After hours, calls shall be directed to the Ministry's Spills Action Centre at 1-800-268-6060.

5.2 For Surface-Water Takings
The taking of water (including the taking of water into storage and the subsequent or simultaneous withdrawal from storage) shall be carried out in such a manner that streamflow is not stopped and is not reduced to a rate that will cause interference with downstream uses of water or with the natural functions of the stream.

For Groundwater Takings
If the taking of water is observed to cause any negative impact to other water supplies obtained from any adequate sources that were in use prior to initial issuance of a Permit for this water taking, the Permit Holder shall take such action necessary to make available to those affected, a supply of water equivalent in quantity and quality to their normal takings, or shall compensate such persons for their reasonable costs of so doing, or shall reduce the rate and amount of taking to prevent or alleviate the observed negative impact. Pending permanent restoration of the affected supplies, the Permit Holder shall provide, to those affected, temporary water supplies adequate to meet their normal requirements, or shall compensate such persons for their reasonable costs of doing so.

If permanent interference is caused by the water taking, the Permit Holder shall restore the water supplies of those permanently affected.

5.3 Prevention of Adverse Effects:
The Permit Holder shall ensure the taking of water under authority of this Permit does not result in an adverse effect on area waters.

5.4 Prevention of Structural Adverse Effects:
The Permit Holder shall take all measures necessary to prevent damage to buildings, bridges, structures, roads and/or railway lines that may be impacted either directly or indirectly by this taking.

5.5 Discharge Control Measures for Water that is Discharged to the Natural Environment:
Siltation control measures shall be installed at the discharge site(s) and shall be sufficient to control the volumes. Continuous care shall be taken to properly maintain the siltation control devices.

5.6 The discharge of water shall be controlled in such a way as to avoid erosion and sedimentation in the receiving stream.

5.7 The Permit Holder shall ensure that any water discharged to the natural environment does not result in scouring, erosion or physical alteration of stream channels or banks and that there is no flooding in the receiving area or water body, downstream water bodies, ditches or properties caused or worsened by this discharge.

5.8 The Permit Holder shall not discharge turbid water to any watercourse. Turbid water shall be defined as any discharge water from the excavation or diverted water with a maximum increase of 8 NTUs above the receiving stream's background levels.

5.9 Discharged Water to the Sanitary or Storm Sewer System:
The Permit Holder shall ensure that any water that is taken for dewatering purposes and discharged to the City of Ottawa sewer system is in accordance with a City of Ottawa Sewer Use Agreement.

6. Director May Amend Permit

The Director may amend this Permit by letter requiring the Permit Holder to suspend or reduce the taking to an amount or threshold specified by the Director in the letter. The suspension or reduction in taking shall be effective immediately and may be revoked at any time upon notification by the Director. This condition does

not affect your right to appeal the suspension or reduction in taking to the Environmental Review Tribunal under the *Ontario Water Resources Act*, Section 100 (4).

Certifications

As the qualified person, and in relation to this Part of the RSC, I certify that:

1. A phase one environmental site assessment of the RSC property, which includes the evaluation of the information gathered from a records review, site visit and interviews, has been conducted in accordance with the Regulation by or under the supervision of a qualified person as required by the Regulation.

2. I have conducted or supervised a phase two environmental site assessment, which includes the evaluation of information gathered through the sampling and analysis of soil and other site investigation or assessment activities, of all or part of the RSC property with respect to one or more contaminants, in accordance with the Regulation.

3. The information represents the site conditions at the sampling points at the time of sampling only and the conditions between and beyond the sampling points may vary.

4. As of 2006/06/12, in my opinion, based on the phase one environmental site assessment and the phase two environmental site assessment, and any confirmatory sampling, there is no evidence of any contaminants in the soil, ground water or sediment on, in or under the RSC property that would interfere with the type of property use to which the RSC property will be put, as specified in the RSC.

5. If non-potable ground water standards have been applied,

    a. I have given written notice of intention to apply non-potable ground water site condition standards to the clerk of the local municipality in which the property is located and the clerk of any upper-tier municipality in which the property is located.

    b. The owner of the property has informed me that either,

        i. the owner did not receive a notice of objection from either the local municipality or the upper-tier municipality within 30 days of the municipality or upper-tier municipality receiving the notice described in paragraph a, or

        ii. after receiving a notice of objection from the municipality, the municipality has withdrawn its objection and given written consent to the application of non-potable ground water standards.

    c. I did not receive a notice of objection from either the local municipality or the upper-tier municipality within 30 days of the municipality receiving the notice described in paragraph a, or, after I received a notice of objection from the municipality, the municipality gave written consent to the application of non-potable ground water standards.

6. As of 2006/06/12, in my opinion, based on the phase one and phase two environmental site assessments and any

confirmatory sampling, the RSC property meets the applicable Full Depth site condition standards prescribed by section 37 of the Regulation for all contaminants prescribed by the Regulation in relation to the type of property use for which this RSC is filed, except for those contaminants (if any) specified in this RSC at Part 2, Final RSC Property Profile - Risk Assessment Standards.

7. As of 2006/06/12, the maximum known concentration of each contaminant in soil, sediment and ground water at the RSC property for which sampling and analysis has been performed is specified in this RSC at Final RSC Property Profile.

8. In relation to any contaminant excepted from the certification mentioned above and as specified in this RSC at Part 2, Final RSC Property Profile - Risk Assessment Standards, or in relation to any other contaminant that in my opinion is likely to cause an adverse effect:

    a. A risk assessment was prepared for the contaminant with respect to the property for which the phase two environmental site assessment was conducted.

    b. The Director has accepted the risk assessment under clause 168.5 (1) (a) of the Act.

    c. As of 2006/06/12, the property for which the phase two environmental site assessment was conducted meets the standards specified in the risk assessment for the contaminant.

As the qualified person, and in relation to this Part of the RSC, I also certify that:

1. I am a qualified person and have the qualifications required by section 5 of the Regulation.

2. I have in place an insurance policy that satisfies the requirements of section 7 of the Regulation.

Certifications

As the qualified person, and in relation to this Part of the RSC, I certify that:

1. A phase one environmental site assessment of the RSC property, which includes the evaluation of the information gathered from a records review, site visit and interviews, has been conducted in accordance with the Regulation by or under the supervision of a qualified person as required by the Regulation.

2. I have conducted or supervised a phase two environmental site assessment, which includes the evaluation of information gathered through the sampling and analysis of soil and other site investigation or assessment activities, of all or part of the RSC property with respect to one or more contaminants, in accordance with the Regulation.

3. The information represents the site conditions at the sampling points at the time of sampling only and the conditions between and beyond the sampling points may vary.

4. As of 2007/11/22, in my opinion, based on the phase one environmental site assessment and the phase two environmental site assessment, and any confirmatory sampling, there is no evidence of any contaminants in the soil, ground water or sediment on, in or under the RSC property that would interfere with the type of property use to which the RSC property will

be put, as specified in the RSC.

5. If non-potable ground water standards have been applied,

    a. I have given written notice of intention to apply non-potable ground water site condition standards to the clerk of the local municipality in which the property is located and the clerk of any upper-tier municipality in which the property is located.

    b. The owner of the property has informed me that either,

        i. the owner did not receive a notice of objection from either the local municipality or the upper-tier municipality within 30 days of the municipality or upper-tier municipality receiving the notice described in paragraph a, or

7. As of 2007/11/22, the maximum known concentration of each contaminant in soil, sediment and ground water at the RSC property for which sampling and analysis has been performed is specified in this RSC at Final RSC Property Profile.

8. In relation to any contaminant excepted from the certification mentioned above and as specified in this RSC at Part 2, Final RSC Property Profile - Risk Assessment Standards, or in relation to any other contaminant that in my opinion is likely to cause an adverse effect:

    a. A risk assessment was prepared for the contaminant with respect to the property for which the phase two environmental site assessment was conducted.

    b. The Director has accepted the risk assessment under clause 168.5 (1) (a) of the Act.

    c. As of 2007/11/22, the property for which the phase two environmental site assessment was conducted meets the standards specified in the risk assessment for the contaminant.

This record shall include the dates and times of water takings, the rates of taking, and an estimated calculation of the total amounts of water taken per day for each day that water is taken under the authorization of this Permit. A separate record shall be maintained for each source. The Permit Holder shall keep all required records up to date and available at or near the site of the taking and shall produce the records immediately for inspection by a Provincial Officer upon his or her request.

5. Impacts of the Water Taking

5.1 Notification
The Permit Holder shall immediately notify the local District Office of any complaint arising from the taking of water authorized under this Permit and shall report any action which has been taken or is proposed with regard to such complaint. The Permit Holder shall immediately notify the local District Office if the taking of water is observed to have any significant impact on the surrounding waters. After hours, calls shall

be directed to the Ministry's Spills Action Centre at 1-800-268-6060.

5.2 For Groundwater Takings
If the taking of water is observed to cause any negative impact to other water supplies obtained from any adequate sources that were in use prior to initial issuance of a Permit for this water taking, the Permit Holder shall take such action necessary to make available to those affected, a supply of water equivalent in quantity and quality to their normal takings, or shall compensate such persons for their reasonable costs of so doing, or shall reduce the rate and amount of taking to prevent or alleviate the observed negative impact. Pending permanent restoration of the affected supplies, the Permit Holder shall provide, to those affected, temporary water supplies adequate to meet their normal requirements, or shall compensate such persons for their reasonable costs of doing so.

If permanent interference is caused by the water taking, the Permit Holder shall restore the water supplies of those permanently affected.

5.3 The Permit Holder shall ensure that all water taken under authority of this Permit be discharged to the City of Ottawa sewer system in a manner that complies with all applicable municipal by-laws.

6. Director May Amend Permit

The Director may amend this Permit by letter requiring the Permit Holder to suspend or reduce the taking to an amount or threshold specified by the Director in the letter. The suspension or reduction in taking shall be effective immediately and may be revoked at any time upon notification by the Director. This condition does not affect your right to appeal the suspension or reduction in taking to the Environmental Review Tribunal under the *Ontario Water Resources Act*, Section 100 (4).

The reasons for the imposition of these terms and conditions are as follows:

1. Condition 1 is included to ensure that the conditions in this Permit are complied with and can be enforced.

2. Condition 2 is included to clarify the legal interpretation of aspects of this Permit.

3. Conditions 3 through 6 are included to protect the quality of the natural environment so as to safeguard the ecosystem and human health and foster efficient use and conservation of waters. These conditions allow for the beneficial use of waters while ensuring the fair sharing, conservation and sustainable use of the waters of Ontario. The conditions also specify the water takings that are authorized by this Permit and the scope of this Permit.

You are hereby notified that this approval is issued to you subject to the terms and conditions outlined below:

TERMS AND CONDITIONS

GENERAL

1. Except as otherwise provided by these Conditions, the Owner shall design, build, install, operate and maintain the Equipment in accordance with the description given in this Certificate, application for approval of the Equipment and the submitted supporting documents and plans and specifications as listed in this Certificate.

2. Where there is a conflict between a provision of any submitted document referred to in this Certificate and the Conditions of this Certificate, the Conditions in this Certificate shall take precedence, and where there is a conflict between the listed submitted documents, the document bearing the most recent date shall prevail.

PERFORMANCE

3. The Owner shall ensure that the noise emissions from the Generator Set comply with the limits set out in Publication NPC-205.

OPERATION AND MAINTENANCE

4. The Owner shall ensure that:

   (1) no other standby generator sets, located at 110 O'Connor Street, Ottawa, Ontario, are operational during the periodic testing of the Generator Sets; and,

   (2) only one (1) of the three (3) standby diesel generator sets approved under this Certificate is periodically tested at any one time.

5. The Owner shall restrict the periodic testing of the Generator Sets to the daytime hours from 7:00 am to 7:00 pm.

6. The Owner shall ensure that the Equipment is properly operated and maintained at all times. The Owner shall:

(1) prepare, not later than three (3) months after the date of this Certificate, and update, as necessary, a Manual outlining the operating procedures and a maintenance program for the Equipment, including:

(a) routine operating and maintenance procedures in accordance with good engineering practices and as recommended by the Equipment suppliers;

(b) emergency procedures;

(c) procedures for any record keeping activities relating to operation and maintenance of the Equipment;

(d) all appropriate measures to minimize noise and odorous emissions from all potential sources;

The reasons for the imposition of these terms and conditions are as follows:

1. Condition Nos. 1 and 2 are imposed to ensure that the Equipment is built and operated in the manner in which it was described for review and upon which approval was granted. These conditions are also included to emphasize the precedence of Conditions in the Certificate and the practice that the Approval is based on the most current document, if several conflicting documents are submitted for review.

2. Condition No. 3 is included to provide the minimum performance requirement considered necessary to prevent an adverse effect resulting from the operation of the Generator Sets.

3. Condition No. 4 is included to ensure that the nitrogen oxide emissions will not result in an adverse effect at a sensitive receptor.

4. Condition No. 5 is included to ensure that the proposed operation, excluding emergency situations, is not extended beyond specific daytime hours to prevent an adverse effect resulting from the operation of the Generator Sets.

5. Condition No. 6 is included to emphasize that the Equipment must be maintained and operated according to a procedure that will result in compliance with the Act, the regulations and this Certificate. In addition the Owner is required to keep records and provide information to staff of the Ministry so that compliance with the Act, the regulations and this Certificate can be verified.

In accordance with Section 139 of the Environmental Protection Act, R.S.O. 1990, Chapter E-19, as amended, you may by written notice served upon me and the Environmental Review Tribunal within 15 days after receipt of this Notice, require a hearing by the Tribunal. Section 142 of the Environmental Protection Act, provides that the Notice requiring the hearing shall state:

FACILITY DESCRIPTION

1.0 FACILITY DESCRIPTION

This application pertains to a fifteen-storey office building located at 110 O'Connor Street. The facility is operated and managed by Dundee Realty Management Corporation (Dundee Realty). As the managing company, Dundee Realty is authorized to apply for operations-related approvals as necessary.

Three diesel-fired generators are in-place at the facility to provide emergency electrical power to the entire facility. The first generator (400 kW) is located on the roof of the building encased in a metal sound-attenuating enclosure. The exhaust from this generator is released to the atmosphere through a 0.6 m diameter exhaust vent that terminates 2.7 m above the rooftop. Specifications for and drawings of the generator are included in **Reference 3.** The second generator (250 kW) is located in the mechanical room on the top floor of the building. The exhaust from this generator is released to the atmosphere through a 0.3 m diameter exhaust vent that terminates 3 m above the rooftop. The third generator (175 kW) is located in a concrete room in the basement of the building. The exhaust from this generator is released to the atmosphere through a 0.3 m diameter exhaust vent that terminates 2 m below grade.

Other on-site sources of combustion emissions included in this Application are:

- Four identical 2,500,000 Btu/h natural gas-fired heating boilers located in the rooftop penthouse; and,
- One 365,000 Btu/h natural gas domestic water heater located in the rooftop penthouse.

The exhaust stacks for the boilers (2 stacks for each boiler) each terminate approximately 1.7 m above the penthouse roof and approximately 43.7 m above grade. The exhaust for the domestic hot water tank is connected to one of the exhaust stacks for Boiler #1.

Three chillers are also located at 110 O'Connor Street: two in the penthouse and one on the roof.

A site drawing showing the location of the 110 O'Connor Street property line and the emission sources to which this application pertains is included **Reference 4.**

SOURCE SUMMARY TABLE

2.0 SOURCE SUMMARY TABLE

This section of the application is for the air emissions from combustion equipment associated with 110 O'Connor Street.

As stated in **Reference 1,** the use of the generators is for back-up power only. The on-site generators will undergo weekly testing for approximately 30 minutes per test (during the day, between 7:00 a.m. and 5:00 p.m.).

Data sheets provided by the manufacturer for two of the generators and sample calculations of contaminant emission rates for one of the generators are attached in **Reference 3**. Primary compounds emitted from the generator exhausts that are listed in Regulation 346 under the Environmental Protection Act have been identified and quantified in Source Summary Table A (Table 2.1). Emissions from the boilers are summarized in Source Summary Table B (Table 2.2).

A maximum overall emission rate is required for dispersion calculations. All of the identified on-site combustion equipment operating at 100% load has been used as the scenario to yield maximum ground level concentrations in the dispersion modelling of applicable compounds listed in Regulation 346 under the Environmental Protection Act. This is a conservative worst case since all the generators will not typically be tested simultaneously.

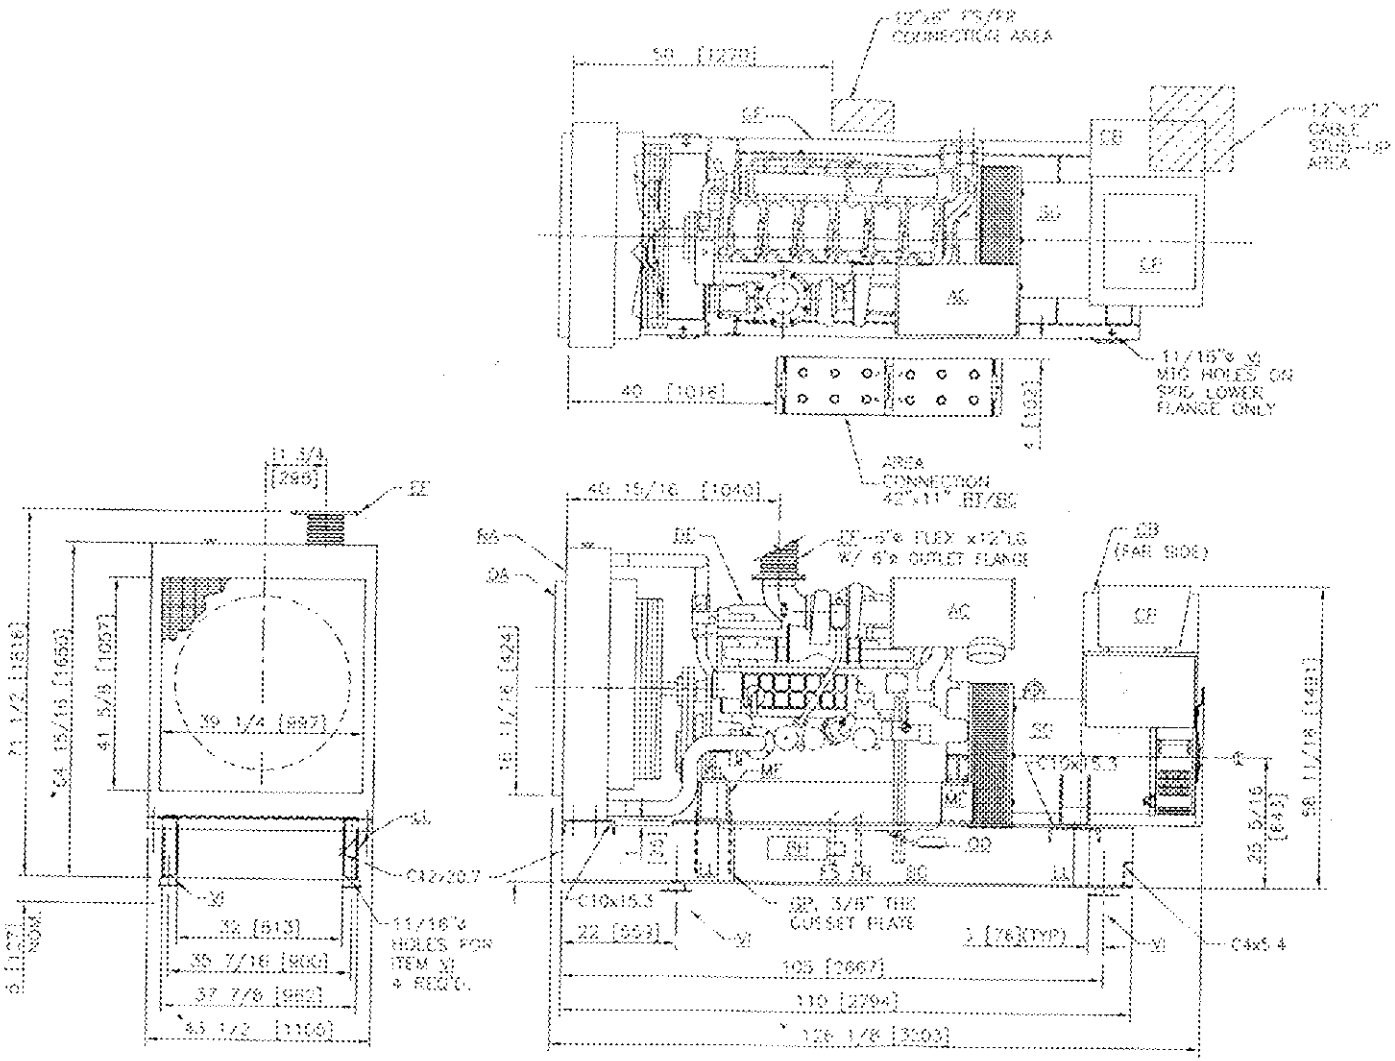
SUPPORTING INFORMATION FOR ESTIMATE OF CONTAMINANT EMISSIONS

3.0 SUPPORTING INFORMATION FOR ESTIMATE OF CONTAMINANT EMISSIONS

Manufacturer's information for the 400 kW generator is provided in this section. Manufacturer's specification sheets for the remaining combustion equipment were not available.



Emissions from the three generators were calculated using US EPA emission factors. Calculations of contaminant emission rates were performed based on the data obtained. A sample calculation is provided at the end of this section.

Since there are multiple tenants at 110 O'Connor, self-contamination calculations were done to determine the concentration of NO_x from the generators at the air intakes to the building. The calculations are provided at the end of this section. The 250 kW and 400 kW generators resulted in a calculated NO_x concentration of 744 $\mu g/m^3$ and 577 $\mu g/m^3$, respectively (i.e., total of 1,321 $\mu g/m^3$), at the nearest air intake. These values exceed the MOE POI criteria of 500 $\mu g/m^3$. Therefore, during testing of the 250 kW and 400 kW generators, the air intake louvers will be closed to prevent self-contamination. The 175 kW generator, located in the parking garage, resulted in a calculated concentration of 368 $\mu g/m^3$ at the closest air intake (i.e., doorway).

TABLE 1.4-2. EMISSION FACTORS FOR CRITERIA POLLUTANTS AND GREENHOUSE GASES FROM NATURAL GAS COMBUSTION[a]

Pollutant	Emission Factor ($lb/10^6$ scf)	Emission Factor Rating

PM (Filterable)[c]	1.9	B
SO_2[d]	0.6	A
TOC	11	B
Methane	2.3	B
VOC	5.5	C

[a] Reference 11. Units are in pounds of pollutant per million standard cubic feet of natural gas fired. Data are for all natural gas combustion sources. To convert from $lb/10^6$ scf to $kg/10^6$ m^3, multiply by 16. To convert from $lb/10^6$ scf to lb/MMBtu, divide by 1,020. The emission factors in this table may be converted to other natural gas heating values by multiplying the given emission factor by the ratio of the specified heating value to this average heating value. TOC = Total Organic Compounds. VOC = Volatile Organic Compounds.

[b] Based on approximately 100% conversion of fuel carbon to CO_2. $CO_2[lb/10^6 scf] = (3.67) (CON) (C)(D)$, where CON = fractional conversion of fuel carbon to CO_2, C = carbon content of fuel by weight (0.76), and D = density of fuel, $4.2x10^4$ $lb/10^6$ scf.

[c] All PM (total, condensible, and filterable) is assumed to be less than 1.0 micrometer in diameter. Therefore, the PM emission factors presented here may be used to estimate PM_{10}, $PM_{2.5}$ or PM_1 emissions. Total PM is the sum of the filterable PM and condensible PM. Condensible PM is the particulate matter collected using EPA Method 202 (or equivalent). Filterable PM is the particulate matter collected on, or prior to, the filter of an EPA Method 5 (or equivalent) sampling train.

[d] Based on 100% conversion of fuel sulfur to SO_2. Assumes sulfur content is natural gas of 2,000 grains/10^6 scf. The SO_2 emission factor in this table can be converted to other natural gas sulfur contents by multiplying the SO_2 emission factor by the ratio of the site-specific sulfur content (grains/10^6 scf) to 2,000 grains/10^6 scf.

[a] Reference 11. Units are in pounds of pollutant per million standard cubic feet of natural gas fired. To convert from $lb/10^6$ scf to $kg/10^6$ m^3, multiply by 16. Emission factors are based on an average natural gas higher heating value of 1,020 Btu/scf. To convert from $lb/10^6$ scf to lb/MMBtu, divide by 1,020. The emission factors in this table may be converted to other natural gas heating values by multiplying the given emission factor by the ratio of the specified heating value to this average heating value. SCC = Source Classification Code. ND = no data. NA = not applicable.

[b] Expressed as NO_2. For large and small wall fired boilers with SNCR control, apply a 24 percent reduction to the appropriate NO_x emission factor. For tangential-fired boilers with SNCR control, apply a 13 percent reduction to the appropriate NO_x emission factor.

[c] NSPS=New Source Performance Standard as defined in 40 CFR 60 Subparts D and Db. Post-NSPS units are boilers with greater than 250 MMBtu/hr of heat input that commenced construction modification, or reconstruction after August 17, 1971, and units with heat input capacities between 100 and 250 MMBtu/hr that commenced construction modification, or reconstruction after June 19, 1984.

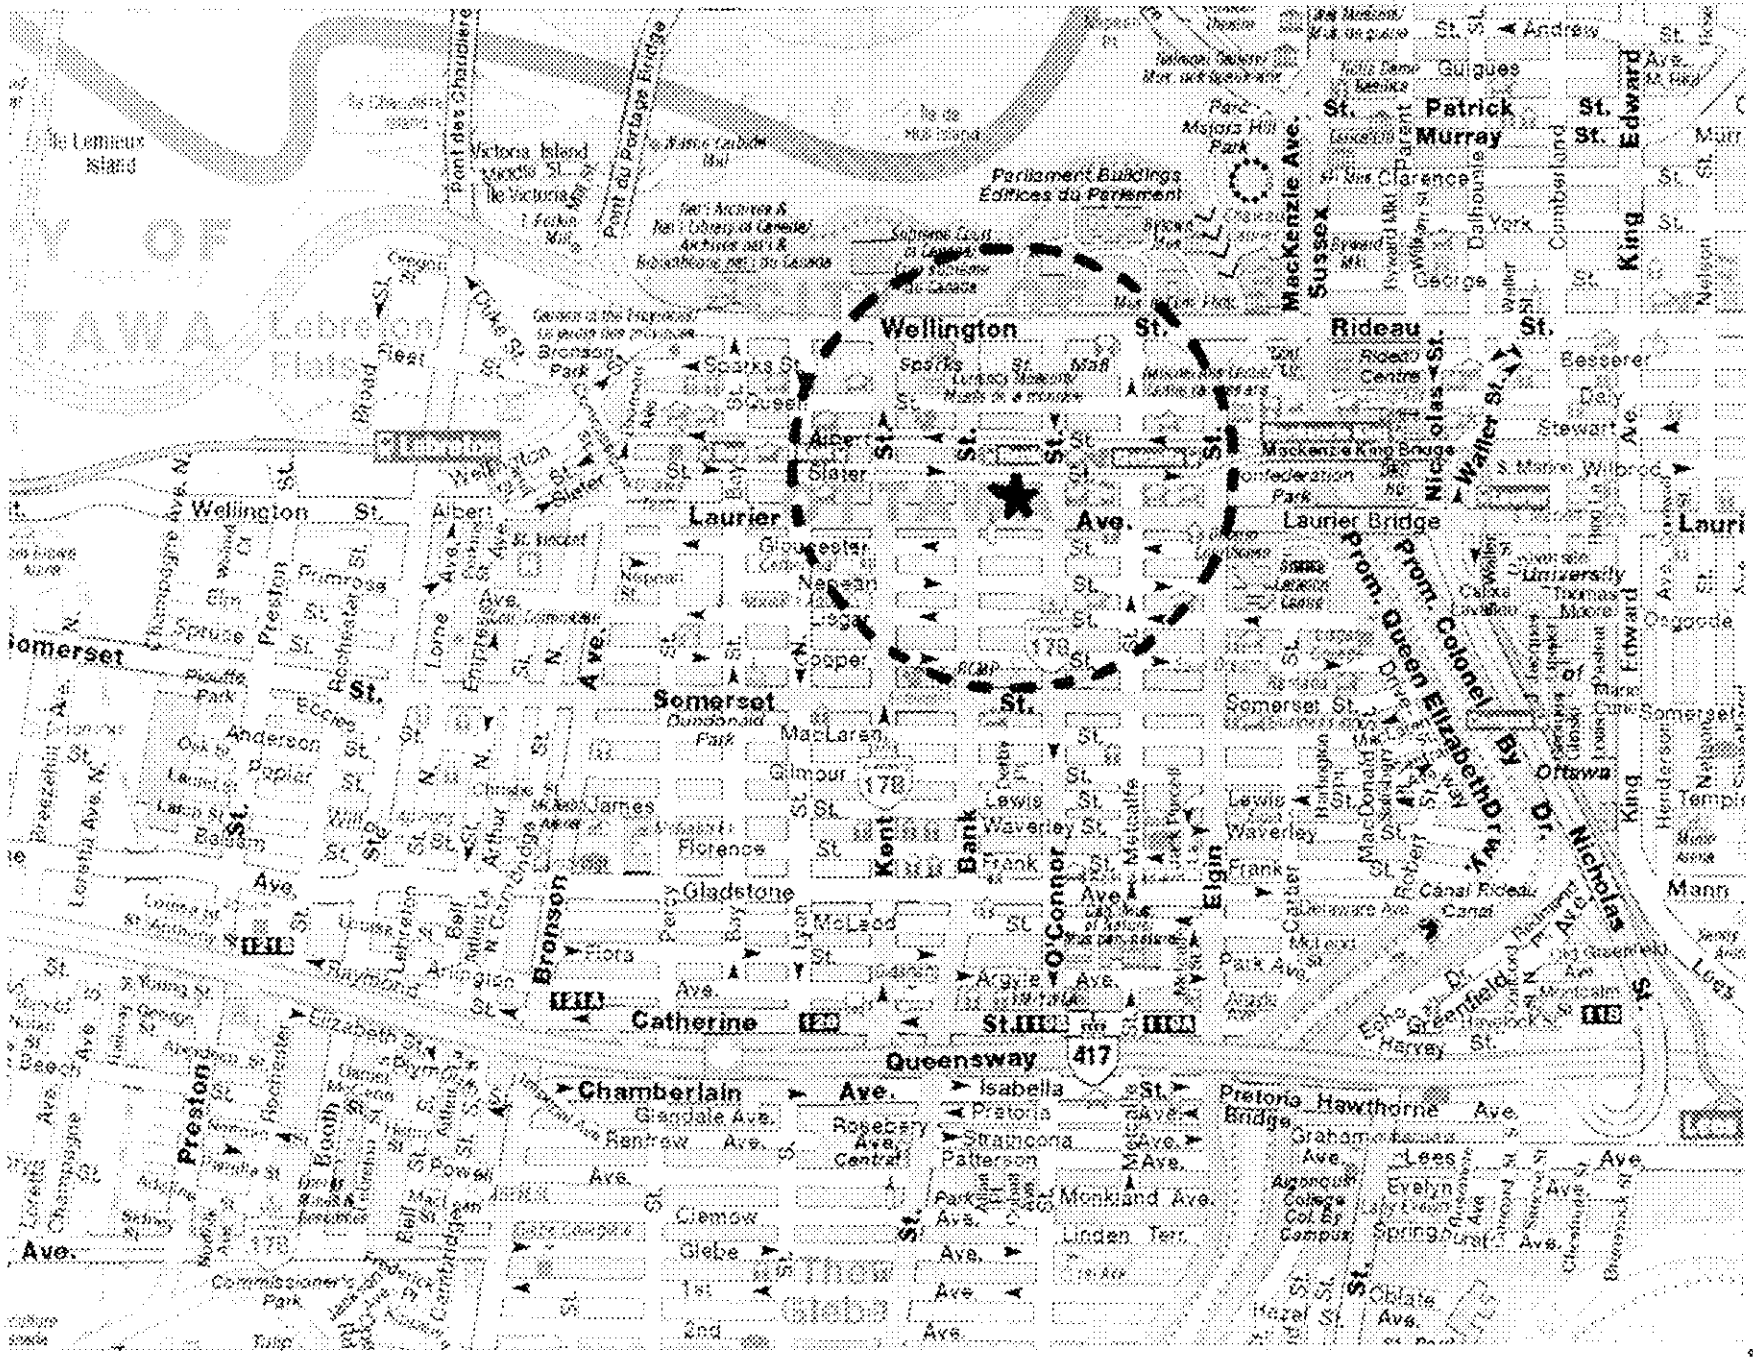
SITE, PLOT, ROOF AND ELEVATION PLANS

4.0 SITE, PLOT, ROOF AND ELEVATION PLANS

The subject property is located at 110 O'Connor Street in Ottawa, Ontario. The nearest building that would be the receptor most sensitive to the emission source is the office building located approximately 15 m north of 110 O'Connor.



The applicable zoning by-law (Neighborhood Monitoring Area No. 13, Central Area Zoning Areas; Zoning-Sub Area 5) has been provided in this section for reference. The location of the subject site is indicated on the zoning map.

Other drawings included in this section are as follows:

- A city map of the area;
- A site plan, which shows the layout of the subject property; and,
- Zoning maps.

The precise rooftop locations of all exhaust stacks associated with the emissions sources were not readily available. They have not all been indicated on the attached drawings. However, the most significant (generator) exhausts are shown, and as the stacks are all low relative to the respective building height, the facility was modelled as a virtual source (discussed in detail in Reference 5) and provision of the precise locations was not considered to be critical in this case.

DISPERSION CALCULATIONS

5.0 DISPERSION CALCULATIONS

5.1 Calculation Method

Regulation 346 Dispersion Modelling

According to the Environmental Protection Act, Regulation 346 (General - Air Pollution), if the height above grade at the point of emission is less than twice the height of the building on which the point of emission is located, then due to a stagnant air layer close to the building, the source of the contaminant should be considered to be the entire building itself. This layer is expected to take effect in this situation. The exhaust stacks of the existing 400 kW and 250 kW generators terminate approximately 2.7 m and 3 m, respectively, above the roof. The 175 kW generator terminates 1.2 m below grade. Therefore, 110 O'Connor as a whole (i.e., the generator enclosures, the exhaust stacks and the building) becomes a virtual source of emissions for the combustion equipment for the calculation of the maximum ground level concentrations (MAXGLCs) at the property line (Refer to the site plan in **Reference 4**.). The dimensions for this virtual source are as follows:

- Width: 20 m;
- Length: 60 m; and,
- Height: 42 m (i.e., height of building above ground level)

As specified in the MOE Dispersion Modelling Report guide, one point, located in the middle of the virtual source, was chosen as the virtual point of emission.

Maximum emission rates for combustion equipment were calculated for contaminants based on manufacturer's specifications or USEPA emission factors, depending on availability. Emission calculations are provided in **Reference 3**.

Point of impingement (POI) calculations were performed to determine the maximum ground level concentrations at the property line as predicted by the MAXGLC subroutine of Version 2 of the Regulation 308/346 dispersion modelling package. A dummy source with an emission rate of 1 g/s was used as a reference in the MAXGLC subroutine dispersion calculations. Maximum concentrations at the property line for contaminants in the virtual source exhaust stream (**Reference 2**) were calculated from a ratio of their emission rates with that of the dummy source. POI concentrations of contaminants that are listed in Regulation 346 were then compared to the MOE criteria for POI concentrations. The results of these calculations are attached and summarized in Table 5.1.

5.2 Results and Discussion

The results of the dispersion modelling calculations are summarized in Table 5.1: Emissions Summary Table, attached.

Table 5.1 indicates that the predicted maximum ground level concentrations for carbon monoxide (CO) and particulate matter (PM) are in compliance with the Regulation 346 half hour average POI concentrations; more specifically, the concentrations are less than 44% of their respective limits. The predicted concentration for nitrogen oxides (NOx) exceeds the applicable MOE POI criteria by 22%. However, since the generators are only used for testing and emergencies, the emergency NOx limit of 1,880 $\mu g/m^3$ may be applied. Therefore the concentration of NOx is 32% of the emergency NOx limit.

SUPPORTING INFORMATION FOR NOISE AND VIBRATION ASSESSMENT

6.0 SUPPORTING INFORMATION FOR NOISE AND VIBRATION ASSESSMENT

All available noise information for the subject generators is included in this section, including the noise information requested in the Mandatory Noise Information for Applications for Certificates of Approval (Air) Diesel/Gas Generator Sets form (MOE).

The 400 kW generator (on the roof) is equipped with a residential grade muffler and is housed within a metal sound-attenuating enclosure on the main roof. Sound data was available to complete a preliminary noise review.

The nearest potentially sensitive noise receptor (hotel at 140 Slater, 14th floor) is located approximately 70 m east, horizontally, from the generator. The curtain wall of the building consists mainly of reflective glass.

The 250 kW generator is housed within the main building structure, in the mechanical room in the penthouse. Sound data for a similar generator was available to complete a preliminary noise review.

The nearest potentially sensitive noise receptor (hotel at 140 Slater, 14th floor) is located approximately 63 m from the 250kW generator.

The 175 kW generator is housed within the basement of the main building structure, in an isolated concrete room. Therefore, the sound propagating from the existing generator exhaust is expected to be minimal. Sound data for a similar generator was available to complete a preliminary noise review.

The nearest potentially sensitive noise receptor (hotel at 140 Slater, 1st floor) is located approximately 79 m from the generator.

In order to predict the potential noise effect of the on-site emergency power generators at the nearest sensitive receptors, preliminary calculations were completed using a standard logarithmic decay equation, accounting for noise decay over a specified distance.

The preliminary noise calculations are presented in Tables 6.1 and 6.2. According to Table 6.1, with the 250 kW and 175 kW generators operating separately for one half hour, the noise level at the nearest potentially sensitive receptor would be 50 and 43 dBA, respectively. This does not exceed the daytime noise limit of 50 dBA.

© Jacques Whitford, 2003

According to Table 6.1, with the 400 kW generator operating for one hour or longer, the noise level at the nearest potentially sensitive receptor would be 64 dBA (worst case emergency conditions). With regards to monthly testing (i.e., 30 continuous minutes per month), application of a usage factor of 0.5 operational hours per averaging hour would result in a noise level of 61 dBA at the nearest potentially sensitive receptor. This exceeds the default daytime noise limit of 50 dBA.

For this reason, Stamson modelling was used to estimate the background traffic noise in the area and at the receptor. From the modelling, daytime traffic noise levels at the receptor location (hotel at 140 Slater, 14th floor) were determined to be 66 dBA. Since the background noise levels are greater than the noise by-law limits, the background levels become the limits, and the generators are not required to meet the noise by-law of 50 dBA during the day. The peak combined noise of 61 dBA from the generators does not exceed the background noise for that area during the day. Therefore 110 O'Connor should be able to test generators, individually or together, for half of an hour, without appreciably contributing to the noise level at the nearest receptor during the day

The Stamson modelling results are provided at the end of this section.

Residential "200" Leve Exhaust Silencers

Typical Attenuation Curve dB(A)*

(ACTUAL ATTENUATION MAY VARY ACCORDING TO APPLICATION)

*Estimated

Application:
These silencers are recommended where minimum silencing is required and ambient noise levels are medium to high.

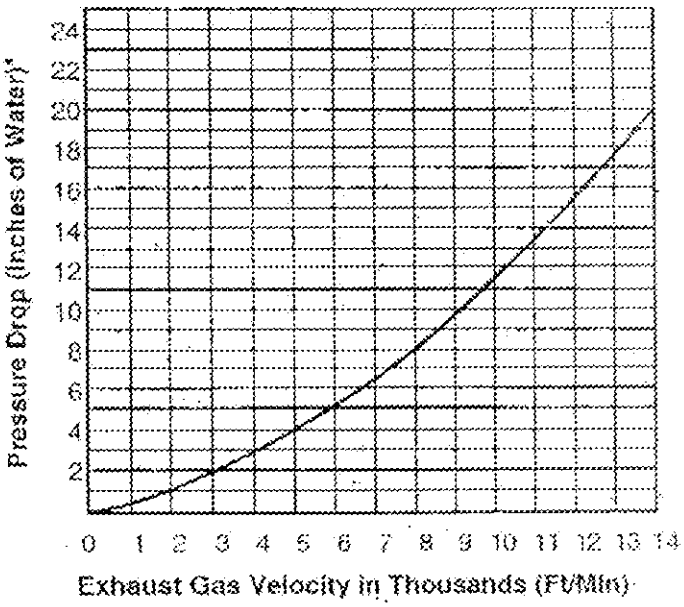
Construction:
Aluminized Steel: Nelson Silencers through 26" O.D. are fabricated of aluminized steel as standard materials. This material has a maximum operating temperature of 1250°F.

Mild Steel/Aluminized Steel: Nelson Silencers 30" O.D. and larger are fabricated of mild steel and aluminized steel. All silencers 30" O.D. through 36" O.D. have aluminized steel bodies with all other components fabricated from mild steel. Silencers 42" O.D. and larger are fabricated from mild steel.

Silicone Aluminum Paint: Nelson Silencers through 26" O.D. are given a coat of high heat resistant silicone aluminum paint.

Primer/Silicone Aluminum Paint: Nelson Silencers over 30" O.D. and larger are given a coat of high heat, rust inhibiting primer and then a topcoat of high heat resistant silicone aluminum paint. Physical properties are maintained up to 900°F* on aluminized steel and 1100°F* on mild steel.

8 holes



"F" Mounting Flange:

Technical Evaluation

The application is for a 175, 250, and 400 kW emergency diesel generators, and 5 boilers and hot water tank having a combined heat input of 10.9 GJ/hr to serve the office building. The applicant has provided emissions summary and dispersion modelling information.

Based on emissions information submitted with respect to nitrogen oxides from the generators and boilers all operating simoultaneously, the POI concentration is 609 ug/m3. While this exceeds the O.Reg. 346 limit of 500 ug/m3 for NOx, it is well within the guideline limit of 1880 ug/m3 based on emergency use of the generator. As well, the self contamination scenario indicates a maximum concentration of 1321 ug/m3 with the largest generator in operation. A condition on the certificate will require that the generators not be tested simoultaneously. The nearest residential receptors are more than 20 m away, and based on noise information provided by the applicant, the noise levels will meet the NPC-205 limits.

The application is recommended for approval.

Incident Information

Incident Summary:	Pro-active SCB ICI Inspection in Office Building Sector *cannot be longer than 60 characters*
Incident Description:	On June 23, 2009 at 1:35 p.m., Provincial Officer J. Junta (#1334) conducted an inspection of the office building located at 110 O'Connor Street, Ottawa (herein referred to as the "Site"). The focus of the inspection was to assess compliance with Ontario Regulation 102/94 and Ontario Regulation 103/94 under the Environmental Protection Act. O. Reg. 102/94 requires the owner of a building or a group of buildings to complete a waste audit and waste reduction work plan; and update the audit and plan every year. O. Reg. 103/94 requires the owner of a building to facilitate the source separation for the purpose of reuse or recycling of the following materials: aluminum food or beverage cans, cardboard (corrugated), fine paper, glass bottles and jars for food or beverages, newsprint, and steel food or beverage cans. The building is legally owned and operated by GE Canada Real Estate Equity Holding Company (herein referred to as the "Company"). During the site inspection, John Reside, Building Operator, GE Canada Real Estate and subsequent to the inspection, Jennifer Patton, Property Manager, GE Capital Real Estate (herein referred to as the "Site Representative(s)"), were interviewed with respect to the operations on Site. Subsequent to the inspection, the Site Representative confirmed that the building's total floor area is approximately 189,174 square feet, which is equivalent to approximately 17,575 square metres. Since the office building is over 10,000 square metres, the Site is subject to the requirements of O. Reg. 102/94 and O. Reg 103/94. Furthermore, it was confirmed that the Company owns the building across the street at 171 Slater Street (approximately 12,913 square metres). Both Sites have implemented a source separation program for the wastes generated by the office building. Subsequent to the time of the inspection, the Site Representative provided a Waste Audit Summary and Waste Reduction Work Plan Summary completed by Logistical Products for both buildings – 110 O'Connor Street, dated May 2009; and 171 Slater Street, dated October 2008. The following is a contravention of O. Reg. 102/94 that was observed during the inspection: 1. The Waste Reduction Work Plan or a Summary of the Waste Reduction Work Plan was not posted, as required by s. 35(a). See Field Inspection Observations section of this report for further details. A letter was issued to the Company requesting that they achieve compliance with O. Reg. 102/94 by October 14, 2009.

Well Record for Well Cluster - Part 3 of 3
Detailed Drawing of All Well Locations

Note: This **Well Record for Well Cluster Part 3 - Detailed Drawing of all Well Locations,** must be attached to Parts 1 and 2.
The drawing must include all property boundaries, an arrow indicating the North direction, all named roads and sufficient measurements to locate all wells in the cluster in relation to fixed points. The drawing must show the location of each well and each well must be numbered on the drawing to match number used for that well on the **Well Record for Well Cluster Parts 1 and 2.**
The well with the well tag must be clearly identified on the Drawing.
UTM coordinates should appear beside each well, if space permits. Additional comments on wells can be included on the drawing
