Subject: **Site Servicing Report
Site Plan Application
158 Cardevco Road, Ottawa (Carp), Ontario**

patersongroup.ca

INTRODUCTION

Further to your request and authorization, Paterson group (Paterson) was commissioned to complete this servicing brief to address the proposed water and wastewater services for the Site Plan Application for the additional workspace at 158 Cardevco Road in Ottawa (Carp). There will not be any additional employees/employee shifts or fixtures due to the additional workspace and as such, the daily design sewage flow is not anticipated to change. Furthermore, the proposed addition will be constructed on existing impermeable area and no additional impermeable surfaces are being proposed. Therefore, there will be no changes in the available permeable surface areas. Due to the elevated chlorides (397 mg/L) and sodium (274 mg/L) found in the existing onsite well supply, the Site Plan application is to continue using the existing non-potable supply well.

Existing Conditions

The property consists of a lot of approximately 0.49 hectares (ha). The lot is currently occupied by a single-storey industrial building, and associated gravel access lanes, parking areas and existing septic system which services the development. The existing development is currently serviced by a private onsite sewage system and a drilled well. The water is used for non-potable (toilets/hand washing) uses. Bottled water is supplied to all employees, and signs have been posted indicating that the water supply is non-potable. There is no public access to the building. Refer to Figure 1 – Key Plan below showing the site location.

An Ottawa Septic System Office (OSSO) Part 10/11 application was completed along with the Site Servicing Report. Specifically, an OSSO application for a renovation. The septic flow volumes were confirmed to remain consistent with the use prior to the renovation, and as such no changes to the septic system were required.

Figure 1: Key Plan

City of Ottawa Hydrogeological Pre-consultation

A City of Ottawa Hydrogeological Pre-consultation was completed on July 7, 2022. During the Hydrogeological Pre-consultation, the City indicated that a pumping test would not be required should the existing water demand not be changing. Additionally, a Septic Impact Assessment would not be required if the existing septic flow volumes would not be changing. Should those conditions be met, a Site Servicing Report would be required in lieu of a Hydrogeological Assessment and Terrain Analysis.

Development Proposal

The Site Plan Application is to build an additional building as an extension to the current existing industrial building. Municipal services are not available at this site. The proposed development will be privately serviced by the existing onsite sewage system and existing water well supply. No additional fixtures or employees will be associated with the additional workspace provided by the building addition. Please refer to Darkhorse Drawing titled Site Plan, Location Map, Site Information & Code Review, sheet number A0 dated Nov 12, 2021 attached to this report for additional details.

AQUIFER ANALYSIS

A member of our hydrogeological staff visited the subject site on November 2nd and 3rd, 2022 to carry out the water supply well disinfection and an inspection of the existing water system which services the subject site. The fieldwork program consisted of disinfecting the existing well, an inspection of the existing drilled water supply well / existing water treatment / distribution system, the collection of a raw water sample for chemical and

microbiological analysis, and the field testing of the water supply using portable testing kits.

The existing water supply is obtained from a drilled well. A Water Well Record (WWR) could not be located by the landowner and could not be found online using the Ministry of the Environment, Conservation, and Parks (MECP) WWR mapping tool. As such, the onsite water supply well was measured manually by Paterson personnel during the site visit.

The onsite drilled water supply well was measured to have a 158 mm diameter steel casing, which extends to at least 5.45 m from the top of the casing (TOC). It is inferred that the casing is a minimum length of 6.1 m based upon standard pipe length used in well installations. According to available drift thickness mapping, the drift thickness on the subject site mapped to be from 3 to 5 m thick. The well depth was measured to extend to approximately 16.7 m below the TOC, with a static water level measured at 1.1 m below the TOC.

The well head is fully accessible with the 158 mm diameter steel casing extending approximately 680 mm above the existing ground surface. The present water well regulations, Ontario Regulation 903, requires that the well casing extends at least 400 mm above the ground surface.

The well cap was observed to consist of a vermin proof well cap. The ground surface in the vicinity of the well was adequately shaped to shed surface water away from the well. The well is located greater than 15 m from the subject and neighboring sewage systems, as required by the regulations.

Existing Water Treatment / Distribution System

The existing water system, listed in the direction of flow consists of the following:

- ☐ Submersible Pump
- ☐ Flexcon Industries Well-Rite Pressure Tank

It was noted that no water treatment is currently being used at the time of writing this report. The well has been historically used as a non-potable supply well and is proposed to remain a non-potable supply well.

Water Quantity

A pumping test was not required as the number of fixtures and employees is not changing with the building addition. As the available water supply quantity has been sufficient historically, the existing well is considered to be capable of supplying an adequate volume of water to satisfy the water demand for the subject site.

As per the City of Ottawa Hydrogeological Pre-consultation, an assessment of the available water supply well quantity is not required if the proposed water demands will not be changing for the development.

Water Quality

On November 2, 2022 Paterson personnel chlorinated the well as per the MECP Water Well Disinfection Instruction Sheet, attached to this report.

The client completed the purging of the well on November 3, 2022. The existing submersible pump was used to purge the well. The discharge line was placed at a sufficient distance to ensure that the discharge water was being directed away from the well as well as any septic systems in the area.

Groundwater samples were collected after the free chlorine residual was verified as non-detectable. A HACH Pocket Colorimeter II chlorine reader was used to measure the free chlorine residual levels. The water samples were submitted for comprehensive testing of bacteriological, chemical, and physical water quality parameters consistent with the standard "Subdivision Supply" suite of parameters plus trace metals, VOC's and PHC's.

All samples were collected unfiltered and unchlorinated and were placed directly into clean bottles supplied by the analytical laboratory. Samples were placed immediately into a cooler with ice and were transported directly to Environmental Testing Canada Inc.(Eurofins) laboratory in Ottawa. All samples were received by the laboratory within 24 hours of collection.

A series of field tests of the pumped water were carried out at the well head prior to the collection of the water samples. The parameters tested at the well head included: pH, total dissolved solids, conductivity, turbidity, true colour, and temperature. The results of the on-site testing are summarized in Table 1 below:

Table 1: Field Testing			
Parameter	Units	Raw Sample	ODWS Water Quality Objective
True Colour	TCU	3	5
Turbidity	NTU	1.12	5
pH	-	7.49	6.5-8.5
Total Dissolved Solids	mg/L	990	500
Conductivity	µs/L	1980	-
Temperature	°C	11.8	8-12

Laboratory Data

The Subdivision Package suite of parameters and trace metals laboratory water quality obtained from the onsite well supply is provided in Table 2a and 2b below and the laboratory analyses reports can be found attached. VOC and PHC laboratory analytical testing was completed and measured to be non-detect in the sample results. All laboratory test results can be found attached to this report.

1. ODWS identifies the following types of parameters:

MAC=Maximum Allowable Concentration

AO = Aesthetic Objective

OG= Operational Guideline

2. Shaded Concentration Indicates an Exceedance of the ODWS Objective

The bacteriological test results (Certificate of Analysis – Report No. 1989429) indicated that E.Coli and Total Coliforms were non-detectable in the well water (0 ct/100 mL).

The water quality of the subject water supply well meets all of the Ontario Drinking Water Standards (ODWS) maximum acceptable concentrations (MAC). Furthermore, the water meets all of the aesthetic objectives (AO) and operational guidelines (OG) with the exception of the following:

- ☐ Hardness (as CaCO_3)
- ☐ Total Dissolved Solids (TDS)
- ☐ Chlorides
- ☐ Sodium
- ☐ Manganese

Exceedances of the above parameters are not uncommon of the water supply in the area. Each of these groundwater parameters are discussed in detail below.

Hardness as CaCO_3

Hardness, expressed as calcium carbonate, an operational guideline, does not appear in the ODWS. Rather, it appears in the Technical Support Documents for Ontario Drinking Water Standards, Objectives, and Guidelines as a parameter with an operational guideline of 100 mg/L. At the measured concentration of 321 mg CaCO_3 /L, the water is considered hard. The Technical Support Document for the ODWS publication states that water with hardness in excess of 500 mg/L may be unacceptable for most domestic purposes, however, there is no maximum treatable value available. It is expected that the hardness concentration can be treated using commercial grade water softener technologies, if desired by the owner.

Total Dissolved Solids (TDS)

Total dissolved solids (TDS) refers to the concentration of inorganic substances dissolved in water. The main constituents are typically chloride, sulphates, calcium, magnesium, and bicarbonates. Water with a TDS concentration above 500 mg/L may not be palatable. As the water is not used for consumption (non-potable supply), palatability is not a concern. The non-potable supply will continue to be used only for hand washing and toilet flushing. Procedure D-5-5 does not provide a treatability limit for TDS, but it does require written rationale that corrosion, encrustation, or taste problems will not occur.

The Langelier Saturation Index (Langelier, 1936) is used to predict the calcium carbonate stability of the water. It indicates whether the calcium carbonate will precipitate, dissolve, or be in equilibrium with the water. The results of the Langelier calculation ($\text{LSI} = -0.3$) indicate that the water is under saturated and tends to dissolve solid calcium carbonate (slightly corrosive but non-scale forming). Based on site observations, significant corrosion was not noted. Should corrosion become an issue, PEX piping would be the

most effective mitigation measure for potential corrosion. See Langelier Saturation Index Calculation attached for calculation details.

Chloride

Chloride, an aesthetic parameter, was detected in the laboratory test sample at a concentration of 397 mg/L which is in excess of the ODWS aesthetic objective of 250 mg/L. The World Health Organization (WHO) prepared a document “Chloride in Drinking-water” dated 1996 that concludes that chloride concentrations in excess of 250 mg/L may potentially provide a detectable taste in the water. Consumers may become accustomed to chloride concentrations that exceed 250 mg/L. WHO noted that they would not be proposing limits for chlorides in drinking water.

Health Canada notes within the document “Guidelines for Canadian Drinking Water Quality: Guideline Technical Document – Chloride” that the aesthetic objective of <250 mg/L was established for chlorides in drinking water, however, a maximum concentration was not set by Health Canada.

Concentrations exceeding the aesthetic objective value may impart undesirable tastes to water and beverages. The treatability limit of chloride is 250 mg/L and as the chloride concentration is well above the treatability limit, the water is not considered to be palatable by the City of Ottawa Hydrogeological and Terrain analysis Guidelines (HTAG) standards. Therefore, imported bottled water or a water cooler will be used as an alternative drinking water source as the onsite well supply will not be a potable water well.

Sodium

Sodium is an aesthetic parameter and was detected in the test sample at a concentration of 274 mg/L, which is greater than the ODWS aesthetic objective of 200 mg/L. Although sodium is not toxic and no maximum acceptable concentration has been set, concentrations above 20 mg/L require that the Medical Officer of Health be notified of the water quality results, so that this information may be passed on to local physicians for use in treatment of those requiring a sodium-restricted diet.

As the sodium levels are above the maximum level considered treatable by the City of Ottawa HTAG (200 mg /L), the raw water encountered by the onsite well is not considered palatable.

Manganese

The manganese concentration results from the laboratory test samples yielded a value of 0.15 mg/L in the onsite well, which is above the aesthetic objectives in the ODWSOG of 0.05 mg/L. The City of Ottawa annotated procedure D-5-5 gives a maximum concentration considered reasonably treatable for manganese as 1.0 mg/L. A conventional water softener or manganese greensand filter can be used to reduce the levels of manganese, if desired.

Private Sewage Service

The proposed development will continue to be serviced by the existing onsite sewage system. Refer to the attached OSSO Sewage System Certificate of Completion (OSSO COC) with Sewage System Permit Number 18-222 for additional details on the existing sewage system.

Existing Sewage System Design

The existing Class 4 sewage system was installed in 2018 and consists of a septic tank and leaching bed/treatment system. According to the OSSO COC, the existing system consists of a 4,500 L concrete septic tank which gravity feeds two (2) runs of eight (8) units of the Eljen Model GSF A-42 treatment system (total of 16 units) over a 122 m² sand bed. The concrete septic tank is outfitted with a Tuf-Tite Ef-6 effluent filter. The septic tank and treatment bed meet the setback requirements from the onsite and neighboring drilled wells, as well as all required distances set by the OBC.

Existing Sewage System Capacity

The estimated sewage flow in the OSSO permit is based on the number of 8-hour employee shifts. It has been specified that there will be 14 x 8-hour shifts per day, which according to the OBC guideline of 75 L per 8-hour shift for factories, workshops, etc., results in a daily flow rate of 1,050 L/day. The existing system has been designed to support 1,500 L/d (approximately 20 employee shifts).

The septic tank, for commercial applications, should have a minimum working capacity of at least three (3) times the total design daily sanitary sewage flow of 1,500 L/d based on the maximum the system can support. As such, the existing septic tank, with a volume of 4,500 L, is considered adequate to support the estimated sewage flow.

The number of modules for the Eljen GSF A-42 treatment system required is determined by the formula $Q/95$, where “Q” is the design daily sewage flow. Based on the flow rate of 1,050 L/d, 12 modules would be required, however, the existing system was designed with two (2) rows of eight (8) modules for a total of 16 modules. The sand area required is calculated by $QT/400$, where “Q” is the design daily sewage flow and “T” is the percolation rate of the soil. For the current site, a percolation rate of 30 min/cm was used, resulting in a required sand area of 78.75 m². The existing sand area is 122 m² which is greater than the required sand area and can support a daily sewage flow of 1,600 L/day.

Since no additional fixtures or additional employee shifts are being proposed as part of the proposed building expansion, the septic flow volumes are not anticipated to change.

As the septic system is already oversized compared to the calculated volume under OBC, it can be concluded that the existing system is sufficient to support the proposed development.

Conclusions

Based on the information contained within the body of this report the following conclusions can be drawn:

1. The water supply aquifer intercepted by the existing well is considered to be adequate to support the water quantity demands for the proposed warehouse addition.
2. As the onsite well currently provides non-potable water to the existing building, the client is familiar with the quality of the groundwater.
3. Bottled water must be provided to all employees, and signage indicating that the water is non-potable must be posted at all drinking water locations.
4. The preferred water supply aquifer intercepted by the onsite drilled supply well contains a water supply that is not potable, and contains elevated concentrations of Hardness, TDS, and Manganese. All of these parameters can be treated with current readily available water conditioning equipment.
5. The preferred water supply aquifer intercepted by the onsite drilled supply well contains a water supply that is not potable and contains elevated concentrations of Chlorides and Sodium which exceed the City of Ottawa's HTAG concentrations considered reasonably treatable. As such, the onsite water supply is considered a non-potable water supply well.
6. The sodium concentrations were measured to be above the 20 mg/L reporting limit and, as such, the Medical Officer of Health for the City of Ottawa should be informed to assist area physicians in the treatment of local residents on sodium reduced diets.
7. A Building Permit needs to be issued prior to the commencement of construction on the proposed warehouse addition.
8. The results of the Site Servicing Report have provided satisfactory evidence that the subject site can support the proposed workplace addition with the existing non-potable water supply and the existing septic system.

We trust that the current submission satisfies your immediate requirements.

Best Regards,

Paterson Group Inc.

Alexander Schopf, PhD, EIT

Erik Ardley, P.Geo

Attachments:

- ☐ MECP Water Well Disinfection Instruction Sheet
- ☐ Eurofins Certificate of Analysis
- ☐ Langelier Saturation Calculation
- ☐ OSSO Sewage System Certificate of Completion with permit No.18-222
- ☐ Darkhorse Drawing titled Site Plan, Location Map, Site Information & Code Review, sheet number A0 dated Nov 12, 2021

Disinfection Instruction Sheet

If your drinking water continues to test positive on repeated submissions, consult your local health unit, which can help you interpret the results of your tests and provide you with advice on what measures you can take to safeguard your drinking water.

The first step in identifying the reason for repeated adverse water quality is to conduct a visual inspection of your well. Start with a close look at your well. The area around it should be

clear of any potential contaminant sources, such as pets, lawn care products, and gardens. Once you're satisfied that the area around your well is okay, take a good, close look at the well itself. If you have an older well, make sure that the cap and the sealant around the well casing isn't cracked or damaged. If it is, you need to fix or replace it right away.

If the source of the problem can't be detected, consult a licensed well contractor right away to identify the source of the problem and eliminate it. You can save yourself a lot of money by doing this instead of rushing out to buy a home treatment device that may be expensive to install, operate, and maintain. And it may not eliminate the source of your trouble.

(If you have a cistern, please talk to your public health unit about disinfection requirements.)

1. Measure the diameter of the well.
2. Measure the well depth and the static or resting water level, then calculate the depth of water in the well.
3. Using the table on this sheet, measure out the amount of bleach needed. (The table gives the volume of bleach needed for different well sizes.) Then, pour the mixture into your well.
4. If possible, mix the water in the well. This can be accomplished by attaching a hose to a tap, running water from the well, through the hose and back into the well.
5. After adding chlorine to the well, remove or bypass any carbon filters that are in the system for water treatment. If you don't, these filters will remove the chlorine from the water, and any pipes beyond the filter will not get disinfected. Replace with new filters after chlorination to avoid reintroducing bacteria into the system.
6. Run water at every faucet in the house (and barn, if you have one) until a strong chlorine odour is detected. Be aware that your nose may lose its ability to detect chlorine.
7. If there is no chlorine smell or it is very weak, add more bleach to the well and repeat Step 6 above.
8. Drain the water heater and fill with chlorinated water.
9. Backflush the water softener and all water filters (except carbon filters).

Volume of Bleach to Add for Every 3 Metres (10 Feet) of Water in the Well*			
Casing Diameter		Volume of Unscented Bleach (5.25% solution)	
Millimetres	Inches	Millilitres	
50	2	6	
100	4	30	
150	6	60	
200	8	100	
250	10	200	
300	12	250	
400	16	400	
500	20	650	
600	24	900	
900	36	2000 (2 litres)	
1200	48	3600 (3.6 litres)	

For example: If you have 6 metres (20 feet) of water in your well and it has a casing diameter of 100 mm or 4 inches, you would add 60 mm or 2 fluid ounces of bleach.

* For questions or more information on how to disinfect your well, contact your local health unit.

TDS	1250	B	2.35
Calcium	102	C	1.61
Alkalinity	315	D	2.50
Temp.	11.8		
		pHs =	7.749215673

Langelier Saturation Index (LSI) Calculation		(Langelier, 1936)
$LSI = pH - pH_s$ $pH_s = (9.3 + A + B) - (C + D)$ <p>Where:</p>		$A = (\log_{10} [TDS] - 1) / 10$ $B = -13.12 \times \log_{10} (oC + 273) + 34.55$ $C = \log_{10} [Ca^{2+} \text{ as } CaCO_3] - 0.4$ $D = \log_{10} [\text{alkalinity as } CaCO_3]$
		LSI = -0.3
LSI	Effect	
0.5 to 2	Water is super saturated and tends to precipitate a scale layer of calcium carbonate (scale forming but non-corrosive)	
0 to 0.5	Water is super saturated and tends to precipitate a scale layer of calcium carbonate (slightly scale forming and corrosive).	
0	Water is saturated (in equilibrium) with calcium carbonate. A scale layer of calcium carbonate is neither precipitated nor dissolved.	
0 to -0.5	Water is under saturated and tends to dissolve solid calcium carbonate (slightly corrosivebut non-scale forming).	
-0.5 to -2	Water is under saturated and tends to dissolve solid calcium carbonate (seriously corrosive).	

Certificate of Completion

Ottawa Septic Bureau des systèmes

INFORMATION FOR OWNER/APPLICANT

Attached is your Sewage System Permit. A minimum of two inspections are required before your proposed sewage system can be approved for use (additional inspections may be required for clay soils/bedrock and/or re-inspections). Inspections must be requested in writing. Please see attached:

- Inspection fax request form (all inspections MUST be requested in writing)
- As-built components and drawing form
- Copy of the approved application and schedule pages
- Approved Part 8 permit (applicant copy - YELLOW)(CITY copy#2 - PINK ** Agent Deliver Direct To City**)

Special Note

- A permit is valid for 12 months from the original date of issuance noted in "permit date". If lapsed, it may be renewed only once for a period of 12 months from the date of expiry.

- No person shall make a material change or cause a material change to be made to a plan, specification, document or other information on the basis of which a permit was issued without notifying, filing details with and obtaining the authorization of the Chief Building Official. (Building Code Act 1992, c.23, s.8(12))

Sewage System Permit Construction Requirements

1. Clay Soils/Bedrock only (if required per issued Approval)

In clay soils/bedrock, a site preparation inspection is required. The total contact area must be properly prepared. Scarification must be done under dry conditions prior to importing leaching bed fill.

2. Installation Inspection - 2nd inspection

When the sewage system is substantially completed (i.e., before the final fill is placed over the septic tank and leaching bed system) an installation inspection is required. Prior to any inspection request, the following must be submitted:

- "as-built components" and "as-built drawings" — see attached form
- "engineer letter" — if the system is engineered
- grain size analysis and weight bills for all Filter Media types of septic systems
- Weight bills for washed septic stone, where applicable
- Maintenance/service contract for treatment unit installed

3. Final Grading Inspection - 3rd inspection

When construction of the sewage system is complete, a final grading inspection is required. Before a Certificate of Completion can be issued, the following must be complete:

- The leaching bed and septic tank must be covered with sand fill and topsoil and graded accordingly
- All conditions of the Sewage System Permit & comments on the installation inspection report must be met
- The depth of cover & material type must be identified by inspection pipes or holes placed over trenches at 4 corners of bed
- The 4 corners of the bed must be staked

*Total: 12.5

*Insert the TOTAL in section 5 of Schedule 4 (O.Reg 151/13 Table 7.4.9.3)

1. Sump pumps and floor drains are not to be connected to the sewage system. Connection of such fixtures to a sewage system may lead to a hydraulic failure of the said system. The above mentioned fixtures should be discharged separately to an approved Class 2 (leaching pit) sewage system.
2. Where laundry waste is not more than 20% of the total daily design sanitary sewage flow, it may discharge to a sewage system (Part 8, OBC, 8.1.3.1(2)).

SPECIAL NOTES:

1. This system (is/is not) designed for the use of a garbage disposal.
2. This system is not designed to receive backwash from a domestic water treatment device.
3. Organic Lean Layer must be removed from bed and slope extension areas prior to fill placement.
Scarify subsoil prior to fill placement.
4. All fill material shall be clean and permeable and meet Eljen design manual requirements. The 150 mm of Specified Sand underneath and surrounding the GSF modules shall comply with ASTM C33 sand.
5. Backfill material can be native soil with no stones larger than 50 mm in any dimension to a maximum depth of 30 cm over the GSF modules and covered with a minimum 150 mm of clean loam.
6. Any Eljen GSF System that is more than 450 mm below finish grade as measured from the top of the module shall be vented.
7. This design complies with and must be installed in accordance with the MOST CURRENT Eljen GSF System Design and Installation Manual for Ontario.
8. Installation shall be performed by an authorized ELJEN Installer detaining a valid C.A. RECEIVED.
9. Eljen GSF product shall be supplied by an Ontario authorized Eljen GSF Distributor.

SEPTIC APPLICATION
18-222
REQUIRED FOR ALL
PERMITS

INFORMATION FOR OWNER/APPLICANT

Attached is your Sewage System Permit. A minimum of two inspections are required before your proposed sewage system can be approved for use (additional inspections may be required for clay soils/bedrock and/or re-inspections). Inspections must be requested in writing. Please see attached:

- Inspection fax request form (all inspections MUST be requested in writing)
- As-built components and drawing form
- Copy of the approved application and schedule pages
- Approved Part 8 permit (applicant copy - YELLOW)(CITY copy#2 - PINK ** Agent Deliver Direct To City**)

Special Note

- A permit is valid for 12 months from the original date of issuance noted in "permit date". If lapsed, it may be renewed only once for a period of 12 months from the date of expiry.

- No person shall make a material change or cause a material change to be made to a plan, specification, document or other information on the basis of which a permit was issued without notifying, filing details with and obtaining the authorization of the Chief Building Official. (Building Code Act 1992, c.23, s.8(12))

Sewage System Permit Construction Requirements

1. Clay Soils/Bedrock only (if required per issued Approval)

In clay soils/bedrock, a site preparation inspection is required. The total contact area must be properly prepared. Scarification must be done under dry conditions prior to importing leaching bed fill.

2. Installation Inspection - 2nd inspection

When the sewage system is substantially completed (i.e., before the final fill is placed over the septic tank and leaching bed system) an installation inspection is required. Prior to any inspection request, the following must be submitted:

- a) "as-built components" and "as-built drawings" — see attached form
- b) "engineer letter" — if the system is engineered
- c) grain size analysis and weight bills for all Filter Media types of septic systems
- d) Weigh bills for washed septic stone, where applicable
- e) Maintenance/service contract for treatment unit installed

3. Final Grading Inspection - 3rd inspection

When construction of the sewage system is complete, a final grading inspection is required. Before a Certificate of Completion can be issued, the following must be complete:

- a) The leaching bed and septic tank must be covered with sand fill and topsoil and graded accordingly
- b) All conditions of the Sewage System Permit & comments on the installation inspection report must be met
- c) The depth of cover & material type must be identified by inspection pipes or holes placed over trenches at 4 corners of bed
- d) The 4 corners of the bed must be staked

I review and take responsibility for the design and am qualified in the appropriate category as an "other designer" under subsection 3.2.5. of Division C, of the Building Code.			
Individual BCIN: _____			
Basis for exemption from registration: _____			
The design work is exempt from the registration and qualification requirements of the Building Code.			
Basis for exemption from registration and qualification: _____			
I certify that:			
1. The information contained in this schedule is true to the best of my knowledge.			
2. I have submitted this application with the knowledge and consent of the firm.			
16-5-18		Signature of Designer	
Date			

NOTE:

- For the purposes of this form, "individual" means the "person" referred to in Clause 3.2.4.7(1) (c) of Division C, Article 3.2.5.1. of Division C, and all other persons who are exempt from qualification under Subsections 3.2.4. and 3.2.5. of Division C.
- Schedule 1 is not required to be completed by a holder of a license, temporary license, or a certificate of practice, issued by the Ontario Association of Architects. Schedule 1 is also not required to be completed by a holder of a license to practise, a limited license to practise, or a certificate of authorization, issued by the Association of Professional Engineers of Ontario.

Schedule 2: Sewage System Installer Information

A. Project Information		MAY 17 2018	
Building number, street name		Unit number	Lot/con.
Municipality		Postal code	Plan number/ other description
OTTAWA - W. CARLETON		4M 356	BLK 10/11
B. Sewage system installer			
Is the installer of the sewage system engaged in the business of constructing on-site, installing, repairing, servicing, cleaning or emptying sewage systems, in accordance with Building Code Article 3.3.1.1, Division C?			
Yes (Continue to Section C)		No (Continue to Section E) Installer unknown at time of application (Continue to Section E)	
C. Registered installer information (where answer to B is "Yes")			
Name		BCIN	
ALL IN ONE SEPTIC + EX.		36933	
Street address		Unit number	Lot/con.
Municipality	Postal code	Province	E-mail
Telephone number	Fax	Cell number	
()	()	()	
D. Qualified supervisor information (where answer to section B is "Yes")			
Name of qualified supervisor(s)		Building Code Identification Number (BCIN)	
GARNET NORTON		15470	
DEUG NORTON		10586	
E. Declaration of Applicant:			
I, <u>G. WITTEYLAN</u> , declare that:			
(print name)			
I am the applicant for the permit to construct the sewage system. If the installer is unknown at time of application, I shall submit a new Schedule 2 prior to construction when the installer is known;			
OR			
I am the holder of the permit to construct the sewage system, and am submitting a new Schedule 2, now that the installer is known.			
I certify that:			
1. The information contained in this schedule is true to the best of my knowledge.			
2. If the owner is a corporation or partnership, I have the authority to bind the corporation or partnership.

*Insert the TOTAL in section 5 of Schedule 4 (0.Reg 151/13 Table 7.4.9.3)

1. Sump pumps and floor drains are not to be connected to the sewage system. Connection of such fixtures to a sewage system may lead to a hydraulic failure of the said system. The above mentioned fixtures should be discharged separately to an approved Class 2 (leaching pit) sewage system.
2. Where laundry waste is not more than 20% of the total daily design sanitary sewage flow, it may discharge to a sewage system (Part 8, OBC, 8.1.3.1(2)).

CARDEVCO 158
TRUCK REPAIR GARAGE
SPECIAL NOTES:
-ONLY DOMESTIC SEWAGE TO BE DISCHARGED TO
PRIVATE SEWAGE SYSTEM
-EMPLOYEES TO CLEAN GREASE OFF HANDS WITH CLOTH
PRIOR TO RINSE

LEGEND

- 1 PROPOSED SEPTIC TANK:
-MINIMUM WORKING VOLUME: 1500 LITRES
-APPROVED EFFLUENT FILTER TO BE INSTALLED
-ACCESS RISER(S) TO GRADE TO BE INSTALLED
- 2 PROPOSED FLOW DIVIDOR
- 3 2 RUNS OF 8 ELJEN GSF A-42 MODULES
16 ELJEN MODULES
- 4 ELJEN SAMPLING PORT:
-INSTALL ELJEN SYSTEM SAMPLING DEVICE AS PER
MANUFACTURES RECOMMENDATIONS.
-INSTALL COLLECTION PIPES (3) BELOW
FIRST, LAST AND MIDDLE MODULE.
- 5 LIMIT OF ELJEN SAND
- A EXISTING SEPTIC TANK (+/-) TO BE
PUMPED OUT BY LICENSED HAULER
AND FILLED IN - PUMP OUT RECEIPT TO
BE FORWARDED TO OSSO
- B EXISTING SEPTIC BED (+/-) TO BE ABANDONED-
ANY CONTAMINATED MATERIAL TO BE
HANDLED AS PER REGULATOR'S POLICY

NOTES:

- 1.0 THIS PLAN IS TO BE READ IN CONJUNCTION WITH THE SEWAGE SYSTEM PERMIT AND DWG #CAR 158-D.
- 2.0 THE SEPTIC TANK SYSTEM CONTRACTOR IS RESPONSIBLE TO CONFIRM ALL DESIGN REQUIREMENTS PRIOR TO COMMENCE WORK.
- 3.0 THE DEVELOPMENT AS PROPOSED IS UNDER THE DIRECTION OF THE OWNER/AGENT. THE OWNER/AGENT ASSUME FULL RESPONSIBILITY FOR DEVELOPMENT AS PROPOSED.
- 4.0 PROPERTY LINE/EASEMENT/LEGAL DESCRIPTION AND EXISTING/NEIGHBOURING WELL INFORMATION WAS PROVIDED BY OWNER OR THEIR AGENT. NOT THIRD EYE TECHNICAL SERVICE. THE OWNER OR THEIR AGENT ASSUME FULL RESPONSIBILITY FOR SCOPE & ACCURACY OF THIS INFORMATION AS DETAIL.
- 5.0 IT IS RECOMMENDED THAT THE INLET/OUTLET PIPES AND SEPTIC TANK BE INSULATED PRIOR TO BACKFILLING.
- 6.0 THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE LOCATION AND PROTECTION OF UTILITIES.
- 7.0 THE GRADING AND DRAINAGE DESIGN IS OF A GENERAL NATURE. ALL ELEVATIONS AND GRADING SPECIFICATIONS TO BE CONFIRMED BY THE CONTRACTOR PRIOR TO COMMENCE WORK.
- 8.0 ALL MEASUREMENTS AND ELEVATIONS ARE METRIC.
- 9.0 THIS PLAN NOT TO BE SCALED FOR LAYOUT.

CAUTION: THIS IS NOT A PLAN OF SURVEY
METRIC: DISTANCES AND ELEVATIONS SHOWN ON THIS PLAN ARE IN METRES AND
CAN BE CONVERTED TO FEET BY DIVIDING BY 0.3048
BENCH MARK: THE BENCH MARK ELEVATION IS BASED ON LOCAL GEODETIC DATUM
AND IS FOR USE ON THIS PROJECT ONLY.

THIRD EYE

TECHNICAL SERVICE

[illegible]

1.0 SEPTIC TANK SYSTEM DESIGN IS BASED ON MAXIMUM 15 EMPLOYEES.
PLUMBING FIXTURE UNITS: 12.5

2.0 DESIGN DAILY SEWAGE VOLUME(Q): $14 \times 75L = 1050L$
USE 2 RINGS OF A-62 MODULES REQUIRED $Q/95=1050/95=11$
USE 2 RINGS OF B-MODULES = 16 MODULES TOTAL
SAND AREA REQUIRED = $0.7/403 = 0.001734$ SQ/30"403 = 78.6m²
SAND AREA PROVIDED: 122m²

3.0 THE CONSTRUCTION AND OPERATION OF THE PRIVATE SEWAGE SYSTEM SHALL
CONFORM WITH ONTARIO REGULATION 332/12 AS AMENDED MADE UNDER THE BUILDING CODE ACT, 1992.
THE APPROVED TREATMENT UNIT SHALL BE INSTALLED AND OPERATED IN ACCORDANCE WITH THE
OBSERVED AUTHORITY AND THE MANUFACTURER'S RECOMMENDATIONS.

5.0 ALL VEGETATION/STUMP TO BE REMOVED FROM ENTIRE AREA BED RILL ZONE.
PRIOR TO PLACEMENT OF PERMEABLE FILL ONLY LIGHT BACKED COUNCIL SHALL BE PERMITTED
TO TRAVEL OVER PREPARED INTERFACE OF NATIVE MATERIAL.

6.0 THE PLAYS TO BE LEAK CONJUNCTION WITH THE SEWAGE SYSTEM PERMIT AND DRAWING #CAR 158.

7.0 THE SEPTIC TANK SYSTEM CONTRACTOR IS RESPONSIBLE TO CONFIRM ALL DESIGN
REQUIREMENTS PRIOR TO COMMENCE WORK.

8.0 THE OWNER/AGENT AS PROPOSED IS UNDER THE DIRECTION OF THE OWNER/AGENT.
THE OWNER/AGENT ASSUME FULL RESPONSIBILITY FOR DEVELOPMENT AS PROPOSED
THIRD PARTY CONTRACTOR CANNOT BE HELD RESPONSIBLE FOR THE INSTALLATION,
ULTIMATE OPERATION AND ENVIRONMENTAL IMPACT OF THE PRIVATE SEWAGE DISPOSAL SYSTEM.

9.0 THE GRADING AND DRAINAGE DESIGN AS COMPLETED IS OF A GENERAL NATURE. ALL ELEVATIONS AND
GRADING SPECIFICATIONS TO BE CONFIRMED BY THE CONTRACTOR PRIOR TO COMMENCE WORK.

10.0 MEASUREMENTS IN DIMENSIONS ARE METRIC.
THIS PLAN NOT TO BE SCALED.

1. This system (is/are not) designed for the use of a garbage disposal.
2. This system is not designed to receive backwash from a domestic water treatment device.
3. Organic Leach Layer must be removed from bed and slope extension areas prior to fit placement.
4. Sealed subsoil prior to fill placement.
5. All fill material shall be clean and permeable and meet Eljen design material requirements. The 150 mm
6. Backfill material can be native soil with no stones larger than 50 mm in any dimension to a maximum
7. depth of 30 cm over the GSF modules and covered with a minimum 150 mm of clean sand.
8. Any Eljen GSF System that is more than 450 mm below finish grade as measured from the top of the
9. module shall be vented.
10. This design complies with and must be installed in accordance with THE MOST CURRENT Eljen GSF
11. System Design and Installation Manual for Ontario.
12. Installation shall be performed by an authorized ELJEN installer detaining a valid
13. Eljen GSF product shall be supplied by an Ontario authorized Eljen GSF Distributor.

Permit Part 8 – Sewage System Ontario Building Code

Do Not Complete
Permit No.
Revision No.
Date
Related Application

A copy of this permit must be posted on the property at all time during construction. OBC, Division C – Part 1, Section 1.3.2.1
This permit verifies that the on-site sewage system was reviewed and approved for construction under the Ontario Building Code and
O.Reg. 323/12 as amended by O.Reg. 151/13.

Inspected & Recommended by: J. Hutton Owner: TDL West
Inspection Date & Time: May 12/18 (11:15 AM) Weather: Sunny, Warm
Civic Address: 158 Candace Rd Legal: _____
