parking levels. Presence of fill and vent pipes associated with the ASTs.

APEC 2: Entire Site – A geotechnical report by others identified fill material present beneath the Site to a depth of 5.33 m below ground surface (bgs).

APEC 3A: Northeastern portion of Site – Historical presence of a dry cleaner from the years 1912 – 1922.

APEC 3B: East central portion of Site – Historical presence of a dry cleaner in 1912.

APEC 3C: Southeastern portion of Site – Historical presence of a dry cleaner from the years 1948 – 1955.

APEC 3D: Northwestern portion of Site – Historical use of 174 Slater Street as a dry cleaner from the years 1912 – 1922.

APEC 4: Central portion of Site – Current and historical presence of a transformer vault within the central portion of the Site.

APEC 5: Western portion of Site – Historical use of de-icing salt located on paved portions of the Site.

APEC 6: Southern portion of Site – Historical presence of a dry cleaner located at 124 O'Connor Street (south adjacent) from the years 1922 – 1941.

APEC 7A: Western portion of Site – Historical use of 170 Slater Street (west adjacent) as an autobody shop, from the years 1948 – 1966.

APEC 7B: Northwest portion of Site – Historical presence two underground storage tanks (USTs) in the 1940 - 1960 located along the northeastern portion of 170 Slater Street (west adjacent).

APEC 7C: Western portion of Site – Historical use of 170 Slater Street (west adjacent) for metal plating in the 1930s.

APEC 7D: Western portion of Site – Historical use of 170 Slater Street (west adjacent) as a metal fabricator in the 1970s.

Regarding APEC 5 (de-icing salt use), per Section 49.1 of O. Reg 153/04, assessment of this APEC is not required. Under the Regulations, where a substance has been applied to surfaces for the safety of vehicular or pedestrian traffic under conditions of snow or ice or both, the applicable standard is deemed not to be exceeded. In this regard, further assessment of this APEC is not required.

Based on the findings of this Phase One ESA, a Phase Two ESA is recommended to investigate the potential for contamination related to the above-noted APECs.

## 8.1 Whether Phase Two Environmental Site Assessment Required Before Record of Site Condition Submitted

It is the opinion of G2S that a Phase Two ESA is required before an RSC can be submitted for the Site.

## 8.2 Record of Site Condition Based on Phase One Environmental Site Assessment Alone

It is the opinion of G2S that an RSC cannot be submitted for the Site based on a Phase One ESA alone.

## 9. Qualifications of the Assessors

This Phase One ESA was conducted by Hailey Perras, B.Sc. Ms. Perras is responsible for the successful completion of field work and reporting. Ms. Perras has completed numerous projects on behalf of private and public sector clients for industrial, commercial, and residential sites.

This Phase One ESA was reviewed by Ms. Stephanie Lewis, B.A. Ms. Lewis has been trained to conduct Phase One and Two ESAs in accordance with the CSA and O. Reg 153/04, as amended. She is a senior project manager with over 10 years of professional experience specializing in environmental investigations and project management. Her main areas of expertise include Phase One and Phase Two ESAs, project management, site cleanup/remediation, UST and AST removals, and site remediation. She has completed numerous projects on behalf of private and public-sector clients for industrial, commercial, and residential sites.

This Phase One ESA was reviewed by Mr. Steve Campbell, P. Geo. Mr. Campbell has over 20 years of environmental consulting experience, including Phase One and Two ESAs, hazardous materials management, contaminant hydrogeology, air quality, environmental monitoring and remediation of contaminated sites. Mr. Campbell is responsible for the overall management of projects, QA/QC, and health and safety, as well as acting as a technical lead on projects. Mr. Campbell is a Qualified Person as defined in Ontario Regulation 153/04 for signing off on Phase One and Two ESAs, remediation reports and Records of Site Condition (RSCs). Mr. Campbell has managed numerous asbestos, designated substances and mould assessments, as well as remediation programs.

## 11. Limitations

This Phase One Environmental Site Assessment (ESA) has been prepared for the sole benefit of the Client (Groupe Mach Inc.) and is intended to provide a Phase One ESA for the Site, 110 O'Connor Street in Ottawa, Ontario. The Phase One ESA may not be relied upon by any other person or entity without the expressed written consent of the Client and G2S Consulting Inc. (G2S). Any use which a third party makes of this Phase One ESA, or any reliance on decisions made based on it, is the responsibility of such third parties. G2S accepts no responsibility for any loss, damage, expenses, or penalties suffered by any third parties that may arise or result from the use of any information or recommendations contained in this report.

The report is based solely on the scope of services which are specifically referred to in this report. No physical or intrusive testing has been performed, except as specifically referenced in this report. This report is not a certification of compliance with past or present regulations, codes, guidelines and policies.

The findings in this Phase One ESA are limited to the conditions at the Site at the time of this investigation (February to April 2025) and supplemented by a historical review and data obtained by G2S as described herein as well as information provided by the Site representative as reported herein. Conclusions presented in this Phase One ESA should not be construed as legal advice.

If Site conditions, regulations, codes, guidelines and applicable standards change or if any additional information becomes available at a future date, changes to the findings, conclusions and recommendations in this Phase One ESA may be necessary.

This assessment does not wholly eliminate uncertainty regarding the potential for existing or future costs, hazards or losses in connection with the Site and must be viewed as a mechanism to reduce risk rather than eliminate the risk of contamination concerns.

## 12. Signatures and Closing Remarks

We trust this Phase One ESA is satisfactory for your purposes. Should you have any questions, please do not hesitate to contact this office.

Yours truly,

**G2S Consulting Inc.**

RE: CITY DIRECTORY RESEARCH
77 Metcalfe St and 110 O'Connor St
Ottawa,ON K1P 5L6

Thank you for contacting ERIS regarding our City Directory Search services. Our staff has conducted a reverse listing City Directory search to determine prior occupants of the subject site and adjacent properties. When searching a range of addresses, all civic addresses within that range found in the Directory are included.

Note: Reverse Listing Directories generally are focused on highly developed areas, while newly developed areas may be covered in the more recent years, older directories tend to cover only "central" parts of the city. To complete the search, we have either utilized the Toronto Reference Library, Library & Archives Canada and multiple digitized directories. While these do not claim to be a complete collection of all reverse listing city directories produced, ERIS has made every effort to provide accurate and complete information. ERIS shall not be held liable for missing, incomplete, or inaccurate information. If you believe there are additional addresses or streets that require searching, please contact us.
