Dear Mr. El-Koury:

Re: Addendum Letter, Transportation Noise
788 March Road, Ottawa
GWE File No.: 18-080

Gradient Wind Engineering Inc. (GWE) was retained by SINA Construction to undertake a roadway traffic noise assessment in support of site plan application for a proposed residential development at 788 March Road in Ottawa, Ontario. This addendum letter is supplemental to our environmental noise report (ref. *Gradient Wind report #18-080 – Traffic Noise Assessment*, dated August 14, 2018), to address changes in the latest site plan drawings.

Gradient Wind received updated site plan drawings, prepared by Neuf Architects and dated November 20th, 2023. Gradient Wind has concluded that changes to the site plan bear resemblance to the original drawing used to produce the original report. Changes between the current and 2018 analysis include the removal of the bridge connecting the two buildings, and removal of outdoor amenity areas at the back of the site. Given the similarities in the site plan drawings the results and conclusions of the original report remain the same and are still valid.

While the original report was prepared for 10731854 Canada Inc, the project has now been taken over by SINA Construction, who may rely upon the original report as if it had been originally addressed to them.

Should you have any questions, or wish to discuss our findings further, please call us (613) 836-0934 or contact us by e-mail at joshua.foster@gradientwind.com. In the interim, we thank you for the opportunity to be of service.

Sincerely,

Gradient Wind Engineering Inc.

Adam Bonello, B.A.Sc.
Junior Environmental Scientist

Joshua Foster, P.Eng.
Lead Engineer
