Adjustable Accutrol Weir

Adjustable Flow Control for Roof Drains

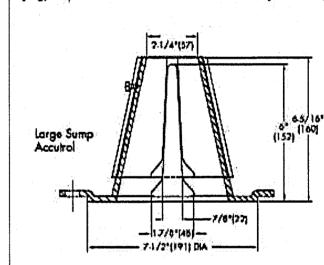

ADJUSTABLE ACCUTROL (for Large Sump Roof Drains only)

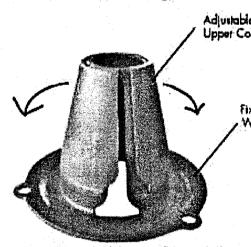

For more flexibility in controlling flow with heads deeper than 2", Watts Drainage offers the Adjustable Acculrol. The Adjustable Acculrol Weir is designed with a single parabolic opening that can be covered to restrict flow above 2" of head to less than 5 gpm per Inch, up to 6" of head. To adjust the flow rate for depths over 2" of head, set the slot in the adjustable upper cone according to the flow rate required. Refer to Table 1 below.

Note: Flow rates are directly proportional to the amount of weir opening that is exposed.

For example, if the adjustable upper cone is set to cover 1/2 of the weir opening, flow rates above 2°of head will be restricted to 2-1/2 gpm per inch of head.

Therefore, at 3" of head, the flow rate through the Accutrol Weir that has 1/2 the slot exposed will be: [5 gpm (per inch of head) \times 2 inches of head] + 2-1/2 gpm (for the third inch of head) = 12-1/2 gpm.
