EXECUTIVE SUMMARY

Assessment

A Phase I – Environmental Site Assessment was carried out for a property at the northwest corner of Greenbank Road and Barnsdale Road in the City of Ottawa, Ontario. The purpose of this environmental assessment was to research the past and current use of the subject site and adjacent properties and identify any environmental concerns with the potential to impact the subject property.

Based on a review of historical sources, the subject site has historically consisted of agricultural fields. More recently, the property has been stripped of topsoil and is no longer used for agriculture. No historical potentially contaminating activities (PCAs) were identified on the Phase I property. Surrounding properties have historically been used for agricultural purposes. Lands to the northwest have been quarried for sand and gravel since the 1970s, however they are not considered to pose any risk to the subject site. In a review of the historical sources, no Potentially Contaminating Activities were identified.

Following the historical review, a site visit was conducted. The subject property currently exists as vacant, tree covered land. No environmental concerns were identified on the subject site at the time of the site visit.

The surrounding land use consisted of commercial, residential and vacant properties. No PCAs were identified in the Phase I study area.

Conclusion

Based on the results of this Phase I - Environmental Site Assessment, it is our opinion that **a Phase II - Environmental Site Assessment is not required for the property.**

1.0 INTRODUCTION

At the request of Minto Communities Inc., Paterson Group (Paterson) conducted a Phase I - Environmental Site Assessment (Phase I ESA) of a property on Greenbank Road and Barnsdale Road, in the City of Ottawa, Ontario. The purpose of this Phase I ESA was to research the past and current use of the site and study area and to identify any environmental concerns with the potential to have impacted the subject property.

Paterson was engaged to conduct this Phase I ESA by Mr. Hugo Lalonde of Minto Communities Inc. Mr. Lalonde can be reached by telephone at (613) 782-2488.

This report has been prepared specifically and solely for the above noted project which is described herein. It contains all of our findings and results of the environmental conditions at this site.

This Phase I ESA report has been prepared in general accordance with the requirements of Ontario Regulation 153/04 as amended by O.Reg. 269/11 (Environmental Protection Act), and also complies with the requirements of CSA Z768-01. The conclusions presented herein are based on information gathered from a limited historical review and field inspection program. The findings of the Phase I ESA are based on a review of readily available geological, historical and regulatory information and a cursory review made at the time of the field assessment. The historical research relies on information supplied by others, such as local, provincial and federal agencies and was limited within the scope-of-work, time and budget of the project herein.

2.0 PHASE I PROPERTY INFORMATION

Address:	No municipal address.
Legal Description:	Part of Lots 6 and 7, Concession 3, Rideau Front, Geographic Township of Nepean, in the City of Ottawa, Ontario.
Property Identification Number (PIN):	04592-2105
Location:	The subject site is located to the northwest of the intersection of Greenbank road and Barnsdale Road.
Latitude and Longitude:	45° 14' 12" N, 75° 43' 44" W

Site Description:

Configuration:	Irregular
Site Area:	67.8 ha (approximate)
Zoning:	RU – rural countryside zone (east end); MR – mineral aggregate reserve zone (north/central part of site); AG – agricultural zone (small part of western side of site)
Current Use:	The subject site is vacant, with agricultural fields and some treed areas; some areas have been cleared of vegetation as part of the early stages of development. Construction access roads are present throughout the site, and an office trailer is located on the northeast part of the site.
Services:	The subject site is situated in a privately serviced area. No utilities are anticipated to be present on the property. The new development to the north is municipally serviced.

3.0 SCOPE OF INVESTIGATION

The scope of work for this Phase I – Environmental Site Assessment was as follows:

- Determine the historical activities on the subject site and study area by conducting a review of readily available records, reports, photographs, plans, mapping, databases and regulatory agencies;
- Investigate the existing conditions present at the subject site and study area by conducting site reconnaissance;
- Conduct interviews with persons knowledgeable of current and historic operations on the subject property, and if warranted, neighbouring properties;
- Present the results of our findings in a comprehensive report in general accordance with the requirements of Ontario Regulation 269/11 amending O.Reg. 153/04 made under the Environmental Protection Act and in compliance with the requirements of CSA Z768-01;
- Provide a preliminary environmental site evaluation based on our findings;
- Provide preliminary remediation recommendations and further investigative work if contamination is suspected or encountered.

4.0 RECORDS REVIEW

4.1 General

Phase I ESA Study Area Determination

A radius of approximately 250 m was determined to be appropriate as a Phase I ESA study area for this assignment. Properties outside the 250 m radius are not considered to have impacted the subject land, based on their significant distance from the site.

First Developed Use Determination

Based on a review of historically available information, the Phase I property appears to have always been vacant, and historically used for agriculture. The property has never been developed.

National Archives

Fire insurance plans and city directories are not available for the Phase I study area.

Plan of Subdivision

A draft plan of subdivision prepared by Stantec Geomatics Ltd. and dated 2017 was reviewed as a part of this assessment. The plan depicts the subject site in its current configuration.

Previous Engineering Reports

Paterson has conducted several environmental and geotechnical projects in the area and on the subject site. No environmental concerns with respect to the subject site were identified during the review of previous reports completed by Paterson.

4.2 Environmental Source Information

Environment Canada

A search of the National Pollutant Release Inventory (NPRI) was conducted electronically on February 22, 2018. The subject site and Phase I study area were not listed in the NPRI database.

PCB Inventory

A search of national PCB waste storage sites was conducted. One PCB waste storage site was identified at 3971 Greenbank Road, to the east of the subject site, across Greenbank Road.

Ontario Ministry of Environment and Climate Change (MOECC) Instruments

A request was submitted to the MOECC Freedom of Information office for information with respect to certificates of approval, permits to take water, certificates of property use or any other similar MOECC issued instruments for the site. At the time of issuing this report, a response from the MOECC had not been received.

MOECC Coal Gasification Plant Inventory

The Ontario Ministry of Environment and Climate Change document titled "Municipal Coal Gasification Plant Site Inventory, 1991" was reviewed to reference the locations of former plants with respect to the site. No coal gasification plants were identified in the Phase I study area

MOECC Incident Reports

A request was submitted to the MOECC Freedom of Information office for information with respect to records concerning environmental incidents, orders, offences, spills, discharges of contaminants or inspections maintained by the MOECC for the site or adjacent properties. At the time of issuing this report, a response from the MOECC had not been received.

MOECC Waste Management Records

A request was submitted to the MOECC Freedom of Information office for information with respect to waste management records. At the time of issuing this report, a response from the MOECC had not been received.

MOECC Submission

A request was submitted to the MOECC Freedom of Information office for information with respect to reports related to environmental conditions for the property. At the time of issuing this report, a response from the MOECC had not been received.

MOECC Brownfields Environmental Site Registry

A search of the MOECC Brownfields Environmental Site Registry was conducted as part of this assessment for the site, neighbouring properties and the Phase I study area. No Records of Site Condition (RSCs) were filed for the subject site or properties within the Phase I study area.

MOECC Waste Disposal Site Inventory

The Ontario Ministry of Environment and Climate Change document titled "Waste Disposal Site Inventory in Ontario, 1991" was reviewed as part of the historical research. This document includes all recorded active and closed waste disposal sites, industrial manufactured gas plants and coal tar distillation plants in the Province of Ontario. No records were listed for the subject site or for properties within the Phase I study area.

Areas of Natural Significance

A search for areas of natural significance and features within the Phase I study area was conducted on the web site of the Ontario Ministry of Natural Resources and Forestry (MNRF) on February 22, 2018. No areas of natural significance were identified on the subject site or within the Phase I study area.

Technical Standards and Safety Authority (TSSA)

The TSSA, Fuels Safety Branch in Toronto was contacted electronically on February 22, 2018 to inquire about current and former underground storage tanks, spills and incidents for the site and neighbouring properties. At the time of issuing this report, a response from the TSSA had not been received. Should the response contain pertinent information, Minto Communities will be notified.

City of Ottawa Landfill Document

The document entitled "Old Landfill Management Strategy, Phase I – Identification of Sites, City of Ottawa", was reviewed. No landfill sites were identified within the Phase I study area.

4.3 Physical Setting Sources

Aerial Photographs

Historical air photos from the National Air Photo Library were reviewed in approximate ten (10) year intervals. The review period dates to the first available air photos for the site. Based on the review, the following observations have been made:

1959 The subject property is vacant agricultural fields. A barn appears to be present on the south part of the site, to the north of a farmstead addressed 3818 Barnsdale Road. Surrounding properties are agricultural fields and farmsteads, with Greenbank Road visible to the east and Barnsdale Road to the south.

1966 No significant changes appear to have been made to the subject site or surrounding properties.

1976 (City of Ottawa website) No changes have been made to the subject property. The adjacent lands to the northwest have been developed with an aggregate pit.

1984 Some parts of the subject property are tree covered. Some of the surrounding properties are tree covered.

1993 No significant changes have been made to the subject property or surrounding lands.

2001 No significant changes have been made to the subject property or surrounding lands.

2011 (City of Ottawa website) No significant changes have been made to the subject property or lands in the Phase I study area.

2017 (City of Ottawa website) Some construction access roads and disturbed areas are present on the east side of the subject property, as well as storage containers and construction equipment. The adjacent lands to the northeast have been developed with residential roadways and dwellings.

Laser copies of selected aerial photographs reviewed are included in Appendix 1.

Topographic Maps

Topographic information was obtained from Natural Resources Canada – The Atlas of Canada website. The topographic maps indicate that the elevation of the subject site is approximately 100 m above sea level. The regional topography in the general area of the site slopes downward to the south and east, towards the Rideau River, and to the north, towards the Jock River. An illustration of the referenced topographic map is presented on Figure 2 – Topographic Map, appended to this report.

Physiographic Maps

A Physiographic Map was reviewed from the Natural Resources Canada – The Atlas of Canada website, as a part of this assessment. According to the publication and mapping, the site is situated within the St. Lawrence Lowlands, Till Plains (Drumlinized) physiographic region. According to the mapping description provided: "The lowlands are plain-like areas that were all affected by the Pleistocene glaciations and are therefore covered by surficial deposits and other features associated with the ice sheets." The subject site is in the Central St. Lawrence Lowland, "where the land is rarely more than 150 m above sea level, except for the Monteregion Hills, which consist of intrusive igneous rocks.

Geological Maps

The Geological Survey of Canada website on the Urban Geology of the National Capital Area was consulted as part of this assessment. Based on this information, bedrock in the area of the site consists of dolomite of the Oxford Formation. Overburden consists of nearshore marine sediments along Greenbank Road, till in the central part of the site, glaciofluvial deposits in the northwest, and nearshore marine sediments in the southwest part of the subject property.

Surficial drift thickness is 15 to 25 m over the majority of the property, and 10 to 15 m on the east side, along Greenbank Road.

Water Well Records

A search of the MOECCs web site for all drilled well records within 250 m of the subject site was conducted on February 22, 2018. Based on the search results, no wells are present on the subject site. Eleven (11) water supply well records were identified in the Phase I study area. Some active water supply wells may be present in the Phase I study area.

Water Bodies and Areas of Natural Significance

The Rideau River is the closest water body, at approximately 1.9 km to the east of the subject site. No creeks, streams, lakes or other water bodies were identified in the Phase I study area. No areas of natural significance were identified within the Phase I study area.

5.0 INTERVIEWS

The current Minto project manager for the property, Mr. Hugo Lalonde, was interviewed via email as part of the environmental assessment. According to Mr. Lalonde, the aggregate pit to the northwest of the subject property is owned by Marcel Brazeau Ltd., which has an arrangement with Minto to strip the topsoil from the property to the west of the subject site and keep the top soil. Marcel Brazeau Ltd. also uses the unpaved access roads on the subject property and the property to the west to supply sand and granular material to the surrounding Minto lands under development. Mr. Lalonde did not identify any environmental concerns on the subject property or in the Phase I study area.

6.0 SITE RECONNAISSANCE

6.1 General Requirements

The site assessment was conducted on February 22, 2018. Weather conditions were overcast, with a temperature of approximately -5°C. Personnel from the Environmental Department of Paterson Group conducted the site visit. In addition to the site, the uses of neighbouring properties within the Phase I study area were also assessed at the time of the site visit.

6.2 Specific Observations at Phase I Property

Buildings and Structures

The subject site is a vacant lot of land. No buildings or permanent structures exist on the subject property. A site office trailer is present to the south of Guiness Crescent, as well as some storage containers and construction materials related to the Phase I development of Quinn's Point. A depiction of the subject site is shown on Drawing PE4246-1 – Site Plan, in the Figures section of this report.

Site Features

The subject site is not developed with any buildings and exists as vacant land with some trees. The site was snow covered at the time of the site visit. A small area on the property is currently used as a construction staging area for the adjacent residential development to the north. A propane tank storage area is present beside Greenbank Road, to the southeast of the site trailer. Some construction access roads are present throughout the property, alongside scattered topsoil piles and construction equipment.

Underground Utilities

The subject site has no underground utilities.

Waste Materials

Construction materials were present on the subject site at the time of the site visit, including used propane tanks. No hazardous waste materials were identified.

Storage Tanks

Propane fuel tanks were present on the subject site at the time of the site visit. The tanks were properly stored and do not pose a concern to the subject land.

Drains, Pits and Sumps

No drains, pits or sumps were present on the subject site at the time of the site visit.

Unidentified Substances

No unidentified substances were present on the subject site at the time of the site visit.

Hazardous Building Materials

No hazardous building materials were present on the subject site at the time of the site visit.

Phase I Study Area

An inspection of the neighbouring properties was conducted from publicly accessible roadways at the time of the site inspection. Land use adjacent to the subject site was as follows:

- ❒ North - Residential development on the east side and aggregate pits on the west side;
- ❒ South - Barnsdale Road and residential dwellings, followed by residential dwellings and agricultural fields;
- ❒ East - Greenbank Road (and one residential dwelling at the intersection of Greenbank Road and Barnsdale Road), followed by vacant land, residential dwellings, and Star Group International;
- ❒ West - Vacant treed land and agricultural fields, followed by Borrisokane Road.

No Potentially Contaminating Activities were identified on the neighbouring properties in the Phase I study area. Property use within the Phase I study area is presented on Drawing PE4246-2 – Surrounding Land Use Plan.

7.0 REVIEW AND EVALUATION OF INFORMATION

7.1 Land Use History

The subject site appears to have never been developed, was historically agricultural fields, and currently exists as partially treed, vacant land.

Potentially Contaminating Activities (PCAs)

Potentially Contaminating Activities (PCAs) were not identified on the subject site or in the Phase I study area.

Areas of Potential Environmental Concern (APECs)

No Areas of Potential Environmental Concern (APECs) were identified on the subject site.

Contaminants of Potential Concern (CPCs)

No contaminants of concern (CPCs) were identified on the Phase I property.

7.2 Conceptual Site Model

Existing Buildings and Structures

The subject site is a vacant lot of land. No buildings or permanent structures exist on the subject property. One (1) site construction trailer and several storage containers are present in the northeast part of the site.

Geological and Hydrogeological Setting

The subject site is located in an area of dolomite bedrock with nearshore marine sediment overburden in the central and southwest sections of the property, and glaciofluvial deposits in the northwest. Drift thickness is 10 to 25 m. Groundwater flow is expected to flow to the southeast, towards the Rideau River.

Water Bodies

The closest major water body is the Rideau River, located approximately 1.9 km to the east of the site. There are no water bodies on the subject site.

Areas of Natural Significance

No areas of natural significance were identified within the Phase I study area.

Water Wells

A search of the MOECC's web site for all drilled well records within 250 m of the subject site was conducted on February 22, 2018. Based on the search results, no wells are located on the subject site. Eleven (11) well records were identified in the Phase I study area, for water supply wells. New developments to the north of the subject land have received full municipal services.

Neighbouring Land Use

Neighbouring land use in the Phase I study area is currently agricultural and residential, with an aggregate pit to the northwest. The small portion of the bit that abuts the subject property is no longer in use. Based on the nature of the limited activities that have taken place in the aggregate pit adjacent to the northwest corner of the site, the pit is not considered to pose a risk to the subject property. Neighbouring land use does not pose an environmental concern to the subject site.

Potentially Contaminating Activities and Areas of Potential Environmental Concern

As per Section 7.1 of this report, no PCAs were identified on the subject site or in the Phase I study area.

Contaminants of Potential Concern

No CPCs were identified on the subject site.

Assessment of Uncertainty and/or Absence of Information

The information available for review as part of the preparation of this Phase I ESA is considered to be sufficient to conclude that there are no APECs on the subject site. The absence of PCAs was confirmed by a variety of independent sources, and as such, the conclusions of this report are not affected by uncertainty which may be present with respect to the individual sources.

8.0 CONCLUSION

Assessment

A Phase I – Environmental Site Assessment was carried out for a property at the northwest corner of Greenbank Road and Barnsdale Road in the City of Ottawa, Ontario. The purpose of this environmental assessment was to research the past and current use of the subject site and adjacent properties and identify any environmental concerns with the potential to impact the subject property.

Based on a review of historical sources, the subject site has historically consisted of agricultural fields. More recently, the property has been stripped of topsoil and is no longer used for agriculture. No historical potentially contaminating activities (PCAs) were identified on the Phase I property. Surrounding properties have historically been used for agricultural purposes. Lands to the northwest have been quarried for sand and gravel since the 1970s, however they are not considered to pose any risk to the subject site. In a review of the historical sources, no Potentially Contaminating Activities were identified.

Following the historical review, a site visit was conducted. The subject property currently exists as vacant, tree covered land. No environmental concerns were identified on the subject site at the time of the site visit.

The surrounding land use consisted of commercial, residential and vacant properties. No PCAs were identified in the Phase I study area.

Conclusion

Based on the results of this Phase I - Environmental Site Assessment, it is our opinion that **a Phase II - Environmental Site Assessment is not required for the property.**

9.0 STATEMENT OF LIMITATIONS

This Phase I - Environmental Site Assessment report has been prepared in general accordance with O.Reg. 153/04 as amended by O.Reg. 269/11, and meets the requirements of CSA Z768-01. The conclusions presented herein are based on information gathered from a limited historical review and field inspection program. The findings of the Phase I ESA are based on a review of readily available geological, historical and regulatory information and a cursory review made at the time of the field assessment. The historical research relies on information supplied by others, such as, local, provincial and federal agencies and was limited within the scope-of-work, time and budget of the project herein.

Should any conditions be encountered at the subject site and/or historical information that differ from our findings, we request that we be notified immediately in order to allow for a reassessment.

This report was prepared for the sole use of Minto Communities Inc. Permission and notification from Minto and Paterson will be required to release this report to any other party.

Anna Graham

From: Anna Graham
Sent: February-22-18 10:20 AM
To: 'Public Information Services'
Subject: Records search request for Barnsdale Road and Greenbank Road, Ottawa

Good morning,

Could you please complete a search of your records for underground/aboveground storage tanks, historical spills or other incidents/infractions for the following addresses for properties located in the City of Ottawa, ON:

3718 Greenbank Road
3971 Greenbank Road
3976 Greenbank Road
3575 Barnsdale Road
3806 Barnsdale Road
3816 Barnsdale Road
3865 Barnsdale Road
3875 Barnsdale Road
3882 Barnsdale Road
3809 Borrisokane Road

Thank you,

Anna Graham, B.Sc., M.E.S.
patersongroup
solution oriented engineering
