1.0 INTRODUCTION

1.1 BACKGROUND

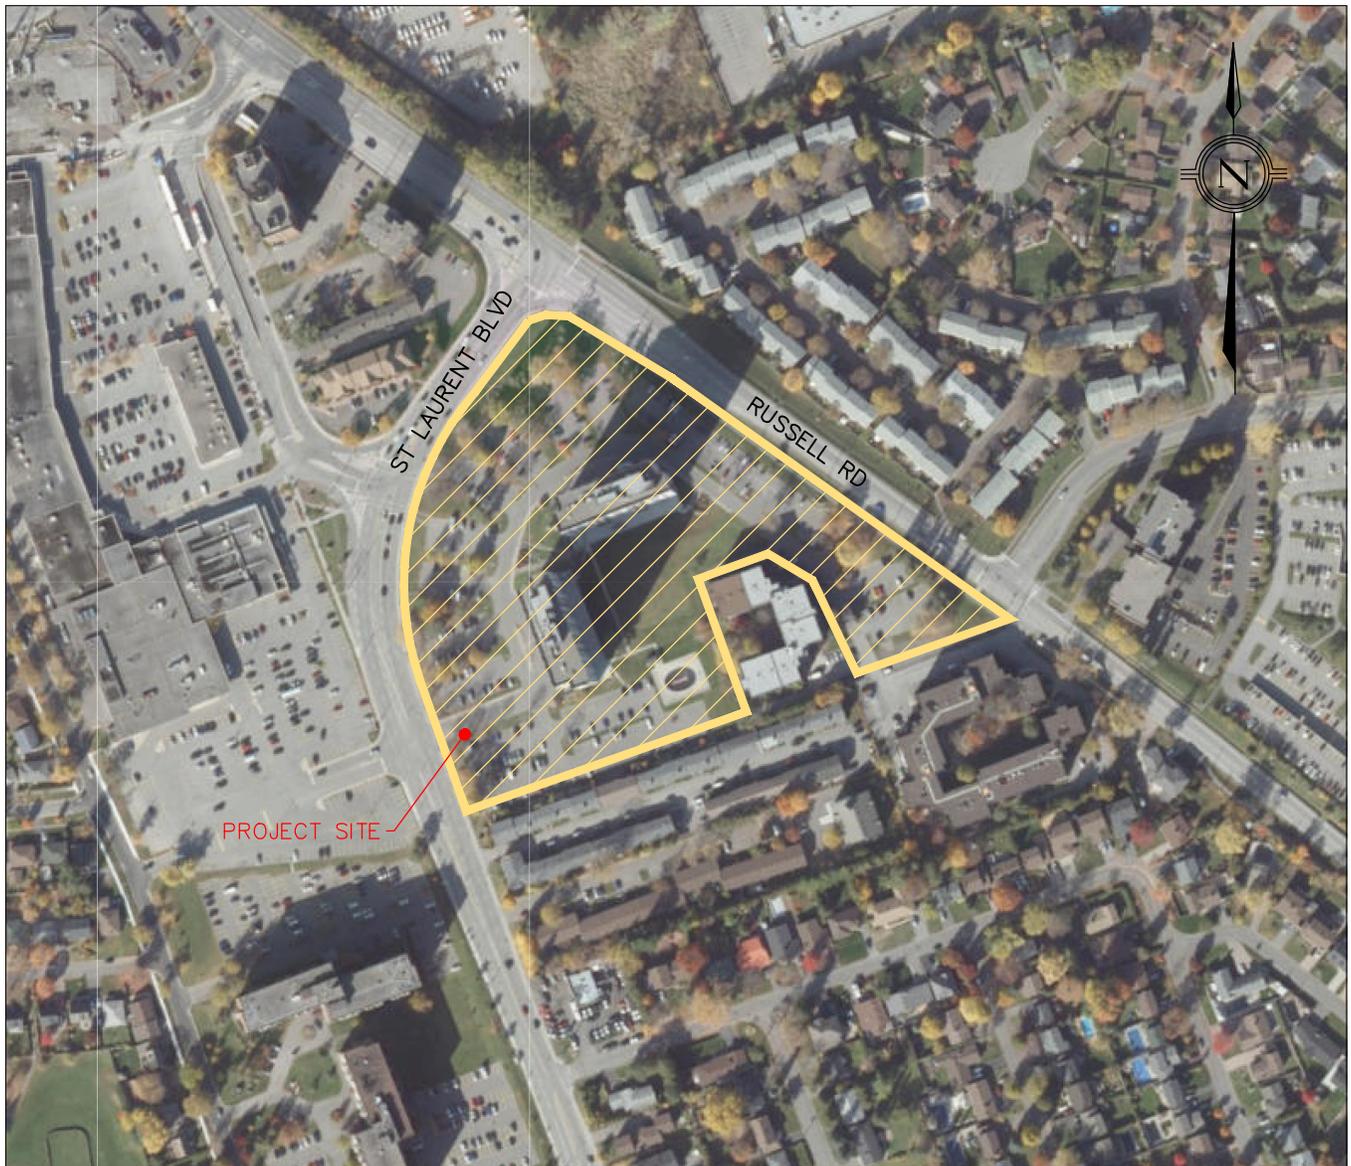

This Site Servicing and Stormwater Management Report ('FSSR') has been prepared in support of a zoning by-law amendment ('ZBLA') and site plan control application ('SPA') for the proposed re-development located at 1971 & 1975 St. Laurent Boulevard within the City of Ottawa. The +/-3.46ha (+/-8.57 acre) subject site is bound by St. Laurent Boulevard along the north and west, Russell Road to the east and an existing City of Ottawa Community Housing residential complex to the south. The site is currently developed and contains two occupied 18-storey apartment buildings including associated surface parking lots and landscaped amenity areas. The site contains two existing vehicular accesses; one from St. Laurent Boulevard and one from Russell Road. The Russell Road access is shared with the adjacent property, 2080 Russell Road and there currently exists a shared access easement agreement. Refer to **Figure 1** for a key plan of the subject site.

The proposed development includes three new 17 storey apartment towers known here-on as "Building A" (167 units), "Building B" (164 units) and "Building C" (167 units) in addition to the two existing 18-storey apartment building which are to remain. In total, an additional 498 rental units are being added to the subject site to compliment the already existing 500 residential rental units. A new 4-storey vehicular parkade known as "Building D" is also proposed at the south end of the subject site. It is intended that the three new apartment towers, Building A, Building B and Building C, be severed off from the existing property for separate ownership at a future time. Site access is proposed through the two site accesses, one newly proposed access from St. Laurent Boulevard and one existing access from Russell Road. The existing shared access easement agreement for the Russell Road vehicular access is to remain. There is a proposed road widening along Russell Road which consists of 0.46 ha (1.14 acres). The above grade parking structure, Building D, will also provide rooftop amenity space for residents in addition to parking spaces. The development concept includes for an increase in Gross Floor Area ('GFA') of 36,100 sq.m. Refer to **Appendix A** for a summary of site statistics and architectural site plan.

*Site Servicing and Stormwater Management Report
1971 & 1975 St. Laurent Blvd., Ottawa*

This FSSR has been prepared to address the site servicing strategy (stormwater, sanitary, and water servicing) in support of the above noted development applications.

1.2 STUDY PARAMETERS

The background documents listed below have been considered in the preparation of this FSSR:

- Architectural plans and inputs prepared by Petroff Partnership Architects;
- SUE investigation by T2 Utility Engineers, dated December 6, 2021;
- Topographic Survey by Annis, O’Sullivan, Vollebekk Ltd., dated September 27, 2021;
- Ottawa Sewer Design Guidelines, Second Edition, October 2012;
- Ottawa Design Guidelines – Water Distribution, First Edition, July 2010;
- Fire Underwriters Survey, 1999.
- City of Ottawa Technical Bulletin ISTB-2018-01 dated March 21, 2018
- City of Ottawa Technical Bulletin ISTB-2018-02 dated March 21, 2018
- City of Ottawa Technical Bulletin ISTB-2019-03 dated March 04, 2019
- City of Ottawa Technical Bulletin ISTB-2021-03 dated August 18, 2021

For the purpose of this report, we have referenced site and building statistics from the architectural site plan.

2.0 STORMWATER MANAGEMENT

2.1 EXISTING CONDITIONS

The subject site is currently occupied by two residential apartment buildings, associated surface parking lots and landscaped areas. The site currently utilizes a storm sewer network to capture minor flows (i.e. through catchbasins and storm sewers) and connects to a 450mm diameter municipal storm connection located at the south-east corner of the subject site. Based on a review of the topographic survey, major system overland flows exit the site at both the east and west frontages of the site, particularly at the existing vehicular access locations. Original design documents of the subject site were not located and due to the age of the existing infrastructure the assumption is that the existing site sewer does not have any stormwater controls. In addition, the storm sewer network servicing the neighboring Ottawa Community Housing buildings connects to the subject sites private storm sewer network at the southeast corner of the site, just upstream of the existing municipal control manhole. Refer to the **Pre-Development storm Drainage Plan (dwg. SW-SWM1)** for an illustration of the existing drainage conditions.

2.2 ALLOWABLE RELEASE RATE

The site conditions as they exist today, drain stormwater runoff to three separate outlets. Currently a portion of the site sheet flows drainage off toward the west end of the site and into the St. Laurent Boulevard right-of-way (ROW) which is eventually collected by the municipal storm sewer that flows south along the road. This will be referred hereon as the St. Laurent Boulevard outlet. In addition, a portion of the site sheet flows drainage off toward the north of the site and into the municipal ROW where it is eventually collected by the municipal storm sewer that flows north along Russell Road. This will be referred hereon as the Russell Road outlet. The remainder of the site captures drainage by the existing site storm sewer via various catchbasins and catchbasin manholes located throughout the site. The existing onsite storm sewer has a municipal service connection located at the southeast corner of the site. The site storm service connects to the existing 450mm municipal storm sewer located on Southvale Crescent. This will be referred hereon as the Southvale Crescent outlet. The existing private storm sewer on site does not have any SWM controls. Therefore, the proposed stormwater management strategy will satisfy municipal criteria and improve the old design to new standards. To

*Site Servicing and Stormwater Management Report
1971 & 1975 St. Laurent Blvd., Ottawa*

determine the allowable discharge rate to each outlet, the pre-development drainage boundary and its subsequent runoff coefficient was calculated. Each municipal storm sewer in the City of Ottawa has its own specifically designed capacity based on storm year events. For the purposes of this design, the following storm events apply for each storm sewer outlet:

- St. Laurent Boulevard outlet = 2 Year Storm Event
- Russell Road Outlet = 5 Year Storm Event
- Southvale Crescent = 2 Year Storm Event

The control manhole has been proposed along the existing 450mm private storm sewer and upstream of the connections from the existing neighbouring Ottawa Community Housing building as to avoid any negative impacts to the neighbouring buildings storm sewer.

Table 1 below summarizes the predevelopment storm runoff calculation which is used to determine the post-development allowable release rate from the altered areas within the subject site:

Table 1: Allowable Release Rates

	$Q_A = C \times A \times i / 360$ (L/s)		
	Area 100 St. Laurent Outlet	Area 101 Russell Outlet	Area 102 Southvale Outlet
A - Site Area (ha)	0.20	0.19	3.16
T_c (min)	10	10	10
C - Runoff Coefficient	0.46	0.25	0.50*
i – Intensity [5-year] (mm/hr)	76.81	104.19	76.81
Q - Release Rate [5-year] (l/s)	19.6	13.8	336.6

* Runoff coefficient used to calculate allowable release rate limited to maximum of 0.5 per City of Ottawa design manual

The overall total combined release rate from the site is **369.9 L/s**. Post-development peak flows will be attenuated to the allowable release rates of each outlet as shown in **Table 1** or less if possible for all storms up to and including the 100-year storm event, as summarized in **Appendix B**. If the release rate for a particular outlet marginally exceeds the allowable release for that particular outlet, another outlet will be additional attenuated to ensure the overall total allowable release rate is not exceeded. Refer

to **Appendix B** for the site-specific allowable release rate calculation. Refer to the **Pre-Development Storm Drainage Plan (dwg. SW-SWM1)** for an illustration of the existing drainage boundaries.

2.3 WATER QUANTITY

All stormwater runoff from the various components of the proposed development's site areas, including roofs, exterior hard paved surfaces, and soft landscaped areas, will be captured by roof drains and catchbasins and conveyed either via the building plumbing system or the site storm sewer system and directed to the existing/proposed storm sewers within the site. Refer to the **Post-Development Storm Drainage Plan (dwg. SW-SWM2)** for the post-development drainage condition, storm sewer network detail and connection to municipal infrastructure. A small portion of the site will drain uncontrolled in the post-development drainage condition. The proposed parkland dedication to the City (0.178 ha) will drain uncontrolled and contributes a large portion of uncontrolled drainage to the St. Laurent Blvd outlet. The post-development 100-year storm event discharging from the uncontrolled areas draining to the St. Laurent outlet and Russell outlet will marginally exceed their respective predevelopment allowable flows of **19.6 l/s** and **13.8 l/s**, respectively. The majority of the site stormwater will be captured and controlled via the onsite storm sewer system and discharge to the Southvale outlet. Quantity control will be provided within the site to ensure that post-development peak flows up to the 100-year storm event are attenuated to the allowable release rate of **336.6 l/s** to the Southvale outlet at the control MH. To compensate for the additional uncontrolled discharge to the St. Laurent outlet and Russell outlet, the controlled discharge to the Southvale outlet will be over attenuated to ensure the overall site discharge does not exceed the total allowable for the site of **369.9 l/s**.

For the purpose of calculating the required storage and orifice diameter required to achieve quantity control, composite run-off coefficients were calculated across the subject site.

Table 2: Composite Runoff Coefficients of Post-Development Condition

Area	Area [m ²]	RC
200 - Controlled to Southvale Outlet	3.318	0.77
201 - Uncontrolled to Southvale Outlet	0.007	0.25
202 - Uncontrolled to St. Laurent Outlet	0.022	0.33
Parkland Dedication	0.178	0.25
203 - Uncontrolled to Russell Outlet	0.108	0.42

The resulting quantity control calculations are summarized in **Table 3** shown below. The on-site water quantity requirements can be achieved by in-sewer underground storage in combination with a 350mm orifice plate control, at the downstream side of the control maintenance hole, to attenuate storm runoff to the required level. Refer to **Appendix B** for stormwater storage calculations. Underground storage tanks will provide the bulk of the required stormwater detention. The tanks specified for this site are GreenStorm-ST modules manufactured by Stormcon. Refer to **Appendix B** for detailed design specifications of the Stormcon system. A combined storage total of **639.5 m³** of storage is provided onsite for the 100-year storm event. As per the Ottawa Sewer Design Guideline requirements (SDG 8.3.12) an additional climate stress test is to be applied to the provided 100-year stormwater storage onsite. The stress test requires the SWM storage facility onsite to be able to accommodate an additional 20% storage volume on top of the required 100-year storage requirement. The 100-year +20% storage volume require onsite is calculated to be **851.3 m³**.

Major storm events in excess of the 100-year event and not captured by the minor system will spill to the municipal right-of-way, primarily at the two vehicular accesses to St. Laurent Boulevard and Russell Road.

Site Servicing and Stormwater Management Report
1971 & 1975 St. Laurent Blvd., Ottawa

Table 3: Peak Flow and Storage Summary

Area ID	Area (ha)	Runoff Coefficient	t _c (min)	5yr Flows				100yr Flows				Description	Orifice Size (mm)	Orifice Release Rate (L/s)
				Allowable Release Rate (L/s)	Provided Release Rate (L/s)	Storage Required (m ³)	Storage Provided (m ³)	Allowable Release Rate (L/s)	Provided Release Rate (L/s)	Storage Required (m ³)	Storage Provided (m ³)

SITE TOTALS	3.455			369.9	56.2	350.1	350.9	369.9	369.2	639.5	851.3			

2.4 WATER QUALITY

Water quality treatment for the subject site is required to ensure Level I enhanced quality treatment is achieved, in accordance with City of Ottawa/MOE criteria, which requires an overall 80% Total Suspended Solids ('TSS') removal rate for the overall site.

As run-off from roof areas is generally considered to be clean, a quality control unit will be provided, at the downstream of the Control MH, to treat only runoff from paved surface areas upstream of the control manhole. In order to achieve a TSS removal rate of 80% and considering site characteristics, a CSD PMSU3020-6-C Oil/Grit Separator (OGS) unit manufactured by Contech Engineered Solutions was selected. Refer to **Appendix B** for more information. The specified oil/grit separator will provide the required 80% TSS removal, at minimum.

2.5 EROSION AND SEDIMENT CONTROL

Erosion and sediment control will be provided on-site before major construction, including silt fence around the perimeter of the construction area, silt controls on existing catchbasins within and adjacent to the site and if suitable, a mud mat at the construction entrance to prevent mud being tracked onto the adjacent roads by construction vehicles. Regular cleaning of the adjacent streets will also be carried out. The above measures are to be maintained throughout the course of construction and any areas disturbed by the installation of erosion and sediment control devices are to be restored to existing condition or better.

3.0 SANITARY SERVICING

3.1 EXISTING SANITARY SERVICING

The site currently is serviced by a sanitary sewer network that conveys sanitary flows from 1971 & 1975 St. Laurent Boulevard and connects to a 250mm diameter municipal sanitary sewer that crosses Russell Road and flows north easterly along Southvale Crescent. The existing sanitary service connection to the subject site also services the neighbouring Ottawa Community Housing buildings located at 2080 & 2100 Russell Road. Based on the proposed sanitary sewer design for the proposed development, it is considered independent of our scope and there is no intention to alter the sanitary sewer connection to either of the existing Ottawa Community Housing buildings. Refer to the **Site Servicing Plan** (dwg. **SW-S**) for the layout of the existing sewer network.

The peak sanitary discharge from the existing apartment towers was calculated using an average wastewater flow of 280 l/capita/day and using an infiltration rate of 0.33 l/s/ha. (City of Ottawa Technical Bulletin ISTB-2018-01, March 21, 2018). The unit count and mix for the two existing apartment towers on site was acquired from the Client to determine a population density for peak flow calculations. The unit count and mix for the two existing buildings located at 2080 & 2100 Russell Road was acquired from the Ottawa Community Housing website to determine a population density for peak flow calculations. Refer to **Appendix C** for supporting calculations. The following table summarized the existing sanitary peak flows generated from the site today:

Table 4: Peak Sanitary Flow – Existing Buildings

Building	Outlet Sewer	Units	Equiv. Pop	Peak Flow incl. Infil. (L/s)
1971 St. Laurent Blvd.	Southvale Cres.	250	412	14.62
1975 St. Laurent Blvd.	Southvale Cres.	250	412	
2080 & 2100 Russell Road	Southvale Cres.	335	472	

3.2 PROPOSED SANITARY RELEASE RATE AND SERVICING

The location of the private sanitary sewer network currently servicing the two existing 18-storey apartment buildings is ideal for providing a new, private connection for Building A and Building D. Building A currently has no public sanitary sewer availability across its frontage along St. Laurent Boulevard or Russell Road and therefore will require service from the existing private sanitary sewer network onsite. Building D is located between the two existing apartment towers and therefore is ideal to connect to the already available private sanitary sewer network onsite. Since the owner is currently intending a land severance, two new sewer connections are proposed from the existing 250mm municipal sanitary sewer along St. Laurent Boulevard to Building B and Building C. The new sanitary sewer connections will consist of 200mm PVC services at a slope of 2.0% connecting into existing sanitary manholes on St. Laurent boulevard and include proposed control manholes at the property lines. Per City request, an additional individual sanitary service connection is provided to the park dedication lands which includes a 150mm PVC service at a slope of 2.0% which includes a control maintenance hole 2.0m inside the property line. Further discussions with City staff are required in order to determine how to ensure the proposed servicing is building code and MECP compliant, considering Building A and Building D will be connecting into the existing private sanitary network onsite.

The peak sanitary discharge from the proposed apartment towers was calculated using an average wastewater flow of 280 l/capita/day and using an infiltration rate of 0.33 l/s/ha. (City of Ottawa Technical Bulletin ISTB-2018-01, March 21, 2018). The onsite sanitary peak discharge has been separated as per their respective sewer outlets.

Table 5: Peak Sanitary Flow – Proposed Buildings

Building	Outlet Sewer	Units	Equiv. Pop	Peak Flow incl. Infil. (L/s)
Building A	Southvale Cres.	167	302	3.72
Building D	Southvale Cres	0	0	
Building B	St. Laurent Blvd.	164	295	6.70
Building C	St. Laurent Blvd.	167	300	

Considering the subject site consists of existing apartment building to remain, the above peak sanitary flows represent the net increase of sanitary discharge from the existing site. Therefore, the total net increase in wet weather peak flow rate to the Southvale Crescent outlet is **3.72 L/s** and the total net increase in wet weather peak flow rate to the St. Laurent Boulevard outlet is **6.70 L/s**. This produces a total net increase in sanitary flow from the site of **10.77 L/s**. Refer to **Appendix C** for supporting calculations.

4.0 WATERMAIN SERVICING

4.1 EXISTING WATER SERVICING STRATEGY

The existing site is currently serviced by a private looped watermain on site consisting of 200mm and 150mm watermain pipes. The internal private watermain systems connects to the municipal watermain system in two locations along St. Laurent Boulevard. The internal private loop provides water service connections to the two existing apartment buildings. The private site watermain service continues southeast into the site where it eventually provides service connections to the Ottawa Community housing buildings. The private site contains three existing fire hydrants located throughout the subject site relatively in the vicinity of the existing buildings. Refer to drawing **SW-S** for the layout of the existing water service network and location of site service connections.

4.2 PROPOSED WATER SERVICING STRATEGY

The following watermain improvements are proposed as part of the development application. Refer to drawing **SW-S** for the proposed watermain improvements.

- Extend the existing private watermain loop to provide connections to the newly proposed buildings. Building A and Building D will be serviced by extensions of the existing internal watermain loop with 300mm diameter and 150mm diameter PVC watermain services providing domestic service and fire protection.
- Remove lengths of existing watermain that conflict with proposed buildings and infrastructure on site and replace with new watermain lengths to reconnect the internal private looped system.

*Site Servicing and Stormwater Management Report
1971 & 1975 St. Laurent Blvd., Ottawa*

- Extend the existing onsite watermain next to complete the loop on either end of the site to eliminate any dead-end lengths of watermain extending to Ottawa Community housing buildings.
- Provide two new separate water service connections each to Building B and Building C from the existing 300mm municipal watermain on St. Laurent Boulevard. Building B and Building C will each require two 150mm PVC water service connection separated by an isolation valve along the water main to provide a redundant looped system to each parcel. These water service connections will provide domestic and fire prevention service to each building.
- Provide a new separate water service connections to the proposed Park Dedication lands from the existing 300mm municipal watermain on St. Laurent Boulevard. The Park Dedication land will require one 50mm copper water service connection complete with a water meter chamber within the property line and terminating into a standpipe. This water service connection will provide any future water provisions required for the park.
- Both portions of the existing watermain system as well as new additions to the watermain network are proposed onsite due to the nature of this project being a retrofit of an existing development. For this reason, construction of the new watermain system and decommissioning of existing watermains to be abandoned will require a detailed water testing and connection commissioning plan to outline the procedure. The contractor is required prior to commencing watermain construction to provide a water chlorination and commissioning plan to the satisfaction of City staff.

Domestic water demands were calculated using a per capita rate of 280 litres/person/day and peaked in accordance with City standards (*Ottawa Water Distribution Design Guidelines – Table 4.2*). Fire flow demand was estimated using the Fire Underwriters Survey (2020) guidelines. A conservative assumption on construction type for each proposed building was made by applying ‘Non-Combustible’. An occupancy reduction (contents) factor of LC was used for all residential buildings with the exception of the parkade structure (Building D) which has a combustible contents factor.

Verification of the capacity of off-site watermain infrastructure is provided in **Section 4.3**. Refer to **Table 6** for a summary of water servicing requirements and **Appendix D** for detailed water service calculations.

Table 6: Water Servicing Statistics

Item	BLDG A, D & EX. Rate (l/s)	BLDG B Rate (l/s)	BLDG C Rate (l/s)
Average Day	5.2	1.0	1.0
Maximum Day	12.9	2.4	2.4
Maximum Hour	28.5	5.3	5.4
Fire Flow – FUS	250.0*	66.7	66.7
Max. Day + Fire Flow	262.9	69.1	69.1

** Please refer to **Appendix D** for detailed FUS calculations for each building. The largest fire demand was used as the governing fire flow for BLDG A, D and Existing Buildings.*

Per the architectural site plan, a Fire Department Connection will be located on the face of each proposed and within 15m of the principal entrance. An existing fire hydrant or proposed fire hydrant will be within the required distance (45m) to the Fire Department Connection.

4.3 WATERMAIN MODELLING

Watermain modeling has been performed as requested by the City to evaluate the available pressures in the watermain system. The watermain analysis utilized EPANET to evaluate the capacity of the surrounding water infrastructure and available pressures. The model was run based on the average day, peak hour and maximum day + fire flow demands for the proposed development. The model analyzed max day + fire flow demand scenarios during fire flow conditions at proposed Building A and D, as well as the existing buildings located at 1971 St. Laurent Blvd, 1975 St. Laurent Blvd, 2080 Russell Road, and 2100 Russell Road. Proposed Buildings B and C will have direct connections into the existing watermain on St. Laurent Blvd and therefore do not rely on the model of the private system to ensure sufficient pressure. The City has indicated that City staff will assess the existing watermain system's capacity to service these two buildings.

The model has been set up to focus on the limits of the development and shall connect into the existing watermain system with two connections to the existing watermain on St. Laurent Blvd, and connect at the existing watermain system in the southeast corner of the site (adjacent to the entrance for 2100 Russell Road) to complete a full loop of the private watermain system. Average day and peak hour

*Site Servicing and Stormwater Management Report
1971 & 1975 St. Laurent Blvd., Ottawa*

demands were placed at the respective nodes where the servicing connections to buildings are located, and fire flows were inputted at the buildings or hydrants that will be servicing the buildings. Fire flows for the existing buildings at 2080 Russell Road and 2100 Russell Road were inputted at their connections to the existing watermain, to demonstrate that adequate fire flow can be provided for these existing buildings.

The model was set up with “pump” locations as follows:

1. Two connections at the existing 300 mm \varnothing watermain along St. Laurent Blvd.

The characteristics of the supply/connection points were established based on the boundary conditions received from the City staff on February 21, 2023. These boundary conditions have been included in **Appendix D**. The results of the water distribution modeling are summarized in **Tables 7 to 9** below:

Table 7 – Highest Residual Pressures During Non-Fire Flow Conditions

Scenario	Pressure (m H ₂ O)	Pressure (psi)	Pressure (kPa)	Satisfies Pressure Requirements?
Avg. Day	52.4	74.51	513.7	Yes
Peak Hour	50.74	72.15	497.5	Yes

Table 8 – Lowest Residual Pressures During Non-Fire Flow Conditions

Scenario	Pressure (m H ₂ O)	Pressure (psi)	Pressure (kPa)	Satisfies Pressure Requirements?
Avg. Day	49.81	70.83	488.3	Yes
Peak Hour	48.07	68.35	471.3	Yes

Table 9 – Residual Pressures During Fire Flow Conditions

Fire Flow at Block	Max. Day + Fire Flow requirements (L/min)	Max. Velocity (m/s)	Lowest Pressure			Satisfies Fire Flow Requirements?
			Pressure (m H ₂ O)	Pressure (psi)	Pressure (kPa)	
Ex. 1971 St. Laurent Blvd	9,200	3.05	41.70	59.30	408.8	Yes
Ex. 1975 St. Laurent Blvd	7,200	3.82	40.23	57.21	394.4	Yes
Ex. 2080 Russell Road	10,092	5.35	22.52	32.02	220.8	Yes
Ex. 2100 Russell Road	11,138	4.24	18.96	26.96	185.9	Yes
Prop. Building A	4,147	2.2	44.26	62.94	433.9	Yes
Prop. Building D	15,000	8.06	17.60	25.03	172.6	Yes

Maximum Pressure = 532.8 kPa (77.27 psi)

Minimum Pressure – During Peak hour = 494.4 kPa (71.71 psi)

Minimum pressure – During Max Day + Fire Flow = 195.6 kPa (28.37 psi)

Refer to **Appendix D** for the details and full model outputs. As per City of Ottawa standards, required pressure ranges are outlined as follows:

- Preferred design pressure during normal operating conditions is within 345 kPa to 552 kPa
- Minimum pressure under non-fire conditions shall not be below 275 kPa
- Minimum pressure under max day + fire flow conditions is 140 kPa

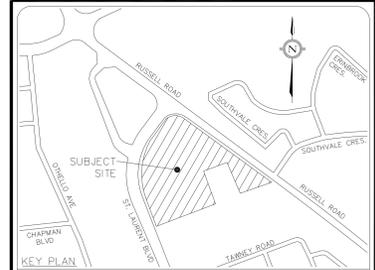

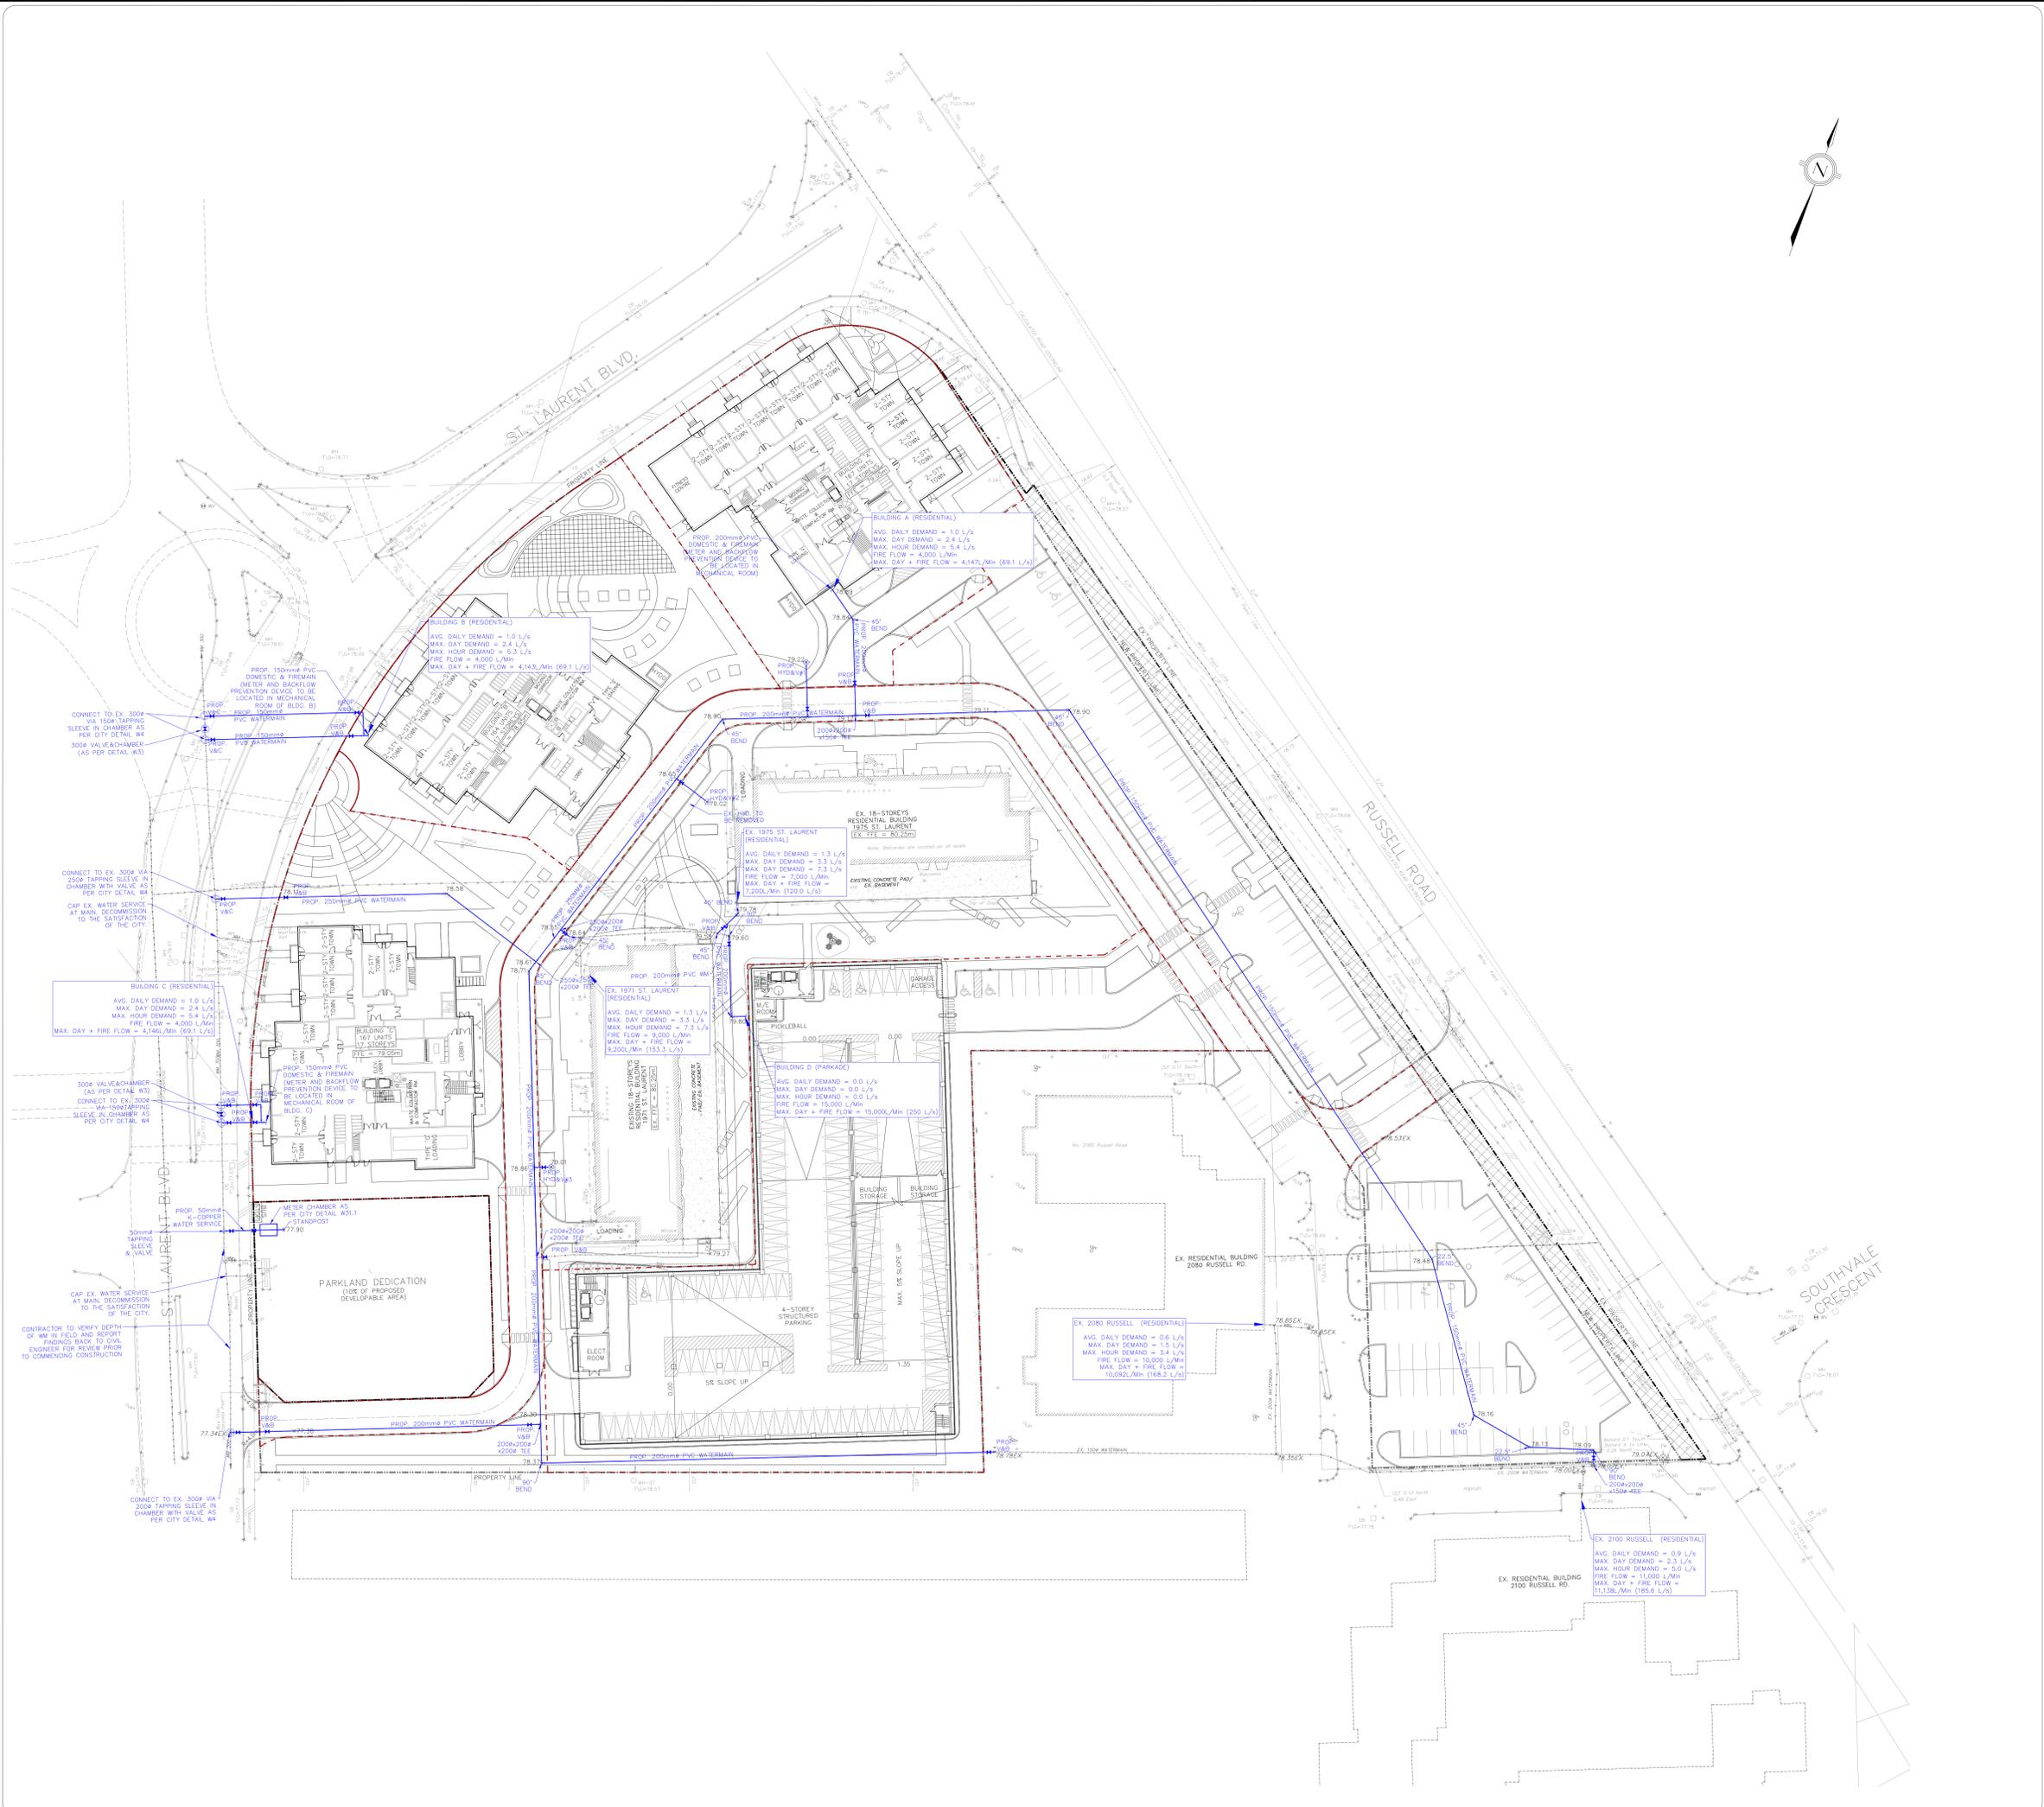

As seen from **Tables 7 to 9** above, adequate pressure is available in the existing surrounding watermain system to service the proposed development and maintain pressures within the required range during all scenarios including average day demand, peak hour demand and max day + fire flow demand conditions.

The existing and proposed watermain system will therefore have adequate flow and pressure to service the proposed development under all required conditions. The proposed water distribution system for

*Site Servicing and Stormwater Management Report
1971 & 1975 St. Laurent Blvd., Ottawa*

the development shall adequately provide max day + fire flow demand, while maintaining a residual pressure of over 140 kPa, as per the City of Ottawa criteria. Therefore, no external upgrades or retrofits are required on the existing surrounding watermain network to service the proposed development.

5.0 CONCLUSIONS

This report presents a site servicing strategy for the proposed development that addresses the requirements of the applicable design guidelines and provides the basis for detailed servicing design. The key points are summarized as follows:

Stormwater Management:

- Post-development stormwater flows are to be controlled to an allowable release rate of 19.6 l/s to the St. Laurent Boulevard outlet, 13.8 l/s to the Russell Road and 336.6 l/s to the Southvale Crescent outlet, which represents the 2-year, 5-year and 2-year design storms respectively. The overall site allowable release must not exceed 269.9 L/s.
- The on-site water quantity requirements will be achieved by in-sewer underground storage, primarily provided by Stormcon GreenStorm SWM detention units in combination with a 350mm orifice plate control, at the downstream side of the control manhole, in order to attenuate storm run-off to the required level.
- A Contech model CDS PSMU3020-6-C Oil/Grit Separator (OGS) quality control unit will be provided downstream of the control manhole, in order to achieve the minimum 80% TSS removal quality control criteria.

Sanitary Servicing:

- The subject site required multiple sanitary service connections to accommodate the future parcel severances on site. A new sanitary service will be provided for Building B, Building C and the park dedication lands with sanitary sewer connection which will connect into the existing municipal 250mm sanitary sewer on St. Laurent Boulevard. Building A and Building D will connect to the existing private sanitary sewer system, which then eventually outlets to a 250mm diameter sanitary sewer on Southvale Crescent.
- The proposed development concept will generate a net increase of 3.72 l/s of peak wet weather sanitary flow to the Southvale Crescent sanitary sewer outlet. As well, the proposed development concept will generate a net increase of 6.70 l/s of peak wet weather sanitary flow

*Site Servicing and Stormwater Management Report
1971 & 1975 St. Laurent Blvd., Ottawa*

to the St. Laurent Boulevard sanitary sewer outlet, in addition to the existing sanitary flow from the existing apartment buildings to remain.

Water Servicing:

- The existing site is currently serviced by a private looped watermain on site consisting of 200mm and 150mm watermain pipes. Building A and Building D will be serviced by 200mm diameter and 150mm diameter PVC watermain extensions of the existing private looped watermain network.
- Building B and Building C will be serviced by the existing 300mm municipal watermain on St. Laurent Boulevard. Building B and Building C will each require two 150mm PVC water service connection separated by an isolation valve along the water main to provide a redundant looped system to each parcel.
- Building A and Building D as well as the existing buildings (1971 & 1975 St. Laurent Blvd. and 208 & 2100 Russell Road) have an average day domestic demand of 5.2 l/s, a maximum day demand of 12.9 l/s and a maximum hour demand of 28.5 l/s.
- Building B has an average day domestic demand of 1.0 l/s, a maximum day demand of 2.4 l/s and a maximum hour demand of 5.3 l/s.
- Building C has an average day domestic demand of 1.0 l/s, a maximum day demand of 2.4 l/s and a maximum hour demand of 5.4 l/s.
- Fire flow demand was estimated using the Fire Underwriters Survey (2020) guidelines. It was determined that the private looped watermain system (Buildings A, D & Existing) will require 15,000 l/min (250.0 l/s) to provide sufficient fire flow protection for the development. It was determined that Building B will require 4,000 l/min (66.7 l/s) to provide sufficient fire flow protection for the development. It was determined Building C will require 4,000 l/min (66.7 l/s) to provide sufficient fire flow protection for the development.
- The subject site was modeled using EPANET software and boundary conditions provided by City of Ottawa staff. The model confirmed that adequate pressure is available in the existing system to service the proposed development.

*Site Servicing and Stormwater Management Report
1971 & 1975 St. Laurent Blvd., Ottawa*

We trust this report sufficiently addresses the site servicing requirements in support of the proposed site plan application associated with the subject site. Please contact the undersigned with any questions or comments.

**Residential Gross Floor Area is calculated based on the City of Ottawa Consolidated Zoning By-Law 2008-250;*

- Gross floor area** means the total area of each floor whether located above, at or below grade, measured from the interiors of outside walls and including floor area occupied by interior walls and floor area created by bay windows, but **excluding**:
1. floor area occupied by shared mechanical, service and electrical equipment that serve the building (By-law 2008-326)
 2. common hallways, corridors, stairwells, elevator shafts and other voids, steps and landings; (By-law 2008-326) (By-law 2017-302)
 3. bicycle parking, motor vehicle parking or loading facilities;
 4. common laundry, storage and washroom facilities that serve the building or tenants;
 5. common storage areas that are accessory to the principal use of the building; (By-law 2008-326)
 6. common amenity area and play areas accessory to a principal use on the lot; and (By-law 2008-326)
 7. living quarters for a caretaker of the building, (surface de plancher hors oeuvre brute)

Bearings are astronomic, derived from the easterly limit of St. Laurent Boulevard, shown to be N 21°14'10" W on

ELEVATION NOTES

1. Elevations shown are geodetic and are referred to the CGVD28 geodetic datum.
2. It is the responsibility of the user of this information to verify that the job benchmark has not been altered or disturbed and that its relative elevation and description agrees with the information shown on this drawing.

UTILITY NOTES

1. This drawing cannot be accepted as acknowledging all of the utilities and it will be the responsibility of the user to contact the respective utility authorities for confirmation.
2. Only visible surface utilities were located.
3. A field location of underground plant by the pertinent utility authority is mandatory before any work involving breaking ground, probing, excavating, etc.

1. Infrastructure/Servicing (Bruce Bramah):

Infrastructure

Please provide a servicing sketch/drawing once available to Bruce.Bramah@ottawa.ca to confirm criteria for proposed storm & sanitary outlet

Water

Existing public services:

- St-Laurent Blvd. – 305mm CI

Existing on-site water service must be shown on the plans. The existing on-site water services will be blanked at the watermain if it will not be reused.

- Service areas with a basic demand greater than 50 m3/day or with a sum of 50 residential units or more shall be connected with a minimum of two water services, separated by an isolation valve, to avoid creation of vulnerable service area.

Boundary conditions:

Civil consultant must request boundary conditions from the City’s assigned Project Manager prior to first submission.

· Water boundary condition requests must include the location of the service(s) and the expected loads required by the proposed developments. Please provide all the following information:

- o Location of service(s)
- o Type of development and the amount of fire flow required (as per FUS, 1999).
- o Average daily demand: ___ l/s.
- o Maximum daily demand: ___ l/s.
- o Maximum hourly daily demand: ___ l/s.

· Fire protection (Fire demand, Hydrant Locations)

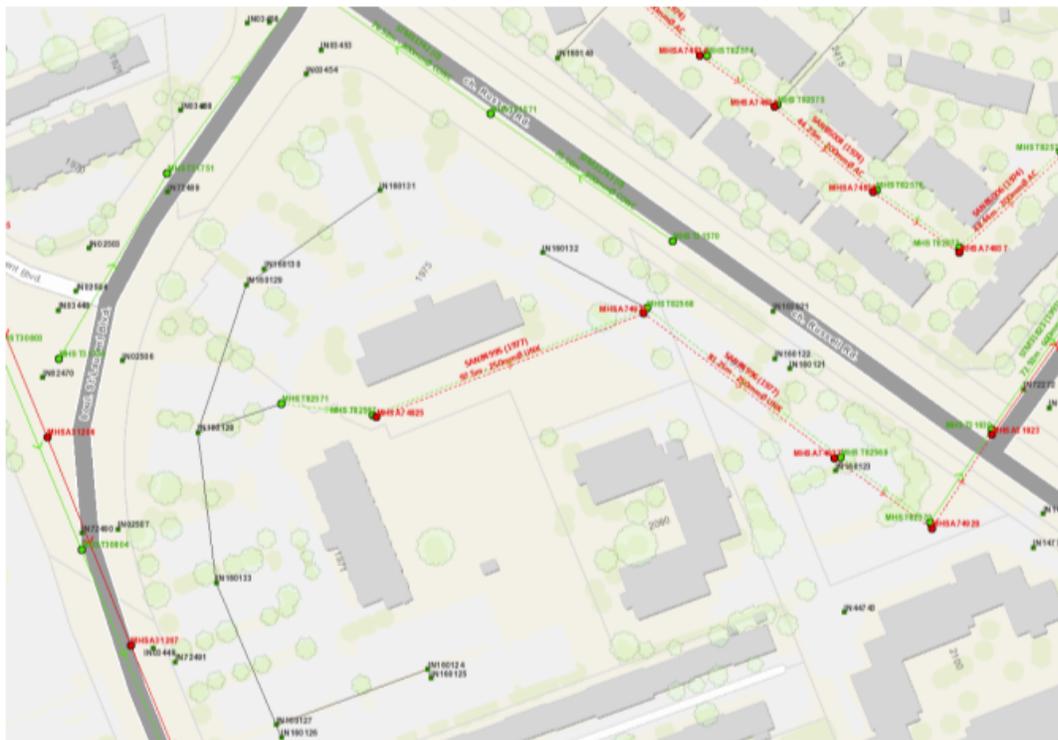

· A water meter sizing questionnaire (water data card) will have to be completed prior to receiving a water permit (water card will be provided post approval)

Sanitary Sewer

Existing public services:

- St-Laurent Blvd. – 250mm conc.
- Southvale Crescent – 250mm conc.

Please note the existing private sanitary sewer onsite outlets to the Southvale Crescent sanitary sewer.

Existing connection:

· Existing on-site sanitary service must be shown on the plans. If existing sanitary sewer is to be reused, provide CCTV inspection report along with consultant's assessment of

the existing sewer conditions. Existing on-site sanitary sewer to be capped and abandoned to City of Ottawa standards at the property line if it will not be reused.

Is a monitoring manhole required on private property? Yes No

· The designer should be aware there may be limited capacity in the downstream sanitary sewer system. The sanitary demand needs to be coordinated with the City Planning Dept. to determine if the existing sanitary sewer system has sufficient capacity to support a rezoning. Provide sanitary demands to the City project manager for coordination.

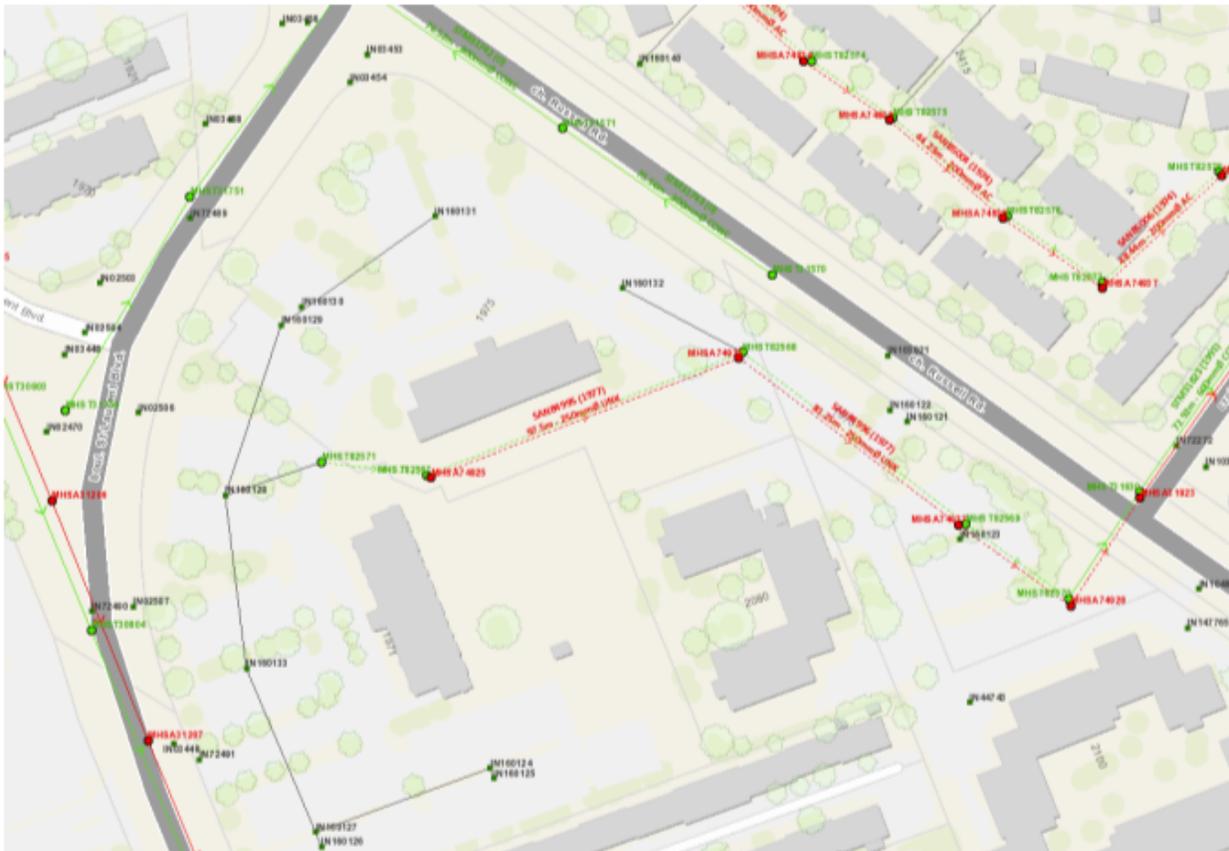

· Any premise in which there is commercial or institutional food preparation shall install a grease and oil inceptor on all fixtures.

Storm Sewer

Existing public services:

- St-Laurent Blvd. (West) – 675mm conc.
- Russel Road/St-Laurent Blvd. (North) – 300mm conc.
- Southvale Crescent – 600mm conc.

Please note the existing private storm sewer onsite outlets to the Southvale Crescent storm sewer.

Existing on-site storm service must be shown on the plans. If existing storm sewer is to be reused, provide CCTV inspection report along with consultant's assessment of the

existing sewer conditions. Existing on-site storm sewer to be capped and abandoned to City of Ottawa standards at the property line if it will not be reused.

- For concrete sewer pipe, maintenance holes shall be installed when the service is greater than 50% of the diameter of the mainline concrete pipe
- The Environmental Site Assessment (ESA) may provide recommendations where site contamination may be present. Any recommendations from an ESA need to be coordinated with the servicing report to ensure compliance with the Sewer Use By-Law.

Stormwater Management

Quality Control:

- Rideau Valley Conservation Authority to provide quality control requirements for property.

Quantity Control:

- Master Servicing Study: N/A
- Allowable Runoff coefficient (C): C = the lesser of the existing pre-development conditions to a maximum of 0.5.
- Time of concentration (Tc): Tc = pre-development; maximum Tc = 10 min
- Allowable flowrate for connection on existing internal services/Southvale Crescent: Control the 100-year storm events to the 2-year storm event.
- Allowable flowrate for connection on St-Laurent Blvd. (West): Control the 100-year storm events to the 2-year storm event.
- Allowable flowrate for connection on Russel Road/St-Laurent Blvd. (North): Control the 100-year storm events to the 5-year storm event.

Ministry of Environment, Conservation and Parks (MECEP)

All development applications should be considered for an Environmental Compliance Approval, under MECP regulations.

- a. The consultants determine if an approval for sewage works under Section 53 of OWRA is required and determines what type of application. The City's project manager may help confirm and coordinate with the MECP as required.
- b. The project will be either transfer of review (standard), transfer of review (additional), direct submission, or exempt as per O. Reg. 525/98.
- c. Pre-consultation is not required if applying for standard or additional works (Schedule A of the Agreement) under Transfer Review.
- d. Pre-consultation with local District office of MECP is recommended for direct submission.
- e. Consultant completes an MECP request form for a pre-consultation. Sends request to moeccottawasewage@ontario.ca
- f. ECA applications are required to be submitted online through the MECP portal. A business account required to submit ECA application. For more information visit <https://www.ontario.ca/page/environmental-compliance-approval>
- g. It is unclear if the proposed development will remain as one property. An ECA will be required where the stormwater management services more than one property parcel.

NOTE: Site Plan Approval, or Draft Approval, is required before any Ministry of the Environment and Climate Change (MOECC) application is sent

General Service Design Comments

- The City of Ottawa requests that all new services be located within the existing service trench to minimize necessary road cuts.
- Monitoring manholes should be located within the property near the property line in an accessible location to City forces and free from obstruction (i.e. not a parking).
- Where service length is greater than 30 m between the building and the first maintenance hole / connection, a cleanout is required.
- The City of Ottawa Standard Detail Drawings should be referenced where possible for all work within the Public Right-of-Way.
- The upstream and downstream manhole top of grate and invert elevations are required for all new sewer connections.
- Services crossing the existing watermain or sewers need to clearly provide the obvert/invert elevations to demonstrate minimum separation distances. A watermain crossing table may be provided.

Other

Are there are Capital Works Projects scheduled that will impact the application? Yes

No

References and Resources

- As per section 53 of the Professional Engineers Act, O. Reg 941/40, R.S.O. 1990, all documents prepared by engineers must be signed and dated on the seal.
- All required plans & reports are to be provided in *.pdf format (at application submission and for any, and all, re-submissions)
- Please find relevant City of Ottawa Links to Preparing Studies and Plans below:
<https://ottawa.ca/en/city-hall/planning-and-development/information-developers/development-application-review-process/development-application-submission/guide-preparing-studies-and-plans#standards-policies-and-guidelines>

GENERAL NOTES

- COORDINATE WITH MANUFACTURER'S REPRESENTATIVE/DISTRIBUTOR FOR PRE-CONSTRUCTION MEETING AND SITE INSPECTION DURING INSTALLATION.
- ENGINEERING DRAWINGS SUPERSEDE ALL PROVIDED DOCUMENTATION. REFER TO SITE ENGINEERS FOR ADDITIONAL INSTRUCTIONS.
- COORDINATE GREENSTORM INSTALLATION ACTIVITIES WITH OTHER SITE ACTIVITIES
- ALL DIMENSIONS ARE IN METERS UNLESS NOTED OTHERWISE
- THE SUB-GRADE AND SIDE BACKFILL TO BE COMPACTED TO 95% SPD OR AS DIRECTED BY THE QUALIFIED ENGINEER.
- PRESENCE OF GROUND WATER ABOVE THE BASE OF THE SYSTEM MUST BE IDENTIFIED TO STORMCON. ALL PUBLISHED MAXIMUM AND MINIMUM INSTALLATION DEPTHS ASSUME THE GROUND WATER IS AT OR BELOW THE BASE OF THE SYSTEM UNLESS OTHERWISE NOTED.
- CONFIRM GEOTECHNICAL SOIL EVALUATION BY A QUALIFIED ENGINEER TO DETERMINE SUITABILITY OF STRUCTURAL INSTALLATION
- CONFIRM FOR BURIED UNDERGROUND UTILITIES INCLUDING GAS, ELECTRICAL, PIPELINES OR CONDUITS
- ROOTS FROM SURROUNDING TREES MAY DAMAGE THE SYSTEM. DESIGN ENGINEER TO ENSURE ADEQUATE SEPARATION FROM ALL TREES
- WHEN INSTALLED IN CONFORMANCE TO THE INSTALLATION GUIDELINES, GREENSTORM-ST CAN HANDLE STANDARD CL-625 TRUCK LOADING AFTER 0.80m COVER. FOR NON-STANDARD LOADS AND INSTALLATION WITHIN GROUNDWATER, CONTACT MANUFACTURER'S REPRESENTATIVE/DISTRIBUTOR
- PROTECT THE INSTALLATION AGAINST DAMAGE WITH CONSTRUCTION TAPE, FENCING OR OTHER MEANS TILL THE CONSTRUCTION IS COMPLETE.
- ENSURE THAT CONSTRUCTION FOLLOWS APPLICABLE FEDERAL, PROVINCIAL, LOCAL, MUNICIPAL AND LOCAL LAWS, ORDINANCES, REGULATIONS AND SAFETY REQUIREMENTS.
- VEHICULAR LOADING IS PROHIBITED UNTIL BACKFILLED AS PER MANUFACTURER'S INSTALLATION GUIDELINES. THE USE OF EQUIPMENT OVER GREENSTORM CHAMBERS IS LIMITED:
 - NO EQUIPMENT IS ALLOWED ON BARE CHAMBERS.
 - NO RUBBER TIERED LOADER, DUMP TRUCK, OR EXCAVATORS ARE ALLOWED UNTIL PROPER FILL DEPTHS ARE REACHED IN ACCORDANCE WITH THE CONSTRUCTION GUIDE.
 - WEIGHT LIMITS FOR CONSTRUCTION EQUIPMENT CAN BE FOUND IN THE CONSTRUCTION GUIDE.

CHECK - REQUIRED MATERIALS AND EQUIPMENT

- ALL GREENSTORM CHAMBERS AND ACCESSORIES AS SPECIFIED IN THE ENGINEER'S PLANS INCLUDING NON-WOVEN GEOTEXTILE, CONNECTORS, QUADS, SIDEWALLS ADAPTER, RISER AND LINER WHERE APPLICABLE.
- RECIPROCATING SAW OR ROUTER
- TRANSIT OR LASER LEVEL MEASURING DEVICE
- COMPACTION EQUIPMENT WITH MAXIMUM GROSS VEHICLE WEIGHT OF 12,000 LBS (5,440 KGS).
- ACCEPTABLE FILL MATERIAL AS SHOWN IN INSTALLATION INSTRUCTIONS.
- QUANTITIES FOR GEOSYNTHETIC ARE APPROXIMATE AND MAY VARY BASED ON OVERLAP, WASTAGE.
- CHECK GREENSTORM CHAMBERS FOR DAMAGE PRIOR TO INSTALLATION. DO NOT USE DAMAGED CHAMBERS, CONTACT YOUR SUPPLIER IMMEDIATELY TO REPORT DAMAGE OR PACKING-LIST DISCREPANCIES.**

NOTES FOR BIDDING AND INSTALLATIONS

- CONTRACTORS ARE EXPECTED TO COMPREHEND AND USE THE MOST CURRENT INSTALLATION INSTRUCTIONS PRIOR TO BEGINNING A SYSTEM INSTALLATION. FOR THE MOST CURRENT INSTRUCTIONS, CONTACT STORMCON AT (289) 380-3742 OR VISIT WWW.STORMCON.CA.
- CONTACT STORMCON AT LEAST TWO WEEKS PRIOR TO SYSTEM INSTALLATION TO ARRANGE FOR A PRE-CONSTRUCTION MEETING.
- USE GREENSTORM INSTALLATION INSTRUCTIONS AS A GUIDELINE ONLY FOR MINIMUM/MAXIMUM REQUIREMENTS. ACTUAL DESIGN MAY VARY. REFER TO APPROVED CONSTRUCTION DRAWINGS FOR JOB-SPECIFIC DETAILS. ENGINEERING DRAWINGS SUPERSEDE ALL PROVIDED DOCUMENTATION.
- THE FOUNDATION STONE SHALL BE LEVEL AND COMPACTED PRIOR TO CHAMBER INSTALLATION.
- ANY DISCREPANCIES WITH THE SYSTEM SUB-GRADE SOIL'S BEARING CAPACITY MUST BE REPORTED TO THE GEOTECHNICAL ENGINEER.
- CONTRACTOR TO REFER TO GREENSTORM INSTALLATION INSTRUCTIONS CONCERNING VEHICULAR TRAFFIC. RESPONSIBILITY FOR PREVENTING VEHICLES THAT EXCEED REQUIREMENTS SPECIFIED FROM TRAVELING ACROSS OR PARKING OVER THE CHAMBER SYSTEM LIES SOLELY WITH THE CONTRACTOR THROUGHOUT THE ENTIRE SITE CONSTRUCTION PROCESS. THE PLACEMENT OF WARNING TAPE, TEMPORARY FENCING, AND/OR APPROPRIATELY LOCATED SIGNS IS HIGHLY RECOMMENDED.
- TRAFFIC OF INSTALLATION EQUIPMENT OR OTHER VEHICULAR TRAFFIC OVER TOP OF THE GREENSTORM STORMWATER SYSTEM IS STRICTLY RESTRICTED AND PROHIBITED UNTIL SATISFACTORY COVER AND COMPACTION IS ACHIEVED ACCORDING TO MANUFACTURER'S INSTALLATION INSTRUCTIONS.
- EROSION AND SEDIMENT-CONTROL MEASURES MUST MEET LOCAL CODES AND THE DESIGN ENGINEER'S SPECIFICATIONS THROUGHOUT THE ENTIRE SITE CONSTRUCTION PROCESS.
- GREENSTORM SYSTEMS MUST BE DESIGNED AND INSTALLED IN ACCORDANCE WITH STORMCON'S MINIMUM REQUIREMENTS. FAILURE TO DO SO WILL VOID THE LIMITED WARRANTY.

NOTE: THESE SHOP DRAWINGS MAY CONTAIN COMPONENTS INCLUDING BUT NOT LIMITED TO MANHOLES, CATCH BASINS, STORM PIPES AND FITTINGS, MANIFOLDS, CASTINGS AND OTHER NECESSARY APPURTENANCES THAT MAY NOT BE SUPPLIED BY STORMCON. IT IS THE RESPONSIBILITY OF THE CONTRACTOR AND/OR SUPPLIER TO CONFIRM THE MATERIALS PROVIDED.

THIS DRAWING WAS PREPARED TO SUPPORT THE PROJECT ENGINEER OF RECORD FOR THE PROPOSED SYSTEM. IT IS THE ULTIMATE RESPONSIBILITY OF THE PROJECT ENGINEER OF RECORD TO ENSURE THAT THE GREENSTORM SYSTEM'S DESIGN IS IN FULL COMPLIANCE WITH ALL APPLICABLE LAWS AND REGULATIONS. IT IS THE CONTRACTOR OF RECORD'S RESPONSIBILITY TO ENSURE THAT THE STORMCON PRODUCTS ARE DESIGNED IN ACCORDANCE WITH STORMCON'S MINIMUM REQUIREMENTS. STORMCON DOES NOT APPROVE PLANS, SIZING, OR SYSTEM DESIGNS.

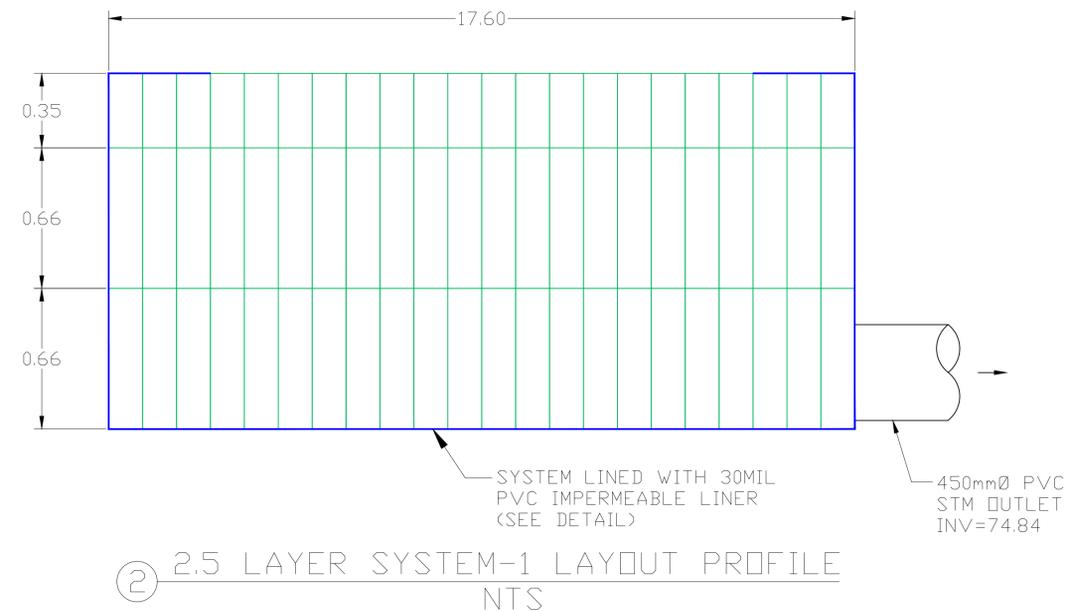

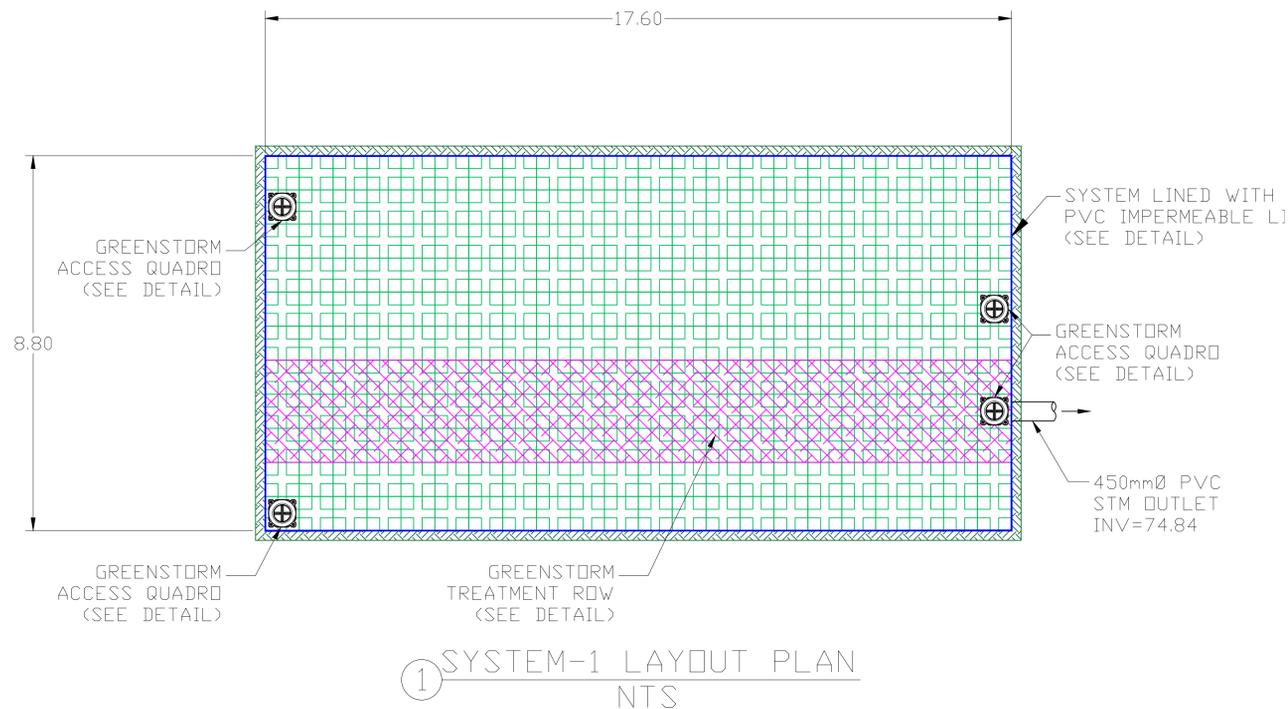

PROPOSED SYSTEM 1 ELEVATIONS

(TO BE APPROVED BY ENGINEER)
 *ENGINEER TO CONFIRM MINIMUM AND MAXIMUM BURIAL REQUIREMENTS ARE MET

80.47	MAXIMUM ALLOWABLE GRADE (TOP OF PAVEMENT/UNPAVED)
77.27	MINIMUM ALLOWABLE GRADE
76.47	GREENSTORM STORAGE TOP ELEVATION LEVEL 2.5
76.12	GREENSTORM STORAGE TOP ELEVATION LEVEL 2
75.46	GREENSTORM STORAGE TOP ELEVATION LEVEL 1
74.80	GREENSTORM BASE ELEVATION
74.70	BOTTOM OF EXCAVATION
<74.80	SEASONAL HIGH GROUNDWATER ELEVATION

GREENSTORM STORMWATER MANAGEMENT SYSTEM

TOTAL STORAGE PROVIDED: 248.30 m³
 STORAGE VOID RATIO: 0.96
 SYSTEM AREA: 154.88 m²
 DEPTH OF EMBEDMENT STONE: 0.00 m
 DEPTH OF BEDDING STONE: 0.00 m
 STONE PERIMETER: 0.00 m

NOTE:*ALL EXTERNAL SYSTEM STRUCTURES, INLET/OUTLET PIPES, AND PROPOSED ELEVATIONS MUST BE DESIGNED AND APPROVED BY PROJECT ENGINEER OF RECORD. PROJECT ENGINEER OF RECORD MUST ENSURE CHAMBER BURIAL REQUIREMENTS ARE MET.

MATERIALS LIST SUPPLIED BY STORMCON
 (SYSTEM MATERIALS LIST - SEE COVER SHEET FOR COMBINED PROJECT MATERIALS LIST)

GREENSTORM-ST 80x80x66 cm	484	BLOCKS
GREENSTORM-ST 80x80x35 cm (HALF BLOCK)	242	BLOCKS

GREENSTORM LEGEND

-  GREENSTORM ST BLOCK
-  8 OZ NON-WOVEN GEOTEXTILE
-  GREENSTORM TREATMENT ROW
-  GREENSTORM ACCESS QUADRO
-  30MIL PVC IMPERMEABLE LINER

NOTE:*
 1) USE OF VEHICLES WHEN APPLYING THE FIRST COVER LAYER :
 THE FIRST COVER LAYER CAN BE APPLIED FOR EXAMPLE USING A WHEEL LOADER OR A FRONT-TYPE MOBILE EXCAVATOR. FOR A WHEEL LOADER OR MOBILE EXCAVATOR WITH A MAXIMUM TOTAL WEIGHT OF 15TONS(CHAIN,WHEELS,TWIN-TYRES), A COMPACTED COVER OF AT LEAST 30CM MUST BE PLACED OVER THE STORAGE/INFILTRATION SYSTEM. POSSIBLE FORMATION OF RUTS MUST BE TAKEN INTO ACCOUNT! AVOID STEERING MANOEUVRES AT THIS CONSTRUCTION STAGE

2) USE OF CONSTRUCTION VEHICLES:
 DRIVING OVER THE COVER WITH HEAVY CONSTRUCTION VEHICLES WITH A WHEEL LOAD OF UP TO 50KN (E.G. HGV 30) IS POSSIBLE IF THE THICKNESS OF THE COMPACTED COVER IS NOT LESS THAN 60CM. POSSIBLE FORMATION OF RUTS MUST BE TAKEN INTO ACCOUNT! WHEN DUMPING THE EARTHQUAKE MATERIAL, THE WHEEL LOAD OF 140KN MUST NOT BE EXCEEDED;IF NECESSARY,LOAD DISTRIBUTION PLATES MUST BE USED.

Average Annual TSS Removal Efficiency [%]: 80.0 Ave. Ann. T. Volume [%]: 96.0

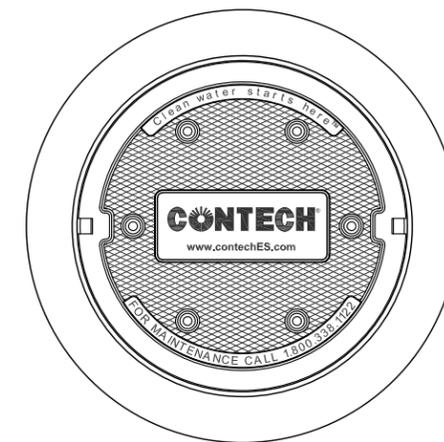

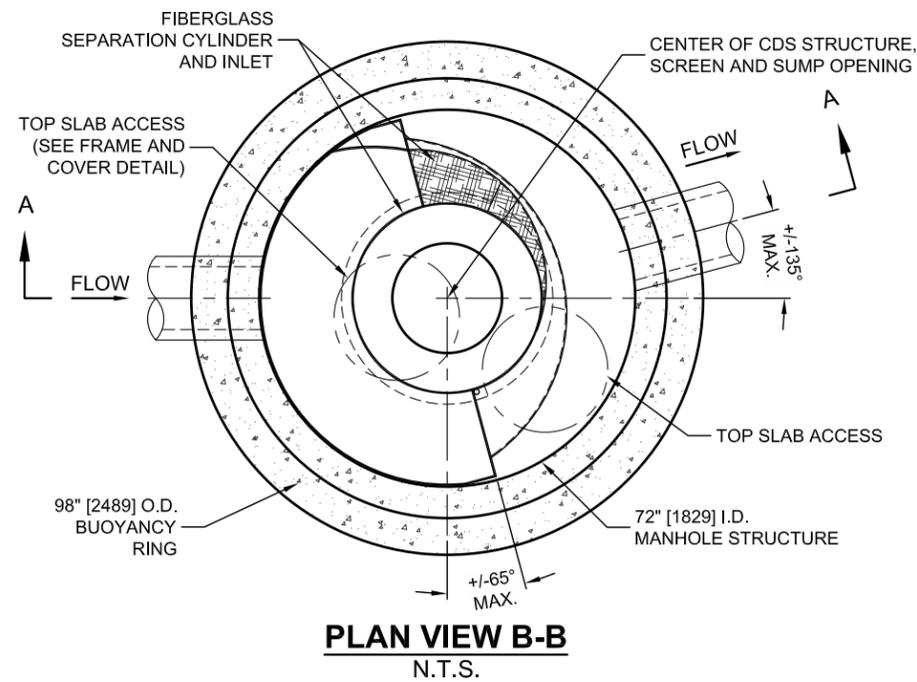

Notes:
 1) CDS Efficiency based on testing conducted at the University of Central Florida
 2) CDS design flowrate and scaling based on standard manufacturer model & product specifications

CDS PMSU3020-6-C DESIGN NOTES

THE STANDARD CDS PMSU3020-6-C CONFIGURATION IS SHOWN. ALTERNATE CONFIGURATIONS ARE AVAILABLE AND ARE LISTED BELOW. SOME CONFIGURATIONS MAY BE COMBINED TO SUIT SITE REQUIREMENTS.

CONFIGURATION DESCRIPTION

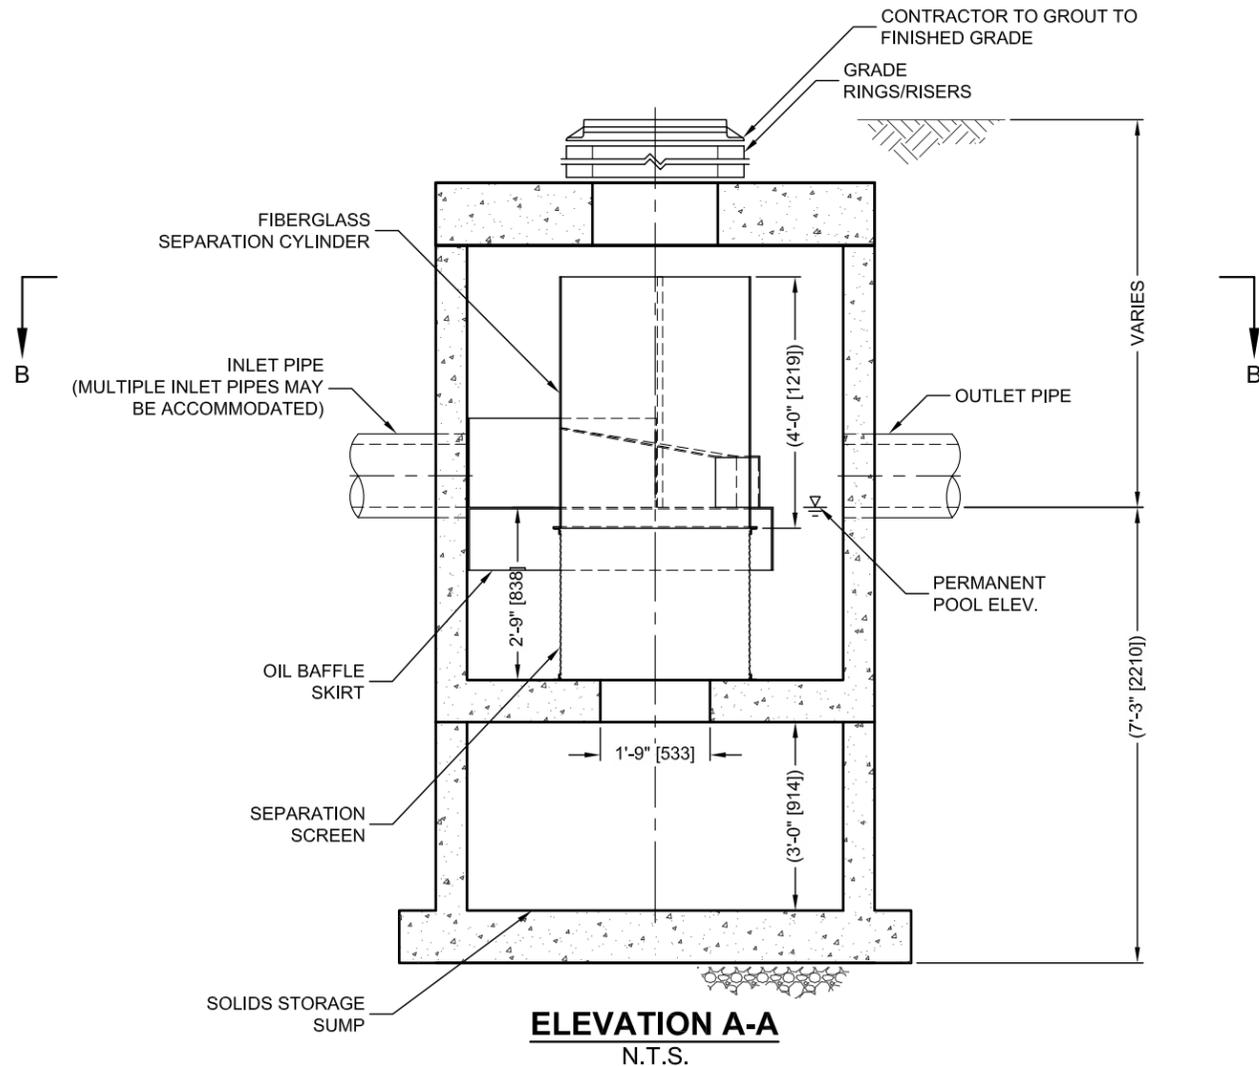

- GRATED INLET ONLY (NO INLET PIPE)
- GRATED INLET WITH INLET PIPE OR PIPES
- CURB INLET ONLY (NO INLET PIPE)
- CURB INLET WITH INLET PIPE OR PIPES
- CUSTOMIZABLE SUMP DEPTH AVAILABLE
- ANTI-FLOTATION DESIGN AVAILABLE UPON REQUEST

FRAME AND COVER
(DIAMETER VARIES)
N.T.S.

SITE SPECIFIC DATA REQUIREMENTS

STRUCTURE ID				
WATER QUALITY FLOW RATE (CFS OR L/s)				*
PEAK FLOW RATE (CFS OR L/s)				*
RETURN PERIOD OF PEAK FLOW (YRS)				*
SCREEN APERTURE (2400 OR 4700)				*
PIPE DATA:	I.E.	MATERIAL	DIAMETER	
INLET PIPE 1	*	*	*	
INLET PIPE 2	*	*	*	
OUTLET PIPE	*	*	*	
RIM ELEVATION				*
ANTI-FLOTATION BALLAST	WIDTH	HEIGHT		
	*	*		
NOTES/SPECIAL REQUIREMENTS:				
* PER ENGINEER OF RECORD				

GENERAL NOTES

1. CONTECH TO PROVIDE ALL MATERIALS UNLESS NOTED OTHERWISE.
2. DIMENSIONS MARKED WITH () ARE REFERENCE DIMENSIONS. ACTUAL DIMENSIONS MAY VARY.
3. FOR FABRICATION DRAWINGS WITH DETAILED STRUCTURE DIMENSIONS AND WEIGHTS, PLEASE CONTACT YOUR CONTECH ENGINEERED SOLUTIONS LLC REPRESENTATIVE. www.contechES.com
4. CDS WATER QUALITY STRUCTURE SHALL BE IN ACCORDANCE WITH ALL DESIGN DATA AND INFORMATION CONTAINED IN THIS DRAWING.
5. STRUCTURE SHALL MEET AASHTO HS20 AND CASTINGS SHALL MEET HS20 (AASHTO M 306) LOAD RATING, ASSUMING GROUNDWATER ELEVATION AT, OR BELOW, THE OUTLET PIPE INVERT ELEVATION. ENGINEER OF RECORD TO CONFIRM ACTUAL GROUNDWATER ELEVATION.
6. PVC HYDRAULIC SHEAR PLATE IS PLACED ON SHELF AT BOTTOM OF SCREEN CYLINDER. REMOVE AND REPLACE AS NECESSARY DURING MAINTENANCE CLEANING.

INSTALLATION NOTES

- A. ANY SUB-BASE, BACKFILL DEPTH, AND/OR ANTI-FLOTATION PROVISIONS ARE SITE-SPECIFIC DESIGN CONSIDERATIONS AND SHALL BE SPECIFIED BY ENGINEER OF RECORD.
- B. CONTRACTOR TO PROVIDE EQUIPMENT WITH SUFFICIENT LIFTING AND REACH CAPACITY TO LIFT AND SET THE CDS MANHOLE STRUCTURE (LIFTING CLUTCHES PROVIDED).
- C. CONTRACTOR TO ADD JOINT SEALANT BETWEEN ALL STRUCTURE SECTIONS, AND ASSEMBLE STRUCTURE.
- D. CONTRACTOR TO PROVIDE, INSTALL, AND GROUT PIPES. MATCH PIPE INVERTS WITH ELEVATIONS SHOWN.
- E. CONTRACTOR TO TAKE APPROPRIATE MEASURES TO ASSURE UNIT IS WATER TIGHT, HOLDING WATER TO FLOWLINE INVERT MINIMUM. IT IS SUGGESTED THAT ALL JOINTS BELOW PIPE INVERTS ARE GROUTED.

-------------------------------	--------------	------------

Proposed Conditions - Sanitary Flow

1971 & 1975 St. Laurent Blvd. - Russell Rd. Sewer

Composite population density per unit:
 Single/Semi-Detached = 3.4
 Townhouse = 2.7
 1 Bdrm. Apartments = 1.4
 2 Bdrm. Apartments = 2.1
 3 Bdrm. Apartments = 3.1

Design Flow-Commercial= 28,000 L/Gross Ha/day
 Population density-Office= 28,000 L/Gross Ha/day
 A = area ha

Infiltration (Dry Conditions)= 0.33 l/s/ha
 Flow (Residential), Q= 280 l/person/day

p - Equivalent residential population density (based on ppl/ha)
 AREA - Area of the commercial/institutional/industrial site
 EQUIV RES P - Equivalent residential population (based on ppl/ha)
 RES UNITS - Residential number of units
 RES POP P - Residential population
 A SITE - Residential Area
 A GROSS - Cumulative Residential + Non-Residential Area

P = population = sum p A site
 Pflow = M q P / 86400 = population flow l/s
 M = 1 + (14/(4+(P/10³)^{0.5})) Min=2.0, Max=4.0
 I = 0.33 x A gross l/s
 Q TOTAL = P flow + I l/s

q = 280 l/person/day (For the analysis of existing sewers - residential)
 q = 28,000 l/gross hectares/day inc. infiltration and peaking effect (For the analysis of existing sewers - comm/ind/office)

Russell Gardens - Hawthorne Meadows

2080 Russell Road

2080 Russell Road

Russell Gardens is located on the west side of Russell Road, east of St. Laurent Boulevard. The community is close to public transportation and shopping malls. There is a community room in each building with an outdoor patio area.

APPENDIX D

Water Demand Calculations

BUILDING A, PARKADE & EXISTING BUILDINGS

Project Name: 1971 & 1975 St. Laurent Blvd.
 Project Number: 21106
 Location: Ottawa
 Date: March 2023

City of Ottawa Watermain Design Guidelines

Water Demand = Maximum Day Flow + Fire Flow or Peak Hour Flow

Domestic Demand

Residential Flow (Avg Day Demand)	280	L/capita/day
Max Day Demand (2.5 x Avg Day Demand)	700	L/capita/day
Max Hour Demand (2.2 x Max Day Demand)	1540	L/capita/day

Commercial & Institutional Demand

Retail/Shopping Centres	2,500	L/1000m ² /day
-------------------------	-------	---------------------------

Fire Demand

Fire Flow	15,000	L / min
Fire Flow Duration	2	hours

- See FUS calculations.

Residential Population 1,597 Ppl - See Sanitary Flow Calculations
Domestic Demand: 447076 L / day
 , or **310 L/min** **5.2 L/s**

Maximum Day Water Demand - Domestic: 1,117,690 L / day
Total Maximum Day Water Demand: 1,117,690 L / day
 , or **776 L / min** **12.9 L/s**

Maximum Hour Water Demand - Domestic: 2,458,918 L / day
Total Maximum Hour Water Demand: 2,458,918 L / day
 , or **1,708 L / min** **28.5 L/s**

Retail Area 0.0 m² - See Sanitary Flow Calculations
Commercial & Institutional Demand: 0 L / day
 , or **0 L/min**

Maximum Day + Fire Flow: **15,776 L / min** **262.9 L/s**

or
4,168 USGPM

Water Demand Calculations

BUILDING B

Project Name: 1971 & 1975 St. Laurent Blvd.
 Project Number: 21106
 Location: Ottawa
 Date: January 2022

City of Ottawa Watermain Design Guidelines

Water Demand = Maximum Day Flow + Fire Flow or Peak Hour Flow

Domestic Demand

Residential Flow (Avg Day Demand)	280	L/capita/day
Max Day Demand (2.5 x Avg Day Demand)	700	L/capita/day
Max Hour Demand (2.2 x Max Day Demand)	1540	L/capita/day

**Peaking factors as per Table 3-3 of the MOE Design Guidelines for Drinking Water Systems
 (used for opulations 500ppl or less in City of Ottawa)*

Commercial & Institutional Demand

Retail/Shopping Centres	2,500	L/1000m ² /day
-------------------------	-------	---------------------------

Fire Demand

Fire Flow	4,000	L / min
Fire Flow Duration	2	hours

- See FUS calculations.

Residential Population	295 Ppl	- See Sanitary Flow Calculations
Domestic Demand:	82600 L / day	
, or	57 L/min	1.0 L/s
Maximum Day Water Demand - Domestic:	206,500 L / day	
Total Max Day Demand:	206,500 L / day	
, or	143 L / min	2.4 L/s
Maximum Hour Water Demand - Domestic:	454,300 L / day	
Total Maximum Hour Water Demand:	454,300 L / day	
, or	315 L / min	5.3 L/s
Retail Area	0.0 m ²	- See Sanitary Flow Calculations
Commercial & Institutional Demand:	0 L / day	
, or	0 L/min	
Maximum Day + Fire Flow:	4,143 L / min	69.1 L/s
	or	
	1,095 USGPM	

Water Demand Calculations

BUILDING C

Project Name: 1971 & 1975 St. Laurent Blvd.

EPANET Model Network Layout

Residual Pressure during Non-Fire Scenarios

Scenario	Lowest Pressure			Satisfies Pressure Requirements?
	Pressure	Pressure	Pressure	
	(m H ₂ O)	(psi)	(kPa)	
Avg. Day	49.81	70.83	488.3	Yes
Max. Day	49.15	69.89	481.9	Yes
Max. Day Using Minimum Pressure	41.13	58.49	403.2	Yes
Peak Hour	48.07	68.35	471.3	Yes

Scenario	Highest Pressure			Satisfies Pressure Requirements?
	Pressure	Pressure	Pressure	
	(m H ₂ O)	(psi)	(kPa)	
Avg. Day	52.4	74.51	513.7	Yes
Max. Day	51.76	73.60	507.5	Yes
Max. Day Using Minimum Pressure	43.73	62.18	428.7	Yes
Peak Hour	50.74	72.15	497.5	Yes

Scenario	Pressure @ Connection Node J1			Satisfies Pressure Requirements?
	Pressure	Pressure	Pressure	
	(m H ₂ O)	(psi)	(kPa)	
Avg. Day	52.4	74.51	513.7	Yes
Max. Day	51.76	73.60	507.5	Yes
Max. Day Using Minimum Pressure	43.73	62.18	428.7	Yes
Peak Hour	50.74	72.15	497.5	Yes

Scenario	Pressure @ Connection Node J2			Satisfies Pressure Requirements?
	Pressure	Pressure	Pressure	
	(m H ₂ O)	(psi)	(kPa)	
Avg. Day	51.17	72.76	501.7	Yes
Max. Day	50.53	71.85	495.4	Yes
Max. Day Using Minimum Pressure	42.5	60.43	416.7	Yes
Peak Hour	49.51	70.40	485.4	Yes

Scenario	Pressure @ Connection Node J12			Satisfies Pressure Requirements?
	Pressure	Pressure	Pressure	
	(m H ₂ O)	(psi)	(kPa)	
Avg. Day	51.47	73.19	504.6	Yes
Max. Day	50.82	72.26	498.2	Yes
Max. Day Using Minimum Pressure	42.8	60.86	419.6	Yes
Peak Hour	49.8	70.81	488.2	Yes

Notes:

1. Preferred design pressure during normal operating conditions is approximately 345 kPa to 552 kPa
2. The maximum static pressure shall not exceed 552 kPa
3. The minimum pressure under any non-fire demand scenario should not be less than 276 kPa
4. In cases where all services are protected by an individual pressure reducing device, the maximum pressure in the watermain system will not exceed 689 kilopascals.

Residual Pressure based on Maximum Day Demand + Fire Flow

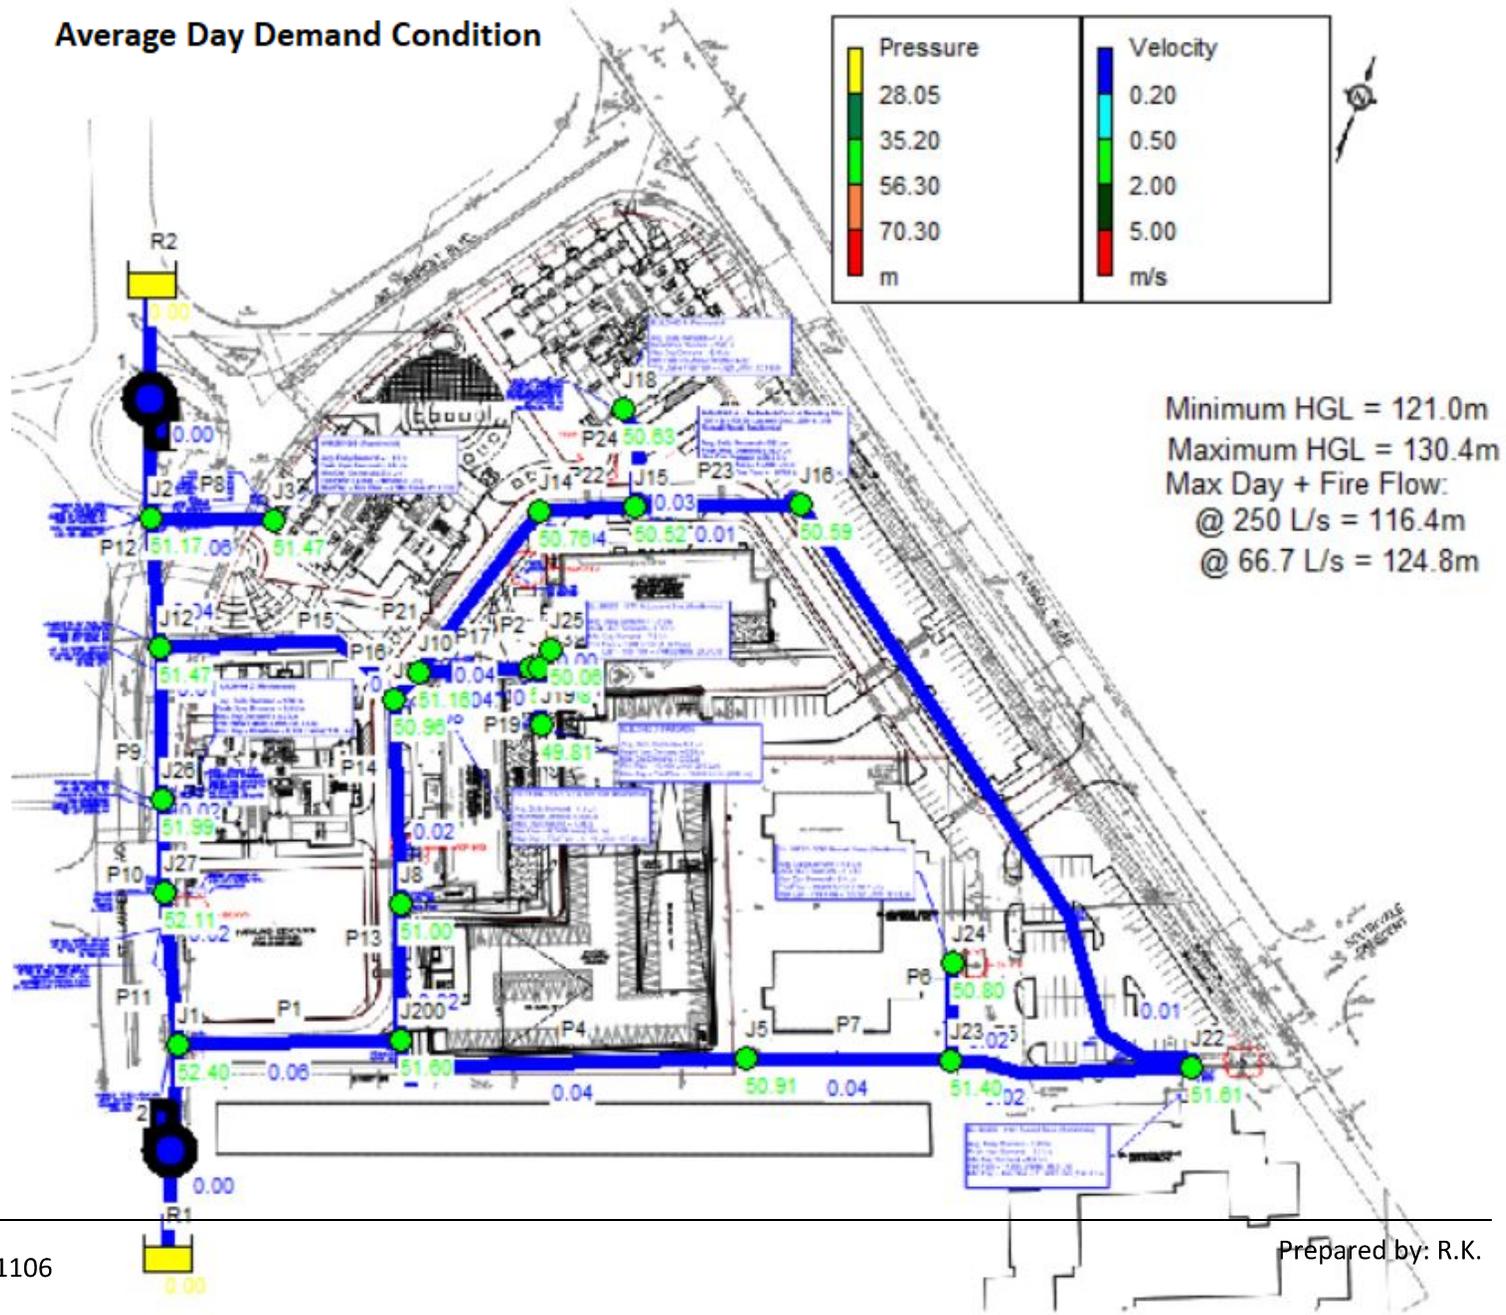

Fire Flow at Critical Building / Node	Max. Velocity (m/s)	Lowest Pressure			Satisfies Pressure & Velocity Requirements?
		Pressure (m H ₂ O)	Pressure (psi)	Pressure (kPa)	
<i>Ex. 1971 St. Laurent Blvd / J10</i>	3.05	41.70	59.30	408.8	Yes
<i>Ex. 1975 St. Laurent Blvd / J25</i>	3.82	40.23	57.21	394.4	Yes
<i>Ex. 2080 Russell Road / J24</i>	5.35	22.52	32.02	220.8	Yes
<i>Ex. 2100 Russell Road / J22</i>	4.24	18.96	26.96	185.9	Yes
Prop. Building A / J18	2.20	44.26	62.94	433.9	Yes
Prop. Building B / J3	3.91	43.15	61.36	423.0	Yes
Prop. Building D / J19	8.06	17.60	25.03	172.6	Yes

Notes:

1. Fire flow requirements satisfied if lowest pressure in is system > 140 kPa (20 psi)

Boundary Conditions for 1971, 1975 St. Laurent Boulevard

Sent: February 21, 2023 11:55 AM

To: Gian-Michael Di Luca <GDILuca@counterpointeng.com>

Cc: David Di Iorio <ddiiorio@counterpointeng.com>; 21106_Starlight Dev't_ 1971 & 1975 St. Laurent Blvd <21106@counterpointeng.com>

Subject: RE: 1971, 1975 St Laurent, TEAMS link, sorry!

Good morning,

The following are boundary conditions, HGL, for hydraulic analysis at 1971, 1975 St-Laurent Boulevard (zone 2W2C) assumed to be connected to the 305 mm watermain on St-Laurent Boulevard (see attached PDF for location).

	Connection 1 Building A	Connection 2 Building C	Connection 3 Building B
Minimum HGL (m)	121.0	121.0	121.0
Maximum HGL (m)	130.4	130.4	130.4

Max Day + Fire Flow (250 L/s): 116.4 m (Building A)

Max Day + Fire Flow (66.7 L/s): 124.8 m (Building B)

Max Day + Fire Flow (66.7 L/s): 124.8 m (Building C)

These are for current conditions and are based on computer model simulation.

Disclaimer: The boundary condition information is based on current operation of the city water distribution system. The computer model simulation is based on the best information available at the time. The operation of the water distribution system can change on a regular basis, resulting in a variation in boundary conditions. The physical properties of watermains deteriorate over time, as such must be assumed in the absence of actual field test data. The variation in physical watermain properties can therefore alter the results of the computer model simulation.

Thank you,

--

Fire Underwriter Survey (2020) Fire Flow Calculation - 1971 St. Laurent Blvd Existing Building

Project Name: 1971 & 1975 St. Laurent Blvd.
 Project Number: 21106
 Date: January 2022

$$F = 220C\sqrt{A}$$

Where

NPF = The Required Fire Flow in litres per minute (LPM)
 C = the Construction Coefficient is related to the type of construction of the building
 A = the Total Effective Floor Area (effective building area) in square metres of the building

- C = 1.5 for Type V Wood Frame Construction
- 1.0 for Type IV Mass Timber Construction
- 0.9 for Type IV Mass Timber Construction
- 1.0 for Type IV Mass Timber Construction
- 1.5 for Type IV Mass Timber Construction
- 1.0 for Type III Ordinary Construction
- 0.8 for Type II Noncombustible Construction
- 0.5 for Type I Fire Resistive Construction

A = The total floor area in square metres (including all storeys, but excluding basements at least 50 percent below grade) in the building being considered.

Legend

Construction Class	Contents Factor
WF wood frame construction	NC non-combustible
OC ordinary construction	LC limited combustible
NC non-combustible construction	C combustible
FC fire-resistive construction	FB free burning
	RB rapid burning

Contents Factor:	Non-Combustible	-25%	Free Burning	+15%
	Limited Combustible	-15%	Rapid Burning	+25%
	Combustible	No Charge		

Separation	Charge	Separation	Charge
0 to 3m	25%	20.1 to 30 m	10%
3.1 to 10m	20%	30.1 to 45m	5%
10.1 to 20m	15%		

1) Fire Flow

Type of Construction: NC
 C = 0.8
 A = 5472 m² - Area of two largest adjoining floors plus 50% of all floors above upto 8 floors.
 F = 14,000 L/min

2) Occupancy Reduction

Contents Factor: LC
 Occupancy Charge = -15%
 -15% of 14,000 L/min = -2,100 L/min
 F = 13000 L/min + 3250 L/min = 11,900 L/min

3) System Type Reduction (to be reduced from result of Step 2)

NFPA 13 Sprinkler: 30% YES
 Standard Water Supply: 10% YES
 Fully Supervised: 10% YES
 Total System Type Reduction = 50%

50% of 11,900 L/min = 5,950 L/min
 (to be reduced from result of Step 2)

4) Separation Charge (to be added to result of Step 2)

Building Face	Distance (m)	Length- Height Factor	Bldg Type	Auto Sprinkler	Charge
				Protection: Exposed BLDG (50% charge). Exposed & Subject Bldg (0% charge)	
North	>30	-	-	-	= 0%
East	15	236	Type III-IV ²	0%	= 0%
South	6.5	140	Type III-IV ²	NO	= 15%
West	23	510	Type III-IV ²	NO	= 5%
Total					20% (max exposure charge can be 75%)

20% of 11,900 L/min = 2,380
 (to be added to result of Step 2)

F = 9,000 L/min (round to the nearest 1,000 L/min) (2,000 L/min < F < 45,000 L/min)
 F = 2,378 GPM

Residual Pressure during Non-Fire Scenarios

Scenario	Lowest Pressure			Satisfies Pressure Requirements?
	Pressure	Pressure	Pressure	
	(m H ₂ O)	(psi)	(kPa)	
Avg. Day	49.81	70.83	488.3	Yes
Max. Day	49.15	69.89	481.9	Yes
Max. Day Using Minimum Pressure	41.13	58.49	403.2	Yes
Peak Hour	48.07	68.35	471.3	Yes

Scenario	Highest Pressure			Satisfies Pressure Requirements?
	Pressure	Pressure	Pressure	
	(m H ₂ O)	(psi)	(kPa)	
Avg. Day	52.4	74.51	513.7	Yes
Max. Day	51.76	73.60	507.5	Yes
Max. Day Using Minimum Pressure	43.73	62.18	428.7	Yes
Peak Hour	50.74	72.15	497.5	Yes

Scenario	Pressure @ Connection Node J1			Satisfies Pressure Requirements?
	Pressure	Pressure	Pressure	
	(m H ₂ O)	(psi)	(kPa)	
Avg. Day	52.4	74.51	513.7	Yes
Max. Day	51.76	73.60	507.5	Yes
Max. Day Using Minimum Pressure	43.73	62.18	428.7	Yes
Peak Hour	50.74	72.15	497.5	Yes

Scenario	Pressure @ Connection Node J2			Satisfies Pressure Requirements?
	Pressure	Pressure	Pressure	
	(m H ₂ O)	(psi)	(kPa)	
Avg. Day	51.17	72.76	501.7	Yes
Max. Day	50.53	71.85	495.4	Yes
Max. Day Using Minimum Pressure	42.5	60.43	416.7	Yes
Peak Hour	49.51	70.40	485.4	Yes

Scenario	Pressure @ Connection Node J12			Satisfies Pressure Requirements?
	Pressure	Pressure	Pressure	
	(m H ₂ O)	(psi)	(kPa)	
Avg. Day	51.47	73.19	504.6	Yes
Max. Day	50.82	72.26	498.2	Yes
Max. Day Using Minimum Pressure	42.8	60.86	419.6	Yes
Peak Hour	49.8	70.81	488.2	Yes

Notes:

1. Preferred design pressure during normal operating conditions is approximately 345 kPa to 552 kPa
2. The maximum static pressure shall not exceed 552 kPa
3. The minimum pressure under any non-fire demand scenario should not be less than 276 kPa
4. In cases where all services are protected by an individual pressure reducing device, the maximum pressure in the watermain system will not exceed 689 kilopascals.

Residual Pressure based on Maximum Day Demand + Fire Flow

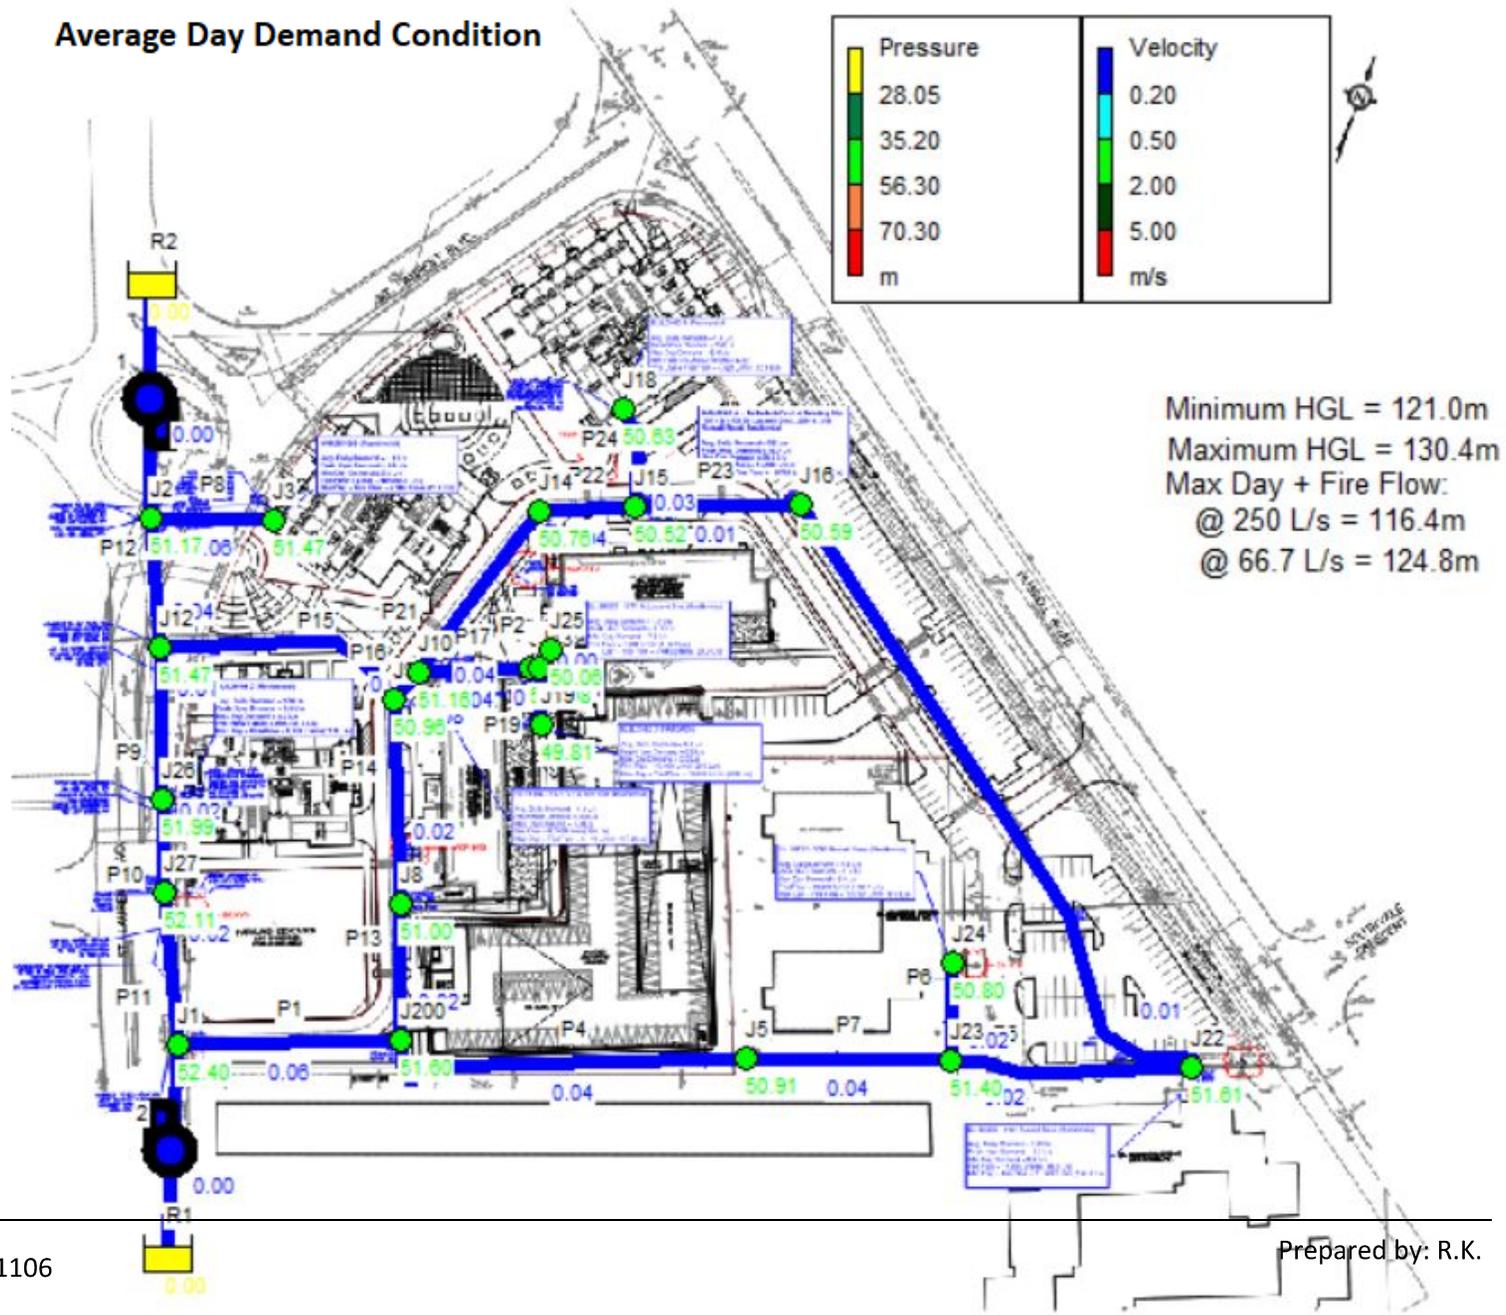

Fire Flow at Critical Building / Node	Max. Velocity (m/s)	Lowest Pressure			Satisfies Pressure & Velocity Requirements?
		Pressure (m H ₂ O)	Pressure (psi)	Pressure (kPa)	
<i>Ex. 1971 St. Laurent Blvd / J10</i>	3.05	41.70	59.30	408.8	Yes

Subject: RE: 1971, 1975 St Laurent, TEAMS link, sorry!

Good morning,

The following are boundary conditions, HGL, for hydraulic analysis at 1971, 1975 St-Laurent Boulevard (zone 2W2C) assumed to be connected to the 305 mm watermain on St-Laurent Boulevard (see attached PDF for location).

	Connection 1 Building A	Connection 2 Building C	Connection 3 Building B
Minimum HGL (m)	121.0	121.0	121.0
Maximum HGL (m)	130.4	130.4	130.4

Max Day + Fire Flow (250 L/s): 116.4 m (Building A)

Max Day + Fire Flow (66.7 L/s): 124.8 m (Building B)

Max Day + Fire Flow (66.7 L/s): 124.8 m (Building C)

These are for current conditions and are based on computer model simulation.

Disclaimer: The boundary condition information is based on current operation of the city water distribution system. The computer model simulation is based on the best information available at the time. The operation of the water distribution system can change on a regular basis, resulting in a variation in boundary conditions. The physical properties of watermains deteriorate over time, as such must be assumed in the absence of actual field test data. The variation in physical watermain properties can therefore alter the results of the computer model simulation.

Thank you,

--
