Attention: **Mr. Mike Giampa**
Sr. Transportation Engineer, Infrastructure Approvals

Dear Mr. Giampa:

Reference: **CHEO Integrated Treatment Centre, 401 Smyth Road**
Revised Transportation Impact Assessment
Novatech File No. 122210

We are pleased to submit the following revised Transportation Impact Assessment (TIA), in support of a Site Plan Control application at 401 Smyth Road, for your review and signoff. The structure and format of this report is in accordance with the City of Ottawa's *Revised Transportation Impact Assessment Guidelines* (June 2023).

If you have any questions or comments regarding this report, please feel free to contact Jennifer Luong, or the undersigned.

Yours truly,

NOVATECH

Trevor Van Wiechen, M.Eng.

TIA Plan Reports

On 14 June 2017, the Council of the City of Ottawa adopted new Transportation Impact Assessment (TIA) Guidelines. In adopting the guidelines, Council established a requirement for those preparing and delivering transportation impact assessments and reports to sign a letter of certification.

Individuals submitting TIA reports will be responsible for all aspects of development-related transportation assessment and reporting, and undertaking such work, in accordance and compliance with the City of Ottawa's Official Plan, the Transportation Master Plan and the Transportation Impact Assessment (2017) Guidelines.

By submitting the attached TIA report (and any associated documents) and signing this document, the individual acknowledges that s/he meets the four criteria listed below.

CERTIFICATION

1. I have reviewed and have a sound understanding of the objectives, needs and requirements of the City of Ottawa's Official Plan, Transportation Master Plan and the Transportation Impact Assessment (2017) Guidelines;
2. I have a sound knowledge of industry standard practice with respect to the preparation of transportation impact assessment reports, including multi modal level of service review;
3. I have substantial experience (more than 5 years) in undertaking and delivering transportation impact studies (analysis, reporting and geometric design) with strong background knowledge in transportation planning, engineering or traffic operations; and
4. I am either a licensed[1] or registered[2] professional in good standing, whose field of expertise [check √ appropriate field(s)] is either transportation engineering ☑ or transportation planning ☐.

[1,2] License of registration body that oversees the profession is required to have a code of conduct and ethics guidelines that will ensure appropriate conduct and representation for transportation planning and/or transportation engineering works.

EXECUTIVE SUMMARY

This Transportation Impact Assessment (TIA) has been prepared in support of a Site Plan Control application for the property located at 401 Smyth Road. The subject development is a new 'Integrated Treatment Centre' building within the campus of the Children's Hospital of Eastern Ontario (CHEO). The site of the Integrated Treatment Centre building is currently occupied by parking areas, which are being relocated to an approved on-campus parking garage, approximately 150m to the east.

The CHEO campus is bound by Ring Road to the north, south, and west, and is adjacent to The Ottawa Hospital (TOH) General Campus to the east. Outside of Ring Road, the hospital campuses are surrounded by the following:

- Parkland, followed by residential uses to the north,
- Smyth Road, followed by residential uses to the south,
- Roger Guindon Avenue, followed by institutional uses to the east, and
- Residential uses, industrial uses, or Department of National Defense offices to the west.

The proposed development consists of approximately 216,080ft² gross floor area (GFA) of hospital space and 17,500ft² of school space. The school will be on the north side of the new building and the clinical space will be on the south side. The proposed school will replace an existing school located on the northwest side of the CHEO campus, as shown in **Figure 1**. A new one-way access to Ring Road (N-S) is proposed to serve the clinical space of the new Integrated Treatment Centre building, and a new loading access to Ring Road (E-W) is proposed. The existing looped two-way accesses to CHEO will be modified to a one-way access, and will also serve the school in the new building. The development of the Integrated Treatment Centre building will be constructed in a single phase, with a buildout year of 2027.

The new eight-storey parking garage located approximately 150m to the east is anticipated to be completed in 2025. The parking garage will have 1,050 parking spaces to accommodate the Integrated Treatment Centre parking demand and the displaced users of Lots B and E.

The subject site is designated as 'Evolving Neighbourhood' and 'Corridor – Mainstreet' (Smyth Road) on Schedule B3 of the City of Ottawa's Official Plan. The implemented zoning for the property is 'Major Institutional' (I2), which permits the existing and proposed hospital uses. The site is not within any Community Design Plan areas, and is located within the Alta Vista/Faircrest Heights/ Riverview Park Secondary Plan area.

The conclusions and recommendations of this TIA can be summarized as follows:

Forecasting

- The proposed hospital clinic development is estimated to generate 401 person trips (including 241 vehicle trips) during the AM peak hour, and 387 person trips (including 233 vehicle trips) during the PM peak hour.

- Traffic from the existing school and Parking Lots B and E were redistributed within the subject site to account for the construction of the new parking garage and the Integrated Treatment Centre building. Traffic along the CHEO main access was redistributed due to the conversion of the road from two-way to one-way operations within the site.

Development Design

- The existing PXO Type D along Ring Road (N-S) is proposed to be moved north approximately 5m so that it does not conflict with turn lanes at the new loop access to the Integrated Treatment Centre. Based on the 8-hour traffic volumes from the March 19, 2024, traffic count at the Ring Road (N-S)/Ring Road (E-W) intersection, the northern leg of the intersection has an 8-hour traffic volume of 2,847 vehicles. Given the posted speed limit of 40km/h, Table 7 of the OTM Book 15 was used to confirm the required Type of PXO. Although the current roadway has a road platform of 9.5m and an effective 3 lane cross-section, it is recommended the roadway be narrowed for a total road platform width of 7.5m. A Type D PXO is appropriate for this width.

- Parking Lot B includes 286 parking spaces and Parking Lot E includes 270 parking spaces. The approved parking garage that is under construction in Parking Lot E will provide approximately 1,050 parking spaces and within the Integrated Treatment Centre site an additional 65 parking spaces are provided. The total number of parking spaces in the existing Parking Lots B and E plus the additional parking required by the ZBL for the Integrated Treatment Centre building totals 849 parking spaces. The approved parking garage therefore exceeds the parking requirements of the ZBL.

- Per Section 4.2.3 of the Stantec 2022 Transportation Study, the estimated parking generation rate for CHEO is approximately 3 spaces/100m^2. This is more than double the minimum zoning rate. Based on the observed rate, approximately 600 parking spaces are required to meet the demand for the new Integrated Treatment Centre clinic. With the 286 Lot B displaced spaces and the 270 Lot E displaced spaces, this amount to a total demand of 1,156 spaces. The 1,050 spaces in the approved Ph1A parking garage and the proposed 65 spaces for the Ph1B Integrated Treatment Centre site plan provide a total of 1,115 spaces, or 96% of the demand.

- The proposed development is considered to meet the required loading spaces as per Section 111 of the City's ZBL, due to the school bus lane to the north of the Integrated Treatment Centre building and the proposed loading area.

- For parking lots with over 1,000 parking spaces the City's Accessibility Design Standards require 11 +1% of the total parking spaces provided be a combination of Type A and Type B accessible parking spaces. Within the Integrated Treatment Centre site 14 Type A and 14 Type B parking spaces are provided. As 11 Type A and 11 Type B parking spaces are required for 1,115 total parking spaces this requirement is met.

- A total of 40 bicycle parking spaces will be provided near the Integrated Treatment Centre building.

Boundary Streets

- The proposed site plan includes 3.0m-wide multi-use pathways along the Ring Road (N-S) and Ring Road (E-W) frontages with boulevard widths of at least 0.5m.

Access Design

- The TAC *Geometric Design Guide* minimum corner clearance requirement of 20m is met by the proposed loop.

- The minimum clear throat requirement of 15m is met at the proposed access loop to Ring Road (N-S).

- The width of the one-way egress of the proposed access loop exceeds the requirements of the Private Approach By-law. However, Ring Road is not a municipal road and the accesses are not subject to the PABL. The one-way ingress of the proposed access loop does meet the requirements of the Private Approach By-law.

- The proposed accesses to Ring Road (E-W) and Ring Road (N-S) are anticipated to operate with acceptable delays for the build-out year 2027 and horizon year 2032.

Transportation Demand Management (TDM)

- A review of the City's TDM Measures Checklist has been conducted. The proponent, is committed to providing the following TDM measures within this development:

    - Display local area maps with walking/cycling access routes and key destinations at major entrances;
    - Provide relevant transit schedules and route maps at main building entrances; and
    - Provide a multimodal travel option information package to new employees.

Transit

- Bus stop #1808 will need to be relocated to bus stop #7045 within the subject site due to the changes being proposed to the CHEO non-emergency access.

Intersection MMLOS

- The east approach of the Smyth Road/Ring Road (N-S)/South Haven Place intersection meets the City's vehicle/pedestrian conflict threshold for zebra-striped crosswalks (greater than 400,000 vehicle/pedestrian conflicts over an eight-hour period). This would improve the level of comfort for pedestrians crossing Smyth Road.

- Implementing bike boxes the Smyth Road/Ring Road (N-S)/South Haven Place intersection would require restricting right turns on red (RTOR) on the east and west approaches. This is identified for the City's consideration.

- A bike lane or higher order facility is identified on the north approach of the Smyth Road/Ring Road (N-S)/South Haven Place intersection for the City's consideration.

- The east and west approaches of the Smyth Road/General Hospital Access Road meet the City's vehicle/pedestrian conflict threshold for zebra-striped crosswalks. This would improve the level of comfort for pedestrians crossing Smyth Road.

- Two-stage left turn bike boxes are required to meet the target BLOS C at the north and west approaches of the Smyth Road/General Hospital Access Road intersection. For cyclists turning left from the north approach, this would involve a bike box in front of the eastbound stop bar. For cyclists turning left from the west approach, this would involve a jug handle facility and cyclist crossing signal. This is identified for the City's consideration.

Background Traffic Analysis

- All movements at study area intersections operate with acceptable LOS under 2027 and 2032 background traffic conditions.

Total Traffic Analysis

- All movements at study area intersections, except for the Ring Road (E-W)/General Hospital Access Road intersection, are expected to operate with acceptable LOS under total traffic conditions.

- Due to limitations in Synchro software the intersection was conservatively modeled as having free flow on the north and south approaches as opposed to only the south approach. It is assumed to operate with less delays and is recommended to be monitored in the future. Delays at the intersection are largely attributable to the existing conditions which includes a high volume of westbound left turning vehicles during the PM peak hour. A future additional westbound left turn lane may be required in addition to the existing westbound left turn lane and westbound through/right turn lane. Any additional travel lanes would likely impact the existing bus stop and retaining wall east of the Ring Road (E-W)/General Hospital Access Road intersection.

Based on the foregoing, the proposed development can be recommended from a transportation perspective.

1.0 SCREENING

1.1 Introduction

This Transportation Impact Assessment (TIA) has been prepared in support of a Site Plan Control application for the property located at 401 Smyth Road. The subject development is a new 'Integrated Treatment Centre' building within the campus of the Children's Hospital of Eastern Ontario (CHEO). The site of the Integrated Treatment Centre building is currently occupied by parking areas, which are being relocated to an approved on-campus parking garage, approximately 150m to the east.

The CHEO campus is bound by Ring Road to the north, south, and west, and is adjacent to The Ottawa Hospital (TOH) General Campus to the east. Outside of Ring Road, the hospital campuses are surrounded by the following:

- Parkland, followed by residential uses to the north,
- Smyth Road, followed by residential uses to the south,
- Roger Guindon Avenue, followed by institutional uses to the east, and
- Residential uses, industrial uses, or Department of National Defense offices to the west.

An aerial of the vicinity around the subject site is provided in **Figure 1**, with the locations of the Integrated Treatment Centre site and approved parking garage shown. A separate figure outlining the existing parking lots within or adjacent to the CHEO campus is included as **Figure 2**.

For the purposes of this study, the north-south section of Ring Road that is immediately west of the proposed building and the east-west section of Ring Road that is immediately south of the proposed building are denoted in this study as Ring Road (N-S) and Ring Road (E-W), respectively.

1.2 Proposed Development

The proposed development consists of approximately 216,080ft² gross floor area (GFA) of hospital space and 17,500ft² of school space. The school will be on the north side of the new building and the clinical space will be on the south side. The proposed school will replace an existing school located on the northwest side of the CHEO campus, as shown in **Figure 1**. A new one-way access to Ring Road (N-S) is proposed to serve the clinical space of the new Integrated Treatment Centre building, and a new loading access to Ring Road (E-W) is proposed. The existing looped two-way accesses to CHEO will be modified to a one-way access, and will also serve the school in the new building. The development of the Integrated Treatment Centre building will be constructed in a single phase, with a buildout year of 2027.

The new eight-storey parking garage located approximately 150m to the east is anticipated to be completed in 2025. The parking garage will have 1,050 parking spaces to accommodate the Integrated Treatment Centre parking demand and the displaced users of Lots B and E.

The subject site is designated as 'Evolving Neighbourhood' and 'Corridor – Mainstreet' (Smyth Road) on Schedule B3 of the City of Ottawa's Official Plan. The implemented zoning for the property is 'Major Institutional' (I2), which permits the existing and proposed hospital uses. The site is not within any Community Design Plan areas, and is located within the Alta Vista/Faircrest Heights/ Riverview Park Secondary Plan area.

A copy of the preliminary site plan is included in **Appendix A**.

Figure 1: View of the Subject Site

1.3 Screening Form

The City's *2023 Revised TIA Guidelines* identify three triggers for completing a TIA report, including trip generation, location, and safety. The criteria for each trigger are outlined in the City's TIA Screening Form, which is included in **Appendix B**. The trigger results are as follows:

- Trip Generation Trigger – The development is anticipated to generate over 60 peak hour person trips; further assessment is **required** based on this trigger.

- Location Triggers – The development does not propose a new connection to a designated Rapid Transit or Transit Priority (RTTP) corridor or a Crosstown Bikeway, and is not located

within a Hub, Protected Major Transit Station Area (PMTSA), or Design Priority Area (DPA); further assessment is **not required** based on this trigger.

- Safety Triggers – The proposed driveway location to Ring Road (N-S) is within 150m of the adjacent signal at Smyth Road/Ring Road/South Haven Place; further assessment is **required** based on this trigger.

Figure 2: CHEO Campus Parking Locations

2.0 SCOPING

2.1 Existing Conditions

2.1.1 Roadways

The study area roadways Smyth Road and Hospital Link Road fall under the jurisdiction of the City of Ottawa. Ring Road, General Hospital Access Road, and all accesses within the CHEO campus are located outside of the City ROW.

Smyth Road is an arterial roadway that generally runs on an east-west alignment between Rideau River Drive and St. Laurent Boulevard/Russell Road. The roadway continues as Main Street west of Rideau River Drive, and as Lancaster Road east of St. Laurent Boulevard/Russell Road. Within the study area, Smyth Road has a four-lane undivided urban cross-section, asphalt sidewalks on both sides of the roadway, and a posted speed limit of 50 km/h. Smyth Road is classified as a truck route, allowing full loads. Street parking is prohibited on both sides of Smyth Road within the study area. The City's Official Plan identifies a 30m right-of-way (ROW) protection for Smyth Road. As the existing ROW of Smyth Road is approximately 26m at the subject site, a widening will be required.

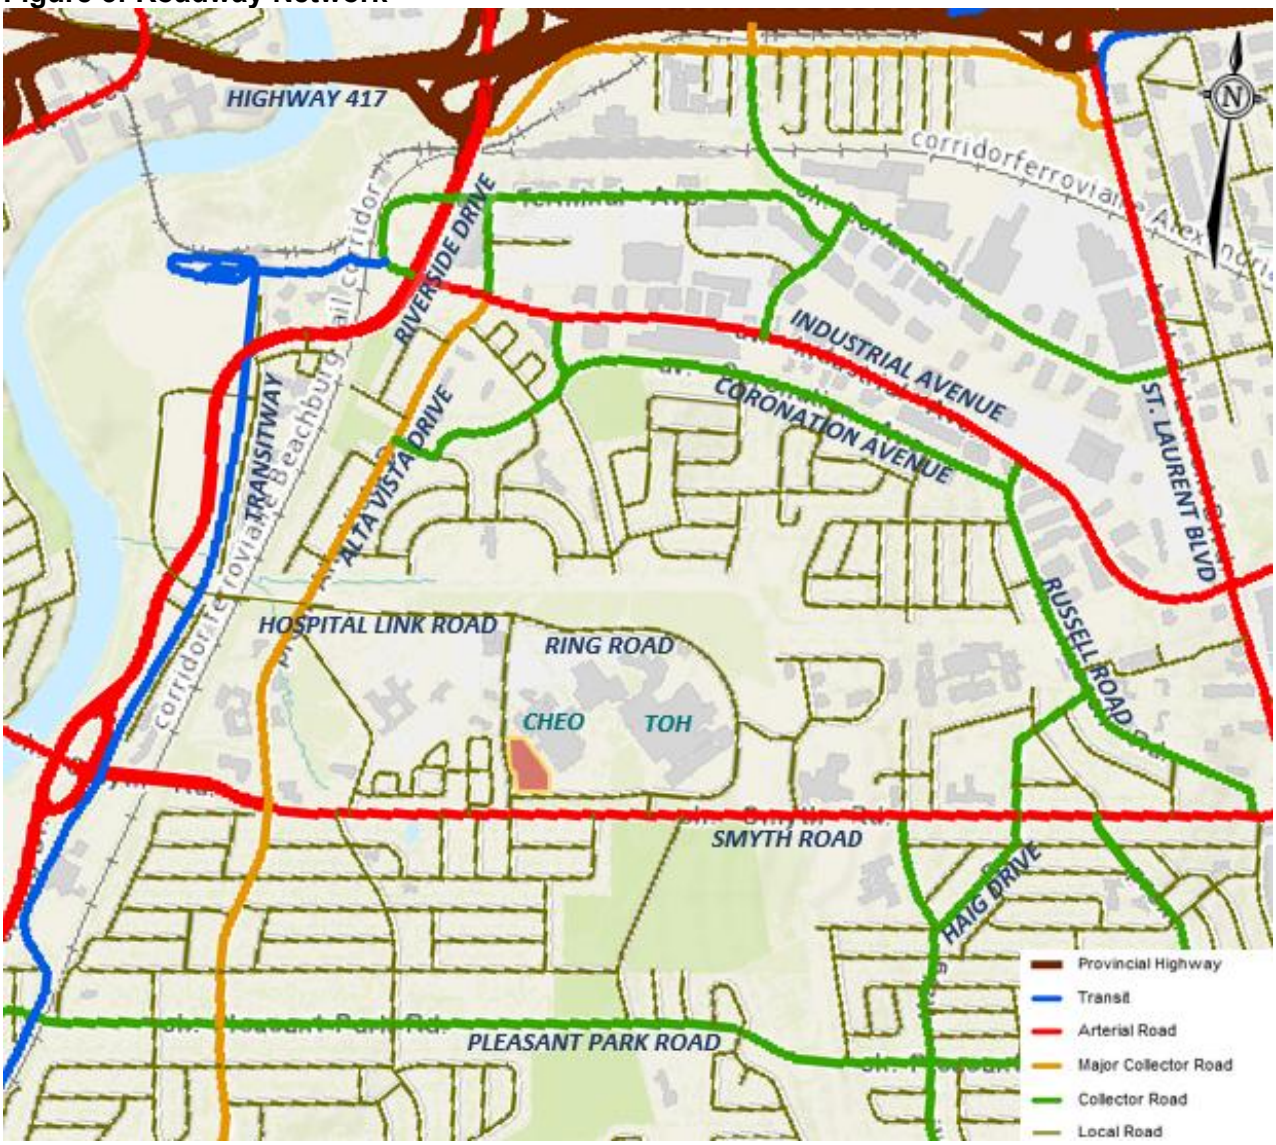
Hospital Link Road is a local roadway that generally runs on a curvilinear alignment between Riverside Drive and Ring Road. At Riverside Drive, the roadway continues east as Hincks Lane. Hospital Link Road continues as Ring Road for the section that directly surrounds the CHEO campus. Within the study area, Hospital Link Road has a two-lane undivided urban cross-section, an asphalt multi-use pathway (MUP) on the south side of the roadway, and a posted speed limit of 50 km/h. Hospital Link Road is not classified as a truck route. Street parking is not prohibited along Hospital Link Road within the study area.

Ring Road is a local roadway that runs on a circuitous alignment around the CHEO campus, and is located within the sites at 401, 451, and 599 Smyth Road. Ring Road is connected to roadways within the City's jurisdiction via one connection to Roger Guindon Avenue, and two connections to Smyth Road. One connection is located in line with Ring Road (N-S), and the other is located in line with the General Hospital Access (approximately 400m to the east, measuring centre-to-centre). Ring Road has a two-lane undivided urban cross-section. On the inside of the roadway, asphalt or concrete sidewalks are provided in select areas, including the entire section of Ring Road (N-S). On the outside of the roadway, an asphalt MUP is provided between Hospital Link Road and the connection to Roger Guindon Avenue. Ring Road has a posted speed limit of 40 km/h, and is not classified as a truck route. Street parking is prohibited on both sides of the roadway, and the signage indicates that Ring Road is a fire route. A Pedestrian Crossover (PXO) Type D is provided along Ring Road (N-S) roughly 80m north of the Ring Road (N-S)/Ring Road (E-W) intersection.

General Hospital Access Road is a local roadway that runs on a north-south alignment that intersects with Smyth Road and Ring Road (E-W), and extends to the north, providing access to parking for vehicles and ambulances, and drop-off zones for Para Transpo, taxis, and emergencies. General Hospital Access Road has a four-lane divided urban cross-section for the short section between Smyth Road and Ring Road (E-W), and a two-lane undivided urban cross-section north of Ring Road (E-W). Asphalt sidewalks are generally provided on both sides of General Hospital Access Road. As no posted speed limit signs are provided along General Hospital Access Road, the Highway Traffic Act stipulates a regulatory speed limit of 50 km/h. General Hospital Access Road is not classified as a truck route, and street parking is permitted in select perpendicular parking areas north of Ring Road (E-W).

The roadway of the greater area surrounding the subject site is illustrated in **Figure 3**.

Figure 3: Roadway Network



2.1.2 Intersections

Ring Road/Hospital Link Road

- Unsignalized three-legged intersection
- All-way stop control
- South Approach (Ring Road):
  one shared left turn/right turn lane
- East Approach (Ring Road):
  one shared left turn/through lane
- West Approach (Hospital Link Road):
  one shared through/right turn lane
- Standard crosswalks on all approaches
- Crossride provided at west approach

Ring Road (N-S)/CHEO Non-Emergency Access

- Unsignalized four-legged intersection
- All-way stop control
- East and west approaches offset
- North/South Approaches (Ring Road N-S):
  one shared left turn/through/right turn lane
- East Approach (CHEO Access):
  one shared left turn/through/right turn lane
- West Approach (access to 411 Smyth Road):
  one shared left turn/through/right turn lane
- Ladder crosswalks on north and east approaches

Ring Road (N-S)/Ring Road (E-W)

- Unsignalized three-legged intersection
- Stop control on east approach
- North Approach (Ring Road N-S): one shared left turn/through lane
- South Approach (Ring Road N-S): one shared through/right turn lane
- East Approach (Ring Road E-W): one shared left turn/right turn lane
- Ladder crosswalks on east approach

Smyth Road/Ring Road (N-S)/South Haven Place

- Signalized four-legged intersection
- North Approach (Ring Road N-S): one left turn lane and one right turn lane (through traffic is restricted, except for bicycles)
- South Approach (South Haven Place): one shared left turn/right turn lane (through traffic is restricted, except for bicycles)
- East Approach (Smyth Road): one shared left turn/through lane and one shared through/right turn lane
- West Approach (Smyth Road): one shared left turn/through lane and one shared through/right turn lane
- Standard crosswalks on all approaches

Ring Road (E-W)/CHEO Non-Emergency Access

- Unsignalized three-legged intersection
- Stop control on north approach
- North Approach (CHEO Non-Emergency Access): one shared left turn/right turn lane
- East Approach (Ring Road E-W): one shared through/right turn lane
- West Approach (Ring Road E-W): one shared left turn/through lane

Ring Road (E-W)/CHEO Emergency Access

- Unsignalized three-legged intersection
- Stop control on north approach
- North Approach (CHEO Emergency Access): one shared left turn/right turn lane
- East Approach (Ring Road E-W): one shared through/right turn lane
- West Approach (Ring Road E-W): one shared left turn/through lane
- Ladder crosswalk on east approach

Ring Road (E-W)/General Hospital Access Road

- Unsignalized four-legged intersection
- Three-way stop control on north, east, and west approaches
- North Approach (General Hospital Access Road): one shared left turn/through/right turn lane
- South Approach (General Hospital Access Road): one shared left turn/through lane and one right turn lane (channelized)
- East Approach (Ring Road E-W): one left turn lane and one shared left turn/through/ right turn lane
- West Approach (Ring Road E-W): one shared left turn/through/right turn lane
- Ladder crosswalk on east and west approaches

Smyth Road/General Hospital Access Road

- Signalized three-legged intersection
- North Approach (General Hospital Access Road): dual left turn lanes and one right turn lane
- East Approach (Smyth Road): two through lanes and one right turn lane
- West Approach (Smyth Road): one left turn lane and two through lanes
- Standard crosswalks on all approaches

2.1.3 Driveways

In accordance with the *Revised TIA Guidelines*, a review of the existing adjacent driveways along the boundary roads are provided as follows. All driveways within 200m of the proposed loop accesses to Ring Road (N-S) and the proposed loading access to Ring Road (E-W) are listed as follows.

Ring Road (N-S), west side
- One driveway to the Ronald McDonald House at 401 Smyth Road;
- One driveway to a motel at 411 Smyth Road.

Ring Road (N-S), east side
- One internal intersection leading to the non-emergency entrance to the CHEO building at 401 Smyth Road;
- One internal intersection leading to the Roger Neilson House and Children's Treatment Centre at 401 Smyth Road.

South Haven Place, west side
- Five driveways to residences at 1874, 1882, and 1890 South Haven Place.

South Haven Place, east side
- Three driveways to residences at 403 & 404 Simpson Road, and 404 Smyth Road.

Ring Road (E-W), north side
- One driveway to Parking Lot A adjacent to the CHEO building at 401 Smyth Road;
- Two internal intersections leading to the non-emergency and emergency entrances to the CHEO building at 401 Smyth Road.

Ring Road (E-W), south side
- No driveways

2.1.4 Pedestrian and Cycling Facilities

Sidewalks are provided on both sides of Smyth Road and General Hospital Access Road, on one side of Ring Road (N-S), and along the north side of Ring Road (E-W) next to Parking Lot E. There are also pathways within the CHEO and TOH campuses, which provide connectivity throughout the sites.

A MUP is provided on the south side of Hospital Link Road, which crosses to the north side at the Hospital Link Road/Ring Road intersection, and continues on the outside of Ring Road until the connection to Roger Guindon Avenue. The MUP then follows Roger Guindon Avenue and crosses Smyth Road, where it continues south of the study area through Lynda Lane Park. North of the CHEO campus, the MUP connects to another pathway that heads north to Station Boulevard.

In the City of Ottawa's 2013 Ottawa Cycling Plan (OCP), Smyth Road is designated as a Spine Route. Per the 2013 OCP, local routes in the area include South Haven Place, Roger Road, and Fairbanks Avenue to the south, Roger Guindon Avenue and Dauphin Road to the east. The section of pathway along the outside of Ring Road forms part of Crosstown Bikeway #4, which runs from Laurier Avenue East to Findlay Creek Boulevard.

A map of the existing pedestrian facilities is provided in **Figure 4** and a map of the existing cycling facilities is provided in **Figure 5**.

Figure 4: Existing Pedestrian Facilities

Figure 5: Existing Cycling Facilities

2.1.5 Area Traffic Management

Within the study area, there are no Area Traffic Management (ATM) studies that are in progress. As described in Section 2.1.2, northbound and southbound through restrictions are implemented at Smyth Road/Ring Road (N-S)/South Haven Place, which serves to keep traffic from travelling directly between the hospital campuses and the residences south of Smyth Road.

To the east of the study area, the Haig Drive Traffic Calming Study was completed by the City, with a final recommendation plan posted in August 2023. The recommended measures include painted bike lanes, traffic calming measures, and intersection modifications on Haig Drive between Smyth Road and Harding Road to the south.

On Smyth Road east of the study area, school zone signage and pavement markings are provided in vicinity of Vincent Massey School, along with a municipal speed camera to enforce speeds within the school zone.

2.1.6 Transit

The locations of OC Transpo bus stops that are relevant to the proposed development are described in **Table 1**, and shown in **Figure 6**. A summary of the various routes which serve the study area is included in **Table 2**. Detailed route information and an excerpt from the OC Transpo System Map are included in **Appendix C**.

Table 1: OC Transpo Transit Stops

Stop	Location	Routes Serviced
#1808	East side of CHEO Non-Emergency Access (between main entrance and access)	45, 55
#7045	West side of CHEO Non-Emergency Access (between main entrance and access)	55
#7072	North side of Ring Road (E-W), east of CHEO Non-Emergency Access	45, 55
#7231	East side of Ring Road (N-S), south of access to Roger Neilson House	45
#7236	North side of Smyth Road, across from Barnhart Place	55, 609, 645
#7237	South side of Smyth Road, east of Barnhart Place	55, 609
#7238	South side of Smyth Road, west of South Haven Place	609

Table 2: OC Transpo Route Information

Route	From ↔ To	Frequency
45	Hospital ~ Hôpital ↔ Hurdman & N Rideau	All day and limited overnight service, seven days a week; 15- to 60-minute headways
55	Elmvale ↔ Westgate	All day service, seven days a week; 15- to 30-minute headways
609	Elmvale ↔ De La Salle H.S.	Service at select times on school days only
645	Franco-Cité H.S. → Hurdman	Service in one direction after school, on school days only

Figure 6: OC Transpo Bus Stop Locations

2.1.7 Existing Traffic Volumes

Weekday traffic counts were coordinated by the City of Ottawa and Novatech. These counts were used to determine the existing traffic volumes at the study area intersections, and the data was collected during the following dates:

- Ring Road/Hospital Link Road — March 19, 2024 (Novatech)
- Ring Road (N-S)/CHEO Non-Emergency Access — March 19, 2024 (Novatech)
- Smyth Road/Ring Road (N-S)/South Haven Place — October 4, 2022 (City)
- Ring Road (E-W)/CHEO Non-Emergency Access — March 20,2024 (Novatech)
- Ring Road (E-W)/CHEO Emergency Access — February 20, 2020 (City)
  March 20,2024 (Novatech)

- Ring Road (E-W)/General Hospital Access Road March 19,2024 (Novatech)
- Smyth Road/General Hospital Access Road December 11, 2019 (City)
- Ring Road (N-S)/Ring Road (E-W) March 19,2024 (Novatech)

Due to construction occurring in Parking Lot E at the time of the 2024 traffic counts the volumes of vehicles turning in and out of the CHEO emergency access were noticeably lower than previous traffic counts. To account for the construction eliminating parking in this area and lowering the turning volumes at this intersection the turning volumes from the 2020 traffic count were combined with the east-west through volumes from the 2024 traffic count.

It should be noted that all recent traffic counts completed within the study area occurred outside of the summer months and pedestrian and cyclist volumes may be higher during other times of the year.

The traffic count data is included in **Appendix D**. Peak hour vehicle volumes within the study area are shown in **Figure 7**, and peak hour pedestrian and cyclist volumes are shown in **Figure 8**.

2.1.8 Collision Records

Historical collision data from the last five years available was obtained from the City's Public Works and Service Department for the study area intersections and midblock segments. Copies of the collision summary reports are included in **Appendix E**. Department staff have advised that no reportable collisions were received for any location along Ring Road.

Private collision data was not available from Infrastructure Ontario for Ring Road.

The collision data has been evaluated to determine if there are any identifiable collision patterns, which are defined in the *Revised TIA Guidelines* as 'more than six collisions in five years' for any one movement. The number of collisions at each intersection from January 1, 2017 to December 31, 2021 is summarized in **Table 3**.

Figure 7: Existing Auto Volumes

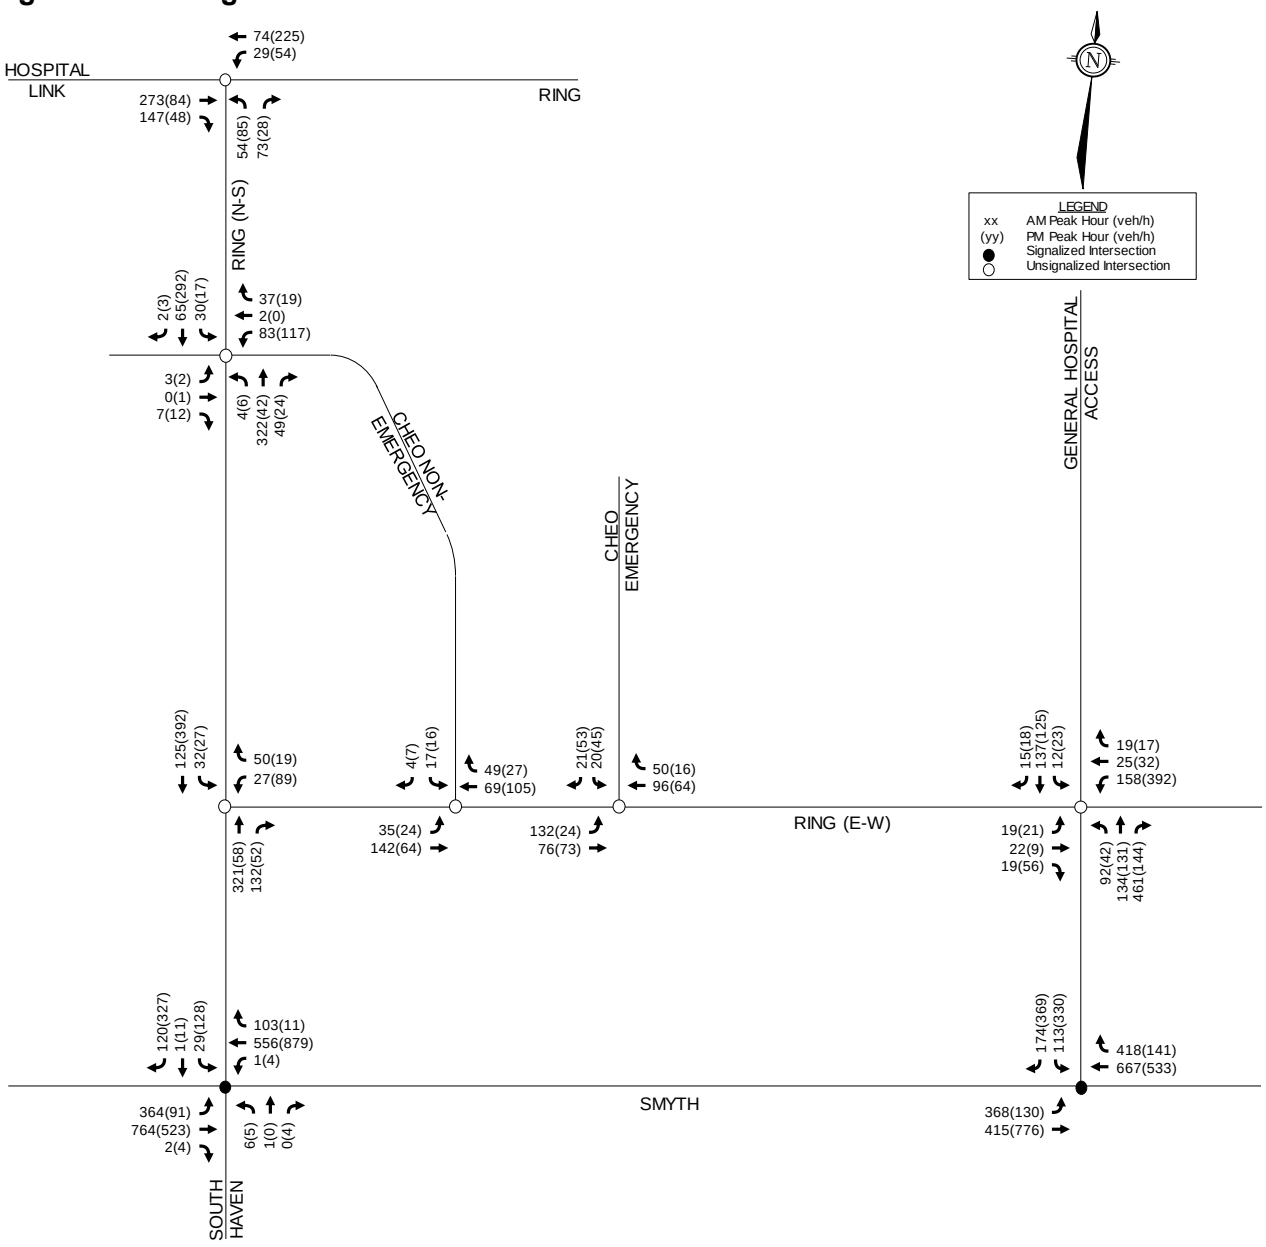


Figure 8: Existing Pedestrian and Cyclist Volumes

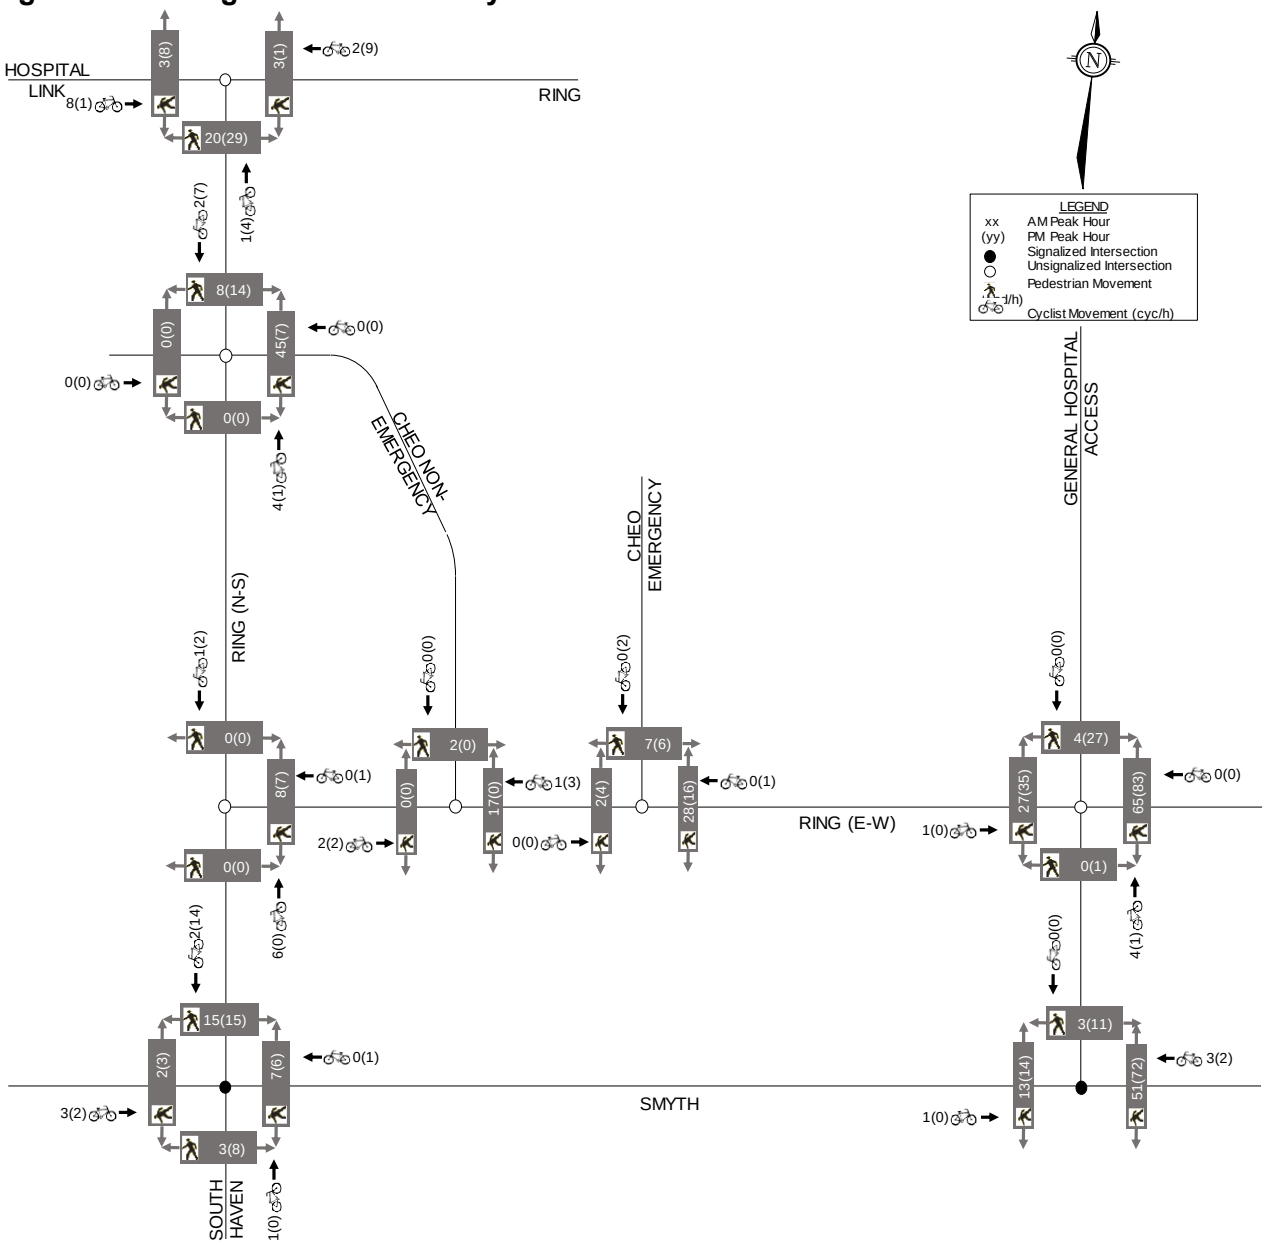

Table 3: Reported Collisions

Location	Impact Types						Total
	Approach	Angle	Rear End	Sideswipe	Turning Movement	SMV(1)/ Other	
Smyth Road/ Ring Road (N-S)/South Haven Pl	-	1	4	3	5	-	**13**
Smyth Road/ General Hospital Access Road	-	-	7	5	4	1	**17**
Smyth Road btwn Ring Rd (N-S) & General Hospital Access Road	-	-	1	3	1	-	**5**

1. SMV = Single Motor Vehicle

Smyth Road/Ring Road (N-S)/South Haven Place
A total of 13 collisions were reported at this intersection over the last five years, consisting of one angle impact, four rear-end impacts, three sideswipe impacts, and five turning movement impacts. One collision resulted in non-fatal injuries, and none resulted in fatal injuries. Six of the 13 collisions (46%) occurred in poor driving conditions. No collisions involved pedestrians or cyclists.

Smyth Road/General Hospital Access Road
A total of 17 collisions were reported at this intersection over the last five years, consisting of seven rear-end impacts, five sideswipe impacts, four turning movement impacts, and one single vehicle/ other impacts. One collision resulted in non-fatal injuries, and none resulted in fatal injuries. Nine of the 17 collisions (53%) occurred in poor driving conditions. No collisions involved pedestrians or cyclists.

Of the seven rear-end impacts, three occurred at the southbound approach, one occurred at the eastbound approach, and three occurred at the westbound approach. Therefore, no rear-end collision patterns are identified at any approach.

Segments of Smyth Road between Ring Road/South Haven Place & General Hospital Access Road
A total of five collisions were reported along this segment over the last five years, including two collisions at the intersection of Smyth Road/Highland Terrace. The five collisions consisted of one rear-end impact, three sideswipe impacts, and one turning movement impact. One collision occurred in non-fatal injuries, and none resulted in fatal injuries. Three of the five collisions (60%) occurred in poor driving conditions. No collisions involved pedestrians or cyclists.

2.2 Planned Conditions

2.2.1 Planned Transportation Projects

The City's *2013 Transportation Master Plan (TMP)* identifies transit signal priority and queue jump lanes at select locations along Alta Vista Drive (from Smyth Road to Industrial Avenue) and Smyth Road (from Alta Vista Transportation Corridor and St. Laurent Boulevard), in the 2031 Rapid Transit and Transit Priority (RTTP) Network Concept.

The City's 2013 TMP also identifies the Alta Vista Transportation Corridor in its 2031 Road Network Concept and 2031 RTTP Network Concept. The corridor includes the now-constructed Hospital Link Road. In the 2031 Road Network Concept, this will include a new four-lane road between the Nicholas Street/Highway 417 interchange and Riverside Drive, and a new four-lane road between the Ottawa Health Sciences Centre and Walkley Road. In the 2031 RTTP Network Concept, bus and high-occupancy vehicle (HOV) lanes and transit signal priority is planned between Riverside Drive and the Ottawa Health Sciences Centre (i.e. Hospital Link Road and the adjacent northern section of Ring Road). Transit signal priority and queue jump lanes are identified between the Ottawa Health Sciences Centre and Walkley Road.

The 2013 Ottawa Cycling Plan and 2013 Ottawa Pedestrian Plan do not identify any upcoming pedestrian and cycling infrastructure projects within the study area. The City's *Draft TMP Update* (March 2023) includes a list of active transportation projects. West of the study area, the update identifies separated cycling facilities and/or bike lanes on Smyth Road from Alta Vista Drive to Riverside Drive, to provide connectivity to these streets and the Rideau River Eastern Pathway. East of the study area, a cycling infrastructure project is identified along the Botsford Street/Dauphin Street corridor, from Coronation Avenue to Kilborn Avenue.

2.2.2 Other Area Developments

Other developments that are in the approval process or have recently been completed, constructed, or approved and are summarized as follows.

355 and 374 Everest Private
A total of 293 dwellings are proposed to be added to an existing condominium complex at 355 and 374 Everest Private. The site plans at both addresses were approved by the City in February 2022.

401 Smyth Road (Parking Structure)
The new parking garage with 1,050 vehicle parking spaces will replace the gravel parking at Parking Lot E. A TIA was prepared by EXP in September 2023 with an addendum by Novatech in October, 2023. Buildout is expected in 2025.

451 Smyth Road
The University of Ottawa has proposed a six-storey medical research facility with a GFA of 267,270 ft². A TIA prepared by WSP in February 2024 had identified an estimated buildout year of 2026.

700 Coronation Avenue
A total of 35 dwellings are proposed to be added to an existing apartment development at 700 Coronation Avenue. The application is currently in the approval process. No traffic study was prepared for this development.

1740-1760 St. Laurent Boulevard
A total of 701 dwellings, 21,808 ft^2 of commercial space, and 9,383 ft^2 of restaurant space are proposed at the addresses above. A TIA prepared by Parsons in October 2023 had identified an estimated buildout year of 2024.

1967 Riverside Drive
TOH has entered into an agreement with the City of Ottawa to permit 256 long-term care units and 250 retirement units, adjacent to the Riverside Campus of TOH. A TIA prepared by CGH in January 2023 had identified an estimated buildout year of 2026.

1971 St. Laurent Boulevard
A total of 498 dwellings are proposed to be added to an existing apartment complex at 1971 St. Laurent Boulevard. A TIA prepared by CGH in March 2023 had identified an estimated buildout year of 2030.

2025 Othello Avenue
A total of 563 dwellings are proposed to be added to an existing apartment complex at 2025 Othello Avenue. A TIA prepared by Parsons in September 2021 had identified an estimated buildout year of 2023.

2.3 Study Area and Time Periods

The study area for this report includes Smyth Road, Ring Road (N-S), and Ring Road (E-W), as the boundary streets, and includes the following intersections.

- Ring Road/Hospital Link Road;
- Ring Road (N-S)/CHEO Non-Emergency Access;
- Ring Road (N-S)/Ring Road (E-W);

- Smyth Road/Ring Road (N-S)/South Haven Place;
- Ring Road (E-W)/CHEO Non-Emergency Access;
- Ring Road (E-W)/CHEO Emergency Access;
- Ring Road (E-W)/General Hospital Access Road;
- Smyth Road/General Hospital Access Road.

The peak hours of adjacent street traffic are generally 7:30-8:30am and 3:30-4:30PM. The PM peak of the intersections along Ring Road (E-W) is slightly earlier at 3:00-4:00PM. Existing and proposed school hours are 8:30AM-3:00PM with no before and after care programs. As outlined in this report, the school traffic is small compared to the proposed clinic traffic.

The selected time periods for the analysis are the weekday AM and PM peak hours, as they represent the 'worst case' combination of site generated traffic and adjacent street traffic. For this analysis the relocated school trips have been added to the AM and PM peak hour traffic. Analysis will be completed for the buildout year 2027 and horizon year 2032.

2.4 Access Design

This section summarizes the proposed new accesses to Ring Road (N-S) and Ring Road (E-W), and proposed changes to existing lane configurations for the CHEO Non-Emergency Accesses. Design vehicle turning templates and detailed intersection analysis has been completed within this TIA.

While the proposed development does not propose any new private approaches to City streets, certain relevant sections of the City's *Private Approach By-Law* (PABL) have been reviewed for each access.

New Integrated Treatment Centre Loop and Adjacent Surface Parking

The proposed Integrated Treatment Centre building will include a loop that accesses Ring Road (N-S), with access points approximately 35m and 95m north of Ring Road (E-W), measuring from the nearest edge of Ring Road (E-W) to the nearest edge of the access. The northerly end of the loop will operate as an egress, allowing both outbound left turns and outbound right turns. The southerly end of the loop will operate as an ingress, permitting all inbound movements. The Transportation Association of Canada (TAC)'s *Geometric Design Guide for Canadian Roads* includes minimum corner clearance requirements for accesses to different classes of roadways, that are in the vicinity of cross roads. Treating all sections of Ring Road as a collector, TAC's *Geometric Design Guide* identifies a minimum corner clearance requirement of 20m. This requirement is met by the proposed loop.

The loop will provide access to the main entrance to the clinical portion of the Integrated Treatment Centre building, as well as a surface parking lot with approximately 40 parking spaces. The nearest edge of the surface parking drive aisle is located approximately 15m from the nearest edge of Ring Road (N-S). TAC's *Geometric Design Guide* includes minimum clear throat requirements for collector and arterial accesses to certain land uses. The light industrial land use has been considered, as it is the land use closest to the proposed hospital use. A minimum clear throat requirement of 15m is identified for light industrial uses between 10,000 and 45,000 m^2 in area, and therefore the requirement is met.

Section 25(1)(d) of the City's PABL identifies a maximum permitted width of 7.5m for one-way private approaches. Measuring at the back of sidewalk on Ring Road (N-S), the one-way ingress

of the loop is approximately 7.5m wide, which meets the requirements of Section 25(1)(d). The one-way egress of the loop is approximately 8.5m wide, and therefore would not meet the requirements of Section 25(1)(d). Ring Road is not a municipal road and the accesses are not subject to the PABL. Required turning movements are reviewed in Section 4.1.2.

New Integrated Treatment Centre Loading Access
The proposed Integrated Treatment Centre building will also include a loading access to Ring Road (E-W), which will be designed to accommodate a Heavy Single Unit (HSU) design vehicle. The nearest edge of the loading access is located approximately 17m from the nearest edge of the non-emergency access.

Measuring from the back of sidewalk along Ring Road (E-W), the loading access is approximately 7.5m wide, meeting the requirements of Section 25(1)(c).

Proposed Reconfiguration of CHEO Non-Emergency Access
As part of the proposed development, the non-emergency access to Ring Road (N-S) will be converted from a two-way access to an ingress only, with separate entrances for the CHEO building and the Integrated Treatment Centre drop-off for school buses and parents. Vehicles will continue to the CHEO entrance or turn into the drop-off lane approximately 45m from Ring Road (N-S). This meets the minimum clear throat requirement of 15m.

Entering the ingress, the lane serving the bus loading area is approximately 3.6m in width, while the lane serving the CHEO entrance and fire route lane is approximately 6.0m in width. The two lanes are separated by an approximately 1.1m-wide buffer. The fire route/CHEO lane has a width of 6m after the split where school buses and parents can turn into the school drop-off lane. The school drop-off lane is approximately 6.0m in width. This allows for a 3.0m-wide drive aisle and 3.0m-wide lane for school bus or parent drop-offs.

Measuring from the back of sidewalk on Ring Road (N-S), the proposed ingress is approximately 17m wide. This does not meet the requirements of Section 25(1)(d) of the PABL. However, Section 25(1)(e) of the PABL identifies that private approaches in excess of 9m in width at the edge or roadway may be permitted for off-street bus loading areas, transport loading areas, and stations operated by the Ottawa Fire Department. As the ingress includes a lane to accommodate school bus queueing, this access is acceptable.

The proposed configuration of the ingress will be able to accommodate a queue of 12 school buses from the front of the school bus drop-off zone to the edge of Ring Road (N-S), meeting the requirements of Infrastructure Ontario. The design bus vehicle considered is a Class A School Bus, which has a length of 8m, width of 2.4m, and height of 3m. The proposed parent drop-off area further downstream of the bus drop-off zone will be able to accommodate a queue of seven passenger vehicles.

The non-emergency access to Ring Road (E-W) will be converted from a two-way access to an egress only, with separate southbound left turn and right turn lanes. The drive aisle approaching the egress is approximately 7.9m in width. This marginally exceeds the requirements of Section 25(1)(d) of the PABL.

2.5 Development-Generated Travel Demand

The school that is proposed within the subject development currently exists and is operating to the north of the subject site within the CHEO campus. New trips will not be generated by the school as

it is expected to accommodate the same number of students and staff as the existing school. The relocated school traffic is shown in Section 3.3.2.

2.5.1 Trip Generation

The gross floor area of the proposed Integrated Treatment Centre building is approximately 21,700 m^2 (233,580 ft^2). Within the proposed building the relocated school accounts for roughly 1,625 m^2 (17,500 ft^2) of the total GFA. The number of peak hour person trips generated by the proposed hospital clinic has been estimated using the regression equations for the rates associated with the Hospital land use, as outlined in the *ITE Trip Generation Manual, 11th Edition*. As the *ITE Trip Generation Manual* produces trip generation rates in vehicle trips, a person trip conversion factor of 1.28 has been applied. The subsequent estimated number of person trips to be generated by the proposed development is shown in **Table 4**.

Table 4: Proposed Development – Peak Hour Trip Generation

Land Use	ITE Code	Units	AM Peak Hour (pph[1])			PM Peak Hour (pph)		
			IN	OUT	TOT	IN	OUT	TOT
Hospital	610	216,080 ft^2	269	132	*401*	136	251	*387*

1. pph: Person Trips per Hour

The *TRANS O-D Survey Report* identifies the subject site as being located within the Alta Vista district. Considering all trips travelling to/within Alta Vista during the AM peak hour and all trips travelling from/within Alta Vista during the PM peak hour (i.e. trips associated with commuters travelling to work in the morning, and from work in the afternoon). Considering these trips, the observed mode shares for the Alta Vista district can be summarized as follows:

- Auto Driver: 61% in AM peak, 62% in PM peak;
- Auto Passenger: 15% in AM peak, 15% in PM peak;
- Transit: 16% in AM peak, 15% in PM peak;
- Cyclist: 2% in AM peak, 2% in PM peak;
- Pedestrian: 6% in AM peak, 6% in PM peak.

Site specific mode share data is not available from CHEO. The mode shares for the proposed Integrated Treatment Centre development are assumed to follow one set for both peak hours. The assumed shares generally follow the observed values above. This can be summarized as 60% driver, 15% passenger, 15% transit, 5% cyclist, and 5% pedestrian. A breakdown of the site-generated trips by mode share is included in **Table 5**.

Table 5: Proposed Development – Peak Hour Trips by Mode Share

Travel Mode	Mode Share	AM Peak Hour			PM Peak Hour		
		IN	OUT	TOT	IN	OUT	TOT
Hospital Person Trips		**269**	**132**	***401***	**136**	**251**	***387***
Auto Driver	60%	162	79	*241*	82	151	*233*
Auto Passenger	15%	40	20	*60*	20	38	*58*
Transit	15%	40	20	*60*	20	38	*58*
Cyclist	5%	14	6	*20*	7	12	*19*
Pedestrian	5%	13	7	*20*	7	12	*19*

From the previous tables, the proposed hospital clinic development is estimated to generate 401 person trips (including 241 vehicle trips) during the AM peak hour, and 387 person trips (including 233 vehicle trips) during the PM peak hour.

2.5.2 Trip Distribution and Assignment

The distribution of trips generated by the proposed development to the study area network has been derived, based on the peak hour volumes at Ring Road/Hospital Link Road, Smyth Road/Ring Road (N-S)/South Haven Place, and Smyth Road/General Hospital Access Road. For the purposes of this study, approximately 15% of peak hour trips have been assigned to the new Integrated Treatment Centre loop to Ring Road (N-S). The other 85% of peak hour trips have been assigned to the parking garage access to Ring Road (E-W).

The distribution and assignment percentages of inbound and outbound site-generated vehicle trips are shown in **Figure 9** and **Figure 10**, respectively. The site-generated peak hour traffic volumes to the study area intersections are shown in **Figure 11**.

Figure 9: Trip Distribution and Assignment Percentages, Inbound Trips

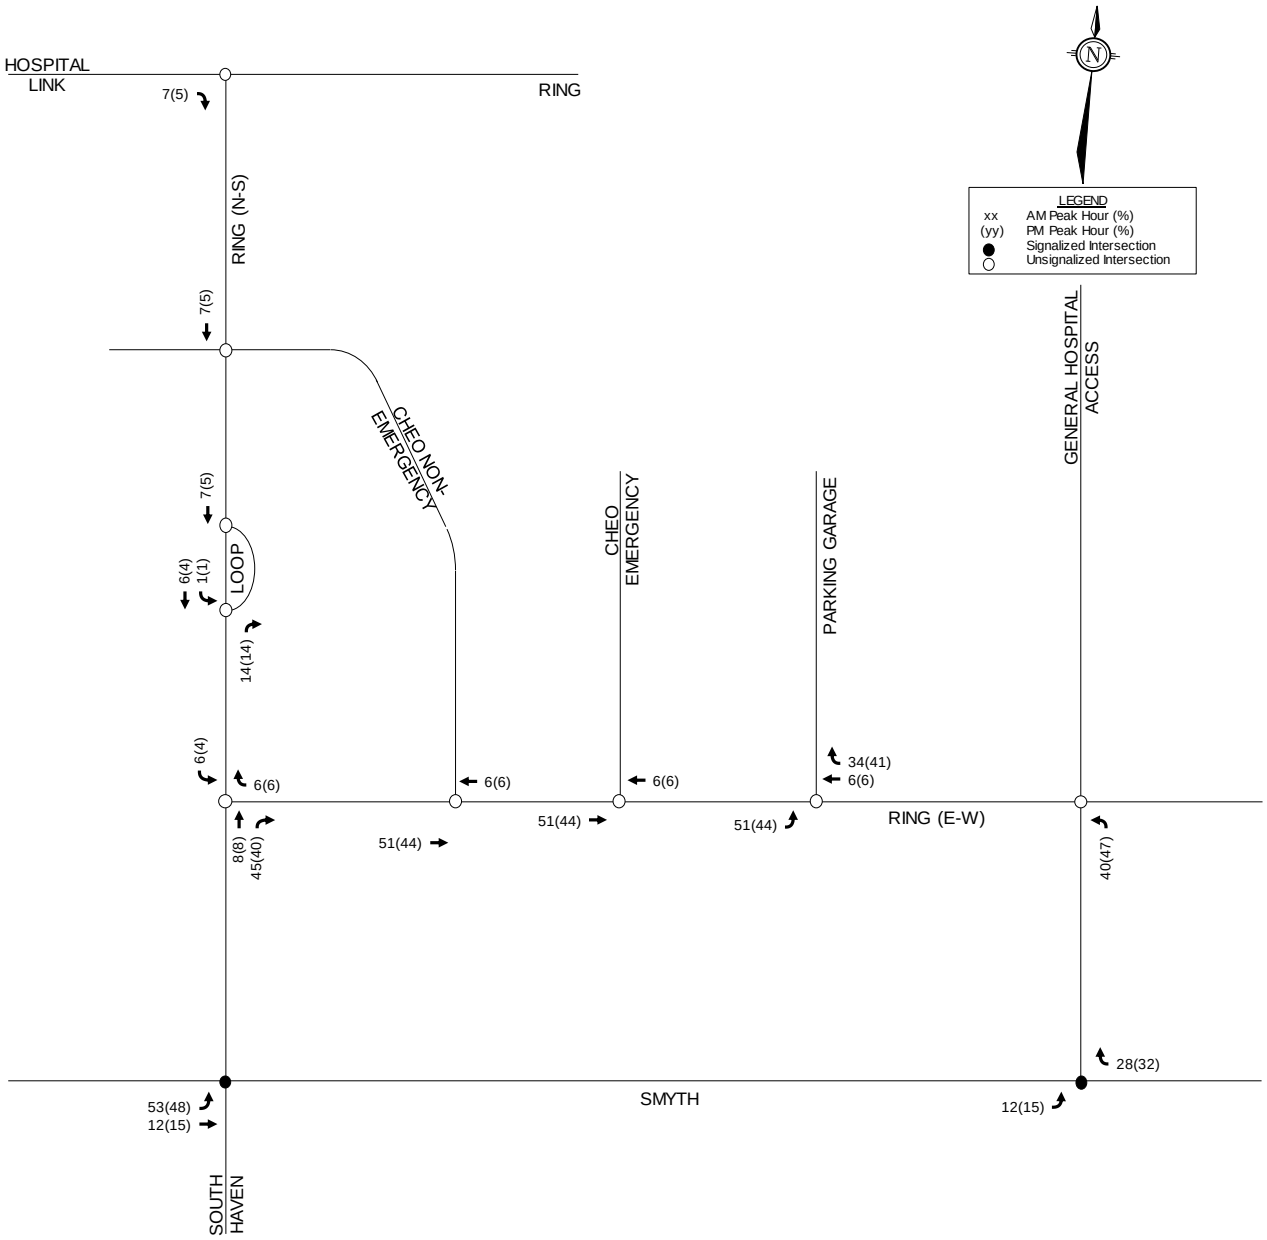

Figure 10: Trip Distribution and Assignment Percentages, Outbound Trips

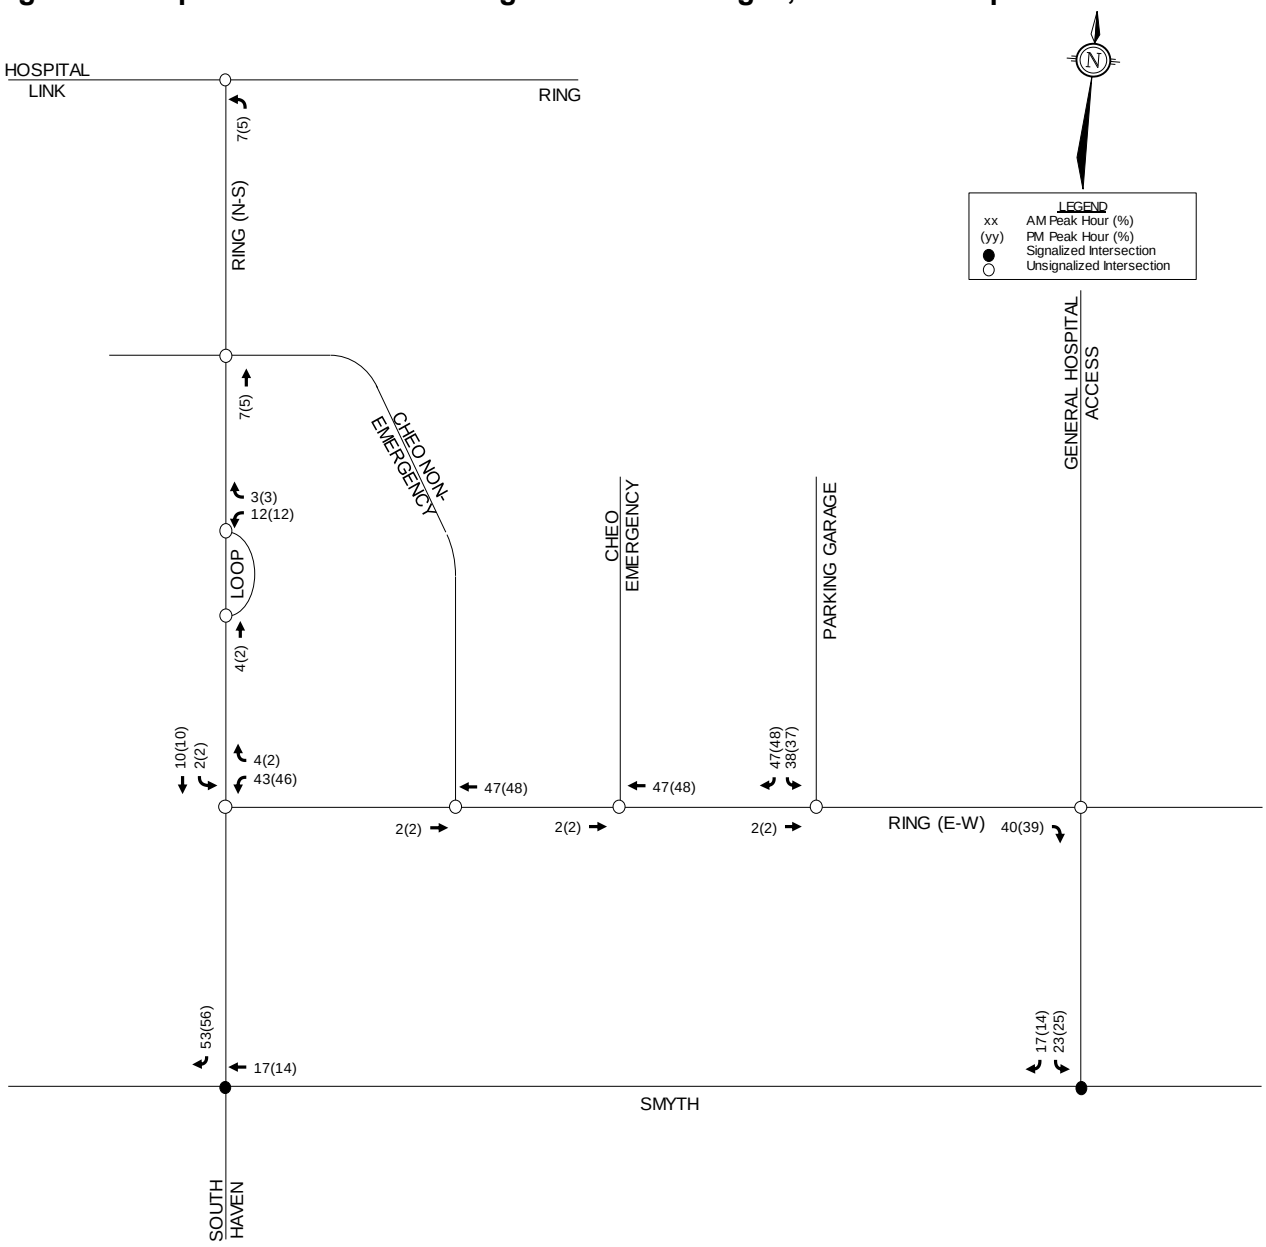

Figure 11: Site-Generated Traffic Volumes

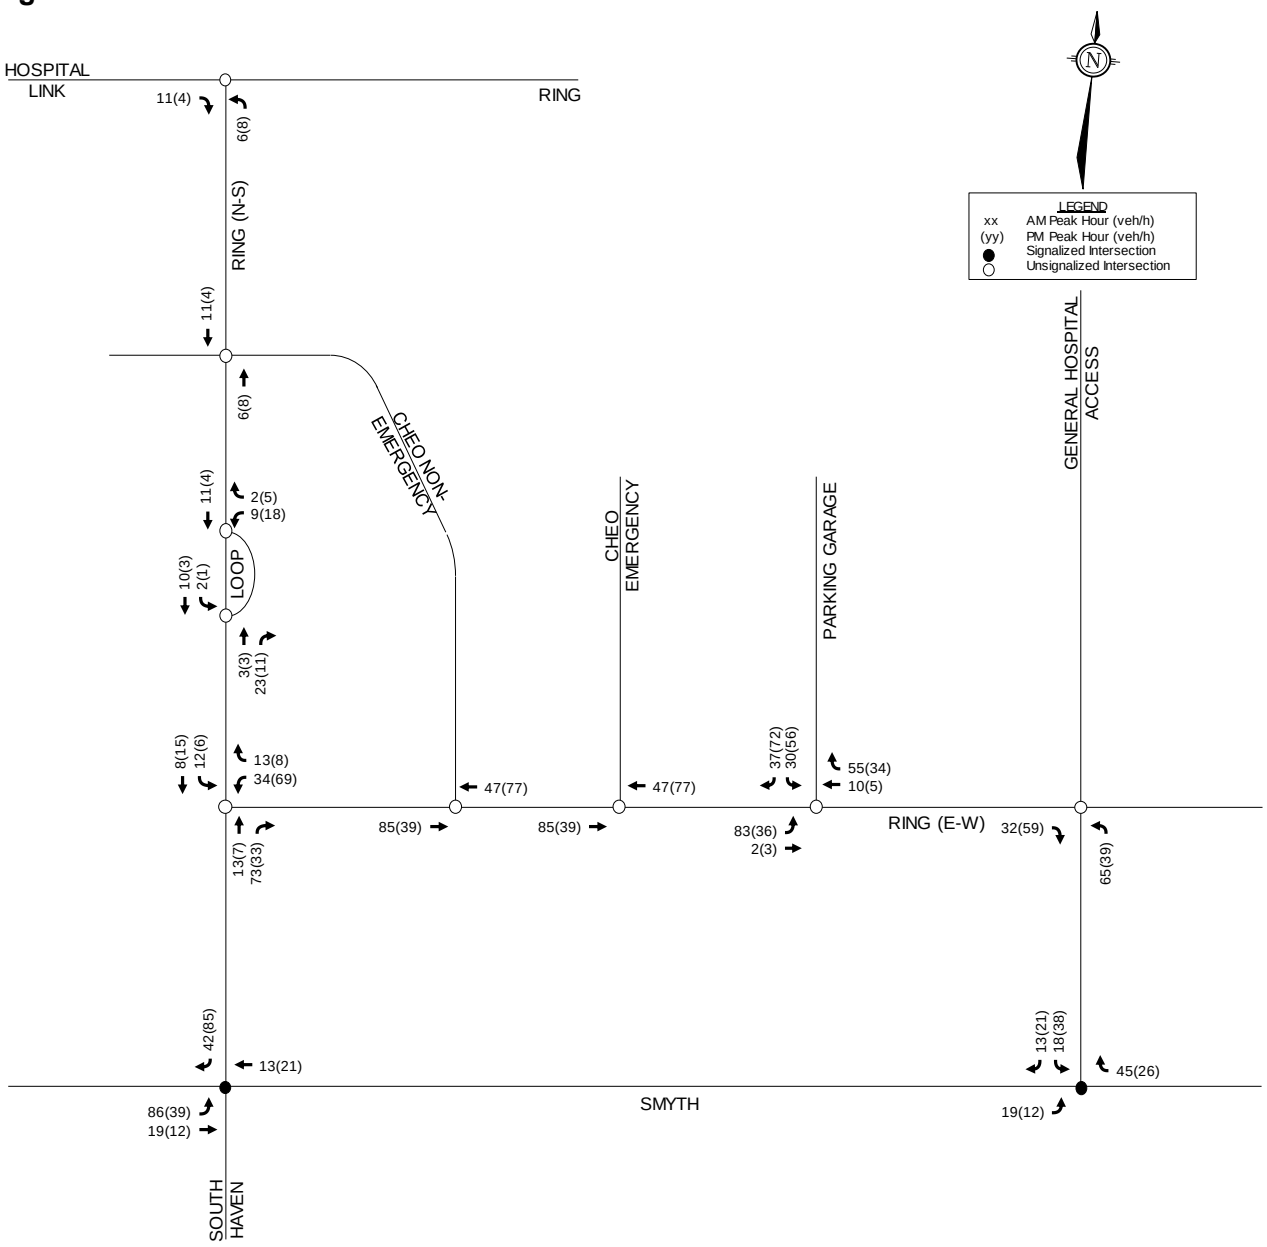


2.6 Exemptions Review

This module reviews possible exemptions from the final TIA, as outlined in the *2017 TIA Guidelines* and *2023 Revisions to the TIA Guidelines*. The applicable exemptions for this site are shown in **Table 6**.

Table 6: TIA Exemptions

Module	Element	Exemption Criteria	Status
Design Review Component			
4.1	*4.1.2*	• Required for site plan control and zoning by-law amendment applications	Not Exempt

Module	Element	Exemption Criteria	Status
Development Design	Circulation and Access		
	4.1.3 New Street Networks	• Required for draft plan of subdivision applications	Exempt
4.2 Parking	*All elements*	• Required for site plan control and zoning by-law amendment applications	Not Exempt
Network Impact Component			
4.5 Transportation Demand Management	*All elements*	• Required when proposed development generates more than 60 person trips	Not Exempt
4.6 Neighbourhood Traffic Calming	*All elements*	• If all of the following criteria are met: 1. Access is provided to a collector or local roadway 2. Application is for zoning by-law amendment or draft plan of subdivision 3. Proposed development generated more than 75 vehicle trips 4. Site trip infiltration is expected, and site-generated traffic will increase peak hour volumes by 50% or more along the route between the site and an arterial roadway 5. The subject street segment is adjacent to two or more of the following significant sensitive land uses: ○ School (within 250m walking distance) ○ Park ○ Retirement/older adult facility ○ Licensed child care centre ○ Community centre ○ 50+% of adjacent properties along the route(s) are occupied by residential lands and at least ten dwellings are occupied	Exempt
4.7 Transit	*4.7.1* Transit Route Capacity	• Required when proposed development generates more than 75 transit trips	Exempt
	4.7.2 Transit Priority Requirements	• Required when proposed development generates more than 75 vehicle trips	Not Exempt
4.8 Network Concept	*All elements*	• Required when proposed development generates more than 200 person trips during the peak hour in excess of the equivalent volume permitted by the established zoning	Exempt
4.9 Intersection Design	*All elements*	• Required when proposed development generates more than 75 vehicle trips	Not Exempt

Based on the foregoing, the following modules are included in the TIA report:

Design Review Component
- Module 4.1: Development Design
- Module 4.2: Parking
- Module 4.3: Boundary Streets
- Module 4.4: Access Design

Network Impact Component
- Module 4.5: Transportation Demand Management
- Module 4.7: Transit
- Module 4.9: Intersection Design

3.0 BACKGROUND NETWORK TRAVEL DEMAND

3.1 General Background Growth Rate

A review of snapshots of the City's *Strategic Long-Range Model* has been conducted which is included in **Appendix F**. Comparing snapshots of the 2011 and 2031 AM peak hour traffic volumes, the *Strategic Long-Range Model* showed a background growth rate of roughly 0.5% along Smyth Road. A background growth rate of 1% was selected to be conservative and to be consistent with other approved transportation studies in the study area that were completed in recent years.

3.2 Other Area Developments

A review of other area development traffic has been conducted, per the developments listed in Section 2.2.2. Traffic generated by these developments have been considered in this analysis and added to the future background traffic volumes, as they are currently under construction, approved, or in the approval process. Relevant excerpts of the traffic studies associated with the developments below are included in **Appendix G**.

355 and 374 Everest Private
The proposed residential development is expected to generate 85 and 92 vehicle trips during the AM and PM peak hours, respectively. The site was anticipated to be completed in 2020 and the site generated traffic have been added to the 2027 and 2032 background traffic.

401 Smyth Road (Parking Structure)
The new parking garage with 1,050 vehicle parking spaces is currently under construction. The parking garage is anticipated to accommodate new vehicle trips from the Integrated Treatment Centre building and displaced parking for Lots B and E. The flow of traffic to the parking garage is studied in this TIA.

451 Smyth Road
The planned medical research facility development is expected to generate 243 and 231 vehicle trips during the AM and PM peak hours, respectively. The site is anticipated to be completed in 2026 and the site generated traffic has been added to the 2027 and 2032 background traffic.

700 Coronation Avenue
No traffic study was prepared for this development, so it is assumed to generate an insignificant amount of vehicle traffic.

1740-1760 St. Laurent Boulevard
The proposed mixed-use development is expected to generate 150 and 149 vehicle trips during the AM and PM peak hours, respectively. The site is anticipated to be completed in 2024 and the site generated traffic has been added to the 2027 and 2032 background traffic.

1967 Riverside Drive
The proposed seniors living development is expected to generate 49 and 68 vehicle trips during the AM and PM peak hours, respectively. The site is anticipated to be completed in 2026 and the site generated traffic has been added to the 2027 and 2032 background traffic.

1971 St. Laurent Boulevard
The proposed residential development is expected to generate 72 and 88 vehicle trips during the AM and PM peak hours, respectively. The site is anticipated to be completed in 2030 and the site generated traffic has been added to the 2032 background traffic.

2025 Othello Avenue
The proposed residential development is expected to generate 93 and 105 vehicle trips during the AM and PM peak hours, respectively. The site was anticipated to be completed in 2023 and the site generated traffic has been added to the 2027 and 2032 background traffic.

3.3 Relocated Traffic

3.3.1 Relocated Parking Traffic

As an initial phase of the proposed development, a parking garage will be constructed on the land currently occupied by Parking Lot E and the clinic and school will be constructed on the land currently occupied by Parking Lot B. The parking currently provided by both of these existing parking lots will be accommodated in the parking garage. As shown in the October 25, 2022 Transportation Study completed by Stantec, Parking Lot B includes 286 parking spaces and Parking Lot E includes 270 parking spaces.

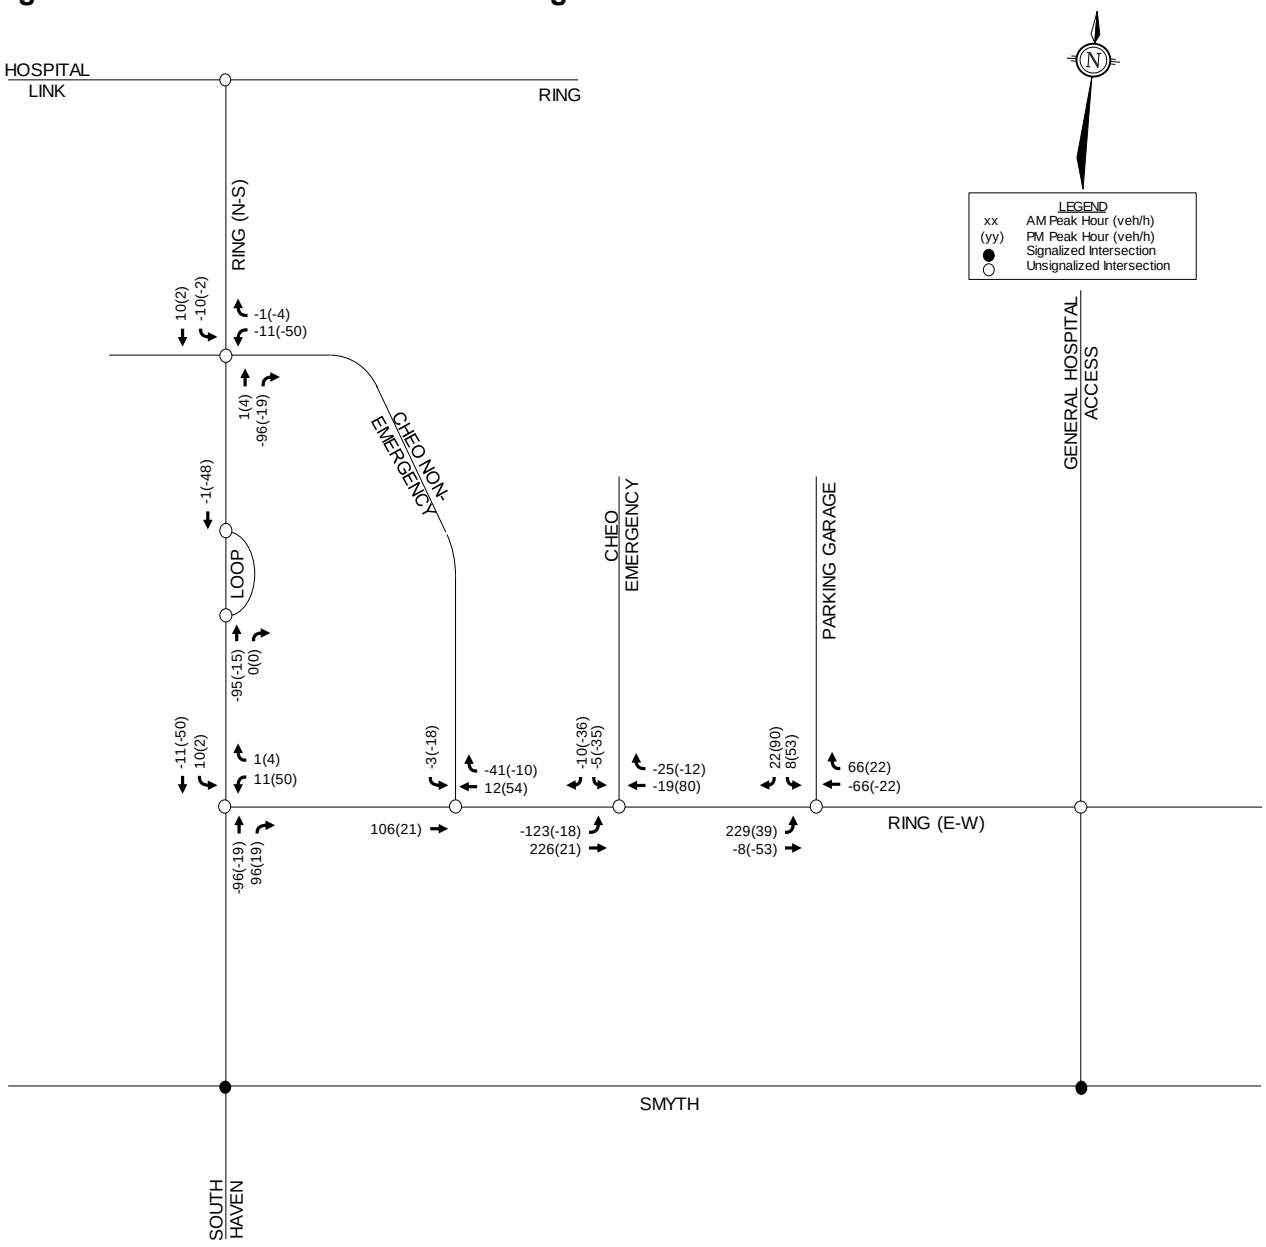
The redistribution of the vehicle traffic to and from Parking Lot E was estimated based on the traffic counts completed on February 20, 2020 and March 20, 2024 at the Ring Road (E-W)/CHEO Emergency Access intersection. The 2020 count included two-way traffic going to and from Parking Lot E while the 2024 count does not include this Parking Lot E related traffic as the parking lot was closed for construction at the time of count. By taking the difference of vehicles turning in and out of the CHEO Emergency Access from the two-counts it is possible to get a rough estimate of the traffic associated with the parking lot during the peak hours.

Given Parking Lots B and E provide a roughly equivalent number of parking spaces it is assumed that an equivalent number of vehicles will be displaced as part of the developments proposed in each of the parking lots.

The distribution of the trips displaced from Parking Lot B has been completed using the assumptions shown in Section 2.5.2.

The redistributed parking lot traffic is shown in **Figure 12**.

Figure 12:Relocated Traffic From Parking Lots B and E



3.3.2 Relocated School Traffic

The school that is proposed within the subject development currently exists and is operating to the north of the subject site within the CHEO campus. The space dedicated to the school in the proposed building is roughly 1,625 m² (17,500 ft²) in size. The school is operational from 8:30 am and 3:00 pm. Staff are expected to arrive for work between 7:50 am and 8:15 am and will depart between 3:00 pm and 3:30 pm. No after school program is provided within the facility.

Based on discussions with the client, the existing school to be relocated has 31 students currently enrolled with a maximum capacity of 35 students. There are 5 classrooms that generally serve junior and senior kindergarten children. Grades 1 and 2 are offered, but enrollment is rare. The students are expected to arrive within 12 buses with one or two students being dropped off by

private vehicle. The 23 employees, including teachers and educational assistants, are expected to arrive and depart using the mode share identified in **Table 7** with roughly 60%, or 14 staff, arriving/departing the site as an auto driver.

Based on the foregoing assumptions, the estimated trips associated with the school is summarized in the following table.

Table 7: Composition of School Generated Vehicle Traffic

Traffic Generator	Time Period (vehicles)					
	AM Peak Hour			PM Peak Hour		
	IN	OUT	TOT	IN	OUT	TOT
Teachers/Staff	14	0	14	0	14	14
Student Drop-off/pick-up	2	2	4	2	2	4
Busses	12	12	24	12	12	24
TOTAL	**28**	**14**	**42**	**14**	**28**	**42**

The 42 AM and PM vehicle trips generated by the existing school will be redistributed to reflect the relocation of the school and the nearest parking lot for employees of the school. It is assumed that the staff currently park in Lots C or D as they are the closest parking lots to the existing school. It is assumed that staff will park at the new parking garage due to its proximity to the new school and the available walking paths connecting the school to the parking garage.

The redistributed school traffic is shown in **Figure 13**.

3.3.3 Alterations to CHEO Non-Emergency Access

As part of the proposed development the CHEO Non-Emergency Access will be changed from a two-way private road between Ring Road N/S and Ring Road E/W to a one-way road with ingress on Ring Road N/S and egress to Ring Road E/W. To account for traffic that was using the CHEO Non-Emergency Access from Ring Road E/W to drop-off patients, all remaining inbound turning vehicles at the CHEO Non-Emergency Access/Ring Road E/W intersection has been relocated to be inbound at the CHEO Non-Emergency Access/Ring Road N/S intersection and all westbound traffic coming out of the CHEO Non-Emergency Access/Ring Road (N-S) intersection will be relocated to being outbound at the CHEO Non-Emergency Access/Ring Road E/W intersection.

The redistributed traffic due to the conversion of the CHEO Non-Emergency Access is shown in **Figure 14**.

3.3.4 Net Relocated Traffic

A summary of all traffic relocated as part of the proposed development is shown in the following figure. Relocated traffic has been added to total traffic figures shown in Section 3.4.

Figure 13: Relocated Traffic From the Existing School

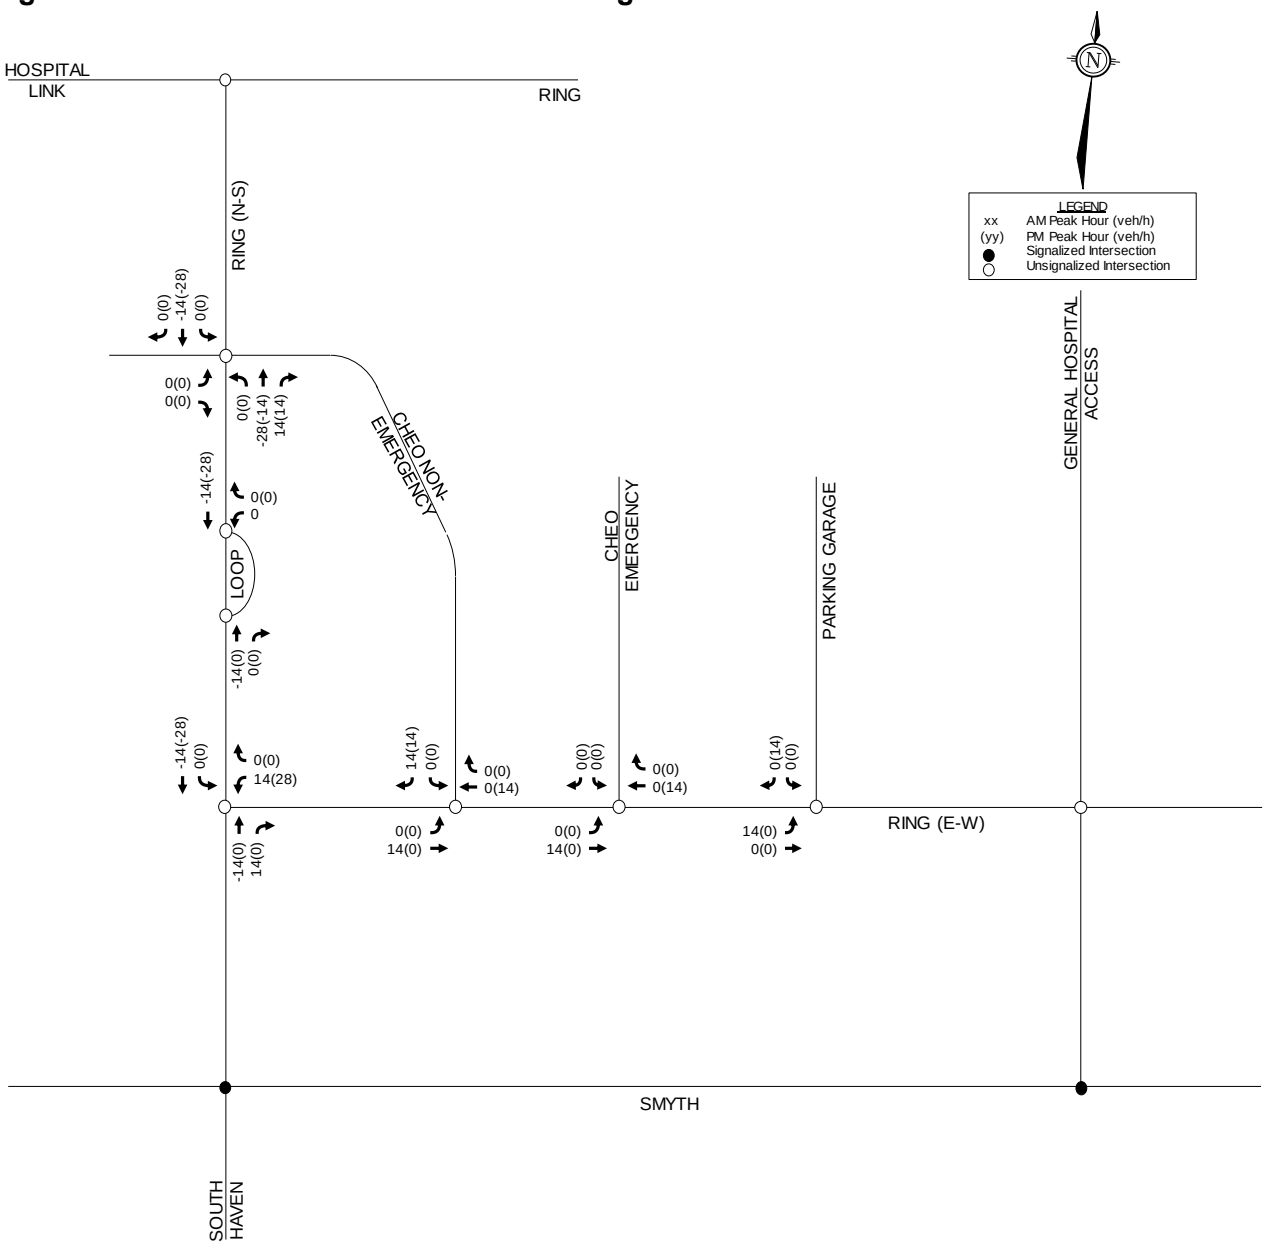


Figure 14: Remaining Displacement

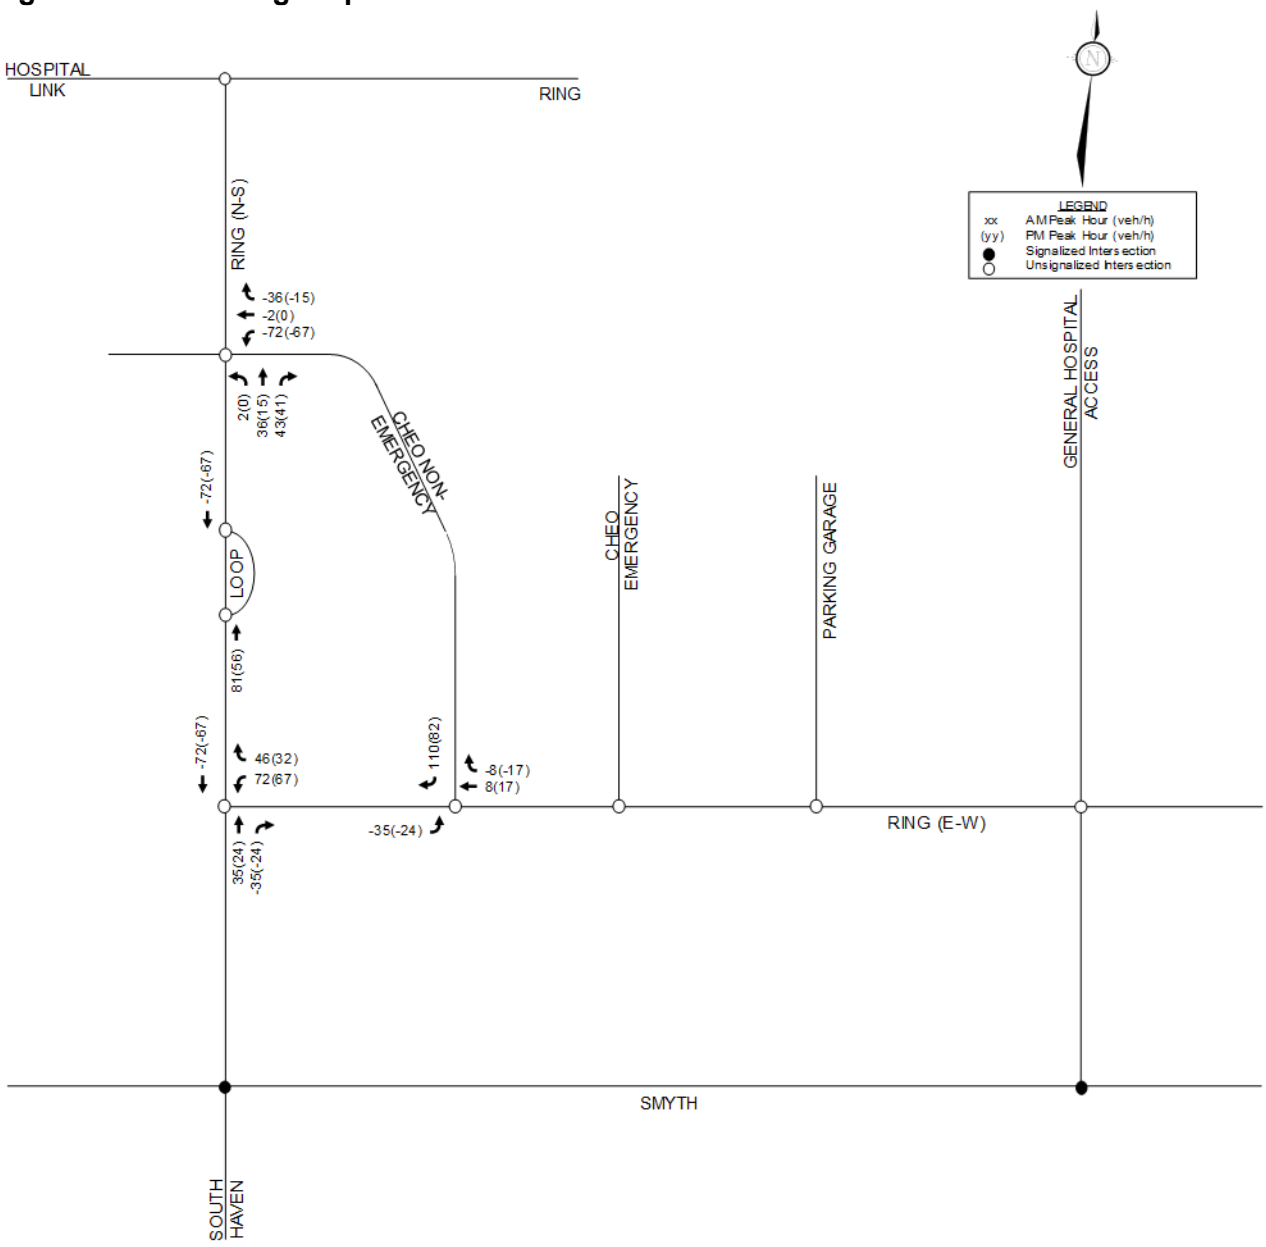

Figure 15: Net Relocated Traffic

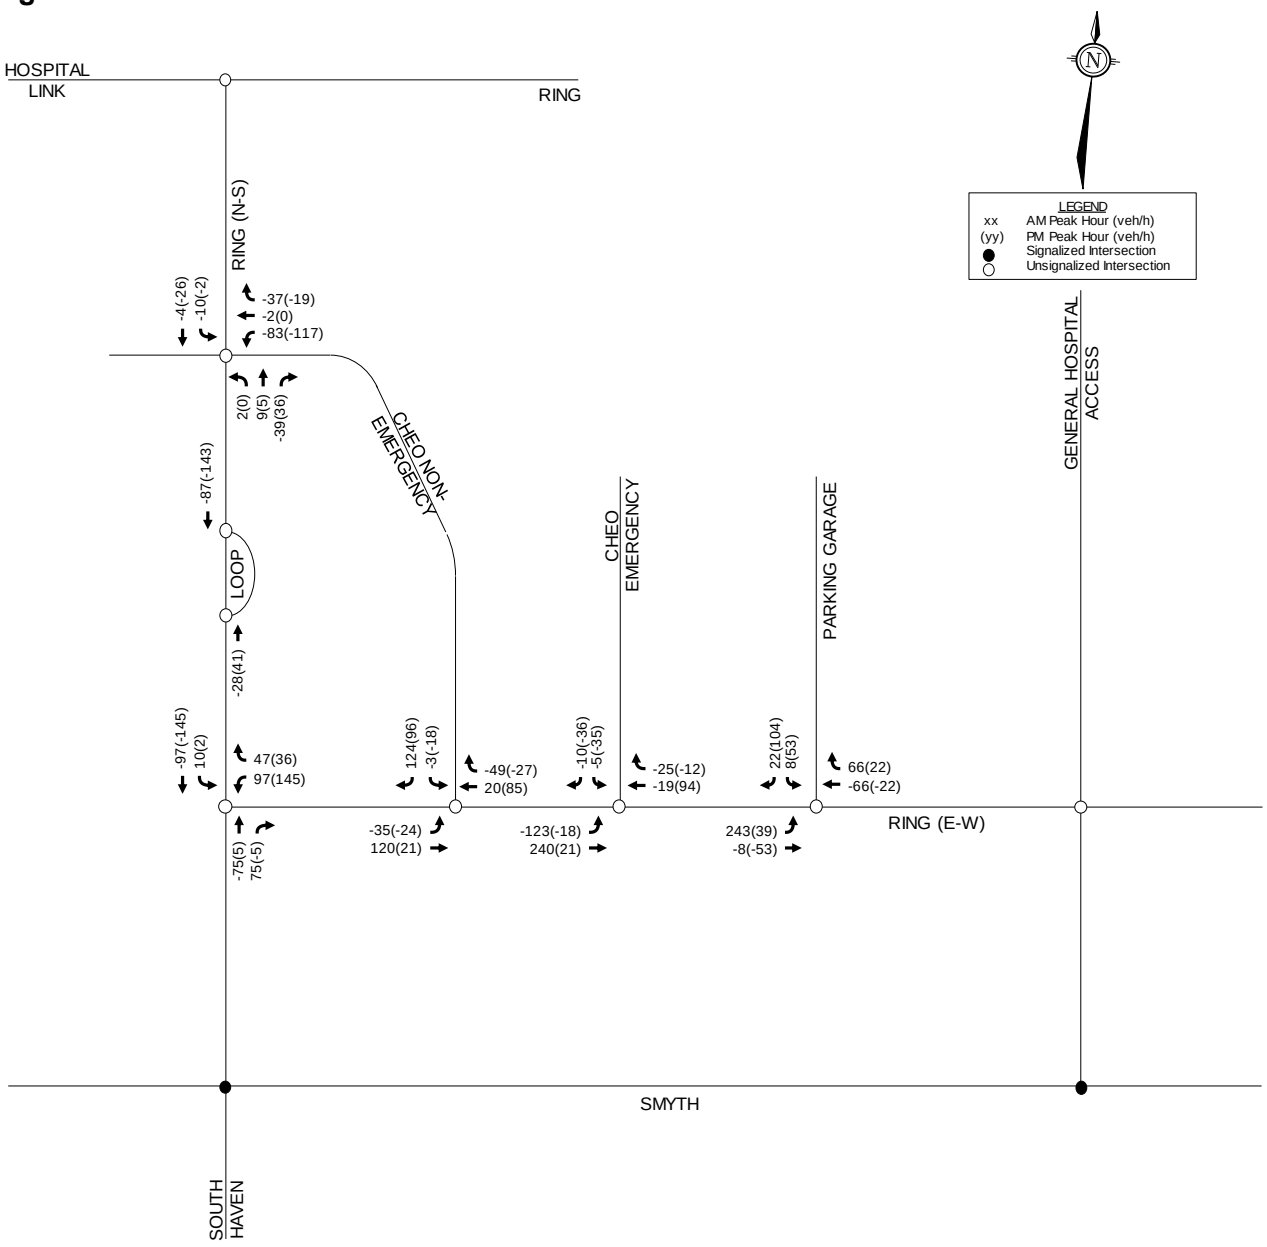

3.4 Future Traffic Conditions

The figures listed below present the following future traffic conditions:

- Background traffic volumes in 2027 are shown in **Figure 16**;
- Background traffic volumes in 2032 are shown in **Figure 17**;
- Total traffic volumes in 2027 are shown in **Figure 18**;
- Total traffic volumes in 2032 are shown in **Figure 19**.

Figure 16: 2027 Background Traffic

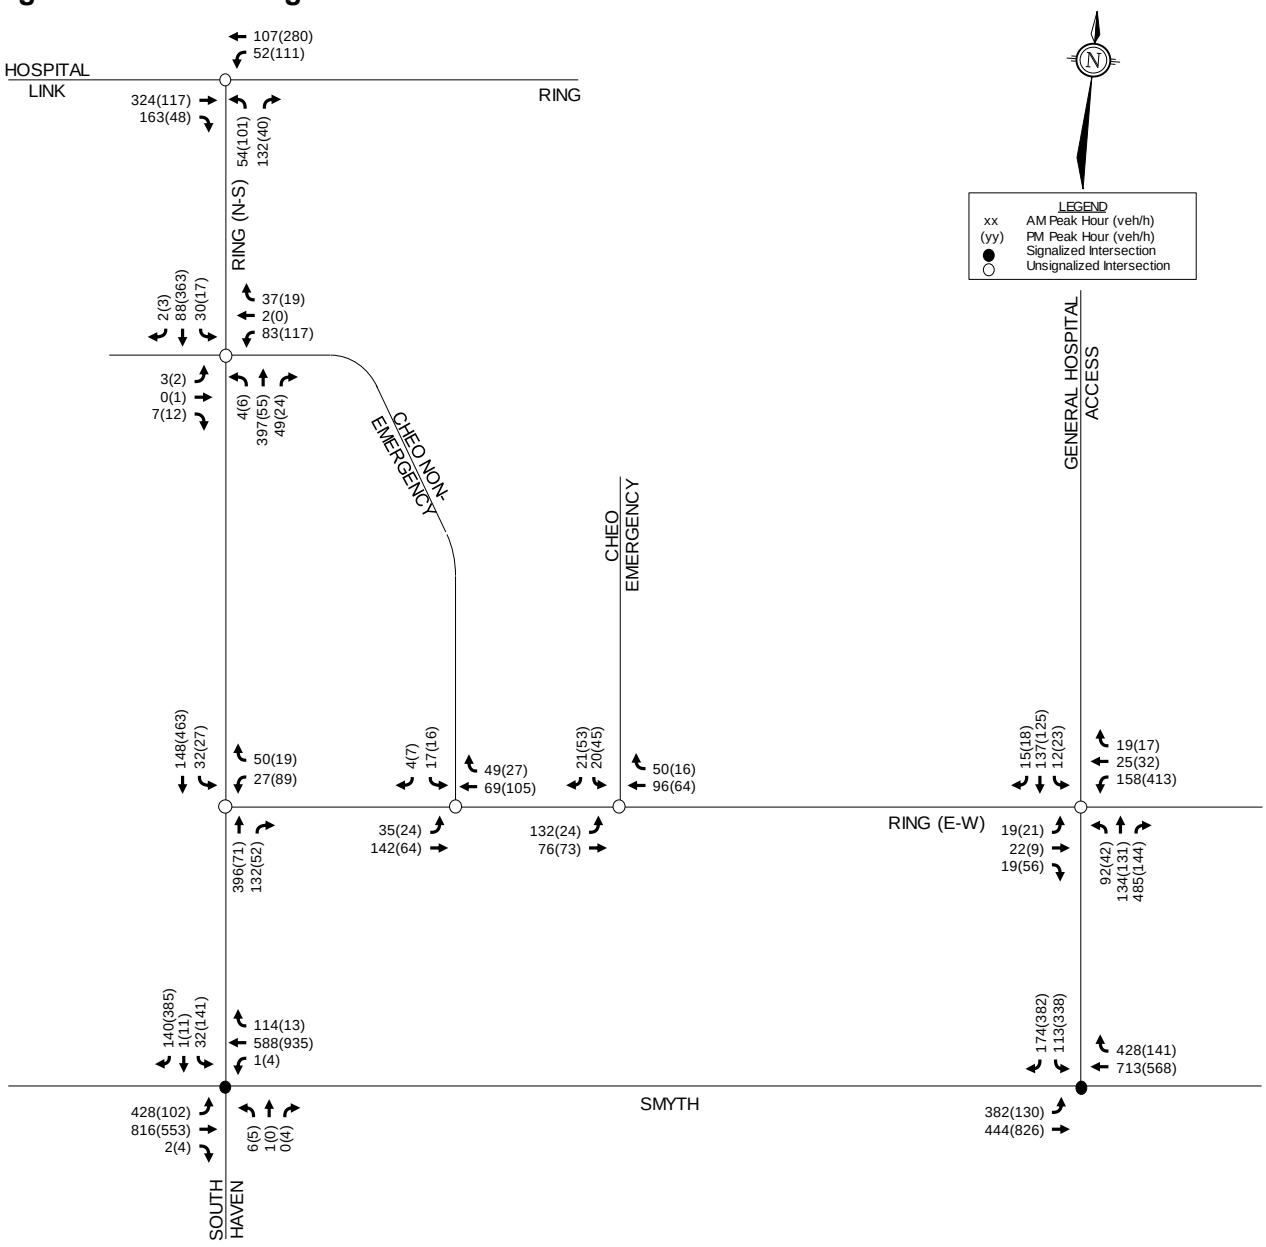

Figure 17: 2032 Background Traffic

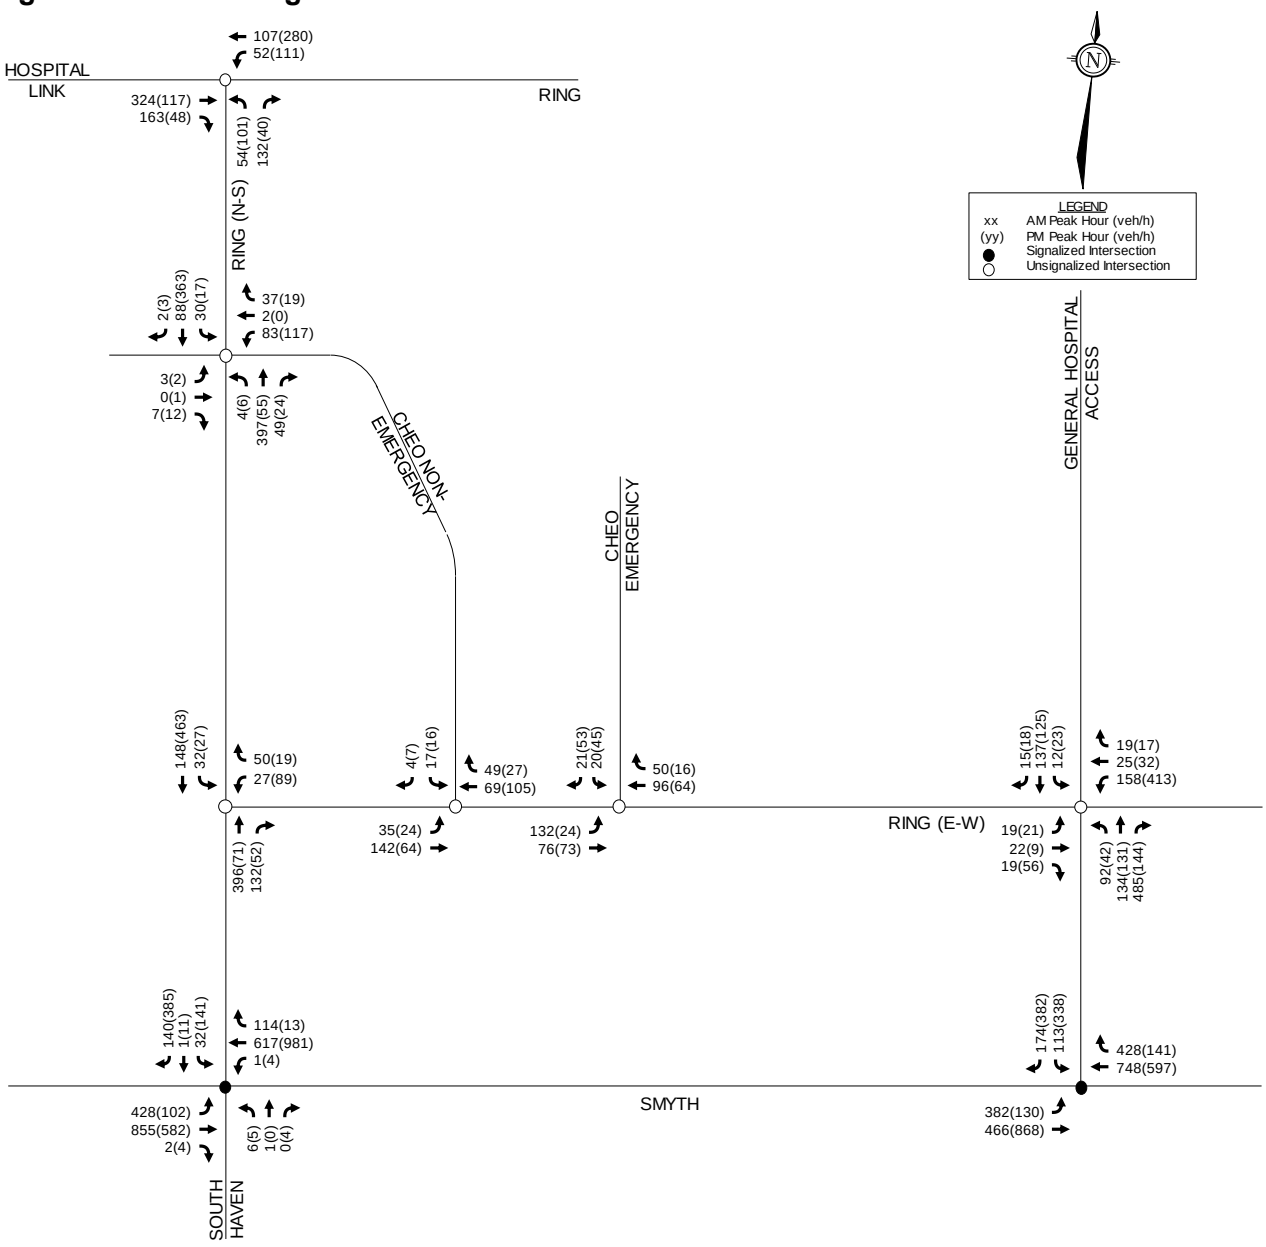

Figure 18: 2027 Total Traffic

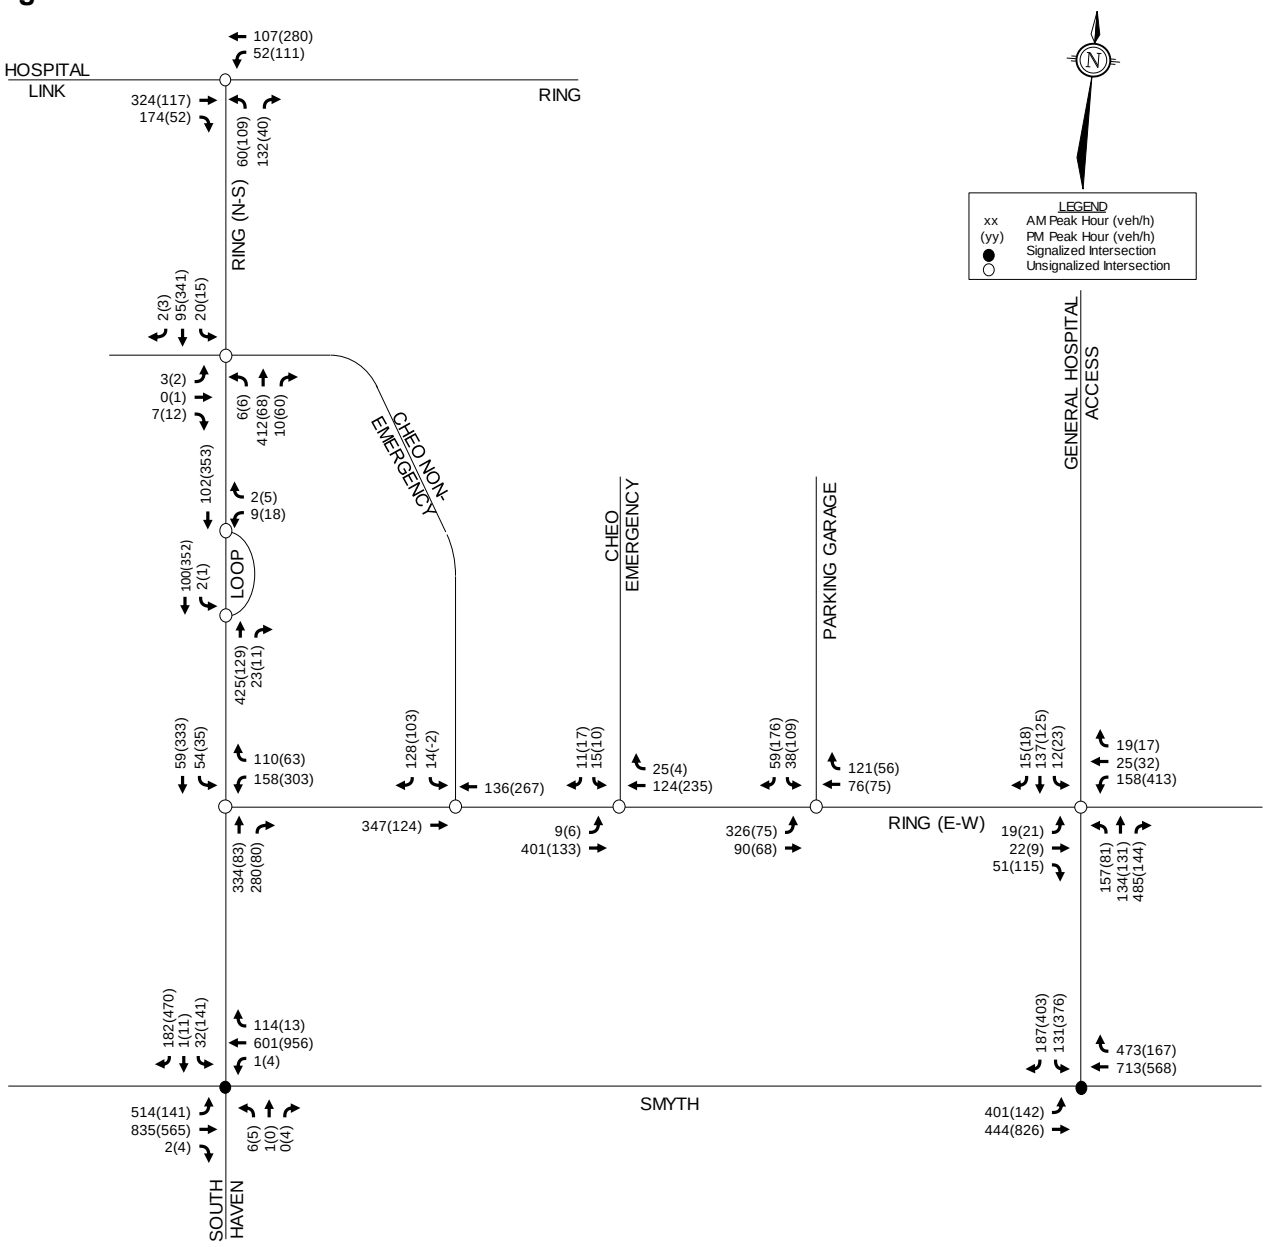

Figure 19: 2032 Total Traffic

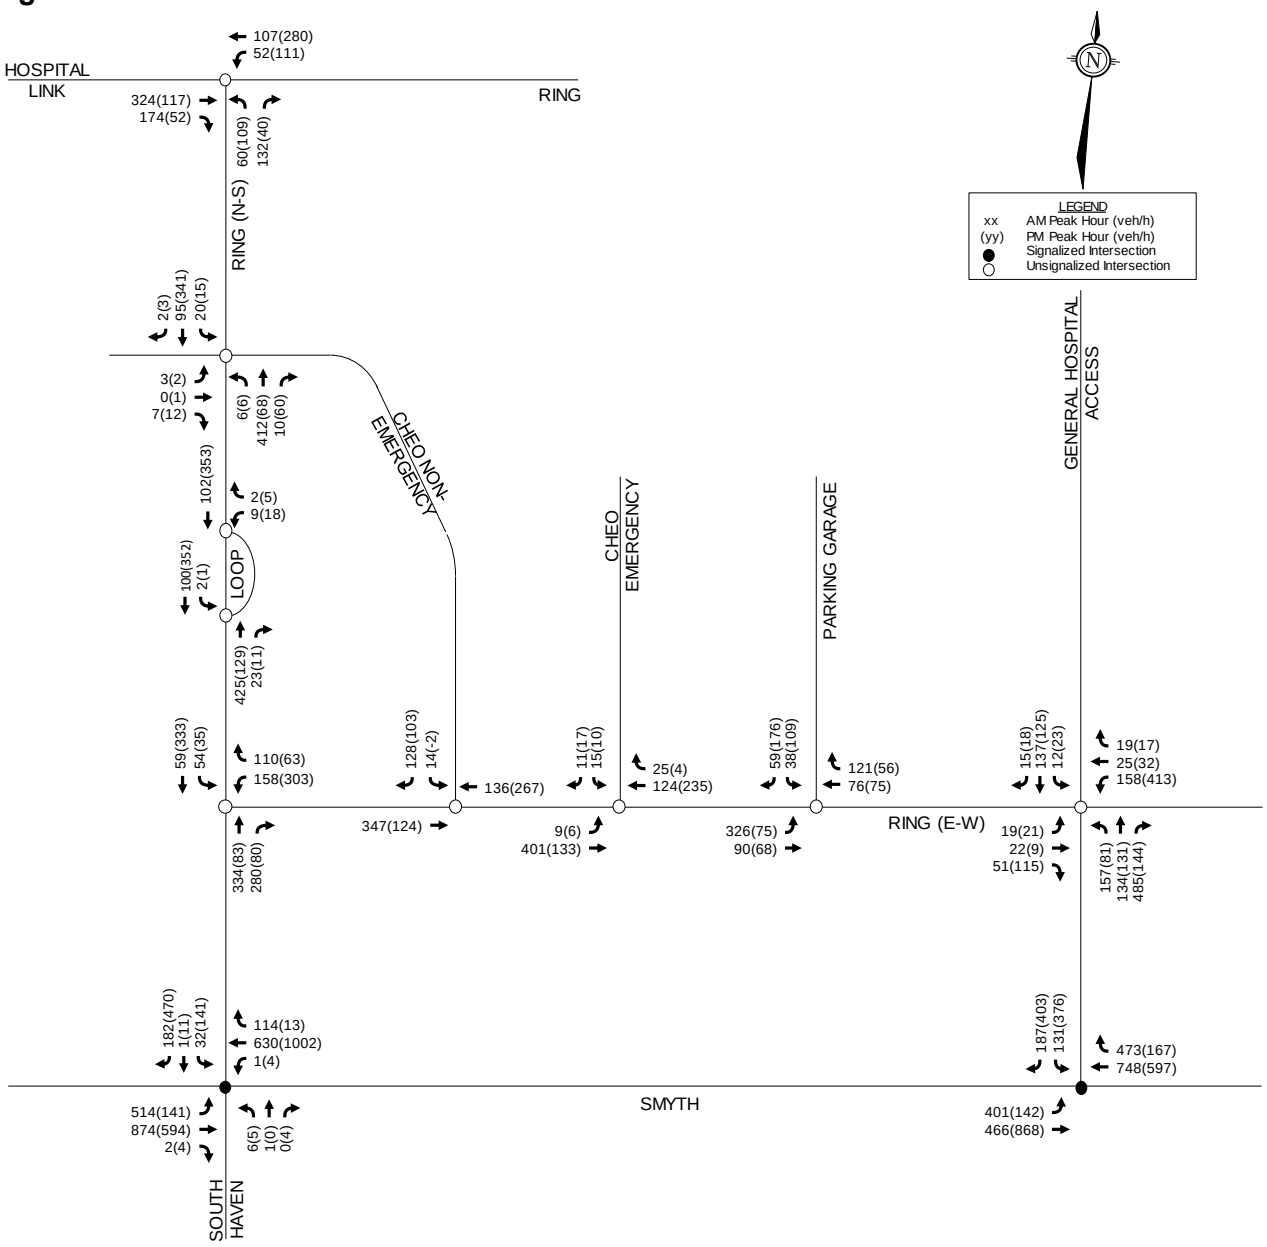

3.5 Demand Rationalization

A review of the existing and background intersection operations has been conducted using Synchro 11, to determine if and when traffic volumes exceed capacity within the study area. The intersection parameters used in the analysis are consistent with the City's *TIA Guidelines* (Saturated Flow Rate: 1,800 vphpl, Peak Hour Factor: 0.9 in existing conditions and 1.0 in future conditions). Signal timing plans have been obtained from the City for the signalized intersections at Smyth Road/Ring Road (N-S)/South Haven Place and Smyth Road/General Hospital Access Road, and are included in **Appendix H**. Per Exhibit 22 of the *Multi-Modal Level of Service (MMLOS) Guidelines* (produced by IBI Group in October 2015), the target vehicular level of service (Auto LOS) is an Auto LOS E within 300m of a school, which equates to a maximum vehicle-to-capacity (v/c) ratio of 1.0 at signalized intersections, and a maximum approach delay of 50 seconds at unsignalized intersections.

3.5.1 Existing Intersection Operations

Intersection capacity analysis has been conducted for the existing traffic conditions. The results of the analysis are summarized in **Table 8** for the weekday AM and PM peak hours. Detailed reports are included in **Appendix I**.

Table 8: Existing Traffic Operations

Intersection	AM Peak Hour			PM Peak Hour		
	Max v/c or Delay	LOS	Mvmt	Max v/c or Delay	LOS	Mvmt
Ring Road/ Hospital Link Road(u)	14 sec.	B	EB	10 sec.	B	WB
Ring Road (N-S)/ CHEO Non-Emergency Access(u)	12 sec.	B	NB	11 sec.	B	SB
Ring Road (N-S)/ Ring Road (E-W)(u)	13 sec.	B	WB	15 sec.	B	WB
Smyth Road/Ring Road (N-S)/ South Haven Place(s)	0.72	C	WB	0.82	D	SBR
Ring Road (E-W)/ CHEO Non-Emergency Access(u)	11 sec.	B	SB	10 sec.	B	SB
Ring Road (E-W)/ CHEO Emergency Access(u)	12 sec.	B	SB	10 sec.	B	SB
Ring Road (E-W)/ General Hospital Access Road*	24 sec.	C	WBL	**69 sec.** 0.98	**F**	**WBL**
Smyth Road/ General Hospital Access Road(s)	0.62	B	EBL	0.83	D	SBR

(u): Unsignalized intersection
(s): Signalized intersection
*: Modeled as a two-way stop intersection on Ring Road (E-W) due to limitations in Synchro software

All movements at study area intersections, except for the Ring Road (E-W)/General Hospital Access Road intersection, are currently operating with acceptable LOS under existing traffic conditions.

The southbound approach at the Smyth Road/Ring Road (N-S)/South Haven Place intersection has roughly 30m of storage. During the PM peak hour the 95th percentile queues exceed the available storage for both the southbound right and left turn movements. The 95th percentile queue is 54m for the southbound right turn movement and 45m for the southbound left turn movement.

The southbound approach at the Smyth Road/General Hospital Access Road intersection has roughly 35m of storage. During the PM peak hour the 95th percentile queues exceed the available storage for both the southbound right and left turn movements. The 95th percentile queue is 75m for the southbound right turn movement and 50m for the southbound left turn movement.

The westbound left turn lane at the Ring Road (E-W)/General Hospital Access Road intersection operates with a LOS F during the PM peak hour. The westbound left turn lane has a 95th percentile queue length of 69m which exceeds the available storage of 40m. The westbound left turn lane has a v/c ratio of 0.98 during the PM peak hour.

3.5.2 2027 Background Intersection Operations

Intersection capacity analysis has been conducted for the 2027 background traffic conditions. The results of the analysis are summarized in **Table 9** for the weekday AM and PM peak hours. Detailed reports are included in **Appendix I**.

Table 9: 2027 Background Traffic Operations

Intersection	AM Peak Hour			PM Peak Hour		
	Max v/c or Delay	LOS	Mvmt	Max v/c or Delay	LOS	Mvmt
Ring Road/ Hospital Link Road(u)	13 sec.	B	EB	12 sec.	B	WB
Ring Road (N-S)/ CHEO Non-Emergency Access(u)	13 sec.	B	NB	12 sec.	B	SB
Ring Road (N-S)/ Ring Road (E-W)(u)	14 sec.	B	WB	15 sec.	B	WB
Smyth Road/Ring Road (N-S)/ South Haven Place(s)	0.69	B	WB	0.84	D	SBR
Ring Road (E-W)/ CHEO Non-Emergency Access(u)	11 sec.	B	SB	10 sec.	B	SB
Ring Road (E-W)/ CHEO Emergency Access(u)	11 sec.	B	SB	10 sec.	B	SB
Ring Road (E-W)/ General Hospital Access Road*	21 sec.	C	WBL	45 sec.	E	WBL
Smyth Road/ General Hospital Access Road(s)	0.59	A	EBL	0.83	D	SBR

(u): Unsignalized intersection
(s): Signalized intersection
*: Modeled as a two-way stop intersection on Ring Road (E-W) due to limitations in Synchro software

All movements at study area intersections operate with acceptable LOS under 2027 background traffic conditions.

The southbound approach at the Smyth Road/Ring Road (N-S)/South Haven Place intersection has roughly 30m of storage. During the PM peak hour the 95th percentile queues exceed the available storage for both the southbound right and left turn movements. The 95th percentile queue is 58m for the southbound right turn movement and 44m for the southbound left turn movement.

The southbound approach at the Smyth Road/General Hospital Access Road intersection has roughly 35m of storage. During the PM peak hour the 95th percentile queues exceed the available storage for both the southbound right and left turn movements. The 95th percentile queue is 71m for the southbound right turn movement and 46m for the southbound left turn movement.

The westbound left turn lane at the Ring Road (E-W)/General Hospital Access Road intersection improves to a LOS E during the PM peak hour due to the PHF of 1.0 being used for future conditions. The westbound left turn lane has a 95th percentile queue length of 52m which exceeds the available storage of 40m.

3.5.3 2032 Background Intersection Operations

Intersection capacity analysis has been conducted for the 2032 background traffic conditions. The results of the analysis are summarized in **Table 10** for the weekday AM and PM peak hours. Detailed reports are included in **Appendix I**.

Table 10: 2032 Background Traffic Operations

Intersection	AM Peak Hour			PM Peak Hour		
	Max v/c or Delay	LOS	Mvmt	Max v/c or Delay	LOS	Mvmt
Ring Road/ Hospital Link Road(u)	13 sec.	B	EB	12 sec.	B	WB
Ring Road (N-S)/ CHEO Non-Emergency Access(u)	13 sec.	B	NB	12 sec.	B	SB
Ring Road (N-S)/ Ring Road (E-W)(u)	14 sec.	B	WB	15 sec.	B	WB
Smyth Road/Ring Road (N-S)/ South Haven Place(s)	0.71	C	WB	0.84	D	SBR
Ring Road (E-W)/ CHEO Non-Emergency Access(u)	11 sec.	B	SB	10 sec.	B	SB
Ring Road (E-W)/ CHEO Emergency Access(u)	11 sec.	B	SB	10 sec.	B	SB
Ring Road (E-W)/ General Hospital Access Road*	21 sec.	C	WBL	45 sec.	E	WBL
Smyth Road/ General Hospital Access Road(s)	0.60	A	EBL	0.83	D	SBR

(u): Unsignalized intersection
(s): Signalized intersection
*: Modeled as a two-way stop intersection on Ring Road (E-W) due to limitations in Synchro software

All movements at study area intersections operate with acceptable LOS under 2032 background traffic conditions.

The southbound approach at the Smyth Road/Ring Road (N-S)/South Haven Place intersection has roughly 30m of storage. During the PM peak hour the 95th percentile queues exceed the available storage for both the southbound right and left turn movements. The 95th percentile queue is 60m for the southbound right turn movement and 44m for the southbound left turn movement.

The southbound approach at the Smyth Road/General Hospital Access Road intersection has roughly 35m of storage. During the PM peak hour the 95th percentile queues exceed the available storage for both the southbound right and left turn movements. The 95th percentile queue is 72m for the southbound right turn movement and 46m for the southbound left turn movement.

4.0 ANALYSIS

4.1 Development Design

4.1.1 Design for Sustainable Modes

Pedestrian connections will be provided between the building entrances and the proposed Multi-Use Pathways (MUP) along the north side of Ring Road (E-W) and the east side of Ring Road (N-S) along the site frontages. The proposed MUP along the site frontage on the north side of Ring

Road (E-W) will connect to the approved MUP on the north side of Ring Road (E-W) to be constructed as part of the parking garage development. The Integrated Treatment Centre building will connect to the CHEO Hospital via above ground pedestrian facilities and an underground tunnel.

The existing PXO Type D along Ring Road (N-S) is proposed to be moved north approximately 5m so that it does not conflict with turn lanes at the new loop access to the Integrated Treatment Centre. Based on the 8-hour traffic volumes from the March 19, 2024, traffic count at the Ring Road (N-S)/Ring Road (E-W) intersection, the northern leg of the intersection has an 8-hour traffic volume of 2,847 vehicles. Given the posted speed limit of 40km/h, Table 7 of the OTM Book 15 was used to confirm the required Type of PXO. Although the current roadway has a road platform of 9.5m and an effective 3 lane cross-section, it is recommended the roadway be narrowed for a total road platform width of 7.5m. A Type D PXO is appropriate for this width.

A total of 40 bicycle parking spaces will be provided throughout the subject site. A further review of the parking provisions with respect to the City's *Zoning By-law* (ZBL) is provided in the subsequent section. There are 10 uncovered and 20 covered spaces near the south entrance to the clinic. The remaining bike parking is proposed near the northeast corner of the building and the southeast corner of the existing CHEO building.

The nearest bus stops to the subject site are discussed in Section 2.1.6 and shown in **Figure 4**. OC Transpo's service design guidelines for peak period service is to provide service within a five-minute (400m) walk of home, work, or school for 95% of urban residents. All of the transit stops outlined in Section 2.1.6 are within the 400m distance and provide service to transit routes #45, #55, #609, and #645.

As part of the proposed development transit stop #1808 will be removed and consolidated into bus stop #7045 with the one-way conversion of the main CHEO access mandated by Infrastructure Ontario. Routes 45 and 55 will have to be re-routed to circle the Ring Road (N-S)/Ring Road (E-W) intersection and access stop #7045 in the EB/SB direction. The new bus stop platform is 15m long and 4.5m wide, which can accommodate a 2.2m deep shelter, a 1.8m walkway, and a 0.5m clearance behind the shelter for maintenance.

A review of the City's *Transportation Demand Management (TDM)-Supportive Development Design and Infrastructure Checklist* has been conducted. All required TDM-supportive design and infrastructure measures in the TDM checklist are met. A copy of this checklist is included in **Appendix J**. In addition to the required measures, the proposed development also meets the following 'basic' or 'better' measures as defined in the *TDM-Supportive Development Design and Infrastructure Checklist*.

- Locate building entrances in order to minimize walking distances to sidewalks and transit stops/stations;
- Locate building doors and windows to ensure visibility of pedestrians from the building, for their security and comfort;
- Provide safe, direct, and attractive walking routes from building entrances to nearby transit stops;
- Provide lighting, landscaping, and benches along walking and cycling routes between building entrances and streets, sidewalks, and trails.

4.1.2 Circulation and Access

Garbage bins will be wheeled from a garbage room on the ground floor to the loading area accessed from Ring Road (E-W). The fire route for the development is provided along the Integrated Treatment Centre new loop access to Ring Road (N-S) and along the CHEO Non-Emergency access.

The following turning movement scenarios were studied:

- A HSU design vehicle performing all necessary movements to enter the site and access the loading bay from Ring Road (E-W);
- A City Transit Bus turning at the CHEO Non-Emergency accesses;
- A small school bus at the CHEO Non-Emergency accesses;
- A fire truck and paratransport vehicle at the new loop access to Ring Road (N-S).

The studied turning movement scenarios are shown in **Figures 20** to **30**.

4.2 Parking

The subject site is located in Area B on both Schedule 1 and Schedule 1A of the City of Ottawa's *Zoning By-Law* (ZBL). Part 4 – Parking, Queueing, and Loading Provisions of the ZBL has been reviewed to confirm the parking and loading requirements for the proposed development, and Section 3 of the City's *Accessibility Design Standards* has been reviewed to confirm the accessible parking requirements. The various parking/loading requirements versus the proposed parking and loading supply are summarized in **Table 11**.

Table 11: Parking Review

Land Use	Rate	Units	Required	Provided
Minimum Vehicle Parking (Section 101 of ZBL)				
Hospital	1.4 spaces per 100 m^2 GFA	20,075 m^2	281	1,050 (Ph1A)
School, other	1.5 spaces per classroom (including portables)	5	8	65 (Ph1B)
		Total	**289**	**1,115**
Minimum Bicycle Parking (Section 111 of ZBL)				
Hospital	1.0 spaces per 1,000 m^2 GFA	20,075 m^2	20	40
School	1.0 spaces per 100 m^2 GFA	1,625 m^2	16	
		Total	**36**	**40**
Minimum Loading (Section 113 of ZBL)				
Hospital	2 spaces when GFA is between 10,000 and 24,999 m^2	20,075 m^2	2	2
School	1 space when GFA is between 1,000 and 9,999 m^2	1,625 m^2	1	12 bus queuing
		Total	**3**	**2**

M:\2022\122210\CAD\Civil\Figures\Traffic\122210-TM.dwg, Fig 30, Nov 14, 2024 - 5:10pm, rhillier

As shown in the October 25, 2022, Transportation Study completed by Stantec, Parking Lot B includes 286 parking spaces and Parking Lot E includes 270 parking spaces. The approved parking garage that is under construction in Parking Lot E will provide approximately 1,050 parking spaces and within the Integrated Treatment Centre site an additional 65 parking spaces are provided. The total number of parking spaces in the existing Parking Lots B and E plus the additional parking required by the ZBL for the Integrated Treatment Centre building totals 849 parking spaces. The approved parking garage therefore exceeds the parking requirements of the ZBL.

Based on the previous table, the minimum parking requirement will be met.

Per Section 4.2.3 of the Stantec 2022 Transportation Study, the estimated parking generation rate for CHEO is approximately 3 spaces/100m². This is more than double the minimum zoning rate. Based on the observed rate, approximately 600 parking spaces are required to meet the demand for the new Integrated Treatment Centre clinic. With the 286 Lot B displaced spaces and the 270 Lot E displaced spaces, this amount to a total demand of 1,156 spaces. The 1,050 spaces in the approved Ph1A parking garage and the proposed 65 spaces for the Ph1B Integrated Treatment Centre site plan provide a total of 1,115 spaces, or 96% of the demand.

The proposed development is considered to meet the required loading spaces as per Section 111 of the City's ZBL, due to the school bus lane to the north of the Integrated Treatment Centre building and the proposed loading area.

For parking lots with over 1,000 parking spaces the City's Accessibility Design Standards require 11 +1% of the total parking spaces provided be a combination of Type A and Type B accessible parking spaces. Within the Integrated Treatment Centre site 14 Type A and 14 Type B parking spaces are provided. As 11 Type A and 11 Type B parking spaces are required for 1,115 total parking spaces this requirement is met.

4.3 Boundary Streets

This section provides a review of the boundary streets Ring Road (N-S), and Ring Road (E-W), using complete streets principles. The *MMLOS Guidelines* were used to evaluate the levels of service for each alternative mode of transportation, based on existing conditions. Using Exhibit 22 of the *MMLOS Guidelines*, the boundary streets have been evaluated based on the targets for roadways within the General Urban Area.

A detailed segment MMLOS review of the boundary streets is included in **Appendix K**. A summary of the segment MMLOS analysis is provided below in **Table 12**.

Table 12: Segment MMLOS Summary

Segment	PLOS		BLOS		TLOS		TkLOS	
	Actual	Target	Actual	Target	Actual	Target	Actual	Target
Ring Road (N-S)	**F**	C	D	D	D	-	B	-
Ring Road (E-W)	**F**		D		D		B	

The results of the segment MMLOS review can be summarized as follows:

- No boundary streets meet the target pedestrian level of service (PLOS);
- Ring Road meets the target bicycle level of service (BLOS).

Further discussion of possible mitigations for the failing PLOS and BLOS scores are included below.

Pedestrian Level of Service

The east side of Ring Road (N-S) meets the target PLOS C, as an approximately 2.0m-wide sidewalk is provided on this side of the roadway. The west side of Ring Road (N-S) and both sides of Ring Road (E-W) do not meet the target PLOS, as sidewalks are either provided only in certain sections or not provided at all. It should be noted that the proposed site plan (shown in **Appendix A**) includes 3.0m-wide multi-use pathways, with boulevard widths of at least 0.5m. This will improve the east side of Ring Road (N-S) to a PLOS C and north side of Ring Road (E-W) to a PLOS A, per Exhibit 4 of the *MMLOS Guidelines*.

4.4 Transportation Demand Management

4.4.1 Context for TDM

The proposed development will consist of the Integrated Treatment Centre building which has a GFA of 21,700m² and includes medical clinic and school uses. The development includes 65 parking spaces within the subject site with an additional 1,050 parking spaces being provided within a parking garage that is being constructed as part of an initial phase.

4.4.2 Need and Opportunity

Smyth Road is designated as 'Evolving Neighbourhood' and 'Corridor – Mainstreet' on Schedule B3 of the City of Ottawa's Official Plan, and the site is located within the Alta Vista/ Faircrest Heights/Riverview Park Secondary Plan area. As discussed in Section 2.5.1, the peak hour driver share assumed for the proposed development (60%) is generally consistent with the observed peak hour drivers shares for the Alta Vista district (61% in AM peak hour and 62% in PM peak hour). If the proposed development achieved a 70% driver share rather than 60%, this would translate to an additional 40 vehicle trips to/from the development during each peak hour. It is anticipated that the 60% driver share is attainable.

4.4.3 TDM Program

A review of the City's *TDM Checklist* has been conducted by the proponent. A copy of the completed non-residential checklist is included in **Appendix K**. The list of measures to be considered are summarized as follows:

- Display local area maps with walking/cycling access routes and key destinations at major entrances;
- Provide relevant transit schedules and route maps at main building entrances; and
- Provide a multimodal travel option information package to new employees.

4.5 Transit

Based on the trip generation estimates presented in Section 2.5.1, the proposed development is anticipated to generate the following number of transit trips:

- AM Peak Hour: 60 transit trips, including 20 boarding and 40 alighting;
- PM Peak Hour: 58 transit trips, including 38 boarding and 20 alighting.

Transit trips generated by the proposed development are anticipated to board and alight via routes 45 and 55 at bus stops #7045, #7072, #7231, #7236, #7237 and #7238. Bus stops #1808 will need

to be relocated to bus stop #7045 within the subject site due to the changes being proposed to the CHEO non-emergency access. As both routes 45 and 55 operate on 15 to 30-minute headways during peak hours, it is expected that they can accommodate the additional transit trips generated by the proposed development.

4.6 Intersection Design

4.6.1 Intersection MMLOS

The following is a review of the MMLOS of the signalized intersections within the study area (Smyth Road/Ring Road (N-S)/South Haven Place and Smyth Road/General Hospital Access Road), using complete streets principles. These intersections have been evaluated based on existing conditions, using the MMLOS targets for intersections within the General Urban Area.

A detailed intersection MMLOS review of the two signalized intersections is included in **Appendix K**. A summary of the intersection MMLOS analysis is provided below in **Table 13**.

Table 13: Intersection MMLOS Summary

Segment	PLOS		BLOS		TLOS		TkLOS	
	Actual	Target	Actual	Target	Actual	Target	Actual	Target
Smyth Road/ Ring Road (N-S)/South Haven Place	**F**	A	**F**	B	E	-	**F**	D
Smyth Road/ General Hospital Access Road	**F**	C	**F**	C	F		B	

The results of the intersection MMLOS analysis can be summarized as follows:

- Neither study area intersection meets the target PLOS;
- Neither study area intersection meets the target BLOS;
- Smyth Road/General Hospital Access Road meets the target TkLOS, while Smyth Road/ Ring Road (N-S)/South Haven Place does not.

Each intersection is discussed further below, relating to the modes where the target levels of service are not met.

Smyth Road/Ring Road (N-S)/South Haven Place
The intersection does not meet the target PLOS A, BLOS B, TLOS D, or TkLOS D.

Per the *MMLOS Guidelines*, every 3.5m in crossing distance is equivalent to one lane crossed. None of the approaches meet the target PLOS A, as all except the south approach have cross-sections with an equivalent of five to seven lanes crossed. The south approach (i.e. crossing South Haven Place) achieves PLOS C, with a cross-section equivalent to three lanes crossed. There is limited opportunity in improving the intersection PLOS without reducing the number of travel lanes at the north, east, and west approaches. The east approach meets the City's vehicle/pedestrian conflict threshold for zebra-striped crosswalks (greater than 400,000 vehicle/pedestrian conflicts over an eight-hour period). This would improve the level of comfort for pedestrians crossing Smyth Road.

The north, east, and west approaches do not meet the target BLOS B based on left turn characteristics. Exhibit 12 of the *MMLOS Guidelines* identifies that these approaches require two-stage left turn bike boxes to meet the target BLOS B. Implementing bike boxes would require

restricting right turns on red (RTOR) on the east and west approaches. This is identified for the City's consideration.

The north approach does not meet the target BLOS B based on right turn characteristics. Exhibit 12 of the *MMLOS Guidelines* identifies that a bike lane or higher order facility is required to meet the target BLOS. This is identified for the City's consideration.

The west approach does not meet the target TkLOS D. This represents the movement of eastbound heavy vehicles on Smyth Road turning right onto South Haven Place, which is a residential street with traffic management measures already implemented (i.e. no through traffic). Therefore, increasing the curb radii to accommodate trucks is not recommended.

Smyth Road/General Hospital Access Road
The intersection does not meet the target PLOS C, BLOS C, or TLOS D.

No approaches meet the target PLOS C, as the approaches have cross-sections with an equivalent of six to eight lanes crossed. There is limited opportunity in improving the intersection PLOS without reducing the number of travel lanes at each approach. The east and west approaches meet the City's vehicle/pedestrian conflict threshold for zebra-striped crosswalks. This would improve the level of comfort for pedestrians crossing Smyth Road.

The north and west approaches do not meet the target BLOS C based on left turn characteristics. Exhibit 12 of the *MMLOS Guidelines* identifies that two-stage left turn accommodations are required to meet the target BLOS C. For cyclists turning left from the north approach, this would involve a bike box in front of the eastbound stop bar. For cyclists turning left from the west approach, this would involve a jug handle facility and cyclist crossing signal. This is identified for the City's consideration.

4.6.2 2027 Total Traffic Operations

Intersection capacity analysis has been conducted for the 2027 total traffic conditions. The results of the analysis are summarized in **Table 14** for the weekday AM and PM peak hours. Detailed reports are included in **Appendix I**.

Table 14: 2027 Total Traffic Operations

Intersection	AM Peak Hour			PM Peak Hour		
	Max v/c or Delay	LOS	Mvmt	Max v/c or Delay	LOS	Mvmt
Ring Road/ Hospital Link Road(u)	15 sec.	B	EB	12 sec.	B	WB
Ring Road (N-S)/ CHEO Non-Emergency Access(u)	11 sec.	B	NB	10 sec.	B	SB
Ring Road (N-S)/ Ring Road (E-W)(u)	23 sec.	C	WB	26 sec.	D	WB
Smyth Road/Ring Road (N-S)/ South Haven Place(s)	0.70	B	WB	0.91	E	SBR
Ring Road (E-W)/ CHEO Non-Emergency Access(u)	10 sec.	B	SB	10 sec.	B	SB
Ring Road (E-W)/ CHEO Emergency Access(u)	12 sec.	B	SB	11 sec.	B	SB

Intersection	AM Peak Hour			PM Peak Hour		
	Max v/c or Delay	LOS	Mvmt	Max v/c or Delay	LOS	Mvmt
Ring Road (E-W)/ General Hospital Access Road*	31 sec.	D	WBL	**130 sec. 1.20**	**F**	**WBL**
Smyth Road/ General Hospital Access Road(s)	0.61	B	EBL	0.83	D	SBR
Ring Road (N-C)/ Integrated Treatment Centre Loop Access(u)	12 sec.	B	WB	11 sec.	B	WB
Ring Road (E-W)/ Parking Garage Access(u)	16 sec.	C	SB	11 sec.	B	SB

(u): Unsignalized intersection
(s): Signalized intersection
*: Modeled as a two-way stop intersection on Ring Road (E-W) due to limitations in Synchro software

All movements at study area intersections, except for the Ring Road (E-W)/General Hospital Access Road intersection, are expected to operate with acceptable LOS under 2027 total traffic conditions.

The southbound approach at the Smyth Road/Ring Road (N-S)/South Haven Place intersection has roughly 30m of storage. During the PM peak hour the 95th percentile queues exceed the available storage for both the southbound right and left turn movements. The 95th percentile queue is 96m for the southbound right turn movement and 44m for the southbound left turn movement. This is not expected to block the egress of the proposed loop access.

The southbound approach at the Smyth Road/General Hospital Access Road intersection has roughly 35m of storage. During the PM peak hour the 95th percentile queues exceed the available storage for both the southbound right and left turn movements. The 95th percentile queue is 74m for the southbound right turn movement and 51m for the southbound left turn movement. This is a marginal increase of 5m or less compared to the 2027 background traffic condition.

It is recommended that the extra wide north and south approaches of the Ring Road (N-S)/Ring Road (E-W) intersection be formalized through line painting as having two lane approaches. A single through and right turn lane are recommended on the south approach and a shared through/left and through lane are recommended on the north approach. A 1.0m widening is recommended on the east approach to accommodate designated left and right turn lanes, based on the projected turning movement volumes. The existing road width is 9.5m and the proposed width of 10.5m as shown on the site plan will accommodate three 3.5m lanes. The City's Roadway Modification Approval process is not required as Ring Road is not a City road. Detailed design drawings will be provided as part of Site Plan approval.

The westbound left turn lane at the Ring Road (E-W)/General Hospital Access Road intersection operates with a LOS F during the PM peak hour. The westbound left turn lane has a 95th percentile queue length of 95m which exceeds the available storage of 40m. The westbound left turn lane has a v/c ratio of 1.20 during the PM peak hour.

As noted in the footnotes below **Table 14**, the Synchro results are based on a two-way stop control intersection at the Ring Road (E-W)/General Hospital Access Road intersection with stop control along Ring Road (E-W). The analysis was completed using this assumption as Synchro is unable to analyze the existing intersection which is a three-way stop control intersection with the northbound leg of the General Hospital Access Road operating under free flow conditions. The analysis presented within this report is assumed to be conservative as the southbound leg of the

Ring Road (E-W)/General Hospital Access Road intersection was not modelled as having stop control and the free flow conditions modelled for the southbound leg limit the available capacity of the eastbound and westbound legs of the intersection and increase delays. Although the Ring Road (E-W)/General Hospital Access Road intersection is not under the jurisdiction of the City of Ottawa monitoring of this intersection is recommended. A future additional westbound left turn lane may be required in addition to the existing westbound left turn lane and westbound through/right turn lane based on the westbound left turning volume of 392 vehicles during the PM peak hour. There is roughly 90m of spacing between the Ring Road (E-W)/General Hospital Access Road intersection and the surface parking lot access to the east which is provides sufficient distance for a 55m storage area with a 10:1 taper of 35m. Any additional travel lanes would likely impact the existing bus stop and retaining wall east of the Ring Road (E-W)/General Hospital Access Road intersection. During the PM peak hour the trips generated by the subject site send an additional 39 northbound left and 59 eastbound right turning vehicles through the Ring Road (E-W)/General Hospital Access Road intersection, as this traffic is relatively small compared to the current 392 westbound left turning vehicles the high delays at this intersection are primarily due to existing conditions.

4.6.3 2032 Total Traffic Operations

Intersection capacity analysis has been conducted for the 2032 total traffic conditions. The results of the analysis are summarized in **Table 15** for the weekday AM and PM peak hours. Detailed reports are included in **Appendix I**.

Table 15: 2032 Total Traffic Operations

Intersection	AM Peak Hour			PM Peak Hour		
	Max v/c or Delay	LOS	Mvmt	Max v/c or Delay	LOS	Mvmt
Ring Road/ Hospital Link Road(u)	15 sec.	B	EB	12 sec.	B	WB

Ring Road (E-W)/ General Hospital Access Road*	31 sec.	D	WBL	**130 sec.**	**F**	**WBL**
Smyth Road/ General Hospital Access Road(s)	0.61	B	EBL	0.83	D	SBR
Ring Road (N-S)/ Integrated Treatment Centre Loop Access(u)	12 sec.	B	WB	11 sec.	B	WB
Ring Road (E-W)/ Parking Garage Access(u)	16 sec.	C	SB	11 sec.	B	SB

(u): Unsignalized intersection
(s): Signalized intersection
*: Modeled as a two-way stop intersection on Ring Road (E-W) due to limitations in Synchro software

All movements at study area intersections, except for the Ring Road (E-W)/General Hospital Access Road intersection, are expected to operate with acceptable LOS under 2032 total traffic conditions.

The southbound approach at the Smyth Road/Ring Road (N-S)/South Haven Place intersection has roughly 30m of storage. During the PM peak hour the 95th percentile queues exceed the available storage for both the southbound right and left turn movements. The 95th percentile queue is 99m for the southbound right turn movement and 44m for the southbound left turn movement. Again, this is not expected to block the egress of the proposed loop access.

The southbound approach at the Smyth Road/General Hospital Access Road intersection has roughly 35m of storage. During the PM peak hour the 95th percentile queues exceed the available storage for both the southbound right and left turn movements. The 95th percentile queue is 75m for the southbound right turn movement and 51m for the southbound left turn movement.

The westbound left turn lane at the Ring Road (E-W)/General Hospital Access Road intersection operates with a LOS F during the PM peak hour. The westbound left turn lane has a 95th percentile queue length of 95m which exceeds the available storage of 40m. The westbound left turn lane has a v/c ratio of 1.20 during the PM peak hour.

A left turn lane warrant analysis was conducted to confirm if a southbound left turn lane would be required for the Ring Road (N-S)/Integrated Treatment Centre Loop Access. Based on a design speed of 50km/hr and the 2032 total traffic volumes, the left turn lane warrants indicated that a southbound left turn lane at the Ring Road (N-S)/Integrated Treatment Centre Loop Access intersection would not be required. While a left turn lane is not warranted, a left turn lane is desired by Infrastructure Ontario to simplify operations at the proposed access. A left turn lane with an 15m storage with a 8:1 taper (26m long taper) is proposed. Left turn lane warrants are included in **Appendix E**.

5.0 CONCLUSIONS AND RECOMMENDATIONS

Forecasting

- The proposed hospital clinic development is estimated to generate 401 person trips (including 241 vehicle trips) during the AM peak hour, and 387 person trips (including 233 vehicle trips) during the PM peak hour.

- Traffic from the existing school and Parking Lots B and E were redistributed within the subject site to account for the construction of the new parking garage and the Integrated Treatment Centre building. Traffic along the CHEO main access was redistributed due to the conversion of the road from two-way to one-way operations within the site.

Development Design

- The existing PXO Type D along Ring Road (N-S) is proposed to be moved north approximately 5m so that it does not conflict with turn lanes at the new loop access to the Integrated Treatment Centre. Based on the 8-hour traffic volumes from the March 19, 2024, traffic count at the Ring Road (N-S)/Ring Road (E-W) intersection, the northern leg of the intersection has an 8-hour traffic volume of 2,847 vehicles. Given the posted speed limit of 40km/h, Table 7 of the OTM Book 15 was used to confirm the required Type of PXO. Although the current roadway has a road platform of 9.5m and an effective 3 lane cross-section, it is recommended the roadway be narrowed for a total road platform width of 7.5m. A Type D PXO is appropriate for this width.

- Parking Lot B includes 286 parking spaces and Parking Lot E includes 270 parking spaces. The approved parking garage that is under construction in Parking Lot E will provide approximately 1,050 parking spaces and within the Integrated Treatment Centre site an additional 65 parking spaces are provided. The total number of parking spaces in the existing Parking Lots B and E plus the additional parking required by the ZBL for the Integrated Treatment Centre building totals 849 parking spaces. The approved parking garage therefore exceeds the parking requirements of the ZBL.

- Per Section 4.2.3 of the Stantec 2022 Transportation Study, the estimated parking generation rate for CHEO is approximately 3 spaces/100m². This is more than double the minimum zoning rate. Based on the observed rate, approximately 600 parking spaces are required to meet the demand for the new Integrated Treatment Centre clinic. With the 286 Lot B displaced spaces and the 270 Lot E displaced spaces, this amount to a total demand of 1,156 spaces. The 1,050 spaces in the approved Ph1A parking garage and the proposed 65 spaces for the Ph1B Integrated Treatment Centre site plan provide a total of 1,115 spaces, or 96% of the demand.

- The proposed development is considered to meet the required loading spaces as per Section 111 of the City's ZBL, due to the school bus lane to the north of the Integrated Treatment Centre building and the proposed loading area.

- For parking lots with over 1,000 parking spaces the City's Accessibility Design Standards require 11 +1% of the total parking spaces provided be a combination of Type A and Type B accessible parking spaces. Within the Integrated Treatment Centre site 14 Type A and 14 Type B parking spaces are provided. As 11 Type A and 11 Type B parking spaces are required for 1,115 total parking spaces this requirement is met.

- A total of 40 bicycle parking spaces will be provided near the Integrated Treatment Centre building.

Boundary Streets

- The proposed site plan includes 3.0m-wide multi-use pathways along the Ring Road (N-S) and Ring Road (E-W) frontages with boulevard widths of at least 0.5m.

Access Design

- The TAC *Geometric Design Guide* minimum corner clearance requirement of 20m is met by the proposed loop.

- The minimum clear throat requirement of 15m is met at the proposed access loop to Ring Road (N-S).

- The width of the one-way egress of the proposed access loop exceeds the requirements of the Private Approach By-law. However, Ring Road is not a municipal road and the accesses are not subject to the PABL. The one-way ingress of the proposed access loop does meet the requirements of the Private Approach By-law.

- The proposed accesses to Ring Road (E-W) and Ring Road (N-S) are anticipated to operate with acceptable delays for the build-out year 2027 and horizon year 2032.

Transportation Demand Management (TDM)

- A review of the City's TDM Measures Checklist has been conducted. The proponent, is committed to providing the following TDM measures within this development:

    - Display local area maps with walking/cycling access routes and key destinations at major entrances;
    - Provide relevant transit schedules and route maps at main building entrances; and
    - Provide a multimodal travel option information package to new employees.

Transit

- Bus stop #1808 will need to be relocated to bus stop #7045 within the subject site due to the changes being proposed to the CHEO non-emergency access.

Intersection MMLOS

- The east approach of the Smyth Road/Ring Road (N-S)/South Haven Place intersection meets the City's vehicle/pedestrian conflict threshold for zebra-striped crosswalks (greater than 400,000 vehicle/pedestrian conflicts over an eight-hour period). This would improve the level of comfort for pedestrians crossing Smyth Road.

- Implementing bike boxes the Smyth Road/Ring Road (N-S)/South Haven Place intersection would require restricting right turns on red (RTOR) on the east and west approaches. This is identified for the City's consideration.

- A bike lane or higher order facility is identified on the north approach of the Smyth Road/Ring Road (N-S)/South Haven Place intersection for the City's consideration.

- The east and west approaches of the Smyth Road/General Hospital Access Road meet the City's vehicle/pedestrian conflict threshold for zebra-striped crosswalks. This would improve the level of comfort for pedestrians crossing Smyth Road.

- Two-stage left turn bike boxes are required to meet the target BLOS C at the north and west approaches of the Smyth Road/General Hospital Access Road intersection. For cyclists turning left from the north approach, this would involve a bike box in front of the eastbound stop bar. For cyclists turning left from the west approach, this would involve a jug handle facility and cyclist crossing signal. This is identified for the City's consideration.

Background Traffic Analysis

- All movements at study area intersections operate with acceptable LOS under 2027 and 2032 background traffic conditions.

Total Traffic Analysis

- All movements at study area intersections, except for the Ring Road (E-W)/General Hospital Access Road intersection, are expected to operate with acceptable LOS under total traffic conditions.

- Due to limitations in Synchro software the intersection was conservatively modeled as having free flow on the north and south approaches as opposed to only the south approach. It is assumed to operate with less delays and is recommended to be monitored in the future. Delays at the intersection are largely attributable to the existing conditions which includes a high volume of westbound left turning vehicles during the PM peak hour. A future additional

westbound left turn lane may be required in addition to the existing westbound left turn lane and westbound through/right turn lane. Any additional travel lanes would likely impact the existing bus stop and retaining wall east of the Ring Road (E-W)/General Hospital Access Road intersection.

Based on the foregoing, the proposed development can be recommended from a transportation perspective.

TIA Screening Form

City of Ottawa 2017 TIA Guidelines TIA Screening

1. Description of Proposed Development

Municipal Address	401 Smyth Road
Description of Location	NE of Ring Rd (N-S)/Ring Road (E-W)
Land Use Classification	hospital
Development Size (units)	
Development Size square metre (m^2)	21,700 sq.m.
Number of Accesses and Locations	1 one-way access to Ring Rd (N-S) plus ex. access to CHEO
Phase of Development	Phase 2 of 2 (parking garage is Phase 1)
Buildout Year	2027 (Parking Garage complete 2025)

If available, please attach a sketch of the development or site plan to this form.

2. Trip Generation Trigger

Considering the Development's Land Use type and Size (as filled out in the previous section), please refer to the Trip Generation Trigger checks below.

Table notes:

1. Table 2, Table 3 & Table 4 TRANS Trip Generation Manual
2. Institute of Transportation Engineers (ITE) Trip Generation Manual 11.1 Ed.

Land Use Type	Minimum Development Size
Single-family homes	**60 units**
Multi-Use Family (Low-Rise)[1]	**90 units**
Multi-Use Family (High-Rise)[1]	**150 units**
Office[2]	**1,400 m^2**
Industrial[2]	**7,000 m^2**
Fast-food restaurant or coffee shop[2]	**110 m^2**
Destination retail[2]	**1,800 m^2**
Gas station or convenience market[2]	**90 m^2**

If the proposed development size is equal to or greater than the sizes identified above, the Trip Generation Trigger is satisfied.

3. Location Triggers

	Yes	No
Does the development propose a new driveway to a boundary street that is designated as part of the Transit Priority Network, Rapid Transit network or Cross-Town Bikeways?	☐	☑
Is the development in a Hub, a Protected Major Transit Station Area (PMTSA), or a Design Priority Area (DPA)?[2]	☐	☑

If any of the above questions were answered with 'Yes,' the Location Trigger is satisfied.

4. Safety Triggers

	Yes	No
Are posted speed limits on a boundary street are 80 kilometers per hour (km/h) or greater?	☐	☑
Are there any horizontal/vertical curvatures on a boundary street limits sight lines at a proposed driveway?	☐	☑
Is the proposed driveway within the area of influence of an adjacent traffic signal or roundabout (i.e. within 300 metre [m] of intersection in rural conditions, or within 150 m of intersection in urban/ suburban conditions)?	☑	☐
Is the proposed driveway within auxiliary lanes of an intersection?	☐	☑
Does the proposed driveway make use of an existing median break that serves an existing site?	☐	☑

[2] Hubs are identified in Schedules B1 to B8 of the City of Ottawa Official Plan. PMTSAs are identified in Schedule C1 of the Official Plan. DPAs are identified in Schedule C7A and C7B of the Official. See Chapter 4 for a list of City of Ottawa Planning and Engineering documents that support the completion of TIA.

	Yes	No
Is there is a documented history of traffic operations or safety concerns on the boundary streets within 500 m of the development?	☐	☑
Does the development include a drive-thru facility?	☐	☑

If any of the above questions were answered with 'Yes,' the Safety Trigger is satisfied.

5. Summary

Results of Screening	Yes	No
Does the development satisfy the Trip Generation Trigger?	☑	☐
Does the development satisfy the Location Trigger?	☐	☑
Does the development satisfy the Safety Trigger?	☑	☐

If none of the triggers are satisfied, the TIA Study is complete. If one or more of the triggers is satisfied, the TIA Study must continue into the next stage (Screening and Scoping).

TRANS Regional Model

Version 2.15 - Assigned June 16, 2020

AM Peak Hour Total Traffic Volume

Smyth Road

2011 Model - Basecase

N/A

User: Manav Singla
Plot Prepared: January 29, 2024
EMME Scenario: 21713

Legend

AM Peak Hour Total Traffic Volume

1000 2000 3000 4000 5000

N

Distance (m)

100 200 300 400 500

The TRANS model is continuously refined & maintained, and all information is provided in good faith. However, model outputs are provided "as is", and no warranty or guarantee is provided as to the accuracy, reliability or reasonableness of the results. In using this data, you agree to accept any and all risks arising from any incorrect, incomplete, or misleading information.

Recipients are required to use caution and professional judgement in using and interpreting model outputs. In particular, caution should be used when focusing on a geographically limited area (such as a single road or intersection), as the model is primarily designed to simulate regional-scale phenomena and has been calibrated at a regional level.

As general good practice, it is recommended that the user confirm the network coding within the area of interest, and compare base year forecasts against traffic count data to assess the extent to which the model may be over- or under-estimating the travel demand.

The TRANS model is continuously refined & maintained, and all information is provided in good faith. However, model outputs are provided "as is", and no warranty or guarantee is provided as to the accuracy, reliability or reasonableness of the results. In using this data, you agree to accept any and all risks arising from any incorrect, incomplete, or misleading information.

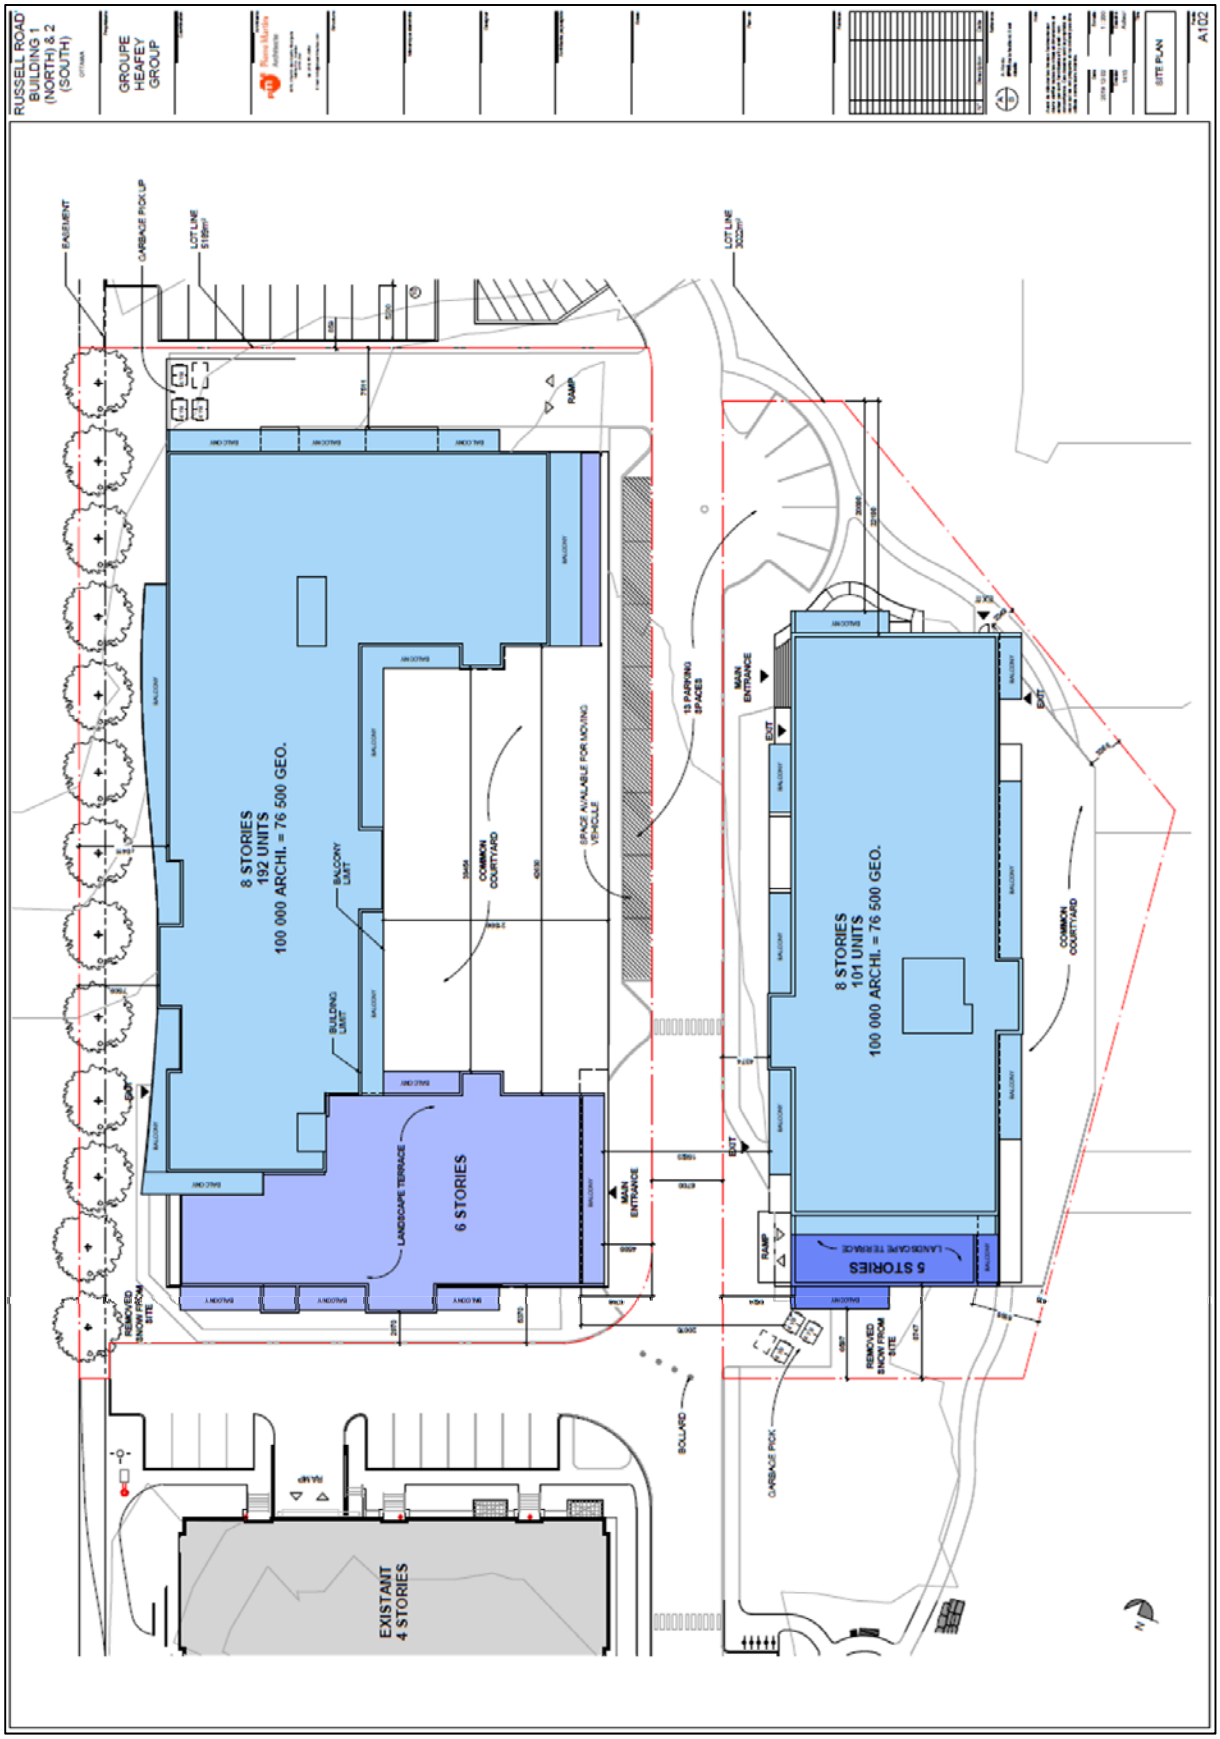
Recipients are required to use caution and professional judgement in using and interpreting model outputs. In particular, caution should be used when focusing on a geographically limited area (such as a single road or intersection), as the model is primarily designed to simulate regional-scale phenomena and has been calibrated at a regional level.

As general good practice, it is recommended that the user confirm the network coding within the area of interest, and compare base year forecasts against traffic count data to assess the extent to which the model may be over- or under-estimating the travel demand.

APPENDIX G

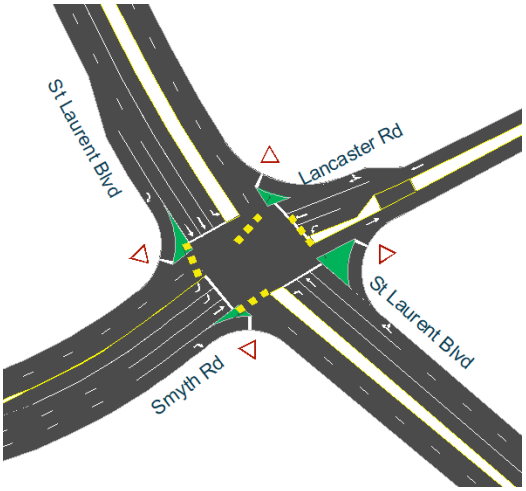
Other Area Developments

Figure 2: Proposed Site Plan



St Laurent/Smyth/Lancaster

The St Laurent/Smyth/Lancaster intersection is a signalized four-legged intersection. The north and south legs consist of two thru lanes, an auxiliary left-turn lane and a YIELD-controlled channelized right-turn lane. The west leg consists of two left-turn lanes, a single thru lane and a YIELD-controlled channelized right-turn lane. The east leg consists of two thru lanes, an auxiliary left-turn lane and a YIELD-controlled channelized right-turn lane. All left-turn movements at the intersection are fully protected. There are no restricted movements at the intersection.



Existing Driveways to Adjacent Developments

In the interim, connectivity to the residential apartments to/from St Laurent Blvd will be limited to pedestrians, cyclists and emergency vehicles. As such, all traffic generated by both existing and planned future residential developments along Everest Priv will be directed to/from Russell Rd only[1]. There are no existing driveways between the planned future development sites and Russell Rd (200 m radius).

Pedestrian/Cycling Network

With regards to pedestrians, sidewalk facilities and pathways are provided throughout Everest Priv and provide connectivity to Russell Rd and St Laurent Blvd. Along Russell Rd, sidewalks are provided on both the east and west sides of the roadway, between the Perley-Rideau access and Smyth Rd, and on the east side only of the roadway between the Perley-Rideau access and Industrial Ave. A pedestrian crossing signal (PXO) is provided at the south crosswalk of the Perley-Rideau driveway access. Along St Laurent Blvd, pedestrians have access to the sidewalk on the west side of the roadway.

With regards to cyclists, Russell Rd allows mixed traffic, while St Laurent Blvd is classified as a spine route and provides elevated cycling tracks on both sides of the roadway.

Transit Network and Bus Services

The following OC Transpo bus routes operate within the study area:

- **Route #40 (St Laurent <-> Greenboro, Hurdman)**: identified by OC Transpo as a "Frequent Route", this route operates at an average rate of every 15 minutes or less during weekday peak hours periods. The nearest bus stops to the site are available along St Laurent Blvd.
- **Route #42 (Blair <-> Hurdman)**: identified by OC Transpo as a "Local Route", this route operates at a rate of every 15-to-30 minutes during weekday morning and afternoon peak hour periods. The nearest bus stops to the future development site are available along Industrial Ave.
- **Route #46 (Hurdman <-> Billings Bridge)**: identified by OC Transpo as a "Local Route", this route operates at a rate of every 15 minutes during weekday morning and afternoon peak hour periods. The route runs along Russell Rd.
- **Route #55 (Elmvale <-> Bayshore)**: identified by OC Transpo as a "Local Rote", this route operates at a rate of every 15-to-30 minutes during weekday peak hour periods. The nearest bus stops to the development site are available along Smyth Rd.

[1] Until such time that traffic signal control is provided at St. Laurent Boulevard as part of future commercial development.

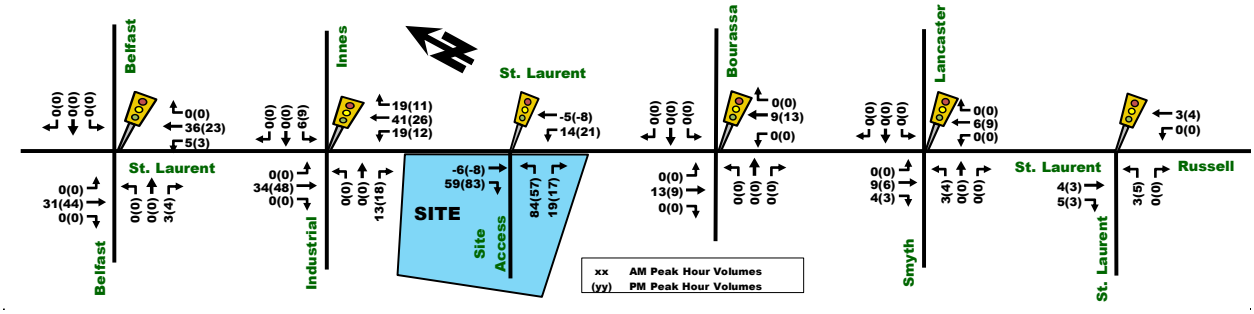
signalized intersection will be located approximately 150m south of St. Laurent Boulevard. The 'new' site-generated vehicle trips provided in **Table 12,** were assigned to the study area network as shown in **Figure 14**. Note that negative numbers reflect pass-by trips.

Figure 14: 'New' Site-Generated Traffic



3.2. Background Network Travel Demands

3.2.1. Transportation Network Plans

As mentioned in **Section 2.1.3** Planned Conditions, St. Laurent Boulevard is designated as a 'transit priority corridor with isolated measures' from Montreal Road to Elmvale Shopping Center within the 2031 Affordable Network and an at grade transitway within the New Official Plan.

The St. Laurent Transit Priority Corridor Planning and Environmental Assessment Study between Hemlock Road and Industrial Avenue is currently ongoing. Though the design is still in its early stages, the study aims at improving transit efficiency and connectivity to LRT while also improving the travel environment for all other modes of transportation such as pedestrians and cyclists. The EA study is anticipated to be complete by winter 2024.

For further detail, refer to **Section 2.1.3**.

3.2.2. Background Growth

The emphasis in the City's recent Official Plan and Transportation Master Plan is to place priority on transit, encourage intensification around transit stations, encourage mixed-use developments and provide "complete streets" that better accommodate the active transportation needs of its residents and reduce the use of the private auto. Given the location of the site near frequent bus service within the St. Laurent transit priority corridor, close bus connectivity to the LRT Confederation Line and Elmvale Mall, the trips generated from this development as well as nearby developments will likely choose alternate modes of transportation over driving as transit infrastructure improves.

The following background traffic growth (summarized in **Table 13**) was calculated based on historical traffic count data (years 2001, 2009, 2014, 2016 and 2020) provided by the City of Ottawa at the Smyth/St. Laurent intersection near the site. Note that the year 2012 was omitted as counts were almost double any other year count and it was considered an anomaly year or miscount. Detailed background traffic growth analysis is included as **Appendix E**.

Table 13: Smyth/St. Laurent Historical Background Growth (2001-2020)

Time Period	Percent Annual Change				
	North Leg	South Leg	East Leg	West Leg	Overall
8 hrs	-0.17%	-0.13%	1.66%	0.47%	0.17%
AM Peak	-0.24%	0.00%	1.77%	0.52%	0.23%
PM Peak	-0.48%	-0.42%	1.53%	0.33%	-0.06%

As shown in **Table 13**, the Smyth/St. Laurent intersection, has experienced between 0.25% to 0% overall annual growth in traffic within recent years. A conservative growth rate of 1% annually will be added to background growth to account for future potential growth to the south and surrounding areas.

6 Background Network Travel Demands

6.1 Transportation Network Plans

The transportation network plans were discussed in Section 2.3. Changes from the Smyth Road Cycling Safety Improvements project will be included in the future conditions.

6.2 Background Growth

A review of the background projections from the City's TRANS Regional Model for the 2011 and 2031 horizons was completed to determine the background growth for each of the study area roadways, and these horizons were compared to the existing roadway volumes. Table 16 summarizes the results of the model, and the projections are provided in Appendix E.

6 Background Network Travel Demands

6.1 Transportation Network Plans

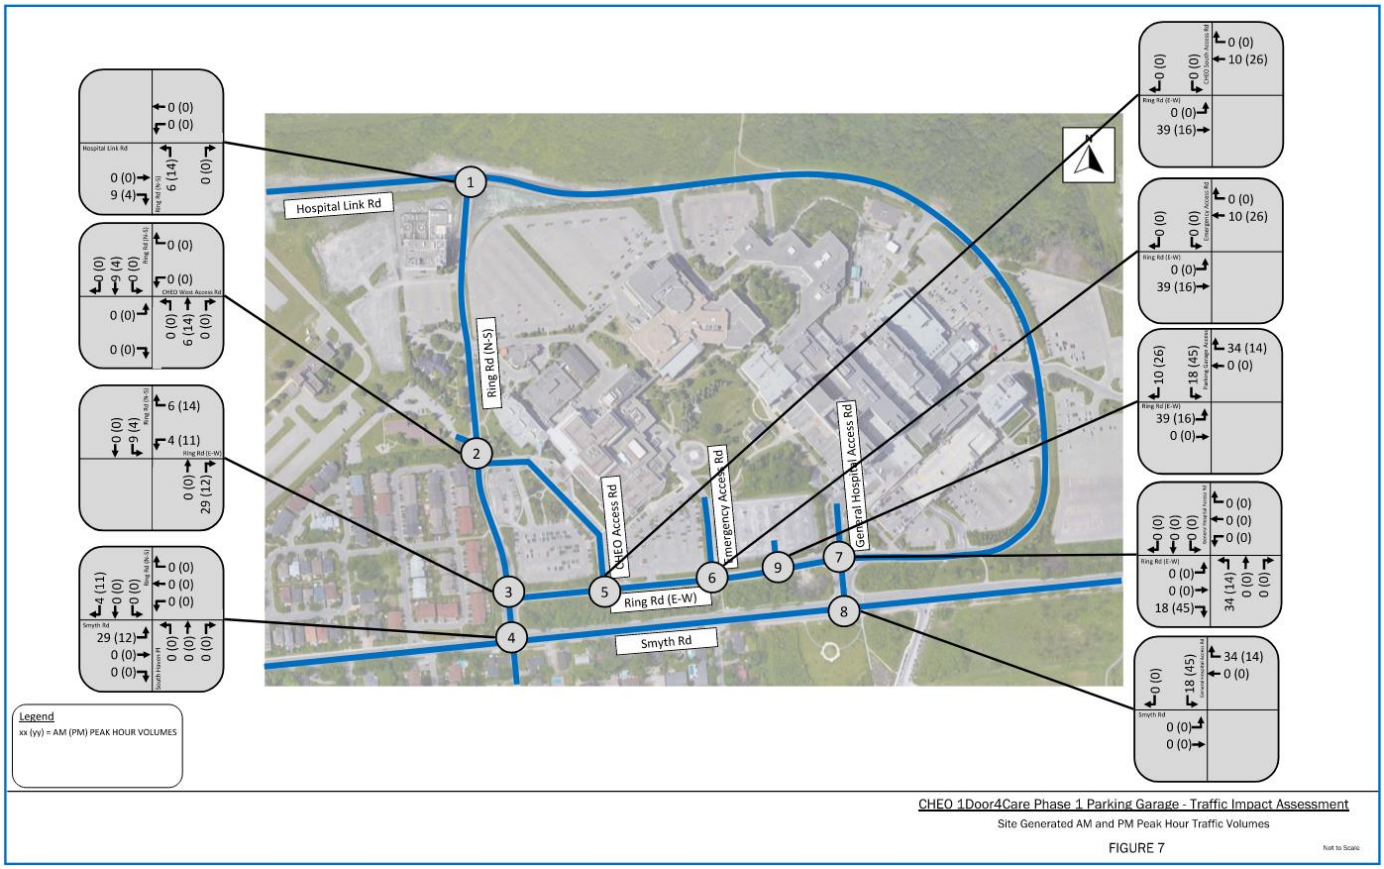
The transportation network plans were discussed in Section 2.3. None of the proposed changes are considered to have any notable impact on the study area traffic volumes and travel patterns.

6.2 Background Growth

A review of the background projections from the City's TRANS Regional Model for the 2011 and 2031 horizons was completed to determine the background growth for each of the study area roadways. The TRANS model plots and a summary of the results of the model interpolation are provided in Appendix E.

When comparing the existing volumes to 2031 horizons, the existing volumes northbound and southbound directions in the study area have exceeded the forecasted volumes. Resultantly, growth rates derived from the existing horizon to the 2031 model horizon rounded to the nearest 0.25% will be peak-directionally applied to the appropriate roadway's mainline volumes and to the appropriate major turning movements at the intersections. Table 14 summarizes the growth rates applied within the study area.

Figure 7: AM and PM Peak Hour Site Generated Trips



4. Analysis

4.1 Development Design

The proposed development and its transportation network elements were reviewed in order to ensure that a safe and efficient design has been proposed that will encourage walking, cycling, and transit use.

Pedestrian facilities will be provided between the proposed parking garage building entrance and the CHEO hospital facilities. A connection to the sidewalk along Ring Road (E-W) will be provided, as shown on the site plan. Sidewalks will be depressed and continuous across the study area road network, in accordance with City standards.

Bicycle parking will also be facilitated at the parking garage. It will be located at the south side of the garage and will be in accordance wit the minimum requirement of the City's Zoning By-Law. A copy of the proposed site plan is included in ***Appendix E***.

OC Transpo's service will not have its riders destined to the parking garage so the associated design features for transit do not come into play. However, if one feels they should be in play, the guidelines for peak period service to provide service within a five minute (400m) walk of the proposed development should be confirmed. Stops #1808, #7072, #1806, and #7234 are all located within 400m actual walking distance (measured using legal crosswalks) of the proposed development. As stated previously, the nearest bus stops to the subject site are described in ***Section 2.1.2*** and shown in ***Figure 4***.

A review of the Transportation Demand Management (TDM) – Supportive Development Design and Infrastructure Checklist has been conducted. A copy of the TDM checklist is included in ***Appendix F***. All required TDM-supportive design and infrastructure measures in the TDM checklist are met.

4.2 Parking

The parking garage itself does not generate a need for parking. It is the medical related buildings on campus that generate the parking needs. However, if one was to apply the by-law rates to identify parking requirements the following would come into play. The subject site is located in Area C on Schedule 1 and 1A of the City of Ottawa's Zoning By-Law. Minimum vehicular and bicycle parking rates for the proposed uses are identified and are summarized in the following ***Table 9***.

Table 9: Parking Requirement Per Zoning By-Law

Land Use	Rate	Units/GFA	Required
Minimum Vehicle Parking			
Hospital	0.7 per 100 m^2 of gross floor area	33,500 m^2	234.5
		Proposed Vehicle Parking	**1,050 Total**
Minimum Bicycle Parking			
Hospital	1 per 1000 m^2 of gross floor area	33,500 m^2	33.5
		Proposed Bicycle Parking	**40 Total**

The proposed development will include 1,050 parking spaces in a parking garage accessible via Ring Road (E-W), meeting the minimum Zoning By-law 2008-250 Consolidation parking requirements. As the proposed supply of on-site parking meets or exceeds the By-law requirement, no further review of vehicular parking is required.

As was the case for vehicle parking, bicycle parking would not apply for a parking garage. However, if bicycle parking was calculated for the garage the proposed development will include a total of 40 bicycle parking spaces, meeting the minimum Zoning By-law 2008-250 Consolidation parking requirements for all land uses in the Site Plan.

The TIA guidelines identify the need to review spillover parking when the parking supply is 15% below demand. As the 1,050 proposed parking spaces are exceeded the required demand, a review of spillover parking is not required for the TIA.

Figure 10: 'New' Site-Generated Traffic

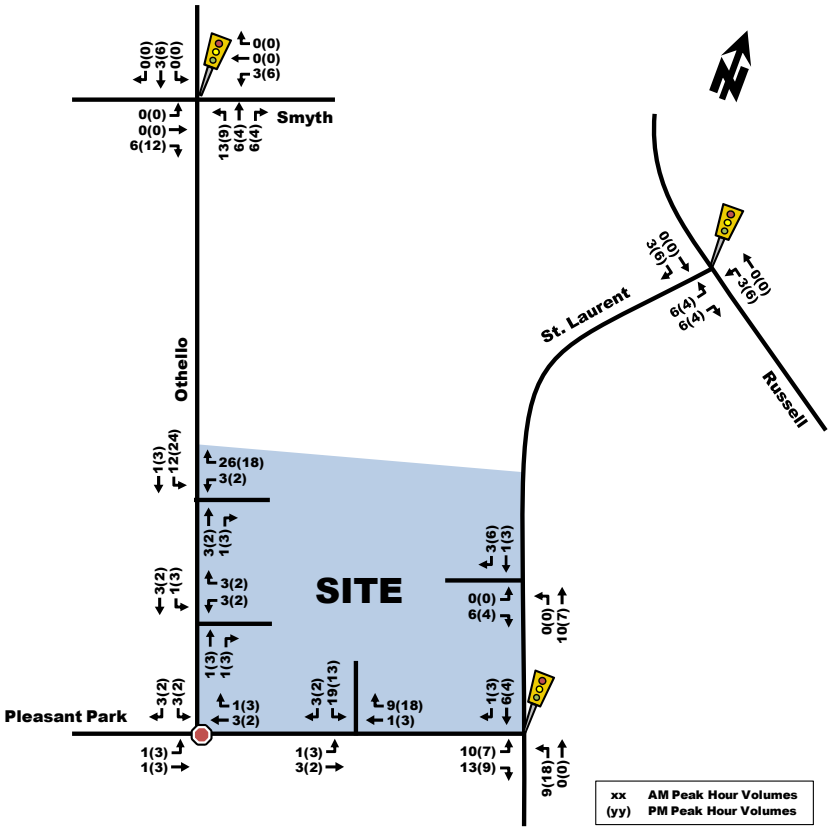

Figure 11: 'Existing' Site-Generated Traffic

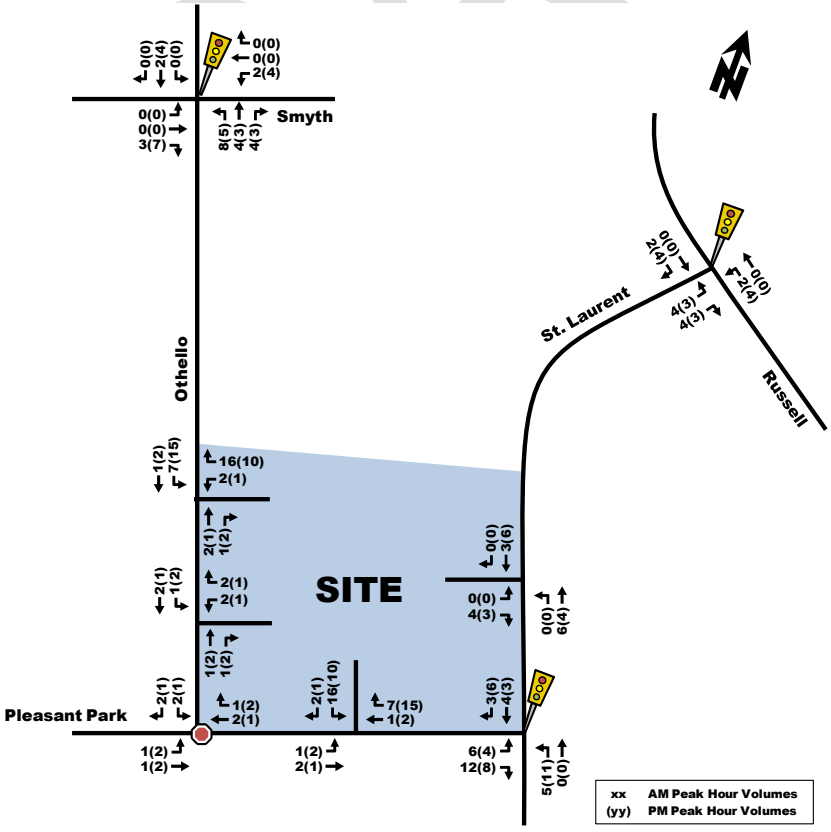

3.1.3. Trip Assignment

Site-generated trips were then assigned to the road network based on the proportions developed in ***Section 3.1.2***. The AM and PM peak hour site-generated traffic volumes are presented in ***Figure 8***.

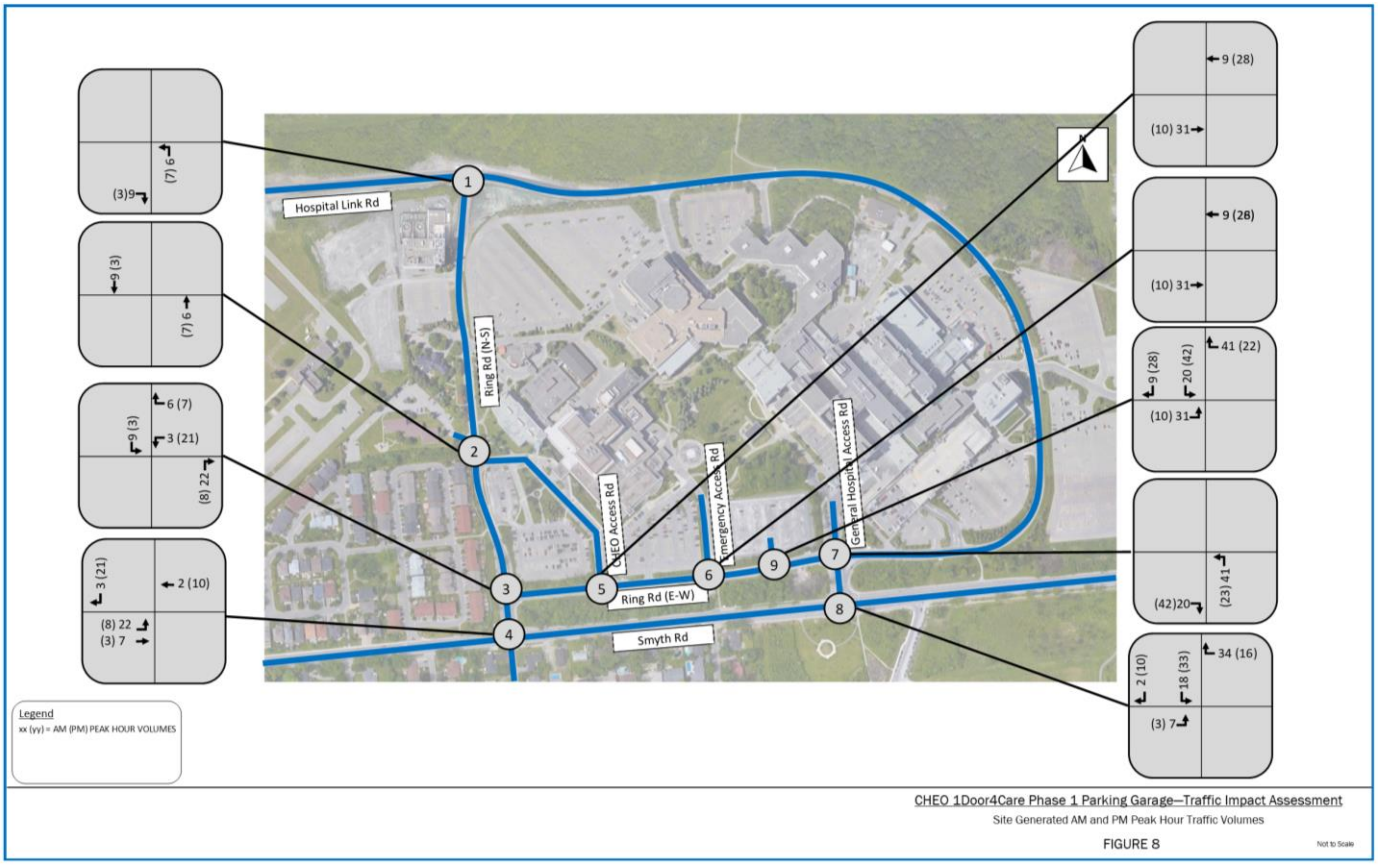

Figure 8: AM and PM Peak Hour Site Generated Trips

4.2 Parking

The parking garage itself does not generate a need for parking. It is the medical related buildings on campus that generate the parking needs. However, if one was to apply the by-law rates to identify parking requirements the following would come into play. The subject site is located in Area C on Schedule 1 and 1A of the City of Ottawa's Zoning By-Law. Minimum vehicular and bicycle parking rates for the proposed uses are identified and are summarized in the following ***Table 10***.

Table 10: Parking Requirement Per Zoning By-Law

Land Use	Rate	Units/GFA	Required
Minimum Vehicle Parking			
Hospital	0.7 per 100 m^2 of gross floor area	33,500 m^2	234.5
		Proposed Vehicle Parking	**1,050 Total**
Minimum Bicycle Parking			
Hospital	1 per 1,000 m^2 of gross floor area	33,500 m^2	33.5
		Proposed Bicycle Parking	**40 Total**

The proposed development will include 1,083 parking spaces in a parking garage accessible via Ring Road (E-W), meeting the minimum Zoning By-law 2008-250 Consolidation parking requirements. As the proposed supply of on-site parking meets or exceeds the By-law requirement, no further review of vehicular parking is required.

As was the case for vehicle parking, bicycle parking would not apply for a parking garage. However, if bicycle parking was calculated for the garage the proposed development will include a total of 40 bicycle parking spaces, meeting the minimum Zoning By-law 2008-250 Consolidation parking requirements for all land uses in the Site Plan.

The TIA guidelines identify the need to review spillover parking when the parking supply is 15% below demand. As the 1,083 proposed parking spaces exceeded the required demand, a review of spillover parking is not required for the TIA.

APPENDIX J

Transportation Demand Checklists

TDM Measures Checklist:
Non-Residential Developments (office, institutional, retail or industrial)

Legend

BASIC — The measure is generally feasible and effective, and in most cases would benefit the development and its users

BETTER — The measure could maximize support for users of sustainable modes, and optimize development performance

★ — The measure is one of the most dependably effective tools to encourage the use of sustainable modes

		TDM measures: *Non-residential developments*	Check if proposed & add descriptions

BASIC ★	1.1.1	Designate an internal coordinator, or contract with an external coordinator	☐
	1.2	**Travel surveys**	
BETTER	1.2.1	Conduct periodic surveys to identify travel-related behaviours, attitudes, challenges and solutions, and to track progress	☐
	2.	**WALKING AND CYCLING**	
	2.1	**Information on walking/cycling routes & destinations**	
BASIC	2.1.1	Display local area maps with walking/cycling access routes and key destinations at major entrances	☒
	2.2	**Bicycle skills training**	
		Commuter travel	
BETTER ★	2.2.1	Offer on-site cycling courses for commuters, or subsidize off-site courses	☐
	2.3	**Valet bike parking**	
		Visitor travel	
BETTER	2.3.1	Offer secure valet bike parking during public events when demand exceeds fixed supply (e.g. for festivals, concerts, games)	☐

			TDM measures: *Non-residential developments*	Check if proposed & add descriptions
		3.	**TRANSIT**	
		3.1	**Transit information**	
BASIC		3.1.1	Display relevant transit schedules and route maps at entrances	☒
BASIC		3.1.2	Provide online links to OC Transpo and STO information	☐
BETTER		3.1.3	Provide real-time arrival information display at entrances	☐
		3.2	**Transit fare incentives**	
			Commuter travel	
BETTER		3.2.1	Offer preloaded PRESTO cards to encourage commuters to use transit	☐
BETTER	★	3.2.2	Subsidize or reimburse monthly transit pass purchases by employees	☐
			Visitor travel	
BETTER		3.2.3	Arrange inclusion of same-day transit fare in price of tickets (e.g. for festivals, concerts, games)	☐
		3.3	**Enhanced public transit service**	
			Commuter travel	
BETTER		3.3.1	Contract with OC Transpo to provide enhanced transit services (e.g. for shift changes, weekends)	☐
			Visitor travel	
BETTER		3.3.2	Contract with OC Transpo to provide enhanced transit services (e.g. for festivals, concerts, games)	☐
		3.4	**Private transit service**	
			Commuter travel	
BETTER		3.4.1	Provide shuttle service when OC Transpo cannot offer sufficient quality or capacity to serve demand (e.g. for shift changes, weekends)	☐
			Visitor travel	
BETTER		3.4.2	Provide shuttle service when OC Transpo cannot offer sufficient quality or capacity to serve demand (e.g. for festivals, concerts, games)	☐

			TDM measures: *Non-residential developments*	Check if proposed & add descriptions
		4.	**RIDESHARING**	
		4.1	**Ridematching service**	
			Commuter travel	
BASIC	★	4.1.1	Provide a dedicated ridematching portal at OttawaRideMatch.com	☐
		4.2	**Carpool parking price incentives**	
			Commuter travel	
BETTER		4.2.1	Provide discounts on parking costs for registered carpools	☐
		4.3	**Vanpool service**	
			Commuter travel	
BETTER		4.3.1	Provide a vanpooling service for long-distance commuters	☐
		5.	**CARSHARING & BIKESHARING**	
		5.1	**Bikeshare stations & memberships**	
BETTER		5.1.1	Contract with provider to install on-site bikeshare station for use by commuters and visitors	☐
			Commuter travel	
BETTER		5.1.2	Provide employees with bikeshare memberships for local business travel	☐
		5.2	**Carshare vehicles & memberships**	
			Commuter travel	
BETTER		5.2.1	Contract with provider to install on-site carshare vehicles and promote their use by tenants	☐
BETTER		5.2.2	Provide employees with carshare memberships for local business travel	☐
		6.	**PARKING**	
		6.1	**Priced parking**	
			Commuter travel	
BASIC	★	6.1.1	Charge for long-term parking (daily, weekly, monthly)	☐
BASIC		6.1.2	Unbundle parking cost from lease rates at multi-tenant sites	☐
			Visitor travel	
BETTER		6.1.3	Charge for short-term parking (hourly)	☐

		TDM measures: *Non-residential developments*	Check if proposed & add descriptions
		7. TDM MARKETING & COMMUNICATIONS	
		7.1 Multimodal travel information	
		Commuter travel	
BASIC	★	7.1.1 Provide a multimodal travel option information package to new/relocating employees and students	☒
		Visitor travel	
BETTER	★	7.1.2 Include multimodal travel option information in invitations or advertising that attract visitors or customers (e.g. for festivals, concerts, games)	☐
		7.2 Personalized trip planning	
		Commuter travel	
BETTER	★	7.2.1 Offer personalized trip planning to new/relocating employees	☐
		7.3 Promotions	
		Commuter travel	
BETTER		7.3.1 Deliver promotions and incentives to maintain awareness, build understanding, and encourage trial of sustainable modes	☐
		8. OTHER INCENTIVES & AMENITIES	
		8.1 Emergency ride home	
		Commuter travel	
BETTER	★	8.1.1 Provide emergency ride home service to non-driving commuters	☐
		8.2 Alternative work arrangements	
		Commuter travel	
BASIC	★	8.2.1 Encourage flexible work hours	☐
BETTER		8.2.2 Encourage compressed workweeks	☐
BETTER	★	8.2.3 Encourage telework	☐
		8.3 Local business travel options	
		Commuter travel	
BASIC	★	8.3.1 Provide local business travel options that minimize the need for employees to bring a personal car to work	☐
		8.4 Commuter incentives	
		Commuter travel	
BETTER		8.4.1 Offer employees a taxable, mode-neutral commuting allowance	☐
		8.5 On-site amenities	
		Commuter travel	
BETTER		8.5.1 Provide on-site amenities/services to minimize mid-day or mid-commute errands	☐

TDM-Supportive Development Design and Infrastructure Checklist:
Non-Residential Developments (office, institutional, retail or industrial)

Legend

REQUIRED	The Official Plan or Zoning By-law provides related guidance that must be followed
BASIC	The measure is generally feasible and effective, and in most cases would benefit the development and its users
BETTER	The measure could maximize support for users of sustainable modes, and optimize development performance

		TDM-supportive design & infrastructure measures: *Non-residential developments*	Check if completed & add descriptions, explanations or plan/drawing references
	1.	**WALKING & CYCLING: ROUTES**	
	1.1	**Building location & access points**	
BASIC	1.1.1	Locate building close to the street, and do not locate parking areas between the street and building entrances	☐
BASIC	1.1.2	Locate building entrances in order to minimize walking distances to sidewalks and transit stops/stations	☒
BASIC	1.1.3	Locate building doors and windows to ensure visibility of pedestrians from the building, for their security and comfort	☒
	1.2	**Facilities for walking & cycling**	
REQUIRED	1.2.1	Provide convenient, direct access to stations or major stops along rapid transit routes within 600 metres; minimize walking distances from buildings to rapid transit; provide pedestrian-friendly, weather-protected (where possible) environment between rapid transit accesses and building entrances; ensure quality linkages from sidewalks through building entrances to integrated stops/stations *(see Official Plan policy 4.3.3)*	☒
REQUIRED	1.2.2	Provide safe, direct and attractive pedestrian access from public sidewalks to building entrances through such measures as: reducing distances between public sidewalks and major building entrances; providing walkways from public streets to major building entrances; within a site, providing walkways along the front of adjoining buildings, between adjacent buildings, and connecting areas where people may congregate, such as courtyards and transit stops; and providing weather protection through canopies, colonnades, and other design elements wherever possible *(see Official Plan policy 4.3.12)*	☒

		TDM-supportive design & infrastructure measures: *Non-residential developments*	Check if completed & add descriptions, explanations or plan/drawing references
REQUIRED	1.2.3	Provide sidewalks of smooth, well-drained walking surfaces of contrasting materials or treatments to differentiate pedestrian areas from vehicle areas, and provide marked pedestrian crosswalks at intersection sidewalks *(see Official Plan policy 4.3.10)*	☒
REQUIRED	1.2.4	Make sidewalks and open space areas easily accessible through features such as gradual grade transition, depressed curbs at street corners and convenient access to extra-wide parking spaces and ramps *(see Official Plan policy 4.3.10)*	☒
REQUIRED	1.2.5	Include adequately spaced inter-block/street cycling and pedestrian connections to facilitate travel by active transportation. Provide links to the existing or planned network of public sidewalks, multi-use pathways and on-road cycle routes. Where public sidewalks and multi-use pathways intersect with roads, consider providing traffic control devices to give priority to cyclists and pedestrians *(see Official Plan policy 4.3.11)*	☒
BASIC	1.2.6	Provide safe, direct and attractive walking routes from building entrances to nearby transit stops	☒
BASIC	1.2.7	Ensure that walking routes to transit stops are secure, visible, lighted, shaded and wind-protected wherever possible	☐
BASIC	1.2.8	Design roads used for access or circulation by cyclists using a target operating speed of no more than 30 km/h, or provide a separated cycling facility	☐
	1.3	**Amenities for walking & cycling**	
BASIC	1.3.1	Provide lighting, landscaping and benches along walking and cycling routes between building entrances and streets, sidewalks and trails	☒
BASIC	1.3.2	Provide wayfinding signage for site access (where required, e.g. when multiple buildings or entrances exist) and egress (where warranted, such as when directions to reach transit stops/stations, trails or other common destinations are not obvious)	☐

		TDM-supportive design & infrastructure measures: *Non-residential developments*	Check if completed & add descriptions, explanations or plan/drawing references
	2.	**WALKING & CYCLING: END-OF-TRIP FACILITIES**	
	2.1	**Bicycle parking**	
REQUIRED	2.1.1	Provide bicycle parking in highly visible and lighted areas, sheltered from the weather wherever possible *(see Official Plan policy 4.3.6)*	☒
REQUIRED	2.1.2	Provide the number of bicycle parking spaces specified for various land uses in different parts of Ottawa; provide convenient access to main entrances or well-used areas *(see Zoning By-law Section 111)*	☒
REQUIRED	2.1.3	Ensure that bicycle parking spaces and access aisles meet minimum dimensions; that no more than 50% of spaces are vertical spaces; and that parking racks are securely anchored *(see Zoning By-law Section 111)*	☒
BASIC	2.1.4	Provide bicycle parking spaces equivalent to the expected number of commuter cyclists (assuming the cycling mode share target is met), plus the expected peak number of customer/visitor cyclists	☐
BETTER	2.1.5	Provide bicycle parking spaces equivalent to the expected number of commuter and customer/visitor cyclists, plus an additional buffer (e.g. 25 percent extra) to encourage other cyclists and ensure adequate capacity in peak cycling season	☐
	2.2	**Secure bicycle parking**	
REQUIRED	2.2.1	Where more than 50 bicycle parking spaces are provided for a single office building, locate at least 25% of spaces within a building/structure, a secure area (e.g. supervised parking lot or enclosure) or bicycle lockers *(see Zoning By-law Section 111)*	☐
BETTER	2.2.2	Provide secure bicycle parking spaces equivalent to the expected number of commuter cyclists (assuming the cycling mode share target is met)	☐
	2.3	**Shower & change facilities**	
BASIC	2.3.1	Provide shower and change facilities for the use of active commuters	☐
BETTER	2.3.2	In addition to shower and change facilities, provide dedicated lockers, grooming stations, drying racks and laundry facilities for the use of active commuters	☐
	2.4	**Bicycle repair station**	
BETTER	2.4.1	Provide a permanent bike repair station, with commonly used tools and an air pump, adjacent to the main bicycle parking area (or secure bicycle parking area, if provided)	☐

		TDM-supportive design & infrastructure measures: *Non-residential developments*	Check if completed & add descriptions, explanations or plan/drawing references
	3.	**TRANSIT**	
	3.1	**Customer amenities**	
BASIC	3.1.1	Provide shelters, lighting and benches at any on-site transit stops	☐
BASIC	3.1.2	Where the site abuts an off-site transit stop and insufficient space exists for a transit shelter in the public right-of-way, protect land for a shelter and/or install a shelter	☐
BETTER	3.1.3	Provide a secure and comfortable interior waiting area by integrating any on-site transit stops into the building	☐
	4.	**RIDESHARING**	
	4.1	**Pick-up & drop-off facilities**	
BASIC	4.1.1	Provide a designated area for carpool drivers (plus taxis and ride-hailing services) to drop off or pick up passengers without using fire lanes or other no-stopping zones	☐
	4.2	**Carpool parking**	
BASIC	4.2.1	Provide signed parking spaces for carpools in a priority location close to a major building entrance, sufficient in number to accommodate the mode share target for carpools	☐
BETTER	4.2.2	At large developments, provide spaces for carpools in a separate, access-controlled parking area to simplify enforcement	☐
	5.	**CARSHARING & BIKESHARING**	
	5.1	**Carshare parking spaces**	
BETTER	5.1.1	Provide carshare parking spaces in permitted non-residential zones, occupying either required or provided parking spaces *(see Zoning By-law Section 94)*	☐
	5.2	**Bikeshare station location**	
BETTER	5.2.1	Provide a designated bikeshare station area near a major building entrance, preferably lighted and sheltered with a direct walkway connection	☐

	TDM-supportive design & infrastructure measures: *Non-residential developments*		Check if completed & add descriptions, explanations or plan/drawing references
	6.	**PARKING**	
	6.1	**Number of parking spaces**	
REQUIRED	6.1.1	Do not provide more parking than permitted by zoning, nor less than required by zoning, unless a variance is being applied for	☒
BASIC	6.1.2	Provide parking for long-term and short-term users that is consistent with mode share targets, considering the potential for visitors to use off-site public parking	☐
BASIC	6.1.3	Where a site features more than one use, provide shared parking and reduce the cumulative number of parking spaces accordingly *(see Zoning By-law Section 104)*	☐
BETTER	6.1.4	Reduce the minimum number of parking spaces required by zoning by one space for each 13 square metres of gross floor area provided as shower rooms, change rooms, locker rooms and other facilities for cyclists in conjunction with bicycle parking *(see Zoning By-law Section 111)*	☐
	6.2	**Separate long-term & short-term parking areas**	
BETTER	6.2.1	Separate short-term and long-term parking areas using signage or physical barriers, to permit access controls and simplify enforcement (i.e. to discourage employees from parking in visitor spaces, and vice versa)	☐
	7.	**OTHER**	
	7.1	**On-site amenities to minimize off-site trips**	
BETTER	7.1.1	Provide on-site amenities to minimize mid-day or mid-commute errands	☐

APPENDIX K

MMLOS Review

Segment MMLOS Analysis

This section provides a review of the boundary streets Ring Road (N-S) and Ring Road (E-W), using complete streets principles. The *Multi-Modal Level of Service (MMLOS) Guidelines*, produced by IBI Group in October 2015 and the 2017 Addendum, were used to evaluate the levels of service for each alternative mode of transportation on the boundary streets. Both boundary streets are located within the General Urban Area, as defined in the previous Official Plan.

Exhibit 4 of the *MMLOS Guidelines* has been used to evaluate the segment pedestrian level of service (PLOS) of the boundary streets. Exhibit 22 of the *MMLOS Guidelines* identifies a target PLOS C for all roadways in the General Urban Area. The results of the segment PLOS analysis are summarized in **Table 1**.

Exhibit 11 of the *MMLOS Guidelines* has been used to evaluate the segment bicycle level of service (BLOS) of the boundary streets. In the General Urban Area, Exhibit 22 of the *MMLOS Guidelines* identifies a target BLOS D for roadways with no cycling route designation (Ring Road). The results of the segment BLOS analysis are summarized in **Table 2**.

Exhibit 15 of the *MMLOS Guidelines* has been used to evaluate the segment transit level of service (TLOS) of the boundary streets. Exhibit 22 of the *MMLOS Guidelines* does not identify a target TLOS for roadways without a Rapid Transit or Transit Priority designation (Ring Road). Ring Road has still been evaluated for TLOS, as it is currently utilized by transit. The results of the segment TLOS analysis are summarized in **Table 3**.

Exhibit 20 of the *MMLOS Guidelines* has been used to evaluate the segment truck level of service (TkLOS) of the boundary streets. In the General Urban Area, Exhibit 22 of the *MMLOS Guidelines* does not identify a target TkLOS for local or collector roadways without a truck route designation (Ring Road). Ring Road has still been evaluated for TkLOS, due to the presence of heavy vehicles on Ring Road (including transit vehicles and ambulances). The results of the segment TkLOS analysis are summarized in **Table 4**.

Table 1: PLOS Segment Analysis

Sidewalk Width	Boulevard Width	Avg. Daily Curb Lane Traffic Volume	Presence of On-Street Parking	Operating Speed[1]	PLOS
Ring Road (N-S), east side					
≥ 2.0m	0m	> 3,000 vpd	N/A	50 km/h	C
Ring Road (N-S), west side					
No sidewalk		> 3,000 vpd	No	50 km/h	**F**
Ring Road (E-W), north side					
No sidewalk		≤ 3,000 vpd	No	50 km/h	**F**
Ring Road (E-W), south side					
No sidewalk		≤ 3,000 vpd	No	50 km/h	**F**

1. Operating speed taken as the speed limit plus 10 km/h.

Table 2: BLOS Segment Analysis

Road Class	Route Type	Bikeway Type	Travel Lanes	Operating Speed	BLOS
Ring Road (N-S), from Hospital Link Road to Ring Road (E-W)					
Local	No Class	Mixed Traffic	2	50 km/h	D
Ring Road (E-W), from General Hospital Access Road to Ring Road (N-S)					
Local	No Class	Mixed Traffic	2	50 km/h	D

Table 3: TLOS Segment Analysis

Facility Type	Exposure to Congestion Delay, Friction, and Incidents			TLOS
	Congestion	Friction	Incident Potential	
Ring Road (N-S), from Hospital Link Road to Ring Road (E-W)				
Mixed Traffic – Limited Parking/Driveway Friction	Yes	Low	Medium	D
Ring Road (E-W), from General Hospital Access Road to Ring Road (N-S)				
Mixed Traffic – Limited Parking/Driveway Friction	Yes	Low	Medium	D

Table 4: TkLOS Segment Analysis

Curb Lane Width	Number of Travel Lanes Per Direction	TkLOS
Ring Road (N-S), from Hospital Link Road to Ring Road (E-W)		
> 3.7m	1	B
Ring Road (E-W), from General Hospital Access Road to Ring Road (N-S)		
> 3.7m	1	B

Intersection MMLOS Analysis

The following is a review of the MMLOS of the signalized intersections within the study area (Smyth Road/Ring Road (N-S)/South Haven Place and Smyth Road/General Hospital Access Road), using complete streets principles. These intersections have been evaluated based on existing conditions, using the MMLOS targets for intersections within the General Urban Area (Smyth Road/General Hospital Access Road) and for intersections within 300m of a school (Smyth Road/Ring Road (N-S)/South Haven Place).

Exhibit 5 of the 2017 *Addendum to the MMLOS Guidelines* has been used to evaluate the existing PLOS at the intersections listed above. Exhibit 22 of the *MMLOS Guidelines* identifies a target PLOS C for all roadways in the General Urban Area and a target PLOS A for roadways within 300m of a school. The results of the intersection PLOS analysis are summarized in **Table 5** and **Table 6**.

Exhibit 12 of the *MMLOS Guidelines* has been used to evaluate the existing BLOS at the intersections listed above. In the General Urban Area, Exhibit 22 of the *MMLOS Guidelines* identifies a target BLOS B for Local Routes (South Haven Place), a target BLOS C for Spine Routes (Smyth Road), and a target BLOS D for roadways with no cycling route designation (Ring Road N-S and General Hospital Access Road). The results of the intersection BLOS analysis are summarized in **Table 7**.

Exhibit 16 of the *MMLOS Guidelines* has been used to evaluate the existing TLOS at the intersections listed above. In the General Urban Area and within 300m of a school, Exhibit 22 of the *MMLOS Guidelines* does not identify a target TLOS for areas that are not Transit Priority Corridors with Isolated Measures. The TLOS has been evaluated for the north, east, and west approaches at intersections listed above, as they are currently utilized by transit. The results of the intersection TLOS analysis are summarized in **Table 8**.

Exhibit 21 of the *MMLOS Guidelines* has been used to evaluate the existing TkLOS at the intersections listed above. In the General Urban Area and within 300m of a school, Exhibit 22 of the *MMLOS Guidelines* identifies a target TkLOS D for arterial truck routes (Smyth Road). The results of the intersection TkLOS analysis are summarized in **Table 9**.

Table 5: PLOS Intersection Analysis – Smyth Road/Ring Road (N-S)/South Haven Place

CRITERIA	North Approach		South Approach		East Approach		West Approach	
PETSI SCORE

Table 7: BLOS Intersection Analysis

Approach	Facility Type	Criteria	Travel Lanes and/or Speed	BLOS
Smyth Road/Ring Road (N-S)/South Haven Place				
North Approach	Mixed Traffic	Right Turn Lane Characteristics	Right turn lane < 50m; turning speed ≤ 25 km/h	**D**
		Left Turn Accommodation	One lane crossed; 50 km/h	**D**
South Approach	Mixed Traffic	Right Turn Lane Characteristics	Shared left turn/right turn lane	A
		Left Turn Accommodation	No lanes crossed; ≤ 50 km/h	B
East Approach	Mixed Traffic	Right Turn Lane Characteristics	Shared through/right turn lane	A
		Left Turn Accommodation	One lane crossed; ≥ 60 km/h	**F**
West Approach	Mixed Traffic	Right Turn Lane Characteristics	Shared through/right turn lane	A
		Left Turn Accommodation	One lane crossed; ≥ 60 km/h	**F**
Smyth Road/General Hospital Access Road				
North Approach	Mixed Traffic	Right Turn Lane Characteristics	Right turn lane < 50m; turning speed ≤ 25 km/h	**D**
		Left Turn Accommodation	Dual left turn lanes	**F**
East Approach	Mixed Traffic	Right Turn Lane Characteristics	Right turn lane > 50m	**F**
		Left Turn Accommodation	N/A	-
West Approach	Mixed Traffic	Right Turn Lane Characteristics	N/A	-
		Left Turn Accommodation	Two lanes crossed; ≥ 50 km/h	**F**

Table 8: TLOS Intersection Analysis

Approach	Delay[1]		TLOS
	AM Peak Hour	PM Peak Hour	
Smyth Road/Ring Road (N-S)/South Haven Place			
North Approach	24 sec	39 sec	**E**
East Approach	33 sec	23 sec	**E**
West Approach	4 sec	6 sec	B
Smyth Road/General Hospital Access Road			
North Approach	37 sec	47 sec	**F**
East Approach	10 sec	12 sec	C
West Approach	7 sec	5 sec	B

1. Delay based on outputs from Synchro analysis of existing conditions

Table 9: TkLOS Intersection Analysis

Approach	Effective Corner Radius	Number of Receiving Lanes Departing Intersection	TkLOS
Smyth Road/Ring Road (N-S)/South Haven Place			
North Approach	< 10m	2	D
South Approach	< 10m	2	D
East Approach	10m to 15m	2(1)	B
West Approach	< 10m	1	**F**
Smyth Road/General Hospital Access Road			
North Approach	10m to 15m	2	B
East Approach	10m to 15m	2(1)	B

1. Ring Road (N-S) and General Hospital Access Road have single receiving lanes. However, the widths of these lanes are greater than 7m and therefore more equivalent to the width of two standard lanes.
