Attention: **Ms. Josiane Gervais**
Project Manager, Infrastructure Approvals

Dear Ms. Gervais:

Reference: **5331 Fernbank Road**
Transportation Impact Assessment
Novatech File No. 121011

We are pleased to submit the following Transportation Impact Assessment (TIA) in support of a Site Plan Control application for 5331 Fernbank Road. The structure and format of this report is in accordance with the City of Ottawa Transportation Impact Assessment Guidelines (June 2017).

If you have any questions or comments regarding this report, please feel free to contact the undersigned.

Yours truly,

NOVATECH

B. Byvelds

Brad Byvelds, P. Eng.
Project Coordinator | Transportation/Traffic

Suite 200, 240 Michael Cowpland Drive, Ottawa ON K2M 1P6 Tel: 613.254.9643 Fax: 613.254.5867 www.novatech-eng.com

TIA Plan Reports

On 14 June 2017, the Council of the City of Ottawa adopted new Transportation Impact Assessment (TIA) Guidelines. In adopting the guidelines, Council established a requirement for those preparing and delivering transportation impact assessments and reports to sign a letter of certification.

Individuals submitting TIA reports will be responsible for all aspects of development-related transportation assessment and reporting, and undertaking such work, in accordance and compliance with the City of Ottawa's Official Plan, the Transportation Master Plan and the Transportation Impact Assessment (2017) Guidelines.

By submitting the attached TIA report (and any associated documents) and signing this document, the individual acknowledges that s/he meets the four criteria listed below.

CERTIFICATION

1. I have reviewed and have a sound understanding of the objectives, needs and requirements of the City of Ottawa's Official Plan, Transportation Master Plan and the Transportation Impact Assessment (2017) Guidelines;
2. I have a sound knowledge of industry standard practice with respect to the preparation of transportation impact assessment reports, including multi modal level of service review;
3. I have substantial experience (more than 5 years) in undertaking and delivering transportation impact studies (analysis, reporting and geometric design) with strong background knowledge in transportation planning, engineering or traffic operations; and
4. I am either a licensed[1] or registered[2] professional in good standing, whose field of expertise [check √ appropriate field(s)] is either transportation engineering ☑ or transportation planning ☐.

[1,2] **License of registration body that oversees the profession is required to have a code of conduct and ethics guidelines that will ensure appropriate conduct and representation for transportation planning and/or transportation engineering works.**

EXECUTIVE SUMMARY

Novatech has been retained by Claridge Homes to prepare a Transportation Impact Assessment (TIA) in support of a Site Plan Control application to allow for the development of the lands known as 5331 Fernbank Road.

The subject site is currently zoned General Mixed-Use (GM[2411]) in Zoning By-law 2008-250 and permits the proposed development. The development consists of 192 residential two-bedroom condominium units and 268 parking spaces. Two accesses to the subject site will be provided and are described as follows:

- Full movement access along Cope Drive opposite the future Street 1 to the residential subdivision at 5331 Fernbank Road and 1039 Terry Fox Drive north of Cope Drive (City File Number: D07-16-18-0027), approximately 140m east of Terry Fox Drive and 80m west of Northgraves Crescent
- Right-in/right-out access along Terry Fox Drive, approximately 145m north of Fernbank Road and 210m south of Cope Drive

The proposed development will be constructed in one phase, with an estimated completion date of 2023.

The conclusions and recommendations of this TIA can be summarized as follows:

<u>Development Design</u>

- A sidewalk will be provided on both sides of the main drive-aisles, connecting to the existing sidewalks along Cope Drive and Fernbank Road.
- A north-south pathway will also be provided on the eastern portion of the site, connecting from Cope Drive to Fernbank Road. An east-west pathway will be provided between buildings G and F, connecting to an existing pathway leading to Patriot Place.
- Bicycle parking will be in accordance with the minimum requirements of the City's Zoning By-law. Bicycle parking racks will be located near the entrances for each building.
- All required TDM-supportive design and infrastructure measures in the TDM checklist are met.
- Garbage collection will be conducted on-site. Earth bins will be located on the west side of the main drive aisle opposite Building G, and in a garbage area south of Building Q.

<u>Parking</u>

- A total of 268 vehicle parking spaces (230 resident, 38 visitor) and 96 bicycle parking spaces are proposed, meeting the minimum requirements of the City's Zoning By-law.

<u>Boundary Street Design</u>

- Cope Drive meets the target PLOS but does not meet the target BLOS for the general urban area. Either a reduction in operating speed combined with bike lanes or a separated cycling facility are required to achieve the target BLOS B. This is identified for the City's consideration.
- Fernbank Road meets the target TkLOS for the general urban area. However, it does not meet a target PLOS C and BLOS C. A boulevard width of 0.5m or greater between the sidewalk and the roadway is required on the north side of the road. A reduction in the operating speed is required to achieve the target PLOS C on the south side of the road.

Either a reduction in operating speed or a separated cycling facility are required to achieve the target BLOS C. This is identified for the City's consideration.

- Terry Fox Drive meets the target TkLOS. However, it does not meet the target PLOS and BLOS. Opportunities to improve the PLOS and BLOS should be explored by the City through the future widening of Terry Fox Drive, as identified in the City's 2013 TMP network concept. At that time, consideration should be given by the City to providing a 2m sidewalk with a boulevard to improve the PLOS. A review of the OTM Book 18 Cycling Nomograph suggests consideration should be given to implementing a separated cycling facility along Terry Fox Drive as part of the future widening project.

Access Intersections Design

- One new all movement access is proposed on Cope Drive, opposite the future Street 1 connection to the subdivision north of Cope Drive, and a right-in right-out access to Terry Fox Drive. The sidewalk along Cope Drive will be depressed and continuous through the proposed accesses, per City of Ottawa Specification 7.1.
- The width of the Cope Drive access conforms to the requirements of the City's Private Approach By-law and Zoning By-law.
- As the width of the Terry Fox Drive access is required to accommodate the proposed pork chop right-in right-out island, a waiver to Section 25 (c) of the Private Approach By-law is requested.
- The location of both accesses meet the requirements of the Private Approach By-law.
- A maximum grade of 2% is proposed for a distance of 9m within the private property at both accesses, conforming to the requirements of the Private Approach By-law.
- Based on the projected northbound right turn volumes at the Terry Fox Drive access, a right turn lane is not recommended. A pork chop island will be provided to restrict this access to right-in right-out.
- Based on the projected eastbound right turn volumes at the Cope Drive access, a right turn lane is not recommended.
- To provide improved access operations and safety, a westbound left turn lane will be painted in lieu of the previously proposed gore area runout taper as part of the left turn lane for the subdivision opposite the proposed development.
- The required Stopping Sight Distance and Intersection Sight Distance at both accesses meet TAC requirements.
- Side street stop control is recommended at the proposed accesses along Cope Drive and Terry Fox Drive.

Transportation Demand Management

- The proposed development conforms to the City's TDM initiatives by providing easy access to local pedestrian, bicycle, and transit systems.
- The following additional TDM measures will be implemented within the proposed development:
    - Unbundle parking from purchase price, and
    - Provide multimodal travel option information package to new residents.

Neighbourhood Traffic Management

- The proposed development is anticipated to generate 7-11 vehicle trips (two-way) along Cope Drive east of the access during the weekday AM and PM peak hours. This equates to one vehicle every 5.5-8.5 minutes during peak hours.

- As there is sufficient capacity along Cope Drive to accommodate traffic generated by the development, no mitigation measures are recommended to offset the impacts of the development generated traffic.

Transit

- The existing routes 161, 164, and 252 have capacity to accommodate the projected transit trips generated by the proposed development.

MMLOS Analysis

- Terry Fox Drive/Cope Drive
    - The Terry Fox Drive/Cope Drive intersection currently does not meet the target PLOS or BLOS for the General Urban Area. As this intersection is not located along a rapid transit or transit priority network, there is no target TLOS.
    - A reduction in the crossing distance on all legs of the intersection would have the greatest improvement on the PETSI score and the Pedestrian Delay.
    - Due to the high operational speed along Terry Fox Drive, a BLOS B is unachievable on the north and south approaches. The target BLOS can be achieved on the east and west approaches by implementing two-stage left-turn bike boxes. This is identified for the City's consideration.
- Terry Fox Drive/Fernbank Road
    - The Terry Fox Drive/Fernbank Road intersection currently does not meet the target PLOS, BLOS, or Auto LOS for the General Urban Area. As this intersection is not located along a rapid transit or transit priority network, there is no target TLOS.
    - A reduction in the crossing distance on all legs of the intersection would have the greatest improvement on the PETSI score and the Pedestrian Delay.
    - Due to the high operational speed along Terry Fox Drive and Fernbank Road, a BLOS B is unachievable at this intersection. A reduction in the length of the southbound, eastbound, and westbound right turn lanes, and a reduction in the operating speed along both Terry Fox Drive and Fernbank Road are required to meet the target BLOS at this intersection.
    - Critical movements at the Terry Fox Drive/Fernbank Road intersection are currently operating with an Auto LOS C during the AM peak hour and an Auto LOS F during the PM peak hour.
    - PM peak hour traffic signalization with an increased cycle length of 120 seconds is anticipated to improve operations to a LOS D, meeting the area target. The increased cycle length is not anticipated to have a significant impact to the PLOS delay score at this intersection.

Background Intersection Operations

- Critical movements at the Terry Fox Drive/Cope Drive intersection are anticipated to operate with a LOS D or better during the weekday AM and PM peak hours.
- Critical movements at the Terry Fox Drive/Fernbank Road intersection are anticipated to operate with a LOS C during the AM peak hour and a LOS F during the PM peak hour.
- PM peak hour traffic signalization with an increased cycle length of 120 seconds is anticipated to improve operations to a LOS D, meeting the area target. The increased cycle length is not anticipated to have a significant impact to the PLOS delay score at this intersection.

Total Intersection Operations

- Traffic generated by the proposed development is anticipated to have marginal operational effects within the study area. The discussion of over-capacity movements and queue lengths are generally consistent with those described in the background traffic analysis.
- Under 2028 total traffic conditions, the v/c ratio associated with the eastbound left turn movement at the Terry Fox Drive/Cope Drive intersection is anticipated to increase from 0.90 to 0.91 during the PM peak hour, increasing to a LOS E. Minor optimization to the existing traffic signal plan is anticipated to improve operations to a LOS D, achieving the area target.
- Under 2028 total traffic conditions, the maximum northbound through queue along Terry Fox Drive is anticipated to be approximately 195m during the AM peak hour and 200m during the PM peak hour. This queue is anticipated to extend approximately to the Terry Fox Drive right-in right-out access during the peak hours, and drivers exiting north onto Terry Fox Drive may periodically rely on courtesy of other drivers.

1.0 SCREENING

1.1 Introduction

Novatech has been retained by Claridge Homes to prepare a Transportation Impact Assessment (TIA) in support of a Site Plan Control application to allow for the development of the lands known as 5331 Fernbank Road. The subject site is surrounded by the following:

- Cope Drive and future residential development to the north;
- Existing residential development to the east;
- New residential rental apartments under construction to the east on south side of Cope Drive;
- Fernbank Road and existing residential development to the south; and
- Terry Fox Drive and existing commercial retail development in the Fernbank Community Design Plan lands to the west.

A view of the subject lands is provided in **Figure 1**.

Figure 1: View of the Subject Lands

1.2 Proposed Development

The subject site is currently zoned General Mixed-Use (GM[2411]) in Zoning By-law 2008-250 and permits the proposed development. The development consists of 192 residential two-bedroom condominium units and 268 parking spaces. Two accesses to the subject site will be provided and are described as follows:

- Full movement access along Cope Drive opposite the future Street 1 to the residential subdivision at 5331 Fernbank Road and 1039 Terry Fox Drive north of Cope Drive (City File Number: D07-16-18-0027), approximately 140m east of Terry Fox Drive and 80m west of Northgraves Crescent
- Right-in/right-out access along Terry Fox Drive, approximately 145m north of Fernbank Road and 210m south of Cope Drive

The proposed development will be constructed in one phase, with an estimated completion date of 2023. A copy of the site plan is included in **Appendix A**.

1.3 Screening Form

The City's 2017 TIA Guidelines identify three triggers for completing a TIA report, including trip generation, location, and safety. The criteria for each trigger are outlined in the City's TIA Screening Form. A copy of the TIA Screening Form is included in **Appendix B.**

Based on the TIA Screening Form, the proposed development satisfies all three triggers for completing a TIA.

2.0 SCOPING

2.1 Existing Conditions

2.1.1 Roadways

The roadway network of the greater area surrounding the subject site is illustrated in **Figure 2**.

Figure 2: Roadway Network

Terry Fox Drive is an arterial roadway that generally runs on a north-south alignment within the study area. Near the subject lands, Terry Fox Drive has a two-lane undivided rural cross section. Terry Fox Drive is designated as a truck route with a posted speed limit of 80 km/hr within the study area. The City of Ottawa Official Plan (OP) identifies a 44.5m right-of-way (ROW) to be protected along Terry Fox Drive between Eagleson Road and the Great Trail (Trans-Canada Trail) located north of the site.

Fernbank Road runs on an east-west alignment between Dwyer Hill Road to Eagleson Road. It is classified as an arterial roadway in proximity of the subject site. Fernbank Road has a two-lane undivided urban cross section with a posted speed limit of 60km/hr between Eagleson Road and Terry Fox Drive. West of Terry Fox Drive, it transitions into a two-lane undivided rural cross section with a posted speed limit of 80km/hr. The City of Ottawa OP identifies a 30m ROW to be protected along Fernbank Road between Terry Fox Drive and Eagleson Road.

Cope Drive generally runs on an east-west alignment between Eagleson Road and west of Robert Grant Avenue. It is classified as a collector roadway between Eagleson Road and Terry Fox Drive. West of Terry Fox Drive, it is classified as a major collector roadway through the Fernbank Community Design Plan (CDP) lands. Cope Drive has a two-lane undivided urban cross section with a posted speed limit of 50km/hr. The City of Ottawa OP identifies a 24m ROW to be protected along the entire length of Cope Drive.

2.1.2 Intersections

Terry Fox Drive/Cope Drive

- Signalized intersection
- Northbound: one left turn lane and one shared through/right turn lane
- Southbound: one left turn lane, one through turn lane and one right turn lane
- Eastbound/Westbound: one left turn lane and one shared through/right turn lane
- Standard crosswalks are provided on all four legs
- A pocket bike lane is provided on the southbound approach

Terry Fox Drive/Fernbank Road

- Signalized intersection
- Northbound: one left turn lane and one shared through/right turn lane
- Southbound: one left turn lane, one through turn lane and one right turn lane
- Eastbound: one left turn lane, one through lane, and one right turn lane
- Westbound: one left turn lane, one through lane, and one channelized right turn lane
- Standard crosswalks are provided on all four legs
- Pocket bike lanes are provided on the eastbound, westbound, and southbound approaches

2.1.3 Driveways

In accordance with the City's 2017 TIA guidelines, a review of adjacent driveways along the boundary roads are provided as follows:

Terry Fox Drive, East Side:
- No other driveways

Terry Fox Drive, West Side:
- One right-in right-out driveway to commercial retail development at 5357 Fernbank Road
- One right-in driveway to an LCBO at 1150 Terry Fox Drive

Cope Drive, North Side:
- Future subdivision street 1 connection opposite proposed access
- No other driveways

Cope Drive, South Side:
- No other driveways

Fernbank Road, North Side:
- No other driveways

Fernbank Road, South Side:
- No other driveways

2.1.4 Pedestrian and Cycling Facilities

Terry Fox Drive is classified as a spine cycling route and currently contains paved shoulders.

Cope Drive is classified as a local cycling route between Terry Fox Drive and Eagleson Road, and a spine cycling route west of Terry Fox Drive. It has concrete sidewalks on both sides and mixed-use travel lanes east of Terry Fox Drive. It will have a concrete sidewalk on the south side and multi-use pathway on the north side west of Terry Fox Drive.

Fernbank Road is classified as a spine cycling route. It has concrete sidewalks on both sides and bike lanes east of Terry Fox Drive. It has paved shoulders west of Terry Fox Drive.

2.1.5 Transit

OC Transpo bus stops within a walking distance of 400m, or a five-minute walk, of the subject site are summarized as follows:

Stop #4031 (Cope Drive/Northgraves Crescent) – Serves Route 161 and 252
Stop #1919 (Cope Drive/Templeford Avenue) – Serves Route 161 and 164
Stop #6933 (Cope Drive/Templeford Avenue) – Serves Route 164, 168, and 252
Stop #1930 (Terry Fox Drive/Fernbank Road) – Serves Route 161 and 168
Stop #1933 (Terry Fox Drive/Fernbank Road) – Serves Route 161

The location of the bus stops with respect to the subject site are shown in **Figure 3**.

Descriptions of the transit routes in proximity of the subject site are provided in the following table. Route maps and existing bus stop utilization data are included in **Appendix C**.

Figure 3: OC Transpo Bus Stop Locations

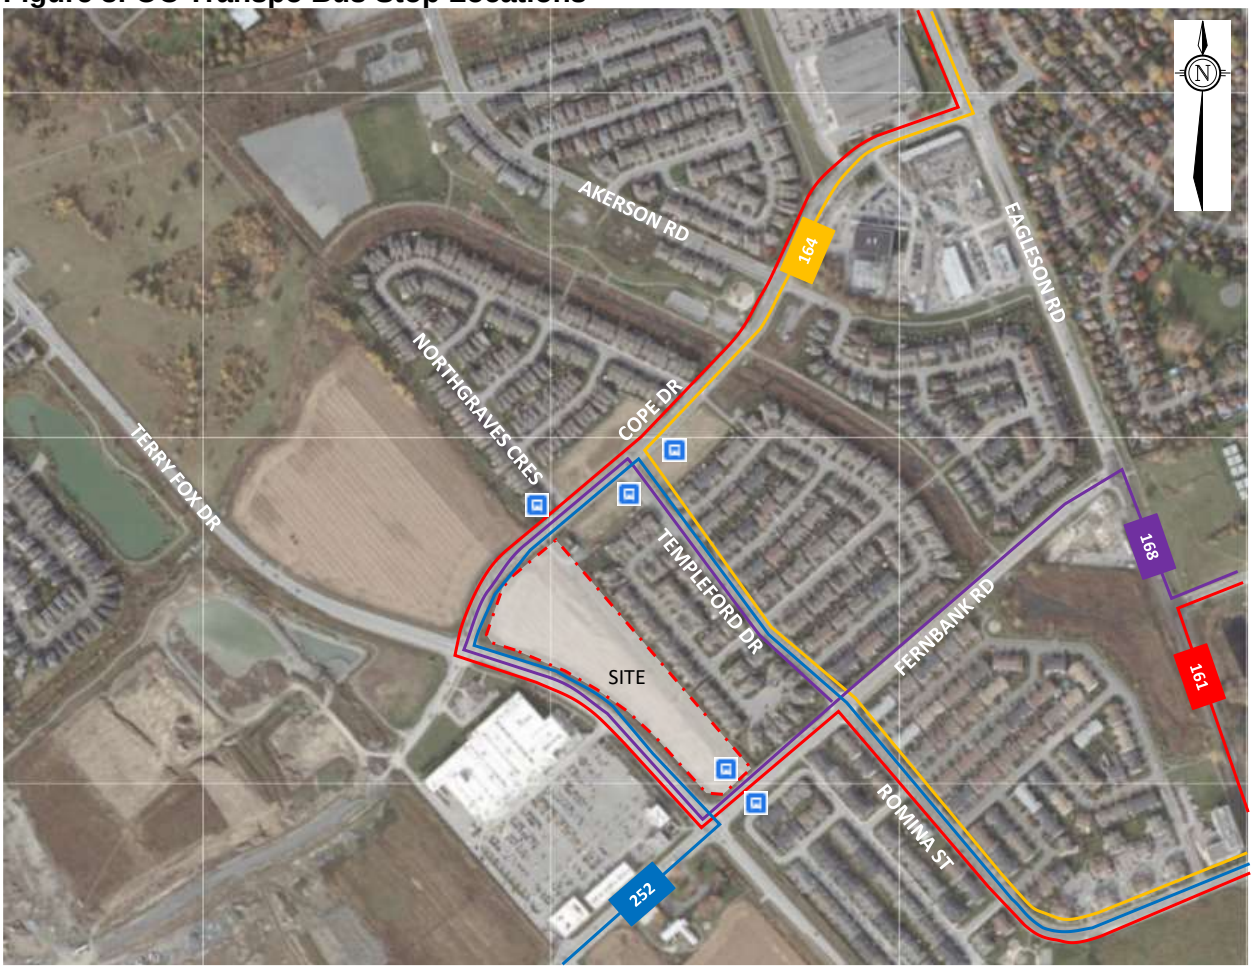

Table 1: OC Transpo Route Information

Route	Description	Schedule		
		Days	Service	Headways
161	Travels between Terry Fox Transit Station and Brildewood	Weekdays	All Day	Morning/Evening: 30 min Mid-Day/Night: 60 min
164	Travels between Terry Fox Transit Station and Hope Side Road	Weekdays	Peak Periods	Morning/Evening: 30 min
168	Travels between Terry Fox Transit Station and Cope Drive	7 Days/ Week	All Day	All Day: 30 min
252	Travels between Mackenzie King Transit Station and Cope Drive	Weekdays	Peak Periods	Morning/Evening: 15-20 min

2.1.6 Existing Area Traffic Management Measures

Unit paver crosswalks are provided at the Cope Drive intersections with Northgraves Crescent, Templeford Avenue, and Akerson Road/Carronbridge Circle. There are currently no area traffic management measures in place along any other study area roadways.

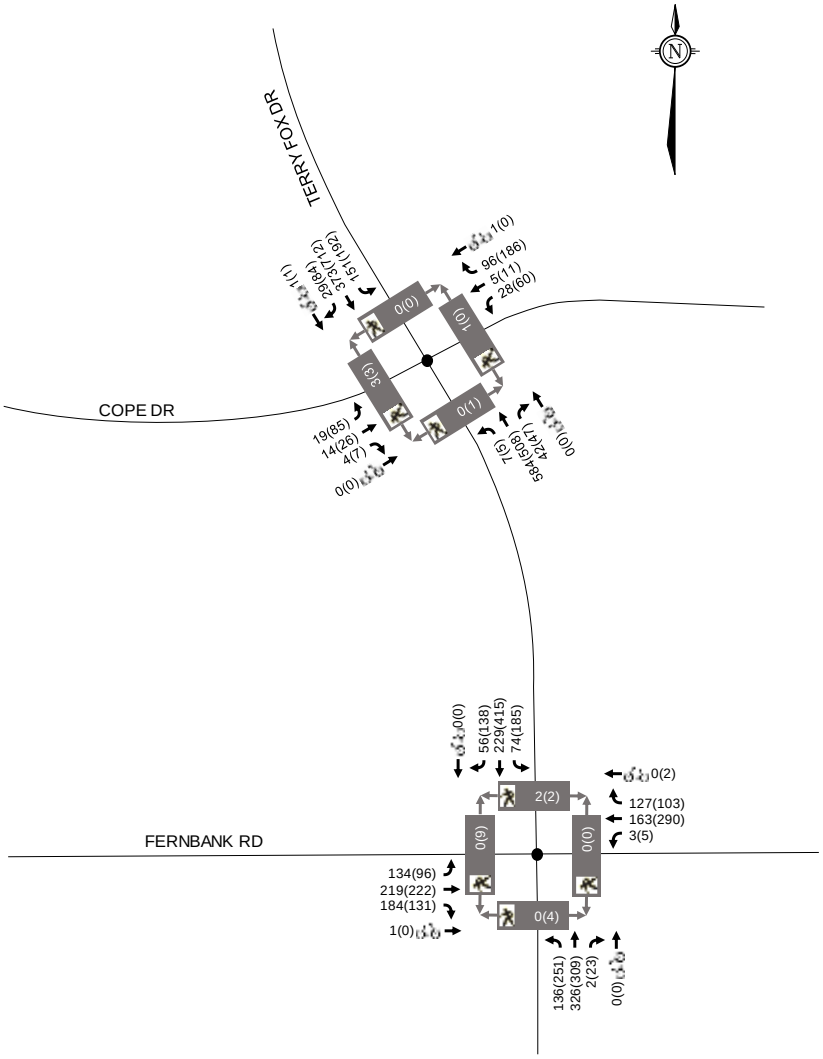
2.1.7 Existing Traffic Volumes

Weekday traffic counts were obtained from the City of Ottawa at the study area intersections to determine the existing pedestrian, cyclist, and vehicular traffic volumes. The traffic counts were completed on the following dates:

- Terry Fox Drive/Cope Drive August 8, 2019
- Terry Fox Drive/Fernbank Road April 11, 2018

Existing traffic volumes along the study area roadways are shown in **Figure 4**. Peak hour summary sheets of the above traffic counts are included in **Appendix D**.

Figure 4: Existing Traffic Volumes



2.1.8 Collision Records

Historical collision data from the last five years was obtained from the City's Public Works and Service Department for the study area intersection. Copies of the collision summary report are included in **Appendix E**.

The collision data has been evaluated to determine if there are any identifiable collision patterns, defined in the 2017 TIA Guidelines as 'more than six collisions in five years' for any one movement. The following summarizes the number of collisions at each intersection from January 1, 2015 to December 31, 2019.

Table 2: Reported Collisions

Intersection	Impact Types					Total Number of Collisions
	Angle	Sideswipe	Rear End	Turning Movement	SMV[1]/ Other	
Terry Fox Drive/ Cope Drive	2	1	8	13	3	**27**
Terry Fox Drive/ Fernbank Road	6	6	10	5	2	**29**

1. SMV = Single Motor Vehicle

Terry Fox Drive/Cope Drive

A total of 29 collisions were reported at the Terry Fox Drive/Cope Drive intersection over the last five years. Thirteen of the collisions were turning movement impacts, eight were rear-end impacts, three were single motor vehicle/other impacts, two were angle impacts and one was a sideswipe. Seven of the collisions resulted in personal injuries, however none resulted in a fatality. Twelve of the collisions occurred under poor driving conditions. None of the collisions involved pedestrians or cyclists.

Eight of the turning movement impacts involved southbound left turning vehicles, three involved northbound left turning vehicles, one involved a northbound right turning vehicle, and one involved an eastbound left turning vehicle. Two of the impacts involving southbound left turning vehicles occurred on weekends, two occurred during the weekday AM peak period, two occurred during the weekday PM peak period, and two occurred during weekday off-peak hours. Based on the existing signal timing plan, a permitted and protected southbound left turn phasing is provided during the PM peak hour only. Consideration could be given by the City to implementing the permitted and protected southbound left turn phase during all periods to mitigate turning movement impacts associated southbound left turning vehicles.

Three of the rear-end impacts involved northbound vehicles, three involved southbound vehicles, and two involved westbound vehicles. One of the rear-end collisions resulted in personal injuries. Four of the rear-end collisions occurred under poor driving conditions.

Terry Fox Drive/Fernbank Road

A total of 29 collisions were reported at the Terry Fox Drive/Fernbank Road intersection over the last five years. Ten of the collisions were rear-end impacts, six were angle impacts, six were sideswipe impacts, five were turning movement impacts, and two were single motor vehicle/other impacts. Six of the collisions resulted in personal injuries, however none resulted in a fatality. Ten of the collisions occurred under poor driving conditions.

Four of the rear-end impacts involved westbound vehicles, three involved southbound vehicles, two involved northbound vehicles, and one involved eastbound vehicles. All of the rear-end impacts resulted in property damage only. Four of the rear-end impacts occurred under poor driving conditions.

Two of the angle impacts involved eastbound and northbound vehicles (one involved a cyclist), two involved southbound and eastbound vehicles, and two involved southbound and westbound vehicles. Two of the angle impacts resulted in personal injuries. One of the angle impacts occurred under poor driving conditions.

Three of the sideswipe impacts involved eastbound vehicles, two involved northbound vehicles, and one involved southbound vehicles. One of the sideswipe impacts resulted in personal injuries. Three of the sideswipe impacts occurred under poor driving conditions.

2.2 Planned Conditions

The City of Ottawa's 2013 Transportation Master Plan (TMP) identifies a widening from two to four lanes along Eagleson Road between Cadence Gate and Hope Side Road. This widening will provide capacity for additional travel demands from new development areas and provide continuity from the four-lane Eagleson Road to the north. The widening of Eagleson Road is identified as a Phase 2 project with implementation between 2020 and 2025.

The City of Ottawa's 2013 TMP identifies a widening from two to four lanes along Hope Side Road between Eagleson Road and Richmond Road. This widening will provide capacity and network continuity for growth areas in Kanata. The widening of Hope Side Ride is identified as a Phase 3 project in the affordable plan with implementation between 2026 and 2031.

The City of Ottawa's 2013 TMP identifies a widening from two to four lanes along Terry Fox Drive between Winchester Drive and Eagleson Road. This project is part of the City's Road Network Concept which will not be complete by 2031.

City staff advised that the Cope Drive/Templeford Road intersection has been approved to be converted into a mini roundabout.

A Transportation Impact Assessment dated October 2018 and revised in March 2019, and Addendum dated October 2020 were prepared in support of a Draft Plan of Subdivision application for 5331 Fernbank Road and 1039 Terry Fox Drive. The proposed development consists of 47 single detached units and 161 semi-detached/townhouse units.

A Transportation Impact Assessment dated January 2019 and revised in May 2019 was prepared in support of a Draft Plan of Subdivision application for 866, 898 Eagleson Road and 1335, 1365 Terry Fox Drive (City File Number: D02-02-19-0004 & D07-16-19-000). The proposed development consists of 347 townhouse units and 47 single-detached units.

A Transportation Impact Study dated May 2017 and Addendum dated February 2018 were prepared in support of a Draft Plan of Subdivision application for 5505 Fernbank Road (Blackstone Phases 4-8 City File Number:D07-16-17-0014) within the Fernbank Community. The proposed development consists of 241 single detached units, 219 townhouse units, and 156 condominium units. This subdivision has recently constructed Cope Drive between the Fernbank Community Design Plan lands and Terry Fox Drive.

A Site Plan Control application was submitted to the City of Ottawa in June 2018, in support of a six storey 143-unit apartment building at 800 Eagleson Road. No TIA has been submitted as part of this application. This building is currently under construction and nearing completion.

A Transportation Impact Study was prepared in support of a Zoning By-law Amendment and Site Plan Control application in July 2015 for a proposed residential development at 80, 110, 140, 151 and 180 Cope Drive (City File Number: D07-12-15-0163). The proposed residential development consists of 260 residential units.

A TIA was prepared in support of a Site Plan Control application in August 2018 for a proposed commercial development at 10 Cope Drive (City File Number: D07-12-18-0074). The proposed commercial development consists of a 3,620m^2 grocery store and 1,982m^2 of commercial. This development is now complete. The grocery store is now open and some of the other commercial units are occupied.

2.3 Study Area and Time Periods

A boundary street review will be conducted for Fernbank Road, Cope Drive, and Terry Fox Drive. The study area intersections are summarized as follows:

- Terry Fox Drive/Cope Drive
- Terry Fox Drive/Fernbank Road

It is noted that the Eagleson Road/Fernbank Road and Eagleson Road/Cope Drive intersections are also located within a 1km radius of the subject site. As Terry Fox will provide a reduced travel distance to/from the south, traffic generated by the site is not anticipated to use the Eagleson Road/Fernbank Road intersection. As such, this intersection has been excluded from the study area.

Based on a December 2017 traffic count, the overall Eagleson Road/Cope Drive intersection volumes equate to approximately 1850 vehicles during the AM peak hour and 2500 vehicles during the PM peak hour. The additional vehicles generated by the site (based on the distribution presented in Section 3.0) equate to approximately 0.5% of the existing intersection volumes. As the Eagleson Road/Cope Drive intersection is approximately 800-850m east of the site access and traffic generated by the proposed development is anticipated to be negligible compared to the existing traffic volumes, the Eagleson Road/Cope Drive intersection has been excluded from the study area.

The selected time periods for the analysis are the weekday AM and PM peak hours, as they represent the 'worst case' combination of site generated traffic and adjacent street traffic. Analysis will be completed for the 2023 build-out year and 2028 horizon year.

2.4 Exemptions Review

This module reviews possible exemptions from the final TIA, as outlined in the TIA Guidelines. The applicable exemptions for this site are shown in **Table 3**.

Table 3: TIA Exemptions

Module	Element	Exemption Criteria	Exemption Applies
Design Review Component			
4.1 Development Design	*4.1.2* Circulation and Access	• Only required for site plans	Not Exempt
	4.1.3 New Street Networks	• Only required for plans of subdivision	Exempt
4.2 Parking	*4.2.1* Parking Supply	• Only required for site plans	Not Exempt
	4.2.2 Spillover Parking	• Only required for site plans where parking supply is 15% below unconstrained demand	Exempt
Network Impact Component			
4.5 Transportation Demand Management	*All elements*	• Not required for non-residential site plans expected to have fewer than 60 employees and/or students on location at any given time	Not Exempt
4.6 Neighbourhood Traffic Management	*4.6.1* Adjacent Neighbourhoods	• Only required when the development relies on local or collector streets for access and total volumes exceed ATM capacity thresholds	Not Exempt
4.8 Network Concept	*All elements*	• Only required when proposed development generates more than 200 person-trips during the peak hour in excess of the equivalent volume permitted by the established zoning	Exempt

As the proposed parking is anticipated to meet the requirements of the Zoning By-law, and the development is permitted under the current zoning the Spillover Parking and Network Concept Modules are exempt.

Based on the foregoing, the following modules will be included in the TIA report:

- Module 4.1: Development Design
- Module 4.2: Parking
- Module 4.3: Boundary Streets
- Module 4.4: Access Design
- Module 4.5: Transportation Demand Management
- Module 4.6: Neighbourhood Traffic Management
- Module 4.7: Transit
- Module 4.9: Intersection Design

3.0 FORECASTING

3.1 Development-Generated Traffic

3.1.1 Trip Generation

Trips generated by the proposed development during the weekday AM and PM peak period have been estimated based on relevant rates presented in the City's 2020 TRANS Trip Generation

Manual Summary Report. Peak period person trips, based on the Multi-Unit (High-Rise – 3+ Storey) rates in Table 3 of the TRANS report, are summarized in the following table.

Table 4: Peak Period Person Trip Generation

Land Use	TRANS Rate	Units	AM Peak Period (ppp[1])			PM Peak Period (ppp)		
			IN	OUT	TOT	IN	OUT	TOT
High-Rise Multifamily Housing	AM: 0.80 PM: 0.90	192	48	106	154	100	73	173

1. ppp: Person Trips per Peak Period

Table 8 of the TRANS report includes data to estimate the mode shares for high-rise (3+ storey) multifamily housing for the AM and PM peak periods based on district. Based on the TRANS report, the mode shares for the Kanata-Stittsville district are summarized as follows:

- Auto Driver: 43% AM, 55% PM
- Auto Passenger: 26% AM, 19% PM
- Transit: 28% AM, 21% PM
- Cyclist: 0% AM, 0% PM
- Pedestrian: 4% AM, 5% PM

A breakdown of the peak period person trips by modal share is shown in **Table 5**.

Table 5: Peak Period Person Trips by Modal Share

Travel Mode	Mode Share		AM Peak Period			PM Peak Period		
	AM	PM	IN	OUT	TOT	IN	OUT	TOT
Peak Period Person Trips			**48**	**106**	**154**	**100**	**73**	**173**
Auto Driver	43%	55%	20	45	65	55	40	95
Auto Passenger	26%	19%	12	28	40	19	14	33
Transit	28%	21%	13	30	43	21	15	36
Cyclist	0%	0%	0	0	0	0	0	0
Pedestrian	4%	5%	2	4	6	5	4	9

Table 4 of the TRANS report includes adjustment factors to convert the estimated number of trips generated for each mode from peak period to peak hour. A breakdown of the peak hour trips by mode is shown in **Table 6**.

Table 6: Peak Hour Person Trips by Mode Share

Travel Mode	Adj. Factor		AM Peak Hour			PM Peak Hour		
	AM	PM	IN	OUT	TOT	IN	OUT	TOT
Auto Driver	0.48	0.44	10	21	31	24	18	42
Auto Passenger	0.48	0.44	6	13	19	9	6	15
Transit	0.55	0.47	7	17	24	10	7	17
Cyclist	0.58	0.48	0	0	0	0	0	0
Pedestrian	0.58	0.52	1	2	3	3	2	5
Peak Hour Person Trips			**24**	**53**	**77**	**46**	**33**	**79**

From the previous table, the proposed development is estimated to generate 77 person trips (including 31 vehicle trips) during the AM peak hour and 79 person trips (including 42 vehicle trips) during the PM peak hour.

3.1.2 Trip Distribution

The distribution of traffic generated by the proposed development has been estimated based on area traffic patterns, the principles of logical trip routing, and a review of distributions for other area developments. The distribution of traffic to the area road network is summarized as follows:

- 40% to/from the north via Terry Fox Drive
- 25% to/from the east via Cope Drive
- 20% to/from the south via Terry Fox Drive
- 15% to/from the west via Fernbank Road and Cope Drive

The assignment of trips to the proposed accesses is summarized as follows:

Cope Drive Access
- 60% of trips to the north via Terry Fox Drive
- All trips from the north via Terry Fox Drive
- All trips to/from the east via Cope Drive
- All trips to the south via Terry Fox Drive
- All trips to the west via Fernbank Road
- All trips to/from the west via Cope Drive

Terry Fox Access
- 40% of trips to the north via Terry Fox Drive
- All trips from the south via Terry Fox Drive
- All trips from the west via Fernbank Road

Site generated traffic volumes are shown in **Figure 5**.

3.2 Background Traffic

3.2.1 General Background Growth Rate

Background traffic growth along the area roadways has been developed based on a review of historic traffic counts and a review of other area developments.

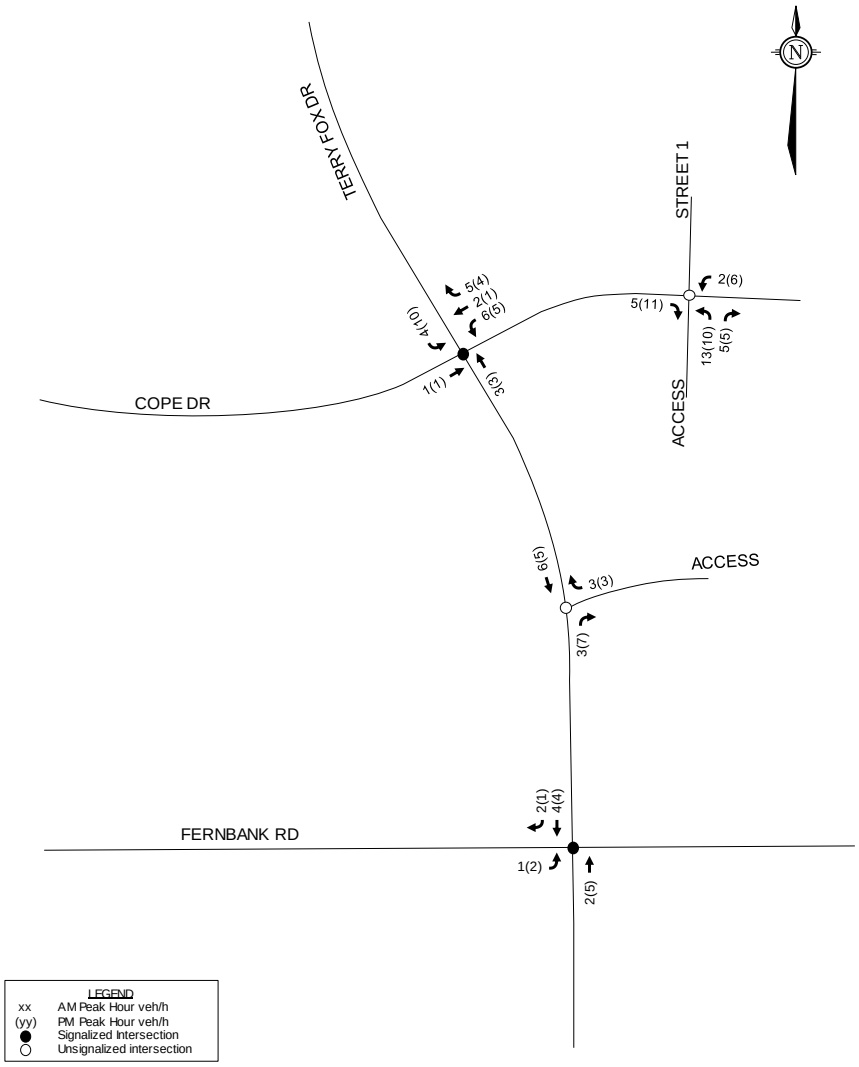
Based on 2010 and 2018 traffic counts at the Terry Fox Drive/Fernbank Road intersection, the intersection Average Annual Daily Traffic (AADT) volumes increased by approximately 2% per annum. Based on 2014 and 2019 traffic counts at the Terry Fox Drive/Cope Drive intersection, the intersection AADT volumes increased by approximately 4% per annum.

A summary of background growth assumptions utilized in other area developments is provided below.

- 1039 Terry Fox Drive, TIA dated March 2019: 2% growth to Cope Drive and Terry Fox Drive
- 866 Eagleson Road, TIA dated May 2019: 2% growth to Terry Fox Drive, No growth to Fernbank Road
- 10 Cope Drive, TIA dated August 2018: 2% growth to Cope Drive and Fernbank Road
- 5505 Fernbank Road, TIS dated May 2017: 2% growth rate to Fernbank Road
- 80-180 Cope Drive, TIS dated July 2015: 2% growth to Cope Drive and Terry Fox Drive

Based on the foregoing, a 2% per annum growth rate has been applied to through traffic along Terry Fox Drive, Fernbank Road, and Cope Drive.

Figure 5: Site Generated Traffic



3.2.2 Other Area Development

A description of other study area developments is included in Section 2.2. The following other area developments have been added to the background traffic volumes:

- 1039 Terry Fox Drive: 100% built-out by 2023
- 866 Eagleson Road: 50% built-out by 2023, 100% built-out by 2028
- 5505 Fernbank Road: 50% built-out by 2023, 100% built-out by 2028
- 80-180 Cope Drive: 100% built-out by 2023
- 10 Cope Drive: 100% built-out by 2023

Relevant excerpts from these studies are included in **Appendix F**.

Traffic generated by other area developments for the 2023 build-out and 2028 horizon years are shown in **Figure 6** and **7**. Background traffic volumes for the 2023 build-out and 2028 horizon years are shown in **Figures 8** and **9**. Total traffic volumes for the 2023 build-out and 2028 horizon years are shown in **Figures 10** and **11**.

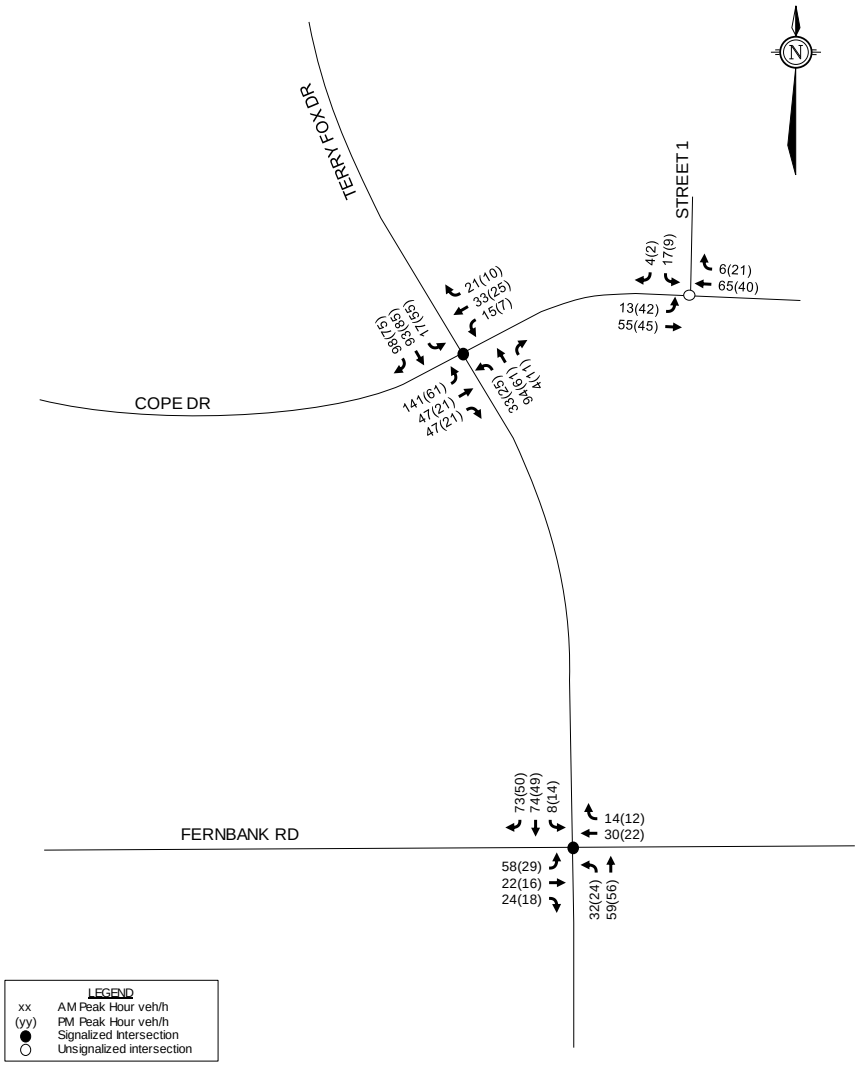

Figure 8: 2023 Background Traffic

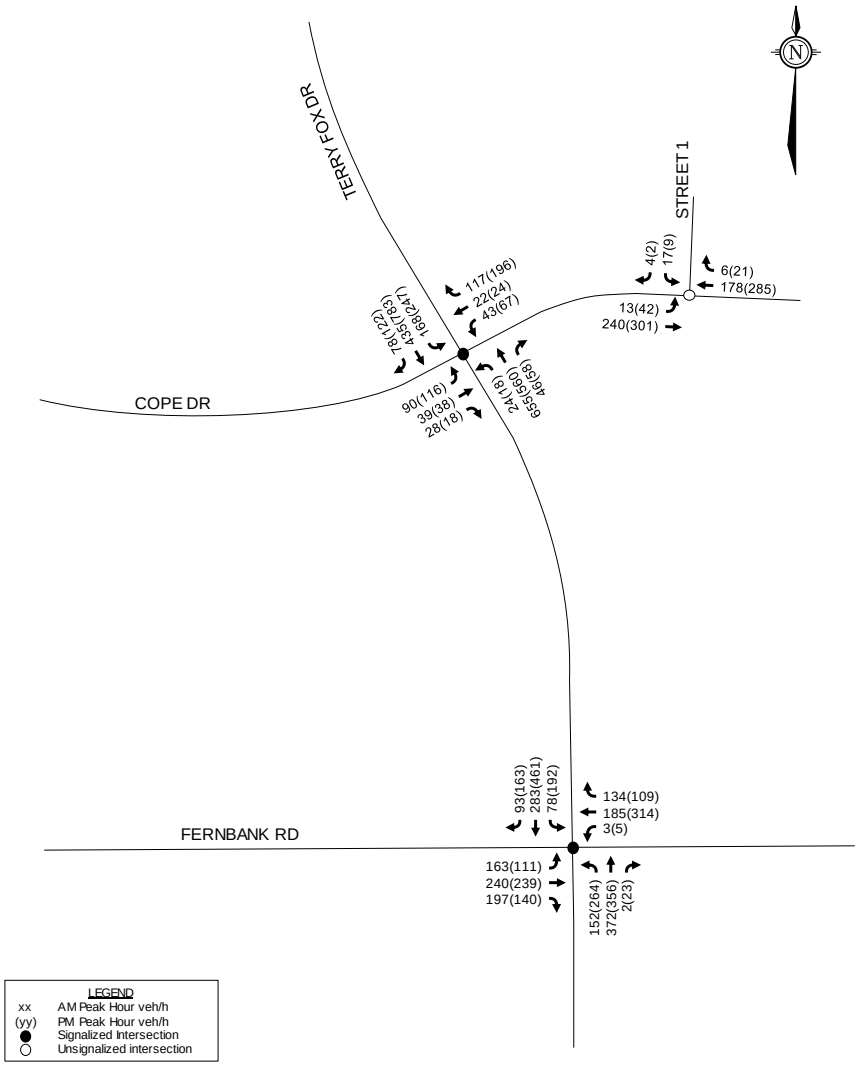

Figure 9: 2028 Background Traffic

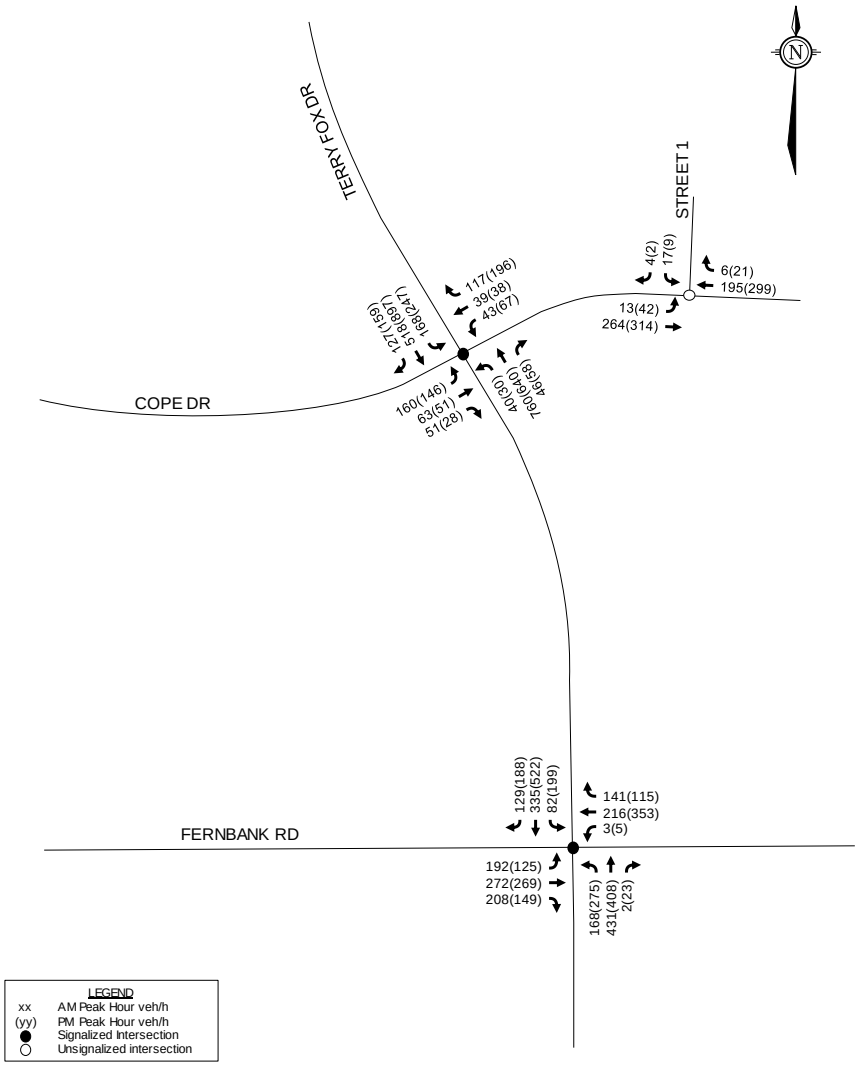

Figure 10: 2023 Total Traffic

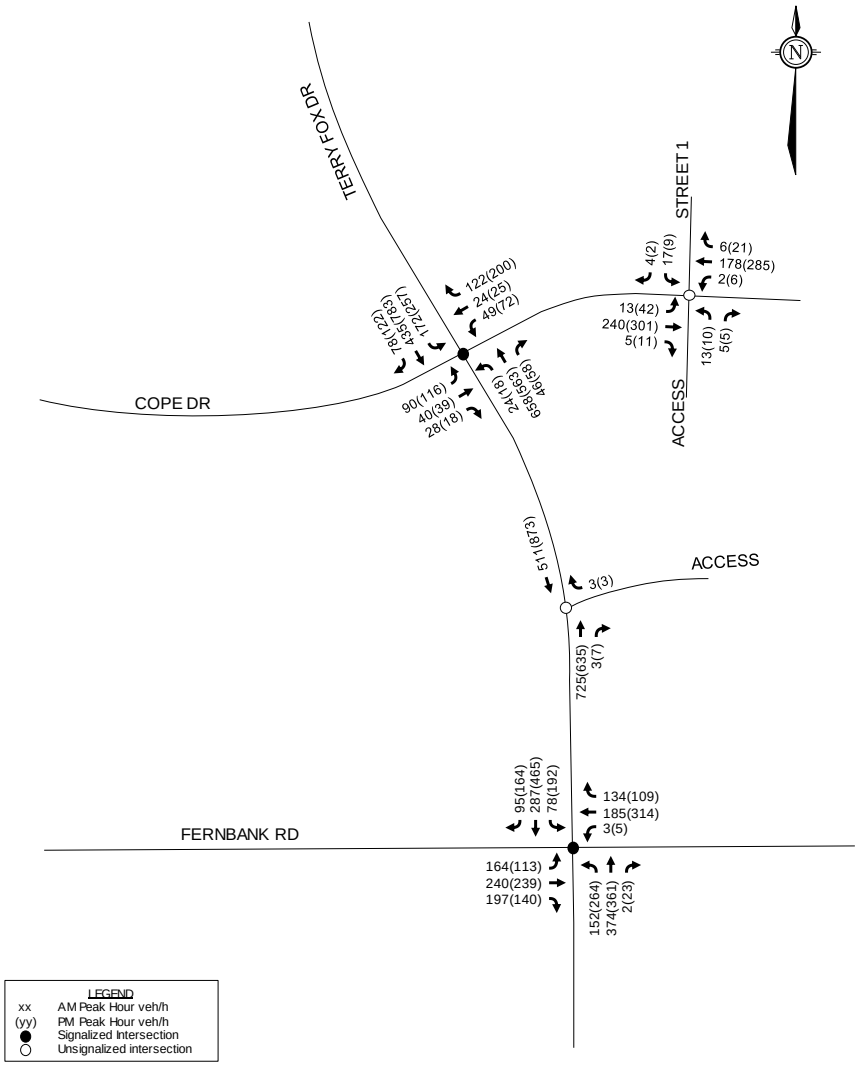

Figure 11: 2028 Total Traffic

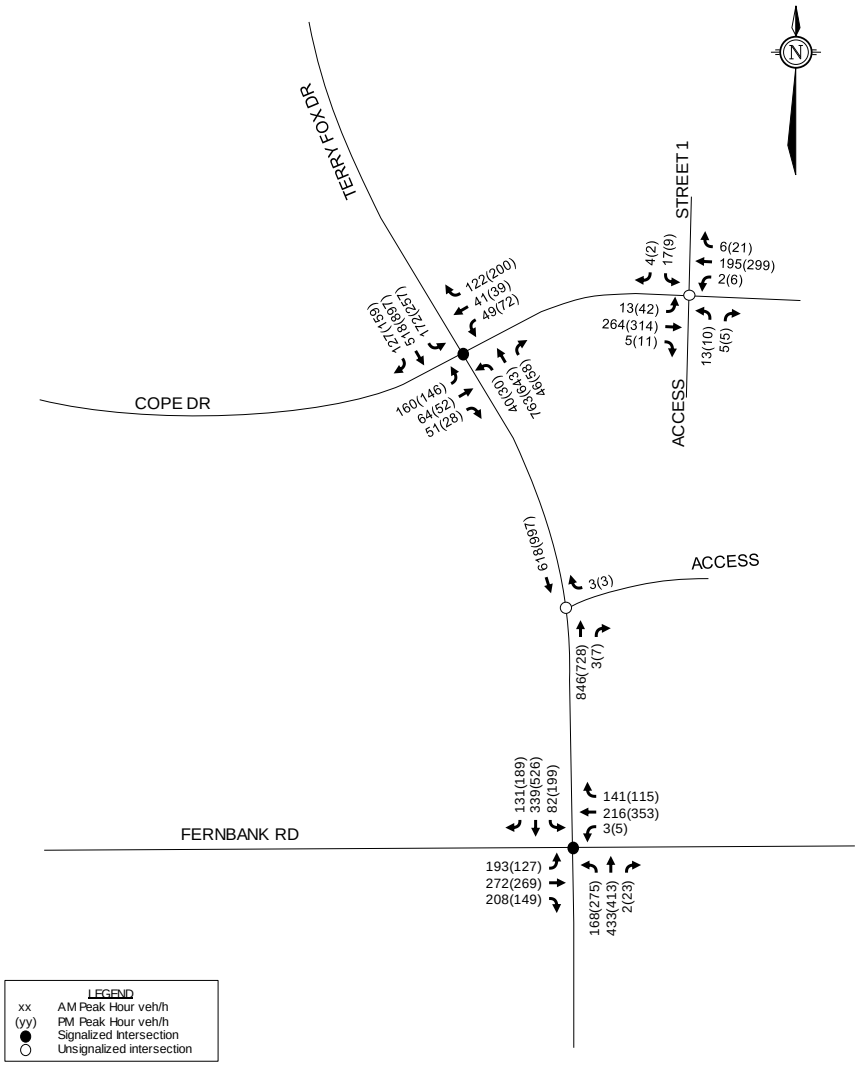

3.3 Demand Rationalization

A review of the existing and background intersection operations has been conducted to determine if and when the projected background traffic will exceed the capacity within the study area. The intersection parameters used in the analysis are consistent with the City of Ottawa's TIA guidelines (saturated flow rate: 1800 vphpl, PHF: 0.9 for existing conditions and 1.0 for future conditions).

Intersection lane arrangements are consistent with the existing conditions described in Section 4.1. Intersection signal timing plans were obtained from the City, and are included in **Appendix D**.

3.3.1 Existing Traffic

Intersection capacity analysis has been completed for the existing traffic conditions. The results of the analysis are summarized in the following table for the weekday AM and PM peak hours. Detailed reports are included in **Appendix G**.

Table 7: Existing Traffic

Intersection	AM Peak			PM Peak		
	Max V/C or Delay	LOS	Mvmt	Max V/C or Delay	LOS	Mvmt
Terry Fox Drive/ Cope Drive[1]	0.56	A	NBT/R	0.80	C	EBL
Terry Fox Drive/ Fernbank Road[1]	0.78	C	NBT/R	**1.12**	**F**	**NBL**

1. Signalized Intersection

Critical movements at the Terry Fox Drive/Cope Drive intersection are currently operating with a LOS C or better during the weekday AM and PM peak hours. The maximum (95th percentile) queue length for all auxiliary lanes does not exceed the existing storage length during the AM and PM peak hours. However, the maximum northbound (AM and PM peak) and southbound (PM peak) through queues along Terry Fox Drive extend past and block access to the adjacent auxiliary left turn lanes.

Critical movements at the Terry Fox Drive/Fernbank Road intersection are currently operating with a LOS C during the AM peak hour and a LOS F during the PM peak hour. The maximum queue length for all auxiliary lanes does not exceed the existing storage length during the AM and PM peak hours. However, the southbound through queue along Terry Fox Drive extends past and block access to the adjacent auxiliary left and right turn lanes during the PM peak hour. PM peak hour traffic signalization with an increased cycle length of 120 seconds is anticipated to improve operations to a LOS D, meeting the area target.

3.3.2 2023 Background Traffic

Intersection capacity analysis has been completed for the 2023 background traffic conditions. The results of the analysis are summarized in the following table for the weekday AM and PM peak hours. Detailed reports are included in **Appendix G**.

Table 8: 2023 Background Traffic

Intersection	AM Peak			PM Peak		
	Max V/C or Delay	LOS	Mvmt	Max V/C or Delay	LOS	Mvmt
Terry Fox Drive/ Cope Drive[1]	0.61	B	NBT/R	0.86	D	EBL
Terry Fox Drive/ Fernbank Road[1]	0.79	C	NBT/R	**1.06**	**F**	**NBL**
Cope Drive/ Street 1[2]	11 sec	B	SB	13 sec	B	SB

1. Signalized Intersection
2. Unsignalized Intersection

Critical movements at the Terry Fox Drive/Cope Drive intersection are anticipated to operate with a LOS D or better during the weekday AM and PM peak hours. The maximum queue length for all auxiliary lanes does not exceed the existing storage length during the AM and PM peak hours. Consistent with the existing traffic condition, the maximum northbound (AM and PM peak) and southbound (PM peak) through queues along Terry Fox Drive extend past and block access to the adjacent auxiliary left turn lanes.

Critical movements at the Terry Fox Drive/Fernbank Road intersection are anticipated to operate with a LOS C during the AM peak hour and a LOS F during the PM peak hour. The maximum queue length for all auxiliary lanes does not exceed the existing storage length during the AM and PM peak hours. Consistent with the existing traffic condition, the maximum southbound through queue along Terry Fox Drive extends past and block access to the adjacent auxiliary left and right turn lanes during the PM peak hour. PM peak hour traffic signalization with an increased cycle length of 120 seconds is anticipated to improve operations to a LOS D, meeting the area target. The increased cycle length is not anticipated to have a significant impact to the PLOS delay score at this intersection.

3.3.3 2028 Background Traffic

Intersection capacity analysis has been completed for the 2028 background traffic conditions. The results of the analysis are summarized in the following table for the weekday AM and PM peak hours. Detailed reports are included in **Appendix G**.

Table 9: 2028 Background Traffic

Intersection	AM Peak			PM Peak		
	Max V/C or Delay	LOS	Mvmt	Max V/C or Delay	LOS	Mvmt
Terry Fox Drive/ Cope Drive[1]	0.75	C	NBT/R	0.90	D	EBL
Terry Fox Drive/ Fernbank Road[1]	0.83	D	NBT/R	**1.22**	**F**	**NBL**
				0.93	**E**	**SBT**
Cope Drive/ Street 1[2]	12 sec	B	SB	14 sec	B	SB

1. Signalized Intersection
2. Unsignalized Intersection

Critical movements at the Terry Fox Drive/Cope Drive intersection are anticipated to operate with a LOS D or better during the weekday AM and PM peak hours. The maximum queue length for the southbound left turn movement is anticipated to be 55m to 65m during the weekday AM and PM peak hours respectively, exceeding the existing storage by approximately 5m to 15m. The maximum queue length for all other auxiliary lanes does not exceed the existing storage length during the AM and PM peak hours. Consistent with the 2023 background traffic condition, the maximum northbound (AM and PM peak) and southbound (PM peak) through queues along Terry Fox Drive extend past and block access to the adjacent auxiliary left turn lanes.

It is noted that the TIA dated March 2019 in support of the 5331 Fernbank Road and 1039 Terry Fox Drive subdivision recommended the City consider the implementation of a westbound right turn lane at the Terry Fox Drive/Cope Drive intersection to improve operations of the eastbound left turn movement during the PM peak hour. Although more recent traffic counts suggest the eastbound left turn movement is anticipated to meet the target LOS D during the PM peak hour,

the implementation of a westbound right turn lane would improve the eastbound left turn operations to a LOS B (v/c ratio 0.65). This is identified for the City's consideration as funding permits.

Critical movements at the Terry Fox Drive/Fernbank Road intersection are anticipated to operate with a LOS D during the AM peak hour and a LOS F during the PM peak hour. The maximum queue length for the northbound left turn movement is anticipated to be 95m during the weekday PM peak hour, exceeding the existing storage by approximately 5m. The maximum queue length for all other auxiliary lanes does not exceed the existing storage length during the AM and PM peak hours. Consistent with the 2023 background traffic condition, the southbound through queue along Terry Fox Drive extends past and block access to the adjacent auxiliary left and right turn lanes during the PM peak hour. PM peak hour traffic signalization with an increased cycle length of 120 seconds is anticipated to improve operations to a LOS E (v/c ratio of 0.91), slightly exceeding the area target. The increased cycle length is not anticipated to have a significant impact to the PLOS delay score at this intersection.

4.0 ANALYSIS

4.1 Development Design

4.1.1 Design for Sustainable Modes

A sidewalk will be provided on both sides of the main drive-aisles, connecting to the existing sidewalks along Cope Drive and Fernbank Road. A north-south pathway will also be provided on the eastern portion of the site, connecting from Cope Drive to Fernbank Road. An east-west pathway will be provided between buildings G and F, connecting to an existing pathway leading to Patriot Place.

Bicycle parking will be in accordance with the minimum requirements of the City's Zoning By-law. Bicycle parking racks will be located near the entrances for each building.

The closest OC Transpo bus stops to the subject site are #4031, #1919, and #6933 along Cope Drive, and #1930 and #1933 along Fernbank Road. These bus stops serve OC Transpo Routes 161, 164, 168, and 252, and can be accessed via the proposed pedestrian connections to Cope Drive and Fernbank Road.

A review of the City's Transportation Demand Management (TDM) – Supportive Development Design and Infrastructure Checklist has been conducted. A copy of the TDM checklist is included in **Appendix H**. All required TDM-supportive design and infrastructure measures in the TDM checklist are met. In addition to the required measures, the proposed development also meets the following 'basic' or 'better' measures as defined in the TDM-supported design and infrastructure measures checklist:

- Locate building entrances in order to minimize walking distances to sidewalks and transit stops/stations
- Locate building doors and windows to ensure visibility of pedestrians from the building, for their security and comfort
- Provide safe, direct and attractive walking routes from building entrances to nearby transit stops

- Ensure that walking routes to transit stops are secure, visible, lighted, shaded and wind-protected wherever possible

4.1.2 Circulation and Access

The main drive aisle will function as the fire route for the development, as shown on the Site Plan in **Appendix A**.

Garbage collection will be conducted on-site. Earth bins will be located on the west side of the main drive aisle opposite Building G, and in a garbage area south of Building Q. The turning movements of a Medium Single Unit Truck, which is representative of a garbage truck, accessing the earth bins are included in **Figure 12** and **13**.

4.2 Parking

The subject site is located in Area C on Schedule 1 and 1A of the City of Ottawa's Zoning By-Law. Minimum vehicular and bicycle parking rates for the proposed development are identified in the Zoning By-law and are summarized in the following table.

Table 10: Parking Requirements

Land Use	Minimum Parking Rate	Units	Required
Vehicle Parking			
Apartment	1.2 spaces per unit (Resident)	192	230
	0.2 spaces per unit (Visitor)		38
		Total	**268**
Bicycle Parking			
Apartment	0.5 spaces per unit	192	96
		Total	**96**

A total of 268 vehicle parking spaces (230 resident, 38 visitor) and 96 bicycle parking spaces are proposed, meeting the minimum requirements of the City's Zoning By-law.

4.3 Boundary Streets

This section provides a review of the boundary streets using complete streets principles. The Multi-Modal Level of Service (MMLOS) guidelines produced by IBI Group in 2015 were used to evaluate the LOS of the boundary roadways for each mode of transportation. Schedule 'B' of the City of Ottawa's Official Plan indicates that Cope Drive, Fernbank Road, and Terry Fox Drive are located within the General Urban Area.

A summary of the results of the segment MMLOS analysis for the boundary roadways is provided in the following table. Detailed segment MMLOS calculations can be found in **Appendix I**.

Table 11: Segment MMLOS Summary

Segment	PLOS	BLOS	TLOS	TkLOS
Cope Drive	A	F	D	B
Target	**C**	**B**	**-**	**-**
Fernbank Road	F	E	D	C
Target	**C**	**C**	**-**	**E**
Terry Fox Drive	F	E	D	C
Target	**C**	**B**	**-**	**D**

Cope Drive meets the target PLOS but does not meet the target BLOS for the general urban area. Based on the criteria in Exhibit 11 of the MMLOS Guidelines, either a reduction in operating speed combined with bike lanes or a separated cycling facility are required to achieve the target BLOS B. This is identified for the City's consideration.

Fernbank Road meets the target TkLOS for the general urban area. However, it does not meet a target PLOS C and BLOS C. Based on Exhibit 4 of the MMLOS Guidelines, a boulevard width of 0.5m or greater between the sidewalk and the roadway is required on the north side of the road. A reduction in the operating speed is required to achieve the target PLOS C on the south side of the road. Based on the criteria in Exhibit 11 of the MMLOS Guidelines, either a reduction in operating speed or a separated cycling facility are required to achieve the target BLOS C. This is identified for the City's consideration.

Terry Fox Drive meets the target TkLOS. However, it does not meet the target PLOS and BLOS. Terry Fox Drive currently has a two-lane undivided rural cross-section adjacent to the subject site. The City of Ottawa's 2013 TMP does not identify any roadway projects along this stretch of Terry Fox Drive in its affordable plan, however it does identify a widening from two to four lanes between Winchester Drive and Eagleson Road in its network concept.

Opportunities to improve the PLOS and BLOS should be explored by the City through the future widening of Terry Fox Drive, as identified in the City's 2013 TMP network concept. At that time, consideration should be given by the City to providing a 2m sidewalk with a boulevard to improve the PLOS. A review of the OTM Book 18 Cycling Nomograph suggests consideration should be

given to implementing a separated cycling facility along Terry Fox Drive as part of the future widening project.

4.4 Access Intersections Design

One new all movement access is proposed on Cope Drive, opposite the future Street 1 connection to the subdivision north of Cope Drive, and a right-in right-out access to Terry Fox Drive. The sidewalk along Cope Drive will be depressed and continuous through the proposed access, per City of Ottawa Specification 7.1.

The Cope Drive access is located approximately 40m from the east property line and 120m from the Terry Fox Drive right-of-way limit. The Terry Fox Drive access is located approximately 210m from the Cope Drive right-of-way limit and 145m from the Fernbank Road right-of-way limit. The Cope Drive access will have a width of 6.7m, while the Terry Fox Drive access will have a width of 10m measured at the property line.

Section 25 (c) of the City of Ottawa's Private Approach By-law identifies that no private approach intended for two-way vehicular traffic shall exceed 9m in width at the street line. Section 107 (1)(a) of the City's Zoning By-law identifies a driveway serving a parking lot must have a minimum width of 6.7m for a double traffic lane. The width of the Cope Drive access conforms to the requirements of the City's Private Approach By-law and Zoning By-law. As the width of the Terry Fox Drive access is required to accommodate the proposed pork chop right-in right-out island, a waiver to Section 25 (c) of the Private Approach By-law is requested.

Section 25 (m) of the City's Private Approach By-law identifies that the access to residential parking lots with 200-299 parking spaces, where the site abuts an arterial roadway, must be a minimum of 60m from the nearest intersecting streetline. Section 25 (p) of the Private Approach By-law identifies that the access must be a minimum of 3m from the nearest property line. The location of both accesses meet the requirements of the Private Approach By-law.

Section 25 (u) of the City's Private Approach By-law identifies a maximum access grade of 2% for a distance of 9m within the property, where the access leads to 50 or more parking spaces. A maximum grade of 2% is proposed for a distance of 9m within the private property at both accesses, conforming to the requirements of the Private Approach By-law.

Based on the projected northbound right turn volumes at the Terry Fox Drive access, a right turn lane is not recommended. A pork chop island will be provided to restrict this access to right-in right-out. The design of the pork chop island will be in accordance with Transportation Association of Canada (TAC) Geometric Design Guidelines standards and will accommodate the turning movements of a Fire Truck. Fire Truck turning movements at the Terry Fox Drive access are shown in **Figures 14** and **15**.

Based on the projected eastbound right turn volumes at the Cope Drive access, a right turn lane is not recommended. The Ministry of Transportation of Ontario (MTO) left turn lane warrants were reviewed at the Cope Drive access. Based on the MTO graph included in **Appendix J**, a westbound left turn lane is not required. It is noted that an eastbound left turn lane will be provided for the Street 1 subdivision access opposite the Cope Drive access, as depicted in the functional design included in **Appendix K**. To provide improved access operations and safety, a westbound left turn lane will be painted in lieu of the previously proposed gore area runout taper. A revised functional design is included in **Appendix K**.

M:\2021\121011\CAD\Design\Figures\Traffic\121011-TM.dwg, FIG15, Nov 05, 2021 - 2:29pm, bbyvelds

A review of stopping sight distance (SSD) and Intersection Sight Distance (ISD) at both accesses has been conducted in accordance with Transportation Association of Canada (TAC) Geometric Design Guidelines. For design purposes, TAC recommends a driver eye height of 1.08m. TAC identifies the following SSD and ISD requirements for the Cope Drive access, based on a design speed of 60km/hr, and the Terry Fox Drive access, based on a design speed of 90km/hr.

Cope Drive
- 85m SSD
- ISD:
  - 130m looking right, to turn left
  - 110m looking left, to turn right

Terry Fox Drive
- 160m SSD
- ISD:
  - 165m looking left, to turn right

Based on the landscape plan, three Japanese Lilac trees and two Makamik Crabapple trees are proposed within the right-of-way east and west of the proposed Cope Drive access. The proposed street trees will have a high canopy and will not represent an obstruction to sightlines.

The required SSD and ISD at the Cope Drive access meets TAC requirements and is depicted in **Figures 16** to **19**.

The required SSD and ISD at the Terry Fox Drive access meets TAC requirements and is depicted in **Figures 20** and **21**.

A review of the intersection operations at the proposed accesses was conducted for the 2023 and 2028 total traffic conditions. The following table provides a summary of the access intersection operations, assuming side street stop control. Detailed summary sheets are provided in **Appendix L**.

Table 12: Access Intersection Operations

Intersection	AM Peak			PM Peak		
	Delay	LOS	Mvmt	Delay	LOS	Mvmt
2023 Total						
Terry Fox Drive Access	13 sec	B	WB	12 sec	B	WB
Cope Drive Access	12 sec	B	SB	15 sec	B	SB
2028 Total						
Terry Fox Drive Access	15 sec	B	WB	13 sec	B	WB
Cope Drive Access	12 sec	B	SB	15 sec	B	SB

The proposed accesses are anticipated to operate with a LOS B or better during the weekday AM and PM peak hours under the 2023 and 2028 total traffic conditions. Based on the foregoing, side street stop control is recommended at the proposed accesses along Cope Drive and Terry Fox Drive.

4.5 Transportation Demand Management

4.5.1 Context for TDM

The proposed development will contain 192 two-bedroom residential units.

4.5.2 Need and Opportunity

The assumed modal shares for the development are consistent with the existing modal shares associated with high-rise (3+ storey) residential developments in the Kanata/Stittsville district. Based on this, the proposed development is anticipated to meet the assumed modal shares.

4.5.3 TDM Program

The proposed development conforms to the City's TDM initiatives by providing easy access to local pedestrian, bicycle, and transit systems as outlined in **Section 4.1**. A review of the TDM – Measures Checklist has been conducted and is included in **Appendix H**. The following measures will be implemented within the proposed development:

- Unbundle parking from purchase price, and
- Provide multimodal travel option information package to new residents.

4.6 Neighbourhood Traffic Management

Cope Drive is classified as collector roadway adjacent to the subject site. The following table summarizes the 2028 background traffic, proposed additional traffic, and total traffic along Cope Drive.

Table 13: Neighbourhood Traffic Impacts

Roadway	AM Peak			PM Peak		
	2028 Bkgd	Site	2028 Total	2028 Bkgd	Site	2028 Total
Cope Dr east of access						
Eastbound	281	5	**286**	323	5	**328**
Westbound	201	2	**203**	320	6	**326**

The City of Ottawa Area Traffic Management (ATM) guidelines identify a maximum threshold of 2,500 vehicles per day, or 300 vehicles during the peak hour for collector roadways. The 2028 background and total traffic volumes along Cope Drive exceed the ATM threshold. However, it is noted that the overall capacity of a collector roadway is estimated at 600 vehicles per hour per lane based on the City's TRANS Long Range Transportation Model. Total peak hour, peak directional traffic volumes along Cope Drive equate to a volume to capacity (v/c) ratio of 0.48 (LOS A) during the AM peak hour and 0.55 (LOS A) during the PM peak hour.

The proposed development is anticipated to generate 7-11 vehicle trips (two-way) along Cope Drive east of the access during the weekday AM and PM peak hours. This equates to one vehicle every 5.5-8.5 minutes during peak hours. As there is sufficient capacity along Cope Drive to accommodate traffic generated by the development, no mitigation measures are recommended to offset the impacts of the development generated traffic.

4.7 Transit

Based on the trip generation presented in Section 3.1, the proposed development is anticipated to generate an additional 24 transit trips (17 boarding, 7 alighting) during the AM peak hour and 17 transit trips (7 boarding, 10 alighting) during the PM peak hour.

The distribution of transit trips to/from the development has been estimated based on origin-destination data from the 2011 TRANS O-D Survey Report. The destinations of trips from the Kanata/Stittsville Area to all TRANS O-D districts during the AM peak period were used to develop the following transit distribution:

AM Peak
- 45% board Route 161 northbound
- 35% board Route 164 northbound
- 20% board Route 252 northbound
- 100% alight Route 161 southbound

PM Peak
- 100% board Route 161 northbound
- 45% alight Route 161 southbound
- 35% alight Route 164 southbound
- 20% alight Route 252 southbound

The projected transit route load at arrival and departure of the study area is summarized in the following table.

Table 14: Projected Transit Utilization

Route		Existing Load at Arrival to Study Area	Site Trips Alighting[1]	Future Load at Arrival to Study Area	Existing Load at Departure of Study Area	Site Trips Boarding[1]	Future Load at Departure of Study Area
AM Peak							
161	NB	3	0	3	3	8	11
	SB	2	7	9	1	0	1
164	NB	2	0	2	2	6	8
	SB	-	-	-	-	-	-
252	NB	3	0	3	3	3	6
	SB	-	-	-	-	-	-
PM Peak							
161	NB	3	0	3	3	7	10
	SB	5	5	10	4	0	4
164	NB	-	-	-	-	-	-
	SB	6	3	9	4	0	4
252	NB	-	-	-	-	-	-
	SB	7	2	9	3	0	3

1. Conservatively assumes all site trips board/alight one bus. However based on existing headways, a minimum of two buses service route 161, 164, and 252 during peak hours

Based on the foregoing, the existing routes 161, 164, and 252 have capacity to accommodate the projected transit trips generated by the proposed development.

4.8 Network Concept

Per Section 2.4, this module is exempt from the analysis.

4.9 Network Intersections

4.9.1 Existing Intersection MMLOS Analysis

This section provides a review of the signalized study area intersections using complete streets principles. The MMLOS guidelines produced by IBI Group in October 2015 were used to evaluate the LOS of all study area intersections for each mode of transportation. Schedule 'B' of the City of Ottawa's Official Plan indicates the Terry Fox Drive/Cope Drive and Terry Fox Drive/Fernbank Road intersections are located in the General Urban Area. Aerial photo of these intersections are provided in Section 2.1.2.

The following table summarizes the findings of the MMLOS intersection analysis. Detailed intersection MMLOS calculations are included in **Appendix I**.

Table 15: Intersection MMLOS Summary

Segment	PLOS	BLOS	TLOS	TkLOS	Auto LOS
Terry Fox Drive/ Cope Drive	F	E	E	C	C
Target	**C**	**B**	**-**	**D**	**D**
Terry Fox Drive/ Fernbank Road	F	E	F	C	F
Target	**C**	**B**	**-**	**D**	**D**

Terry Fox Drive/Cope Drive
The Terry Fox Drive/Cope Drive intersection currently does not meet the target PLOS or BLOS for the General Urban Area. As this intersection is not located along a rapid transit or transit priority network, there is no target TLOS.

Based on the Pedestrian Exposure to Traffic (PETSI) score, the Terry Fox Drive/Cope Drive intersection is operating with a PLOS F. Based on the Pedestrian Delay Evaluation Table, this intersection is operating with a PLOS D. A reduction in the crossing distance on all legs of the intersection would have the greatest improvement on the PETSI score and the Pedestrian Delay.

All approaches do not meet the target BLOS B based on the left turn characteristics, and the north approach does not meet the target BLOS B based on the right turn characteristics. Due to the high operational speed along Terry Fox Drive, a BLOS B is unachievable on the north and south approaches. Based on Exhibit 12 of the MMLOS Guidelines, the target BLOS can be achieved on the east and west approaches by implementing two-stage left-turn bike boxes. This is identified for the City's consideration.

Terry Fox Drive/Fernbank Road
The Terry Fox Drive/Fernbank Road intersection currently does not meet the target PLOS, BLOS, or Auto LOS for the General Urban Area. As this intersection is not located along a rapid transit or transit priority network, there is no target TLOS.

Based on the Pedestrian Exposure to Traffic (PETSI) score, the Terry Fox Drive/Fernbank Road intersection is operating with a PLOS F. Based on the Pedestrian Delay Evaluation Table, this

intersection is operating with a PLOS E. A reduction in the crossing distance on all legs of the intersection would have the greatest improvement on the PETSI score and the Pedestrian Delay.

All approaches do not meet the target BLOS B based on the left turn characteristics, and the north, east and west approaches do not meet the target BLOS B based on the right turn characteristics. Due to the high operational speed along Terry Fox Drive and Fernbank Road, a BLOS B is unachievable at this intersection. A reduction in the length of the southbound, eastbound, and westbound right turn lanes, and a reduction in the operating speed along both Terry Fox Drive and Fernbank Road are required to meet the target BLOS at this intersection.

Critical movements at the Terry Fox Drive/Fernbank Road intersection are currently operating with a LOS C during the AM peak hour and a LOS F during the PM peak hour. The 95th percentile queue length for all auxiliary lanes does not exceed the existing storage length during the AM and PM peak hours. PM peak hour traffic signalization with an increased cycle length of 120 seconds is anticipated to improve operations to a LOS D, meeting the area target. The increased cycle length is not anticipated to have a significant impact to the PLOS delay score at this intersection.

4.9.2 2023 Total Intersection Operations

Intersection capacity analysis has been completed for the 2023 total traffic conditions. The results of the analysis are summarized in the following table for the weekday AM and PM peak hours. Detailed reports are included in **Appendix L**.

Table 16: 2023 Total Traffic

Intersection	AM Peak			PM Peak		
	Max V/C	LOS	Mvmt	Max V/C	LOS	Mvmt
Terry Fox Drive/ Cope Drive	0.62	B	NBT/R	0.88	D	EBL
Terry Fox Drive/ Fernbank Road	0.79	C	NBT/R	**1.06**	**F**	**NBL**

Comparing the previous tables and the 2023 background traffic conditions, traffic generated by the proposed development is anticipated to have marginal operational effects within the study area. The discussion of over-capacity movements and queue lengths are generally consistent with those described in Section 3.3.2.

The maximum northbound through queue along Terry Fox Drive is anticipated to be approximately 150m during the AM peak hour and 165m during the PM peak hour. This queue is not anticipated to block the Terry Fox Drive right-in right-out access.

4.9.3 2028 Total Intersection Operations

Intersection capacity analysis has been completed for the 2028 total traffic conditions. The results of the analysis are summarized in the following table for the weekday AM and PM peak hours. Detailed reports are included in **Appendix L**.

Table 17: 2028 Total Traffic

Intersection	AM Peak			PM Peak		
	Max V/C	LOS	Mvmt	Max V/C	LOS	Mvmt
Terry Fox Drive/ Cope Drive	0.75	C	NBT/R	**0.91**	**E**	**EBL**
Terry Fox Drive/ Fernbank Road	0.83	D	NBT/R	**1.23**	**F**	**NBL**
				0.93	**E**	**SBT**

Comparing the previous tables and the 2028 background traffic conditions, traffic generated by the proposed development is anticipated to have marginal operational effects within the study area. The discussion of over-capacity movements and queue lengths are generally consistent with those described in Section 3.3.3.

It is noted that the v/c ratio associated with the eastbound left turn movement at the Terry Fox Drive/Cope Drive intersection is anticipated to increase from 0.90 to 0.91 during the PM peak hour, increasing to a LOS E. Minor optimization to the existing traffic signal plan is anticipated to improve operations to a LOS D, achieving the area target.

The maximum northbound through queue along Terry Fox Drive is anticipated to be approximately 195m during the AM peak hour and 200m during the PM peak hour. This queue is anticipated to extend approximately to the Terry Fox Drive right-in right-out access during the peak hours, and drivers exiting north onto Terry Fox Drive may periodically rely on courtesy of other drivers.

5.0 CONCLUSIONS AND RECOMMENDATIONS

Based on the foregoing, the conclusions and recommendations of this TIA can be summarized as follows:

<u>Development Design</u>

- A sidewalk will be provided on both sides of the main drive-aisles, connecting to the existing sidewalks along Cope Drive and Fernbank Road.
- A north-south pathway will also be provided on the eastern portion of the site, connecting from Cope Drive to Fernbank Road. An east-west pathway will be provided between buildings G and F, connecting to an existing pathway leading to Patriot Place.
- Bicycle parking will be in accordance with the minimum requirements of the City's Zoning By-law. Bicycle parking racks will be located near the entrances for each building.
- All required TDM-supportive design and infrastructure measures in the TDM checklist are met.
- Garbage collection will be conducted on-site. Earth bins will be located on the west side of the main drive aisle opposite Building G, and in a garbage area south of Building Q.

<u>Parking</u>

- A total of 268 vehicle parking spaces (230 resident, 38 visitor) and 96 bicycle parking spaces are proposed, meeting the minimum requirements of the City's Zoning By-law.

<u>Boundary Street Design</u>

- Cope Drive meets the target PLOS but does not meet the target BLOS for the general urban area. Either a reduction in operating speed combined with bike lanes or a separated

cycling facility are required to achieve the target BLOS B. This is identified for the City's consideration.

- Fernbank Road meets the target TkLOS for the general urban area. However, it does not meet a target PLOS C and BLOS C. A boulevard width of 0.5m or greater between the sidewalk and the roadway is required on the north side of the road. A reduction in the operating speed is required to achieve the target PLOS C on the south side of the road. Either a reduction in operating speed or a separated cycling facility are required to achieve the target BLOS C. This is identified for the City's consideration.
- Terry Fox Drive meets the target TkLOS. However, it does not meet the target PLOS and BLOS. Opportunities to improve the PLOS and BLOS should be explored by the City through the future widening of Terry Fox Drive, as identified in the City's 2013 TMP network concept. At that time, consideration should be given by the City to providing a 2m sidewalk with a boulevard to improve the PLOS. A review of the OTM Book 18 Cycling Nomograph suggests consideration should be given to implementing a separated cycling facility along Terry Fox Drive as part of the future widening project.

Access Intersections Design

- One new all movement access is proposed on Cope Drive, opposite the future Street 1 connection to the subdivision north of Cope Drive, and a right-in right-out access to Terry Fox Drive. The sidewalk along Cope Drive will be depressed and continuous through the proposed accesses, per City of Ottawa Specification 7.1.
- The width of the Cope Drive access conforms to the requirements of the City's Private Approach By-law and Zoning By-law.
- As the width of the Terry Fox Drive access is required to accommodate the proposed pork chop right-in right-out island, a waiver to Section 25 (c) of the Private Approach By-law is requested.
- The location of both accesses meet the requirements of the Private Approach By-law.
- A maximum grade of 2% is proposed for a distance of 9m within the private property at both accesses, conforming to the requirements of the Private Approach By-law.
- Based on the projected northbound right turn volumes at the Terry Fox Drive access, a right turn lane is not recommended. A pork chop island will be provided to restrict this access to right-in right-out.
- Based on the projected eastbound right turn volumes at the Cope Drive access, a right turn lane is not recommended.
- To provide improved access operations and safety, a westbound left turn lane will be painted in lieu of the previously proposed gore area runout taper as part of the left turn lane for the subdivision opposite the proposed development.
- The required Stopping Sight Distance and Intersection Sight Distance at both accesses meet TAC requirements.
- Side street stop control is recommended at the proposed accesses along Cope Drive and Terry Fox Drive.

Transportation Demand Management

- The proposed development conforms to the City's TDM initiatives by providing easy access to local pedestrian, bicycle, and transit systems.
- The following additional TDM measures will be implemented within the proposed development:
    - Unbundle parking from purchase price, and
    - Provide multimodal travel option information package to new residents.

Neighbourhood Traffic Management

- The proposed development is anticipated to generate 7-11 vehicle trips (two-way) along Cope Drive east of the access during the weekday AM and PM peak hours. This equates to one vehicle every 5.5-8.5 minutes during peak hours.
- As there is sufficient capacity along Cope Drive to accommodate traffic generated by the development, no mitigation measures are recommended to offset the impacts of the development generated traffic.

Transit

- The existing routes 161, 164, and 252 have capacity to accommodate the projected transit trips generated by the proposed development.

MMLOS Analysis

- Terry Fox Drive/Cope Drive
    - The Terry Fox Drive/Cope Drive intersection currently does not meet the target PLOS or BLOS for the General Urban Area. As this intersection is not located along a rapid transit or transit priority network, there is no target TLOS.
    - A reduction in the crossing distance on all legs of the intersection would have the greatest improvement on the PETSI score and the Pedestrian Delay.
    - Due to the high operational speed along Terry Fox Drive, a BLOS B is unachievable on the north and south approaches. The target BLOS can be achieved on the east and west approaches by implementing two-stage left-turn bike boxes. This is identified for the City's consideration.
- Terry Fox Drive/Fernbank Road
    - The Terry Fox Drive/Fernbank Road intersection currently does not meet the target PLOS, BLOS, or Auto LOS for the General Urban Area. As this intersection is not located along a rapid transit or transit priority network, there is no target TLOS.
    - A reduction in the crossing distance on all legs of the intersection would have the greatest improvement on the PETSI score and the Pedestrian Delay.
    - Due to the high operational speed along Terry Fox Drive and Fernbank Road, a BLOS B is unachievable at this intersection. A reduction in the length of the southbound, eastbound, and westbound right turn lanes, and a reduction in the operating speed along both Terry Fox Drive and Fernbank Road are required to meet the target BLOS at this intersection.
    - Critical movements at the Terry Fox Drive/Fernbank Road intersection are currently operating with an Auto LOS C during the AM peak hour and an Auto LOS F during the PM peak hour.
    - PM peak hour traffic signalization with an increased cycle length of 120 seconds is anticipated to improve operations to a LOS D, meeting the area target. The increased cycle length is not anticipated to have a significant impact to the PLOS delay score at this intersection.

Background Intersection Operations

- Critical movements at the Terry Fox Drive/Cope Drive intersection are anticipated to operate with a LOS D or better during the weekday AM and PM peak hours.
- Critical movements at the Terry Fox Drive/Fernbank Road intersection are anticipated to operate with a LOS C during the AM peak hour and a LOS F during the PM peak hour.
- PM peak hour traffic signalization with an increased cycle length of 120 seconds is anticipated to improve operations to a LOS D, meeting the area target. The increased

cycle length is not anticipated to have a significant impact to the PLOS delay score at this intersection.

Total Intersection Operations

- Traffic generated by the proposed development is anticipated to have marginal operational effects within the study area. The discussion of over-capacity movements and queue lengths are generally consistent with those described in the background traffic analysis.
- Under 2028 total traffic conditions, the v/c ratio associated with the eastbound left turn movement at the Terry Fox Drive/Cope Drive intersection is anticipated to increase from 0.90 to 0.91 during the PM peak hour, increasing to a LOS E. Minor optimization to the existing traffic signal plan is anticipated to improve operations to a LOS D, achieving the area target.
- Under 2028 total traffic conditions, the maximum northbound through queue along Terry Fox Drive is anticipated to be approximately 195m during the AM peak hour and 200m during the PM peak hour. This queue is anticipated to extend approximately to the Terry Fox Drive right-in right-out access during the peak hours, and drivers exiting north onto Terry Fox Drive may periodically rely on courtesy of other drivers.

APPENDIX B

TIA Screening Form

City of Ottawa 2017 TIA Guidelines Screening Form

1. Description of Proposed Development

Municipal Address	**5331 Fernbank Road**
Description of Location	**East side of Terry Fox Drive, between Fernbank Road and Cope Drive**
Land Use Classification	**Residential**
Development Size (units)	**192 Units**
Development Size (m^2)	
Number of Accesses and Locations	**One all movement to Cope Drive** **One Right-in Right-out to Terry Fox Drive**
Phase of Development	**One**
Buildout Year	

If available, please attach a sketch of the development or site plan to this form.

2. Trip Generation Trigger

Considering the Development's Land Use type and Size (as filled out in the previous section), please refer to the Trip Generation Trigger checks below.

Land Use Type	Minimum Development Size
Single-family homes	40 units
Townhomes or apartments	90 units
Office	3,500 m^2
Industrial	5,000 m^2
Fast-food restaurant or coffee shop	100 m^2
Destination retail	1,000 m^2
Gas station or convenience market	75 m^2

** If the development has a land use type other than what is presented in the table above, estimates of person-trip generation may be made based on average trip generation characteristics represented in the current edition of the Institute of Transportation Engineers (ITE) Trip Generation Manual.*

If the proposed development size is greater than the sizes identified above, the Trip Generation Trigger is satisfied.

3. Location Triggers

	Yes	No
Does the development propose a new driveway to a boundary street that is designated as part of the City's Transit Priority, Rapid Transit or Spine Bicycle Networks?	✓	
Is the development in a Design Priority Area (DPA) or Transit-oriented Development (TOD) zone?*		×

**DPA and TOD are identified in the City of Ottawa Official Plan (DPA in Section 2.5.1 and Schedules A and B; TOD in Annex 6). See Chapter 4 for a list of City of Ottawa Planning and Engineering documents that support the completion of TIA).*

If any of the above questions were answered with 'Yes,' the Location Trigger is satisfied.

4. Safety Triggers

	Yes	No
Are posted speed limits on a boundary street are 80 km/hr or greater?	✓	
Are there any horizontal/vertical curvatures on a boundary street limits sight lines at a proposed driveway?		×
Is the proposed driveway within the area of influence of an adjacent traffic signal or roundabout (i.e. within 300 m of intersection in rural conditions, or within 150 m of intersection in urban/ suburban conditions)?	✓	
Is the proposed driveway within auxiliary lanes of an intersection?	✓	
Does the proposed driveway make use of an existing median break that serves an existing site?		×
Is there is a documented history of traffic operations or safety concerns on the boundary streets within 500 m of the development?		×
Does the development include a drive-thru facility?		×

If any of the above questions were answered with 'Yes,' the Safety Trigger is satisfied.

5. Summary

	Yes	No
Does the development satisfy the Trip Generation Trigger?	✓	
Does the development satisfy the Location Trigger?	✓	
Does the development satisfy the Safety Trigger?	✓	

If none of the triggers are satisfied, the TIA Study is complete. If one or more of the triggers is satisfied, the TIA Study must continue into the next stage (Screening and Scoping).

To: Brad Byvelds
Subject: RE: Request for Transit Information - Terry Fox and Fernbank

Follow Up Flag: Follow up
Flag Status: Flagged

Hi Brad,

The requested data is provided in the table below. Data was sampled from January 5 to March 7 2020, which is the last period of 'normal' ridership before the pandemic began. Cells with a dash (-) indicate that the bus stop in question is not served by the corresponding route in the given time period and direction. Also note that Route 681 is a specialized school route with limited trips to/from Bell High School to meet the school bell times. While these trips are available to anyone, in practice only high school students use them so they are generally not considered part of the regular transit service and are not shown on the transit system map.

Winter 2020 (5 Jan 2020 - 7 Mar 2020)

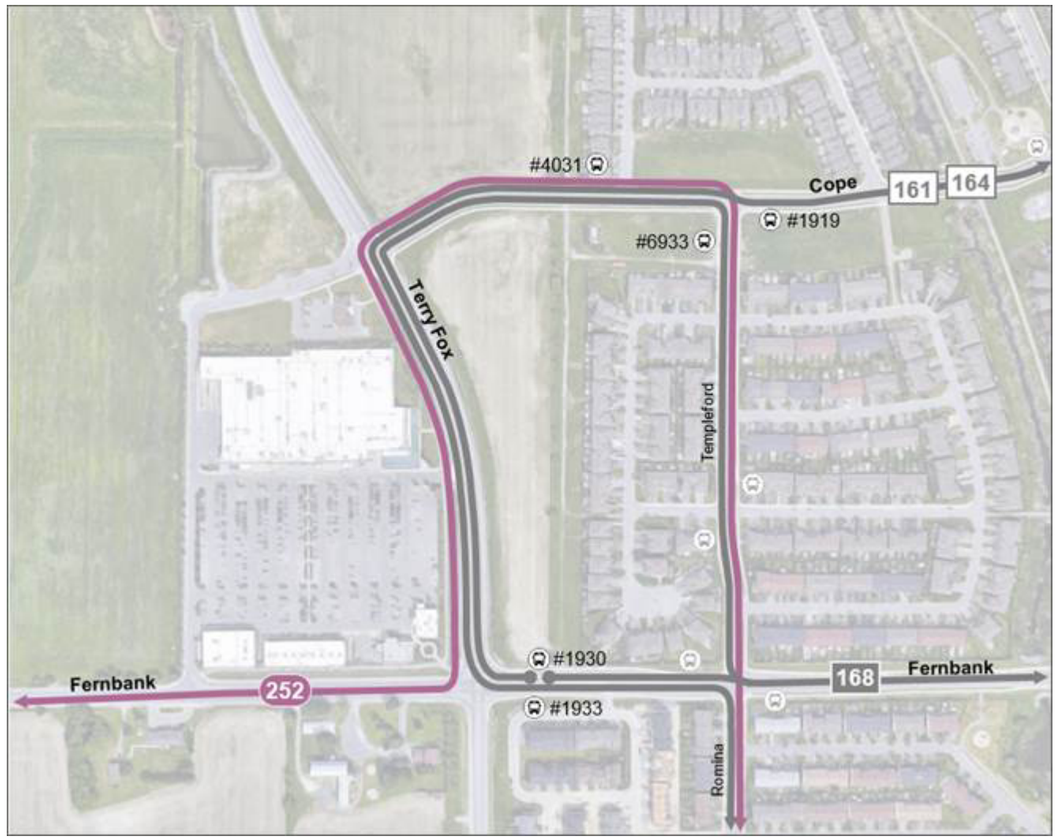
To: Brad Byvelds <B.Byvelds@novatech-eng.com>
Subject: RE: Request for Transit Information

Good afternoon Brad,

Your request has been received and I will follow-up once the data is prepared.

In the meantime, I drafted a quick map of the area with the stops in question and the patterns of the routes that serve them: please see below and attached. Note that Route 167 also currently operates through this area (via Fernbank and Terry Fox) however it does not serve any stops shown within these map extents so it was left off the map. Also note that there are additional bus stops within the map extents (shown with a light grey symbol): these are shown for context only, as I assume the data for the requested stops will be sufficient to meet your needs.



Please let me know if there are any questions about the above or if any additional data is required. I will follow-up as soon as the ridership data is prepared.

Best,

Graham Rathwell

2.2. REVISED SITE PLAN

The Blackstone development draft plan was revised in December 2017 to satisfy City comments received during the application process and with the new properties along Fernbank Road. The subsequent unit count totals 609 units, with a breakdown of 214 single family homes, 239 townhomes, and 156 condo units. The revised trip generation results in a total of 438 two-way person trips (92 inbound, 346 outbound) during the AM peak hour and 544 two-way person trips (350 inbound, 194 outbound) during the PM peak hour. The assumed modal split of 60% auto driver meant a total of 264 two-way auto trips (56 inbound, 208 outbound) during the AM peak hour and 327 two-way auto trips (210 inbound, 117 outbound) during the PM peak hour.

The modified person trip generation is summarized below in Table 3, and the modal split is summarized in Table 4Table 2.

Table 3: Modified Person Trip Generation (Revised Draft Plan)

Land Use	Data Source	Units	AM Peak (Person Trips/hr)			PM Peak (Person Trips/hr)		
			In	Out	Total	In	Out	Total
			17%	83%		67%	33%

Total 'New' Auto Trips		**56**	**208**	**264**	**210**	**117**	**327**

3. CONCLUSIONS

Table 5 summarizes the changes in trip generation from the original TIS and the Revised Draft Plan, broken into total person trips and both auto and transit modal shares.

Table 5: Net Change in Trip Generation and Trips by Mode

Peak Period	Mode Type	Original TIA		Revised Draft Plan		Net Difference	
		Inbound	Outbound	Inbound	Outbound	Inbound	Outbound
AM	Person	98	356	92	346	-6	-10
	Total	454		438		-16	
	Auto	59	214	56	208	-3	-6
	Total	273		264		-9	
PM	Person	361	202	350	194	-11	-8
	Total	563		544		-19	
	Auto	217	122	210	117	-7	-5
	Total	339		327		-12	

The net change in the original TIS trip generation and the Revised Draft Plan is a reduction of 16 total person trips (or 9 auto trips) during the AM peak hour and a reduction of 19 total person trips (or 12 auto trips) during the PM peak hour.

The overall reduction in the trip generation for the Mattamy Blackstone lands is a combination of revised unit count which is 5 units lower than previously submitted, and increase in townhomes over single family homes that typically generate more trips during the peak hours.

Therefore, the reduction in the overall trip generation is considered negligible and the conclusions/recommendations of the May 2017 TIS remain valid. No further trip generation analysis is required to support the December 14, 2017 Revised Draft Plan.

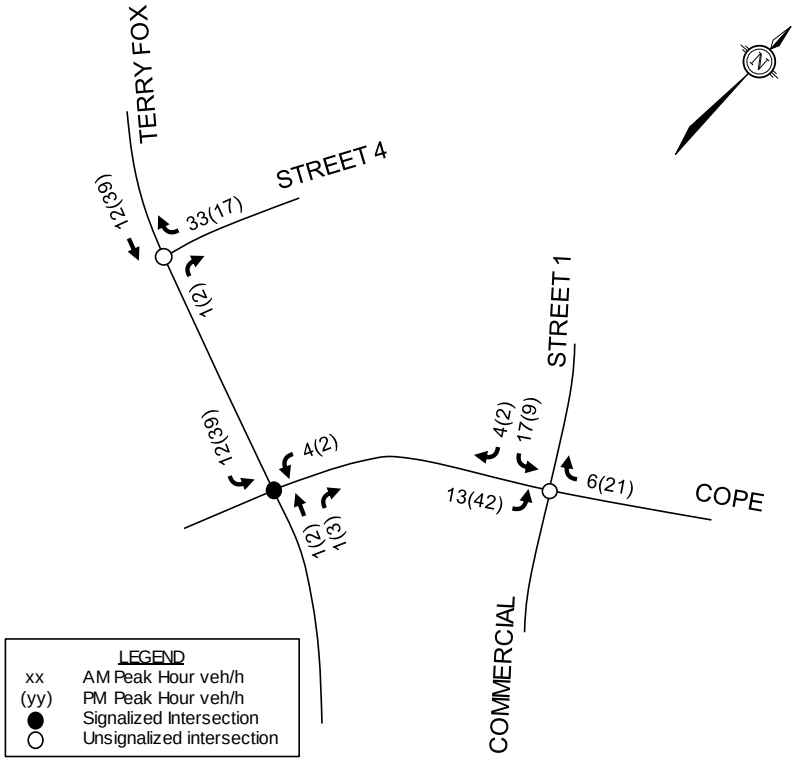
Andrew Harte, P.Eng.
Senior Transportation Engineer

5331 Fernbank Road and 1039 Terry Fox Drive

Figure 5: Site Generated Traffic



4.2 Background Traffic

4.2.1 General Background Growth Rate

The addendum to the Van Gaal Lands CTS applied a 2% background growth rate to the traffic volumes along Terry Fox Drive and Cope Drive. In the interest of maintaining consistency with the addendum, a 2% per annum growth rate has been carried forward for this analysis.

4.2.2 Other Area Development Traffic

As identified above, Site Plan Control or Zoning By-law Amendment applications have been filed for the following lands in the vicinity of the subject site:

- 800 Eagleson Road and 5264 Fernbank Road
- 80, 110, 140, 151 and 180 Cope Drive
- 10 Cope Drive
- 5331 Fernbank Road

The 2022 and 2027 background traffic projections include traffic generated by the developments along Cope Drive, as well as the 5331 Fernbank Road commercial development. As a TIA was not submitted in support of the 800 Eagleson Road site, and the site is located in the southwest corner of the Eagleson Road/Fernbank Road intersection where minimal traffic is anticipated to travel through the study area, this development has not been accounted for in the background traffic projections. Relevant excerpts from other area developments are included in **Appendix E**.

Table 1: Person Trip Generation

Land Use	Units	AM Peak			PM Peak		
		IN	OUT	TOTAL	IN	OUT	TOTAL
Previous TIA							
Single Family Detached Housing	55	16	40	56	51	22	73
Multifamily Housing (Low-Rise)	129	20	58	78	67	28	95
Total		**36**	**98**	**134**	**118**	**50**	**168**
Revised Development							
Single Family Detached Housing	47	12	37	49	40	23	63
Multifamily Housing (Low-Rise)	161	22	74	96	72	43	115
Total		**34**	**111**	**145**	**112**	**66**	**178**
Difference		**-2**	**+13**	**+11**	**-6**	**+16**	**+10**

Based on the foregoing, the revised Draft Plan is anticipated to result in a net increase of 11 person trips during the AM peak hour and 10 person trips during the PM peak hour. The modal shares for the proposed development are consistent with the previous TIA. A full breakdown of the person trips by modal share are summarized in the following table.

Travel Mode	Modal Share	AM Peak			PM Peak		
		IN	OUT	TOTAL	IN	OUT	TOTAL
Previous TIA							
Total Person Trips		36	98	134	118	50	168
Auto Driver	55%	20	54	74	65	27	92
Auto Passenger	15%	5	15	20	18	7	25
Transit	20%	7	20	27	24	10	34
Non-Auto	10%	4	9	13	11	5	17
Revised Development							
Total Person Trips		34	111	145	112	66	178
Auto Driver	55%	19	60	79	62	35	97
Auto Passenger	15%	5	17	22	17	10	27
Transit	20%	7	22	29	22	14	36
Non-Auto	10%	3	12	15	11	7	18
Auto Driver (Difference)		-1	6	5	-3	8	5
Auto Passenger (Difference)		0	2	2	-1	3	2
Transit (Difference)		0	2	2	-2	4	2
Non-Auto (Difference)		-1	3	2	0	2	1

Based on the foregoing, the proposed development is only anticipated to generate an additional five vehicle trips during the AM and PM peak hours, compared to the previously proposed development. The additional vehicle trips generated by the revised development are not anticipated to have a significant impact on the intersection operations presented in the original report.

Intersection Summary

Area Type: Other
Cycle Length: 100
Actuated Cycle Length: 100
Offset: 69 (69%), Referenced to phase 2:NBTL and 6:SBTL, Start of Green
Natural Cycle: 90
Control Type: Actuated-Coordinated
Maximum v/c Ratio: 0.80
Intersection Signal Delay: 17.6 Intersection LOS: B
Intersection Capacity Utilization 90.0% ICU Level of Service E
Analysis Period (min) 15
95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.
m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 2: Terry Fox & Cope

Intersection Summary

Area Type: Other
Cycle Length: 100
Actuated Cycle Length: 100
Offset: 79 (79%), Referenced to phase 2:EBTL and 5:EBL, Start of Green
Natural Cycle: 90
Control Type: Actuated-Coordinated
Maximum v/c Ratio: 1.12
Intersection Signal Delay: 40.5 Intersection LOS: D
Intersection Capacity Utilization 89.5% ICU Level of Service E
Analysis Period (min) 15

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 5: Terry Fox & Fernbank

Intersection Summary

Area Type: Other
Cycle Length: 100
Actuated Cycle Length: 100
Offset: 69 (69%), Referenced to phase 2:NBTL and 6:SBTL, Start of Green
Natural Cycle: 90
Control Type: Actuated-Coordinated
Maximum v/c Ratio: 0.86
Intersection Signal Delay: 19.8 Intersection LOS: B
Intersection Capacity Utilization 95.3% ICU Level of Service F
Analysis Period (min) 15
95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.
m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 2: Terry Fox & Cope

Intersection Summary

Area Type: Other
Cycle Length: 120
Actuated Cycle Length: 120
Offset: 0 (0%), Referenced to phase 2:EBTL and 5:EBL, Start of Green
Natural Cycle: 90
Control Type: Actuated-Coordinated
Maximum v/c Ratio: 0.87
Intersection Signal Delay: 36.1 Intersection LOS: D
Intersection Capacity Utilization 92.8% ICU Level of Service F
Analysis Period (min) 15
95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Splits and Phases: 5: Terry Fox & Fernbank

Intersection Summary

Area Type: Other
Cycle Length: 100
Actuated Cycle Length: 100
Offset: 79 (79%), Referenced to phase 2:EBTL and 5:EBL, Start of Green
Natural Cycle: 100
Control Type: Actuated-Coordinated
Maximum v/c Ratio: 1.22
Intersection Signal Delay: 46.2 Intersection LOS: D
Intersection Capacity Utilization 96.8% ICU Level of Service F
Analysis Period (min) 15
~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.
95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.
m Volume for 95th percentile queue is metered by upstream signal.

Area Type: Other
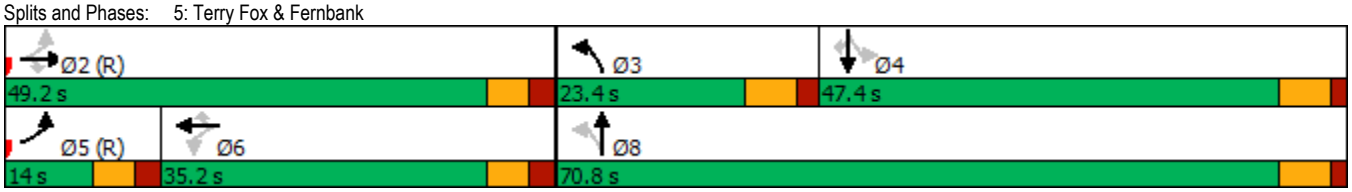
Cycle Length: 120
Actuated Cycle Length: 120
Offset: 0 (0%), Referenced to phase 2:EBTL and 5:EBL, Start of Green
Natural Cycle: 100
Control Type: Actuated-Coordinated
Maximum v/c Ratio: 0.91
Intersection Signal Delay: 38.6 Intersection LOS: D
Intersection Capacity Utilization 96.8% ICU Level of Service F
Analysis Period (min) 15
95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Splits and Phases: 5: Terry Fox & Fernbank



APPENDIX H

Transportation Demand Management Checklists

TDM-Supportive Development Design and Infrastructure Checklist:
Residential Developments (multi-family or condominium)

Legend

REQUIRED	The Official Plan or Zoning By-law provides related guidance that must be followed
BASIC	The measure is generally feasible and effective, and in most cases would benefit the development and its users
BETTER	The measure could maximize support for users of sustainable modes, and optimize development performance

		TDM-supportive design & infrastructure measures: *Residential developments*	Check if completed & add descriptions, explanations or plan/drawing references
	1.	**WALKING & CYCLING: ROUTES**	
	1.1	**Building location & access points**	
BASIC	1.1.1	Locate building close to the street, and do not locate parking areas between the street and building entrances	☐
BASIC	1.1.2	Locate building entrances in order to minimize walking distances to sidewalks and transit stops/stations	☑
BASIC	1.1.3	Locate building doors and windows to ensure visibility of pedestrians from the building, for their security and comfort	☑
	1.2	**Facilities for walking & cycling**	
REQUIRED	1.2.1	Provide convenient, direct access to stations or major stops along rapid transit routes within 600 metres; minimize walking distances from buildings to rapid transit; provide pedestrian-friendly, weather-protected (where possible) environment between rapid transit accesses and building entrances; ensure quality linkages from sidewalks through building entrances to integrated stops/stations *(see Official Plan policy 4.3.3)*	☑
REQUIRED	1.2.2	Provide safe, direct and attractive pedestrian access from public sidewalks to building entrances through such measures as: reducing distances between public sidewalks and major building entrances; providing walkways from public streets to major building entrances; within a site, providing walkways along the front of adjoining buildings, between adjacent buildings, and connecting areas where people may congregate, such as courtyards and transit stops; and providing weather protection through canopies, colonnades, and other design elements wherever possible *(see Official Plan policy 4.3.12)*	☑

		TDM-supportive design & infrastructure measures: *Residential developments*	Check if completed & add descriptions, explanations or plan/drawing references
REQUIRED	1.2.3	Provide sidewalks of smooth, well-drained walking surfaces of contrasting materials or treatments to differentiate pedestrian areas from vehicle areas, and provide marked pedestrian crosswalks at intersection sidewalks *(see Official Plan policy 4.3.10)*	☑
REQUIRED	1.2.4	Make sidewalks and open space areas easily accessible through features such as gradual grade transition, depressed curbs at street corners and convenient access to extra-wide parking spaces and ramps *(see Official Plan policy 4.3.10)*	☑
REQUIRED	1.2.5	Include adequately spaced inter-block/street cycling and pedestrian connections to facilitate travel by active transportation. Provide links to the existing or planned network of public sidewalks, multi-use pathways and on-road cycle routes. Where public sidewalks and multi-use pathways intersect with roads, consider providing traffic control devices to give priority to cyclists and pedestrians *(see Official Plan policy 4.3.11)*	☑
BASIC	1.2.6	Provide safe, direct and attractive walking routes from building entrances to nearby transit stops	☑
BASIC	1.2.7	Ensure that walking routes to transit stops are secure, visible, lighted, shaded and wind-protected wherever possible	☑
BASIC	1.2.8	Design roads used for access or circulation by cyclists using a target operating speed of no more than 30 km/h, or provide a separated cycling facility	☐
	1.3	**Amenities for walking & cycling**	
BASIC	1.3.1	Provide lighting, landscaping and benches along walking and cycling routes between building entrances and streets, sidewalks and trails	☐
BASIC	1.3.2	Provide wayfinding signage for site access (where required, e.g. when multiple buildings or entrances exist) and egress (where warranted, such as when directions to reach transit stops/stations, trails or other common destinations are not obvious)	☐

		TDM-supportive design & infrastructure measures: *Residential developments*	Check if completed & add descriptions, explanations or plan/drawing references
	2.	**WALKING & CYCLING: END-OF-TRIP FACILITIES**	
	2.1	**Bicycle parking**	
REQUIRED	2.1.1	Provide bicycle parking in highly visible and lighted areas, sheltered from the weather wherever possible *(see Official Plan policy 4.3.6)*	☑
REQUIRED	2.1.2	Provide the number of bicycle parking spaces specified for various land uses in different parts of Ottawa; provide convenient access to main entrances or well-used areas *(see Zoning By-law Section 111)*	☑
REQUIRED	2.1.3	Ensure that bicycle parking spaces and access aisles meet minimum dimensions; that no more than 50% of spaces are vertical spaces; and that parking racks are securely anchored *(see Zoning By-law Section 111)*	☑
BASIC	2.1.4	Provide bicycle parking spaces equivalent to the expected number of resident-owned bicycles, plus the expected peak number of visitor cyclists	☐
	2.2	**Secure bicycle parking**	
REQUIRED	2.2.1	Where more than 50 bicycle parking spaces are provided for a single residential building, locate at least 25% of spaces within a building/structure, a secure area (e.g. supervised parking lot or enclosure) or bicycle lockers *(see Zoning By-law Section 111)*	☐ Not Applicable
BETTER	2.2.2	Provide secure bicycle parking spaces equivalent to at least the number of units at condominiums or multi-family residential developments	☐
	2.3	**Bicycle repair station**	
BETTER	2.3.1	Provide a permanent bike repair station, with commonly used tools and an air pump, adjacent to the main bicycle parking area (or secure bicycle parking area, if provided)	☐
	3.	**TRANSIT**	
	3.1	**Customer amenities**	
BASIC	3.1.1	Provide shelters, lighting and benches at any on-site transit stops	☐
BASIC	3.1.2	Where the site abuts an off-site transit stop and insufficient space exists for a transit shelter in the public right-of-way, protect land for a shelter and/or install a shelter	☐
BETTER	3.1.3	Provide a secure and comfortable interior waiting area by integrating any on-site transit stops into the building	☐

		TDM-supportive design & infrastructure measures: *Residential developments*	Check if completed & add descriptions, explanations or plan/drawing references
	4.	**RIDESHARING**	
	4.1	**Pick-up & drop-off facilities**	
BASIC	4.1.1	Provide a designated area for carpool drivers (plus taxis and ride-hailing services) to drop off or pick up passengers without using fire lanes or other no-stopping zones	☐
	5.	**CARSHARING & BIKESHARING**	
	5.1	**Carshare parking spaces**	
BETTER	5.1.1	Provide up to three carshare parking spaces in an R3, R4 or R5 Zone for specified residential uses *(see Zoning By-law Section 94)*	☐
	5.2	**Bikeshare station location**	
BETTER	5.2.1	Provide a designated bikeshare station area near a major building entrance, preferably lighted and sheltered with a direct walkway connection	☐
	6.	**PARKING**	
	6.1	**Number of parking spaces**	
REQUIRED	6.1.1	Do not provide more parking than permitted by zoning, nor less than required by zoning, unless a variance is being applied for	☑
BASIC	6.1.2	Provide parking for long-term and short-term users that is consistent with mode share targets, considering the potential for visitors to use off-site public parking	☐
BASIC	6.1.3	Where a site features more than one use, provide shared parking and reduce the cumulative number of parking spaces accordingly *(see Zoning By-law Section 104)*	☐
BETTER	6.1.4	Reduce the minimum number of parking spaces required by zoning by one space for each 13 square metres of gross floor area provided as shower rooms, change rooms, locker rooms and other facilities for cyclists in conjunction with bicycle parking *(see Zoning By-law Section 111)*	☐
	6.2	**Separate long-term & short-term parking areas**	
BETTER	6.2.1	Provide separate areas for short-term and long-term parking (using signage or physical barriers) to permit access controls and simplify enforcement (i.e. to discourage residents from parking in visitor spaces, and vice versa)	☐

TDM Measures Checklist:
Residential Developments (multi-family, condominium or subdivision)

Legend

BASIC — The measure is generally feasible and effective, and in most cases would benefit the development and its users

BETTER — The measure could maximize support for users of sustainable modes, and optimize development performance

★ — The measure is one of the most dependably effective tools to encourage the use of sustainable modes

		TDM measures: *Residential developments*	Check if proposed & add descriptions
	1.	**TDM PROGRAM MANAGEMENT**	
	1.1	**Program coordinator**	
BASIC ★	1.1.1	Designate an internal coordinator, or contract with an external coordinator	☐
	1.2	**Travel surveys**	
BETTER	1.2.1	Conduct periodic surveys to identify travel-related behaviours, attitudes, challenges and solutions, and to track progress	☐
	2.	**WALKING AND CYCLING**	
	2.1	**Information on walking/cycling routes & destinations**	
BASIC	2.1.1	Display local area maps with walking/cycling access routes and key destinations at major entrances *(multi-family, condominium)*	☐
	2.2	**Bicycle skills training**	
BETTER	2.2.1	Offer on-site cycling courses for residents, or subsidize off-site courses	☐

			TDM measures: *Residential developments*	Check if proposed & add descriptions
		3.	**TRANSIT**	
		3.1	**Transit information**	
BASIC		3.1.1	Display relevant transit schedules and route maps at entrances *(multi-family, condominium)*	☐
BETTER		3.1.2	Provide real-time arrival information display at entrances *(multi-family, condominium)*	☐
		3.2	**Transit fare incentives**	
BASIC	★	3.2.1	Offer PRESTO cards preloaded with one monthly transit pass on residence purchase/move-in, to encourage residents to use transit	☐
BETTER		3.2.2	Offer at least one year of free monthly transit passes on residence purchase/move-in	☐
		3.3	**Enhanced public transit service**	
BETTER	★	3.3.1	Contract with OC Transpo to provide early transit services until regular services are warranted by occupancy levels *(subdivision)*	☐
		3.4	**Private transit service**	
BETTER		3.4.1	Provide shuttle service for seniors homes or lifestyle communities (e.g. scheduled mall or supermarket runs)	☐
		4.	**CARSHARING & BIKESHARING**	
		4.1	**Bikeshare stations & memberships**	
BETTER		4.1.1	Contract with provider to install on-site bikeshare station (*multi-family)*	☐
BETTER		4.1.2	Provide residents with bikeshare memberships, either free or subsidized *(multi-family)*	☐
		4.2	**Carshare vehicles & memberships**	
BETTER		4.2.1	Contract with provider to install on-site carshare vehicles and promote their use by residents	☐
BETTER		4.2.2	Provide residents with carshare memberships, either free or subsidized	☐
		5.	**PARKING**	
		5.1	**Priced parking**	
BASIC	★	5.1.1	Unbundle parking cost from purchase price *(condominium)*	☑
BASIC	★	5.1.2	Unbundle parking cost from monthly rent *(multi-family)*	☐

			TDM measures: *Residential developments*	Check if proposed & add descriptions
		6.	**TDM MARKETING & COMMUNICATIONS**	
		6.1	**Multimodal travel information**	
BASIC	★	6.1.1	Provide a multimodal travel option information package to new residents	☑
		6.2	**Personalized trip planning**	
BETTER	★	6.2.1	Offer personalized trip planning to new residents	☐

APPENDIX I

Multi-Modal Level of Service Analysis

Pedestrian Level of Service (PLOS)

Sidewalk Width	Boulevard Width	Avg. Daily Curb Lane Traffic Volume	Presence of On-Street Parking	Operating Speed (1)	Segment PLOS
Cope Drive (Both Sides)					
2.0m	>2.0m	<3,000 vpd	N/A	60 km/hr	A
Fernbank Road (North Side)					
2.0m	0m	<3,000 vpd (2)	N/A	70 km/hr	D
Fernbank Road (South Side)					
2.0m	0m	>3,000 vpd	No	70 km/hr	F
Terry Fox Drive (East Side) (3)

Bicycle Level of Service (BLOS)

Approach	Bikeway Facility Type	Criteria	Travel Lanes and/or Speed	BLOS
Terry Fox Drive/Cope Drive				
North Approach	Pocket Bike Lane	Right Turn Lane Characteristics	Right turn lane >50m long	D
		Left Turn Accommodation	One lane crossed, >60km/hr	E
South Approach	Paved Shoulder	Right Turn Lane Characteristics	No impact to LTS	A
		Left Turn Accommodation	One lane crossed, >60km/hr	E
East Approach	Mixed Traffic	Right Turn Lane Characteristics	No impact to LTS	A
		Left Turn Accommodation	One lane crossed, 50km/hr	D
West Approach	Mixed Traffic	Right Turn Lane Characteristics	No impact to LTS	A
		Left Turn Accommodation	One lane crossed, 50km/hr	D
Terry Fox Drive/Fernbank Road				
North Approach	Pocket Bike Lane	Right Turn Lane Characteristics	Right-turn lane >50m long	D
		Left Turn Accommodation	One lane crossed, >60km/hr	E
South Approach	Paved Shoulder	Right Turn Lane Characteristics	No impact to LTS	A
		Left Turn Accommodation	One lane crossed, >60km/hr	E
East Approach	Pocket Bike Lane	Right Turn Lane Characteristics	Right-turn lane >50m long	D
		Left Turn Accommodation	One lane crossed, 60km/hr	E
West Approach	Pocket Bike Lane	Right Turn Lane Characteristics	Bike lane shifts to the left of right-turn lane	D
		Left Turn Accommodation	One lane crossed, 60km/hr	E

Transit Level of Service (TLOS)

Approach	Facility Type	Delay[1] AM (PM)	Movement	TLOS
Terry Fox Drive/Cope Drive[2]				
North Approach	Mixed Traffic (No TSP)	7 sec (12 sec)	SBT	C
South Approach	Mixed Traffic (No TSP)	7 sec (21 sec)	NBT/R	D
East Approach	Mixed Traffic (No TSP)	34 sec (40 sec)	WBL	E
West Approach	Mixed Traffic (No TSP)	-	-	-
Terry Fox Drive/Fernbank Road[2]				
North Approach	Mixed Traffic (No TSP)	43 sec (50 sec)	SBL	F
South Approach	Mixed Traffic (No TSP)	-	-	-
East Approach	Mixed Traffic (No TSP)	5 sec (2 sec)	WBR	B
West Approach	Mixed Traffic (No TSP)	11 sec (22 sec)	EBL	D

1. Mixed traffic delay based on the critical approach delay in Synchro analysis
2. No OC Transpo Service on Terry Fox Drive south of Fernbank Road, and on Cope Drive west of Terry Fox Drive

Truck Level of Service (TkLOS)

Approach	Effective Corner Radius	Number of Receiving Lanes on Departure from Intersection	LOS
Terry Fox Drive/Cope Drive			
North Approach	> 15m	One	C
South Approach	> 15m	One	C
East Approach	> 15m	One	C
West Approach	> 15m	One	C
Terry Fox Drive/Fernbank Road			
North Approach	> 15m	One	C
South Approach	> 15m	One	C
East Approach	> 15m	One	C
West Approach	> 15m	One	C

STEP 1 of 3
Desirable Cycling Facility Pre-selection Nomograph

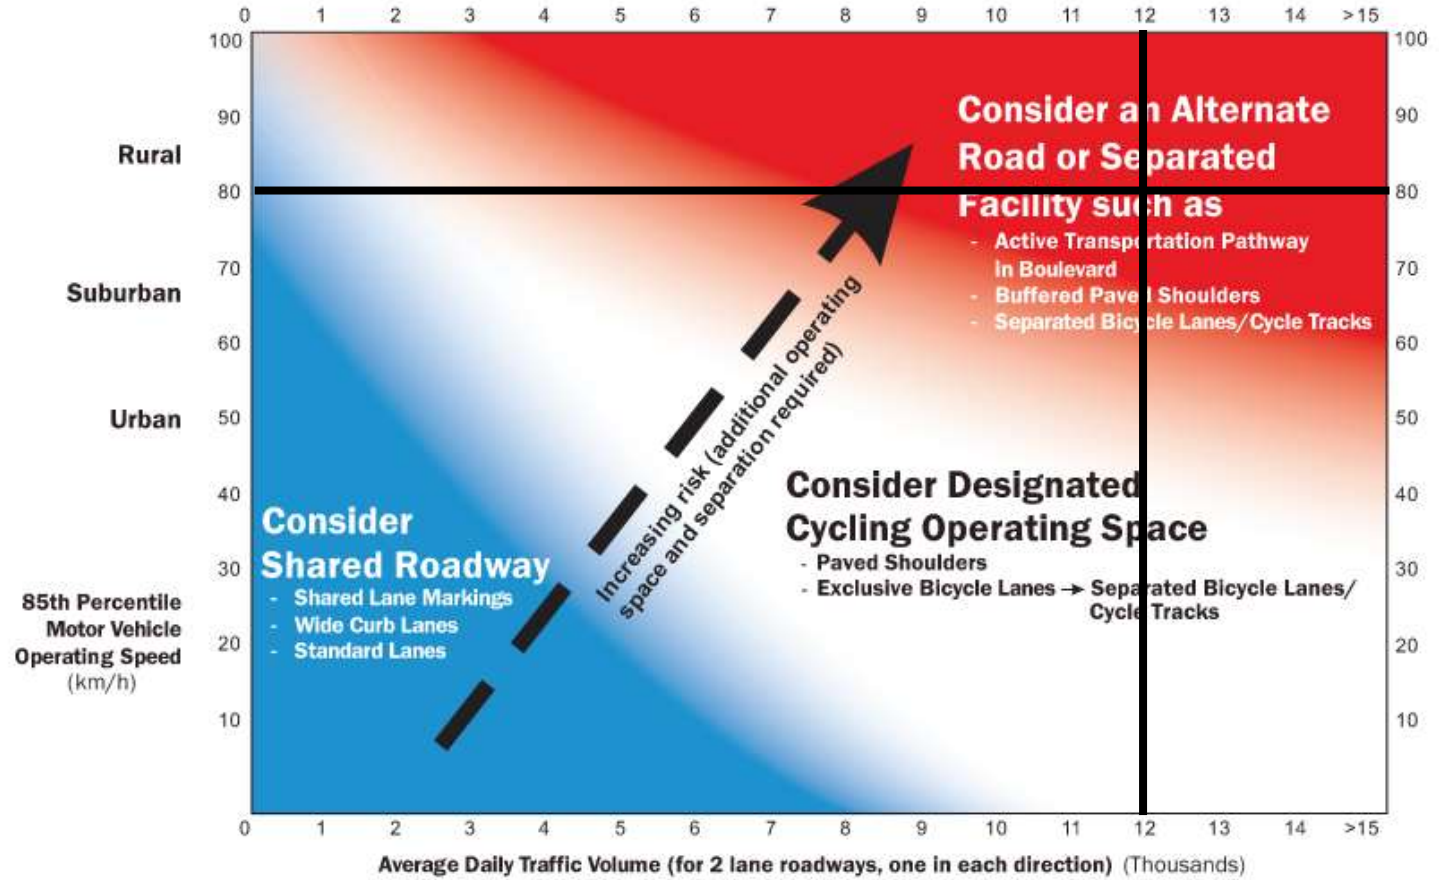

Figure 3.3 – Desirable Bicycle Facility Pre-Selection Nomograph

Footnotes:
- This nomograph is the **first of a three step bicycle facility selection process,**, and should not be used by itself as the justification for facility selection (see Steps 2 and 3). The nomograph simply helps practitioners pre-select a desirable cycling facility type, however the context of the situation governs the final decision.
- The nomograph has been adapted for the North American context and is based on international examples and research for two lane roadways. It is, however, still applicable for multi-lane roadways. For these situations, designers should consider the operating speed, total combined traffic volume and traffic mix of the vehicles traveling in the lanes immediately adjacent to the cycling facilities.
- Consider a Separated Facility or an Alternate Road for roadways with an AADT greater than 15,000 vehicles and an operating speed of greater then 50 km/h.
- For rural and suburban locations this nomograph assumes good sightlines are provided for all road users. In urban areas, there are typically more frequent conflict points at driveways, midblock crossings and intersections (especially on multi-lane roads), as well as on road segments with on-street parking. This needs to be considered when assessing risk exposure in urban environments since it will influence the selection of a suitable facility type.

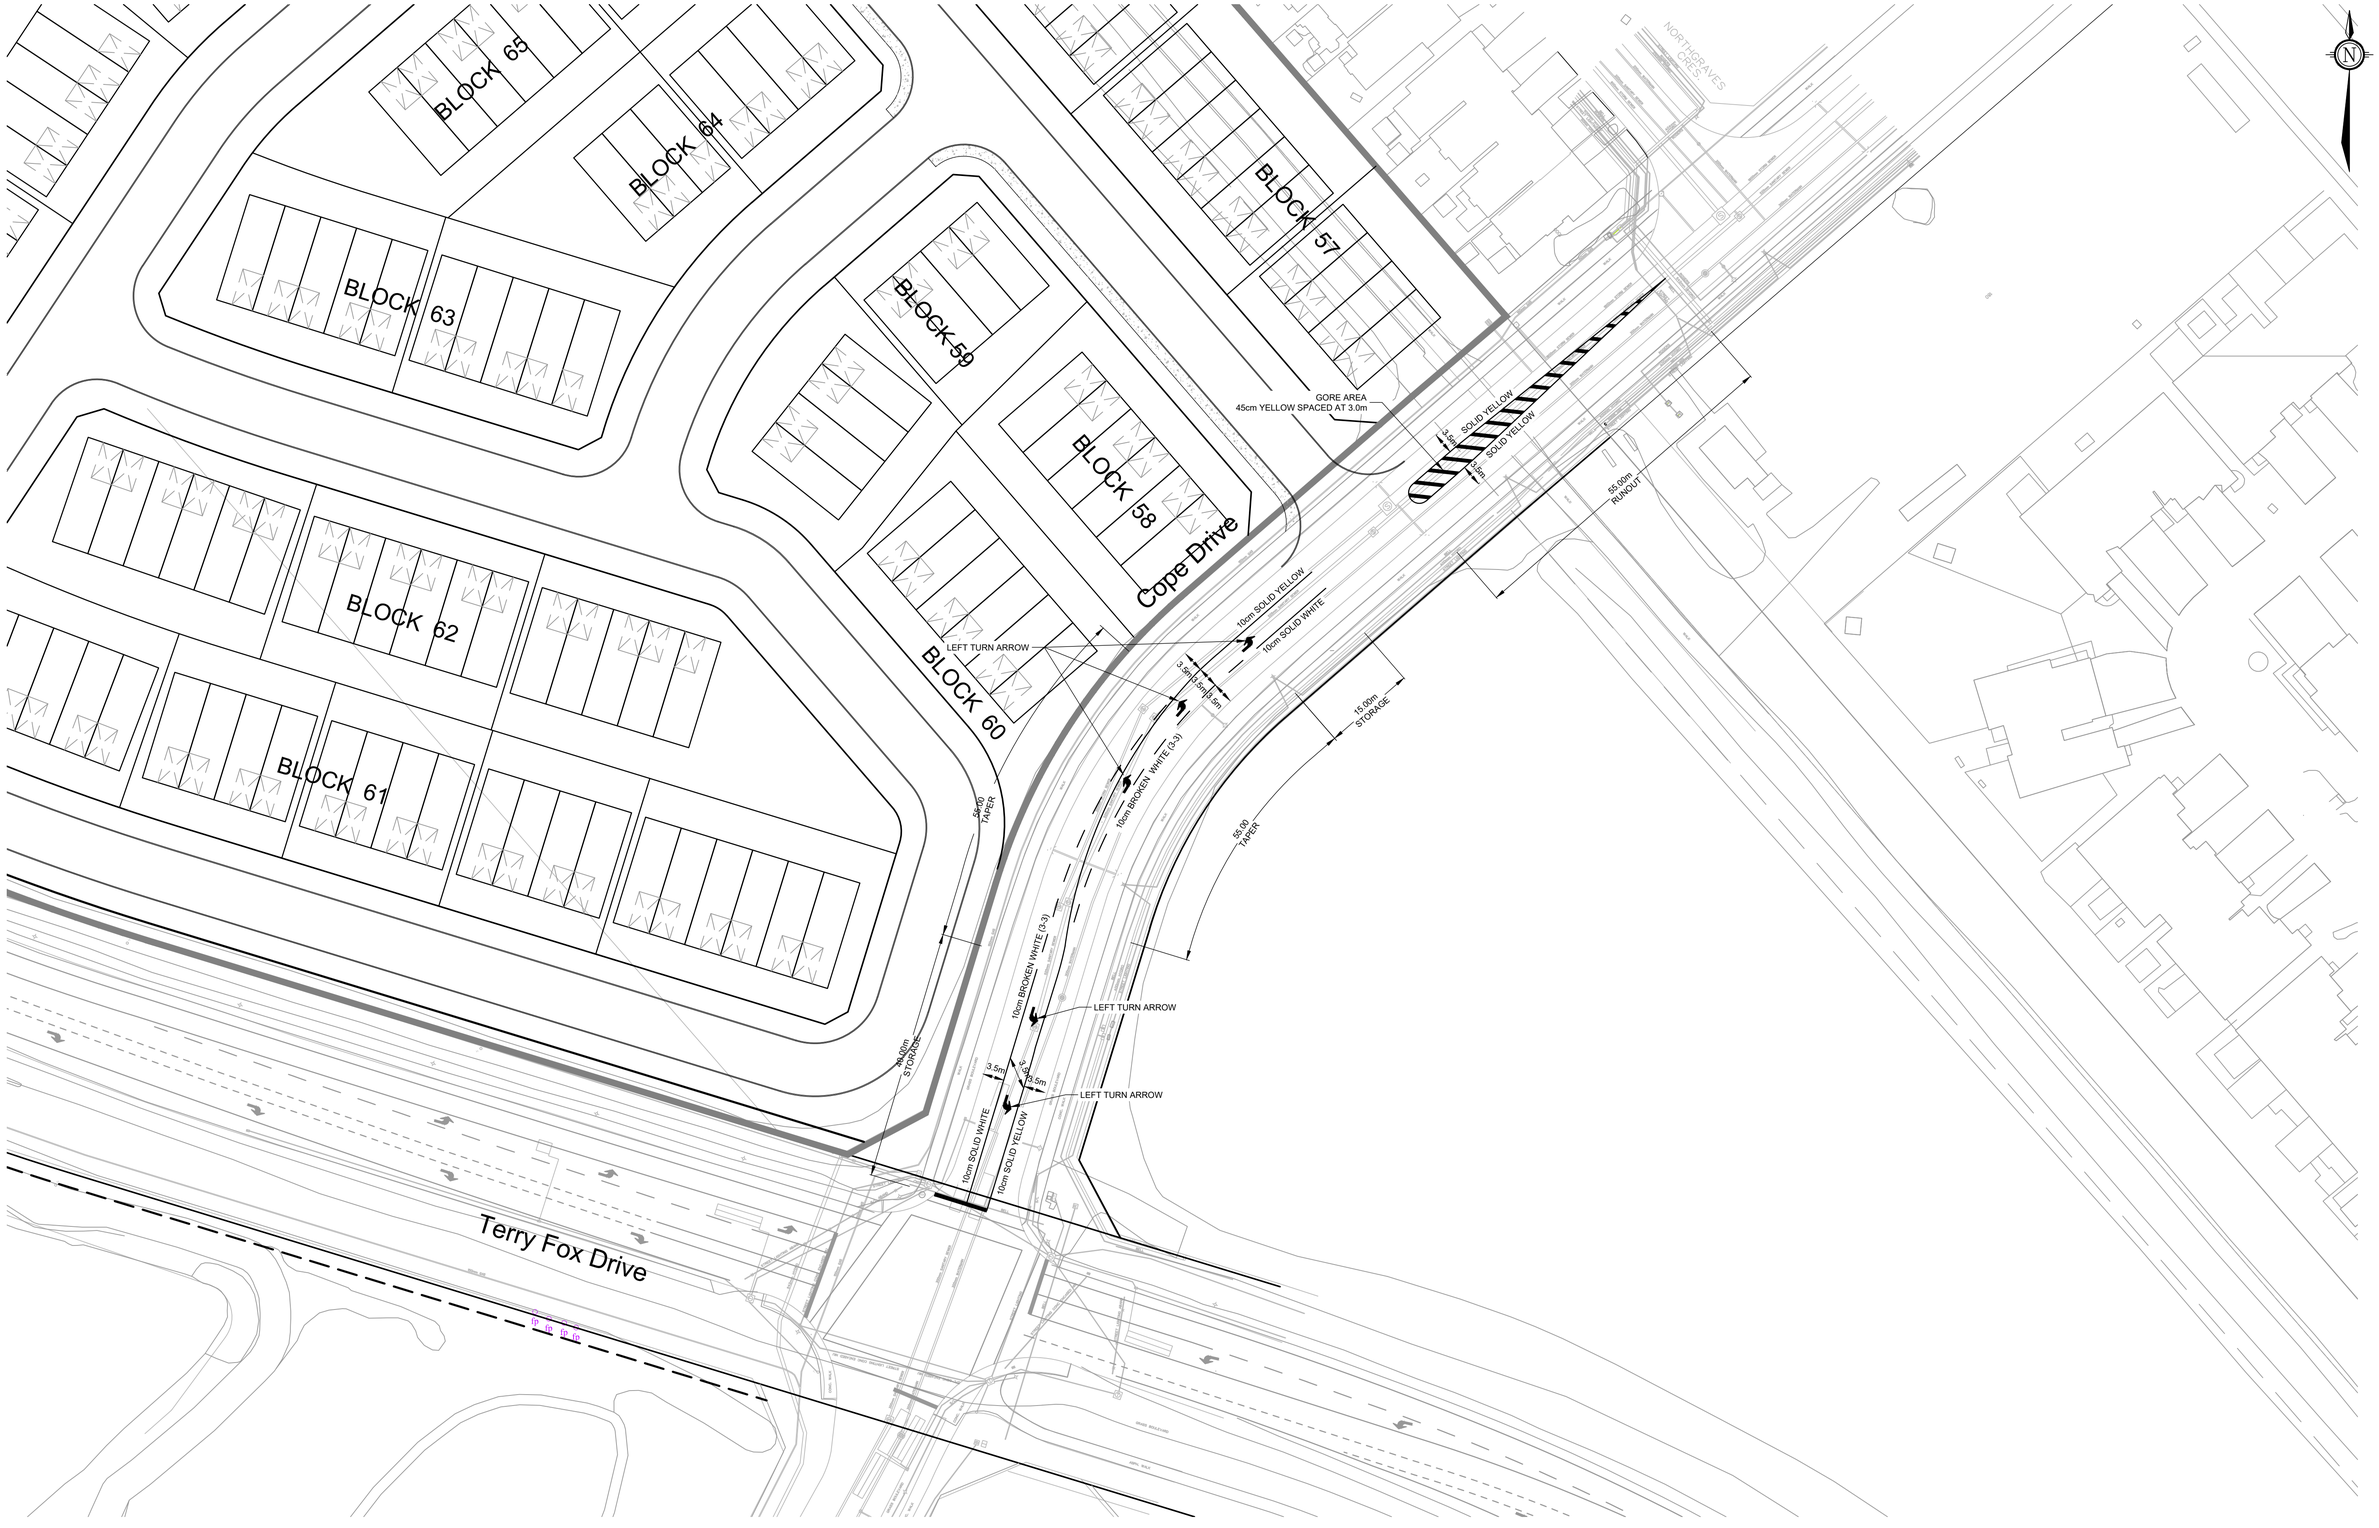
APPENDIX K

Functional Design of Turn Lane on Cope Drive



NOTE:
THE POSITION OF ALL POLE LINES, CONDUITS, WATERMAINS, SEWERS AND OTHER UNDERGROUND AND OVERGROUND UTILITIES AND STRUCTURES IS NOT NECESSARILY SHOWN ON THE CONTRACT DRAWINGS, AND WHERE SHOWN, THE ACCURACY OF THE POSITION OF SUCH UTILITIES AND STRUCTURES IS NOT GUARANTEED. BEFORE STARTING WORK, DETERMINE THE EXACT LOCATION OF ALL SUCH UTILITIES AND STRUCTURES AND ASSUME ALL LIABILITY FOR DAMAGE TO THEM.

Intersection Summary

Area Type: Other
Cycle Length: 90
Actuated Cycle Length: 90
Offset: 55 (61%), Referenced to phase 2:NBTL and 6:SBTL, Start of Green
Natural Cycle: 80
Control Type: Actuated-Coordinated
Maximum v/c Ratio: 0.62
Intersection Signal Delay: 11.7 Intersection LOS: B
Intersection Capacity Utilization 88.2% ICU Level of Service E
Analysis Period (min) 15
m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 2: Terry Fox & Cope

Intersection Summary

Area Type: Other
Cycle Length: 100
Actuated Cycle Length: 100
Offset: 79 (79%), Referenced to phase 2:EBTL and 5:EBL, Start of Green
Natural Cycle: 90
Control Type: Actuated-Coordinated
Maximum v/c Ratio: 1.06
Intersection Signal Delay: 38.4 Intersection LOS: D
Intersection Capacity Utilization 93.0% ICU Level of Service F
Analysis Period (min) 15
~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.
95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Splits and Phases: 5: Terry Fox & Fernbank

Intersection Summary

Area Type: Other
Cycle Length: 90
Actuated Cycle Length: 90
Offset: 55 (61%), Referenced to phase 2:NBTL and 6:SBTL, Start of Green
Natural Cycle: 90
Control Type: Actuated-Coordinated
Maximum v/c Ratio: 0.75
Intersection Signal Delay: 16.7 Intersection LOS: B
Intersection Capacity Utilization 96.0% ICU Level of Service F
Analysis Period (min) 15
95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.
m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 2: Terry Fox & Cope

Intersection Summary

Area Type: Other
Cycle Length: 100
Actuated Cycle Length: 100
Offset: 69 (69%), Referenced to phase 2:NBTL and 6:SBTL, Start of Green
Natural Cycle: 90
Control Type: Actuated-Coordinated
Maximum v/c Ratio: 0.91
Intersection Signal Delay: 28.5 Intersection LOS: C
Intersection Capacity Utilization 102.9% ICU Level of Service G
Analysis Period (min) 15
95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.
m Volume for 95th percentile queue is metered by upstream signal.

Intersection Summary

Area Type: Other
Cycle Length: 100
Actuated Cycle Length: 100
Offset: 69 (69%), Referenced to phase 2:NBTL and 6:SBTL, Start of Green
Natural Cycle: 90
Control Type: Actuated-Coordinated
Maximum v/c Ratio: 0.90
Intersection Signal Delay: 27.9 Intersection LOS: C
Intersection Capacity Utilization 102.9% ICU Level of Service G
Analysis Period (min) 15
95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Splits and Phases: 2: Terry Fox & Cope
