

Dand-Dee-Single-Side Park 4

14.5" spacing

Length: 48" / **Legs Width:** max 30"

Finish: Mazeweld's Signature Thermoplastic Polymer Powder Coating available in various colours

Function: Vertical and horizontal stagger for smaller footprint, organized and comfortable parking

CITY OF OTTAWA APPROVED

100 % locally built

in Canada's National Capital Region

Our Round-Dee bicycle rack is one of our bicycle racks that is City of Ottawa approved. Being part of designing and building bicycle racks for the City of Ottawa, the Provincial, and Federal Governments is a great privilege. Our Single-Dee also fits into this category. As the years go by, we will be working with and developing other innovative designs for our great Nation. Below are some examples of our City of Ottawa accepted bicycle racks with more coming soon.

THE DAND-DEE

The Dand-Dee is one of the first bike rack models in Canada which meets and exceeds parking bylaws for the City of Ottawa. It is also 100 % locally made in Canada's National Capital Region. It is the first design to prevent crowding, creating order, cradles the bike wheel, supports the bicycle on more than one point, and provides sufficient spacing for bicycle and cyclist to comfortably park and secure their bicycle. It comes in two models, single-sided and double-sided (most efficient use of space). Our new coatings, (first of its kind in Canada) Flame applied Polymer powder coated finish is the icing on the cake. It is a flexible coating which provides superior oxidation protection, compared to traditional powder coating. It comes in various colours, and because of its soft characteristics, also helps protect the bicycle paint finish from scratching or chipping while parked and secured.
