Report: MH1037-REP.01

## 1.0 Executive Summary

Matrix Heritage, on behalf of Cavanagh Developments (Cavanagh), undertook Stage 3 Archaeological Assessments of the Edey/Davis Site (BiFx-27) and the W. Morgan Site (BiFx-28) located within the development area of 1020 and 1070 March Road, Part Lot 13, Concession 4, in the Geographic Township of March, City of Ottawa, Ontario, legally described as PIN 04527-0071, 04527-0074, and 04527-0075 (Map 1). Cavanagh is planning to develop the property for mixed residential and commercial use (Map 2). The archaeological assessment process was triggered in accordance with the Planning Act as a component of a Plan of Subdivision application. This assessment is in accordance with the Ministry of Heritage, Sport, Tourism and Culture Industries' *Standards and Guidelines for Consultant Archaeologists* (2011).

This Stage 1 Archaeological Assessment concluded that, based on criteria outlined in the MHSTCI's *Standards and Guidelines for Consultant Archaeologists* (Section 1.3, 2011), the study area has both pre-contact Indigenous as well as historic Euro-Canadian archaeological potential (Paterson Group 2013).

The Stage 2 archaeological assessment involved a pedestrian survey at 5 m intervals of the area where ploughing was possible. Subsurface testing occurred in areas that could not be ploughed such as woodlots, which consisted of hand excavated test pits at 5 m intervals. The test pit survey resulted in no positive test pits, but pedestrian survey resulted in two distinct artifact scatters of historical material that represent the remains of two historical farmsteads occupied in the mid to late 19<sup>th</sup> century. Based on historical records of ownership, these sites have been registered with the MHSTCI as the Edey/Davis Site (BiFx-27) and The W. Morgan Site (BiFx-28). It was recommended that both sites be subject to Stage 3 archaeological assessment to further understand the occupational content, extent, and the composition of the identified artifact scatters (Matrix Heritage 2021a).

The Stage 3 archaeological assessment of the Edey/Davis Site (BiFx-27) began with a controlled surface pickup (CSP) to confirm the extent of the site discovered during the Stage 2 survey. As per the Stage 2 recommendations for the Edey/Davis Site (BiFx-27) (Matrix Heritage 2021a), as it was not clearly evident that the site would eventually proceed to Stage 4 mitigation of development impact, the Stage 3 grid was laid out in the form of 1 x 1 m excavation units on the full 5 m grid as per Standard 1, Section 3.2.3 (MHSTCI 2011). However, test unit excavation commenced on 10 m intervals and was planned to narrow until it became evident whether to proceed to Stage 4 as per Section 3.3.3 of the *Archaeology of Rural Historical Farmsteads* (MHSTCI 2014). Narrowing to 5 m intervals was not required as it became evident on the 10 m grid, with partial infill unit excavation, that the site would require not Stage 4 mitigation. Accordingly, the Stage 3 assessment of the Edey/Davis Site (BiFx-27) involved the excavation of 44 1 x 1 meter units across a 10-meter grid (Section 3.2.3, Table 3.1, Standard 3) (Map 3). An additional 12 units (27% of the on-grid units) were excavated to examine further areas of interest within the site, with the goal of document artifact concentration drop-offs, increasing the sample size to better determine the nature and chronology of the site, and to delineate the extent of the site (Section 3.2.3, Table 3, Standard 2) (MHSTCI 2011). Infill unit excavation stopped at 12 units (27%) as the combined historical research, stratigraphic data, and assemblage from the 10 m grid and the off-grid units excavated clearly demonstrated the ongoing use of the site had impacted the context of the site and a Stage 4 mitigation was not required. Therefore, as per Section 3.3.3 of the *Archaeology of Rural Historical Farmsteads* (MHSTCI 2014), excavation was stopped when sufficient data had been gained from all areas of the site.

A total of 6,460 artifacts were recovered from the Edey/Davis Site (BiFx-27) (184 artifacts from the CSP and 6,276 artifacts from 1x1 m units). While there are artifacts dating to the 19<sup>th</sup> century

occupation, virtually all archaeological contexts down to subsoil across the site include modern items (e.g., wire nails, plastics) demonstrating a complete lack of integrity for the site owing to this continued occupation well into the 20<sup>th</sup> century. Furthermore, the Edey-Davis Site (BiFx-27) is not considered culturally significant as 80% or more of the artifact assemblage dates the occupation of the site to post-1870 as per Section 3.4.2, Standard 1.a (MHSTCI 2011). Indeed, aerial imagery documents ongoing occupancy into the 1990s with the structure being removed between 1999 and 2002 (Map 4). The removal resulted in the presence of a house mound on the site (Map 3) composed of rubble from the destruction.

The Stage 3 archaeological assessment of the W. Morgan Site (BiFx-28) began with a controlled surface pickup (CSP) to confirm the extent of the site discovered during the Stage 2 survey. As per the Stage 2 recommendations for the W. Morgan Site (BiFx-28) (Matrix Heritage 2021), as it was not clearly evident that the site would eventually proceed to Stage 4, the Stage 3 grid was laid out in the form of 1 x 1 m excavation units on the full 5 m grid as per Standard 1, Section 3.2.3 (MHSTCI 2011). However, test unit excavation commenced on 10 m intervals and was planned to narrow until it became evident whether to proceed to Stage 4 as per Section 3.3.3 of the Archaeology of Rural Historical Farmsteads (MHSTCHI 2014). Accordingly, the Stage 3 assessment of the W. Morgan Site (BiFx-28) commenced with the excavation of 1 x 1 meter units at 10-meter intervals (Section 3.2.3, Table 3.1, Standard 3) (Map 5) with the plan to narrow to a 5 m grid and complete infill as required. This strategy was used to determine the nature and chronology of the artifacts and the extent of the site. Per unit artifact yields from the site on the 10 m grid were generally low on the initial 10 m grid and therefore it was not evident whether the site would proceed to Stage 4. Accordingly, additional 1 x 1 meter units were then dug to fill in to complete the 5-meter grid for a total of 24 on-grid units. An additional six infill units (25% of the on-grid total) were excavated to examine areas of interest within the site, with the goal of better documenting artifact concentrations, drop-offs, increasing the sample size to better determine the nature and chronology of the site, and to delineate the extent of the site (Section 3.2.3, Table 3, Standard 2) (MHSTCI 2011).

Stage 3 assessment of the W. Morgan Site (BiFx-28) produced an assemblage of 1,013 artifacts (988 from 1x1 m unit excavation and 25 during the CSP). This collection is largely material typical of a rural mid to late-19<sup>th</sup> century Euro-Canadian farmstead. Structural evidence in the form of considerable numbers of cut nails and pane glass demonstrate that a building was constructed on the site sometime in the mid-19<sup>th</sup> century. A small number of wire nails hint at modification or repairs undertaken later in the 19<sup>th</sup> century or intrusive refuse scattering from later occupancy. Although no foundations or cultural features were uncovered, the amount of domestic refuse recovered suggests that the site was associated with a residence rather than an outbuilding. The north half of Lot 13, Concession 4 was owned in the early 19<sup>th</sup> century by George Morgan, who resided on the west side of March Road in Concession 3, outside of the study area (Map 6). He likely used the lands within the study area for farming, as no structure is shown on the 1863 Walling map (Map 6). In 1870, William Morgan purchased the Concession 4 lands from George, his father, (OLR:Ottawa-Carleton (04), March, Book 3), and in 1879 is shown as the occupant with a structure in the location of the archaeological site (Map 6).

Based on the documentary evidence and artifact assemblage (both chronologically and functionally), the site is associated with the residence of William Morgan and his family. Based on the late 19<sup>th</sup> century trend of the assemblage and association with a historically documented occupancy that started in 1870, as per Section 3.4.2, Standard 1.a (MHSTCI 2011), the W. Morgan site (BiFx-28) is not considered culturally significant as 80% or more of the artifact assemblage dates the occupation of the site to post-1870. Therefore, no further archaeological study is required for the W. Morgan Site (BiFx-28).

Stage 3 field work took place over the span of 16 days on September 20, 21, 24, 27-30 and October 1, 4-8, and 12-14 2021. Weather conditions ranged from sunny to overcast and slightly drizzling, with temperatures ranging from 8-25° Celsius. Permission to access the property was provided by Cavanagh.

Based on the results of this investigation at the Edey/Davis Site (BiFx-27) it is recommended that:

1. No further archaeological study is required for the study area as delineated in Map 1.
2. Should deeply buried archaeological material be found on the property during construction activities, the Ministry of Heritage, Sport, Tourism and Culture Industries should be notified immediately.

Based on the results of this investigation at the W. Morgan Site (BiFx-28) it is recommended that:

3. No further archaeological study is required for the study area as delineated in Map 1.
4. Should deeply buried archaeological material be found on the property during construction activities, the Ministry of Heritage, Sport, Tourism and Culture Industries should be notified immediately.

## 4.0 Project Context

### 4.1 Development Context

Matrix Heritage, on behalf of Cavanagh Developments (Cavanagh), undertook Stage 3 Archaeological Assessments of the Edey/Davis Site (BiFx-27) and the W. Morgan Site (BiFx-28) located within the development area of 1020 and 1070 March Road, Part Lot 13, Concession 4, in the Geographic Township of March, City of Ottawa, Ontario, legally described as PIN 04527-0071, 04527-0074, and 04527-0075 (Map 1). Cavanagh is planning to develop the property for mixed residential and commercial use (Map 2). The archaeological assessment process was triggered in accordance with the Planning Act as a component of a Plan of Subdivision. This assessment is in accordance with the Ministry of Heritage, Sport, Tourism and Culture Industries' *Standards and Guidelines for Consultant Archaeologists* (2011).

The City of Ottawa has an archaeological management plan which was developed in 1999, *The Archaeological Resource Potential Mapping Study of the Regional Municipality of Ottawa-Carleton*. The management plan covers the Township of March (Archaeological Services Inc. and Geomatics International Inc 1999). According to the management plan, most of the property falls within an area of archaeological potential, moreover, the entire property is considered to have archaeological potential according to the 2011 Standards set out for consultant archaeologists by the MHSTCI (2011).

At the time of the archaeological assessment, the study area was owned by Cavanagh Developments. Permission to access the study property was granted by Cavanagh, prior to the commencement of any field work; no limits were placed on this access.

### 4.2 Historical Context

#### 4.2.1 Historic Documentation

The subject property is in the geographic township of March, former County of Carleton. March Township was first surveyed in 1820 and the first settlers in 1819 included retired officers of the Napoleonic Wars, who received plots on the Broken Front along the Ottawa River (Belden 1879). The early history of March is described in *March Past* (Burns et al. 1972), *Families and Heritage Homes of March Township: The Historical Project* (Senior Citizen's Club of March Township 1974-1978), and *The Catholic Community of St. Isidore* (St. Isidore Parish 1987). Other useful resources include, *The Carleton Saga* (Walker and Walker 1968), Courtney Bond's *The Ottawa Country* (Bond 1968), and Belden's *Illustrated Historical Atlas of Carleton County* (Belden 1879).

#### 4.2.2 Pre-Contact Period

The Laurentide Ice Sheet of the Wisconsinian glacier blanketed the Ottawa area until about 11,000 B.P. At this time the receding glacial terminus was north of the Ottawa Valley, and water from the Atlantic Ocean flooded the region to create the Champlain Sea. The Champlain Sea encompassed the lowlands of Quebec on the north shore of the Ottawa River and most of Ontario east of Petawawa, including the Ottawa Valley and Rideau Lakes. However, by 10,000 B.P. the Champlain Sea was receding and within 1,000 years was gone from Eastern Ontario (Watson 1990:9).

By circa 11,000 B.P., when the Ottawa area was emerging from glaciations and being flooded by the Champlain Sea, northeastern North America was home to what are commonly referred to as the Paleo-Indian people. For Ontario the Paleo-Indian period is divided into the Early Paleo-Indian period (11,000 - 10,400 B.P.) and the Late Paleo-Indian period (10,500-9,400 B.P.), based on changes in

tool technology (Ellis and Deller 1990). The Paleo people, who had moved into hospitable areas of southwest Ontario (Ellis and Deller 1990), likely consisted of small groups of exogamous hunter-gatherers relying on a variety of plants and animals who ranged over large territories (Jamieson 1999). The few possible Paleo-Indian period artifacts found, as surface finds or poorly documented finds, in the broader region are from the Rideau Lakes area (Watson 1990) and Thompson's Island near Cornwall (Ritchie 1969:18). In comparison, little evidence exists for Paleo-Indian occupations in the immediate Ottawa Valley, as can be expected given the environmental changes the region underwent, and the recent exposure of the area from glaciations and sea. However, as Watson (Watson 1999:38) suggests, it is possible Paleo-Indian people followed the changing shoreline of the Champlain Sea, moving into the Ottawa Valley in the late Paleo-Indian Period, although archaeological evidence is absent.

As the climate continued to warm, the ice sheet receded further allowing areas of the Ottawa Valley to be travelled and occupied in what is known as the Archaic Period (9,500 – 2,900 B.P.). This period is generally characterized by increasing populations, developments in lithic technology (e.g., ground stone tools), and emerging trade networks. Archaic populations remained hunter-gatherers with an increasing emphasis on fishing. Sites from this period in the region include Morrison's Island-2 (BkGg-10), Morrison's Island-6 (BkGg-12) and Allumette Island-1 (BkGg-11) near Pembroke, and the Lamoureux site (BiFs-2) in the floodplain of the South Nation River (Clermont 1999).

The Woodland Period is characterized by the introduction of ceramics. Populations continued to participate in extensive trade networks that extended across much of North America. Social structure appears to have become increasingly complex with some status differentiation recognized in burials. Towards the end of this period domesticated plants were gradually introduced to the region. This coincided with other changes including the development of semi-permanent villages. The Woodland period is commonly divided into the Early Woodland (1000 – 300 B.C.), Middle Woodland (400 B.C. to A.D. 1000), and the Late Woodland (A.D. 900 – European Contact) periods.

The Early Woodland is typically noted via lithic point styles (i.e., Meadowood bifaces) and pottery types (i.e., Vinette I). Early Woodland sites in the Ottawa Valley region include Deep River (CaGi-1) (Mitchell 1963), Constance Bay I (BiGa-2) (Watson 1972), and Wyght (BfGa-11) (Watson 1980). The Middle Woodland period is identified primarily via changes in pottery style (e.g., the addition of decoration). Some of the best documented Middle Woodland Period sites from the region are from Leamy Lake Park (BiFw-6, BiFw-16) (Laliberté 1999).

The identification of pottery traditions or complexes (Laurel, Point Peninsula, Saugeen) within the Northeast Middle Woodland, the identifiers for the temporal and social organizational changes signifying the Late Woodland Period, subsequent phases within in the Late Woodland, and the overall 'simple' culture history model assumed for Ontario at this time (e.g. Ritchie 1969; Wright 1966, 2004) are much debated in light of newer evidence and improved interpretive models (Engelbrecht 1999; Ferris 1999; Hart 2011; Hart and Brumbach 2003, 2005, 2009; Hart and Englebrecht 2011; Martin 2008; Mortimer 2012). Thus, the shift into the period held as the Late Woodland is not well defined. There are general trends for increasingly sedentary populations, the gradual introduction of agriculture, and changing pottery and lithic styles. However, nearing the time of contact, Ontario was populated with somewhat distinct regional populations that broadly shared many traits. In the southwest, in good cropland areas, groups were practicing corn-bean-squash agriculture in semi-permanent, often palisaded villages which are commonly assigned to Iroquoian peoples (Wright 2004:1297–1304). On the shield and in other non-arable environments, including portions of the Ottawa Valley, there seems to remain a less sedentary lifestyle often associated with the Algonquian groups noted in the region at contact (Wright 2004:1485–1486).

### 4.2.3 Contact Period

Initial contact between the Ottawa Valley Algonquian groups and European explorers occurred during Champlain's travels in 1613. At this time the Algonquian people along the Ottawa River Valley, an important and long-standing trade route to the interior, were middle-men in the rapidly expanding fur-trade industry and alliances were formed or reinforced with the French. Early historical accounts note many different Algonquian speaking groups in the region at the time. Of note for the lower Ottawa Valley area were the Kichesipirini (focused around Morrison Island); Matouweskariini (upstream from Ottawa, along the Madawaska River); Weskarini (around the Petite Nation, Lièvre, and Rouge rivers west of Montreal), Kinounchepirini (in the Bonnechere River drainage); and the Onontcharonon, (along the South Nation River) (Joan Holmes & Associates 1993; Morrison 2005; Pilon 2005). However, little archaeological work has been undertaken of contact period Algonquians (Pilon 2005).

Starting in the 1630s and continuing into the 1700s, European disease spread among the Algonquian groups along the Ottawa River, bringing widespread death (Trigger 1986:230). Additionally, up to 1650 warfare and raiding into the lower Ottawa Valley by the Five Nation Iroquois forced the various Algonquin groups from the area (Morrison 2005:26). By 1701 the Iroquois had been driven from most of southern Ontario and the Ottawa Valley was occupied by the Algonquin Nation (Morrison 2005:27–28).

A traditional lifeway was continued by many of the Algonquian groups in the lower Ottawa Valley above Montreal through to the influx of European settlement in the late 1700s and early 1800s. This included bands noted to be living along the Gatineau River and other rivers flowing into the Ottawa. These traditional bands maintained a seasonal round focused on harvesting activities into the 1800s when development pressures and assimilation policies implemented by the colonial government saw Algonquian lands taken up, albeit under increasing protest and without consideration for native claims, for settlement and industry.

### 4.2.4 Post-Contact Period

March Township was first surveyed in 1820, although settlers began arriving in 1819. The township acquired its name at a dinner party held in the Village of Richmond in Goulbourn Township, on 27 August 1819. In attendance was the Governor General of British North America, Charles Lennox, Duke of Richmond, who passed away the following day from rabies. The new township that was laid out fronting on the Ottawa River was named after the Duke's son, Charles Gordon-Lennox, Earl of March (Bond 1968).

The township is bounded on the northeast by the Ottawa River, the east by Nepean Township, the southeast by Goulbourn Township, the southwest by Huntley Township, and the northwest by Torbolton Township. March Township was originally part of the District of Johnstown, in 1822 it became part of the District of Bathurst and was incorporated into Carleton County in the 1840s. The 27,993 acres were laid out in seven concessions 7/8 of a mile wide. Only the first two concessions are full concessions, as the others are all broken by the line of Nepean Township or the Ottawa River (Belden 1879).

Settlement in March Township began in 1819 when Colonel Lloyd, a veteran of the British Army against Napoleon in Egypt in 1802, and other half pay officers from the Napoleonic wars were influenced to settle along the Ottawa River rather than in the military settlements of Richmond or Perth. Among the first settlers were Lieutenant Thomas Read, Captain Weatherby, and Captain Benjamin Street of the Royal Navy, and Captain John B. Monk of the army. Free land grants were awarded to discharged military as follows: privates 100 acres, sergeants 200 acres, army lieutenants

500 acres, Royal Navy lieutenants and army captains 800 acres, and Royal Navy captains 1,200 acres. Since the township was not officially surveyed until 1820, many of the new settler's were located on the wrong lots, and some had built houses on other's property, luckily these mishaps were solved amicably (Belden 1879).

It was not until 1820 that civilians, who were awarded 100-acre half lots, arrived in March Township. Unlike other townships, March did not provide provisions as to the amount of land that needed to be cleared, the only stipulation was that it be settled. Nor were there requirements for the particular style of house to be built upon the land. Settlers were also given a kit of tools consisting of necessary equipment and supplies including a blanket, axe, hand saw, spade, shovel, pickaxe, scythe, camp kettle, 12 lbs of nails, and 12 panes of glass. Every retired soldier further received one year of rations (Belden 1879).

One civilian of note who settled on the Ottawa River alongside the army and Royal Navy officers was Hamnett Kirkes Pinhey, a civilian merchant from Plymouth, England. Pinhey won distinction during the Napoleonic Wars by getting messages through the French blockade, which later earned him a grant of 1,000 acres along the Ottawa River (Burns et al. 1972). With his wife Mary Ann, he settled on Lot 23 of Concessions 6 and 7. With his great wealth he constructed an estate which he named Horaceville, after his son. In 1823, Pinhey built the first grist and sawmills in the township on his land, followed in 1824-1826 by financing the construction St. Mary's, the first Anglican Church, on his land (Burns et al. 1972). For his service to the community, the government supplemented Pinhey's land grant with another 1,000 acres. With two mills and a church, the Pinhey estate quickly became an early focus for the community and Pinhey emerged as a community leader, shown by the fact that he was a member of the Legislative Council of Upper Canada, and Township Reeve from 1850-1855 (Belden 1879).

While the riverfront was settled by officers, the interior of the township was settled between the 1820s and 1840s mainly by Irish farmers, tradesmen, and lower ranking soldiers. In many cases these settlers received the best arable land in the township, as the soils closer to the river were very shallow (Burns et al. 1972). Belden noted that March Township was the poorest in Carleton County in terms of soils, with many areas of exposed bedrock, although there were pockets of good areas with a large number of excellent farms (Belden 1879). The first census of the township was undertaken in 1823 by the township clerk Henry Edward, who lived on Lot 22 Concession 4, and enumerated 49 families, a total of 207 people, living within the township (Belden 1879; Walker and Walker 1968).

During the early settlement of the township the only semblance of a village appeared in the south at what became known as March Corners, with its centre at Lots 10 and 11 of Concession 3 and 4. This hamlet was at the centre of six different roads, and by 1879 had a post office, two general stores, a blacksmith and wagon shop, an orange hall, and the only hotel in the township (Belden 1879:xlvi). The hamlet was also known as South March; in various directories, it is described as a post village situated on Lot 11 Concession 3, located 14 miles from Ottawa. In 1876, it is described as having one church and approximately 100 inhabitants (Woodburn 1876).

Free land grants in March Township were discontinued in 1824, however, many Irish immigrants continued arriving throughout the 1820s and 1830s (St. Isidore Parish 1987). The early Irish Catholic settlers were visited by missionaries from Kingston, Richmond, and Perth. By 1836, there were enough Catholic families to build a log chapel that measured 38' x 23'. It was officially blessed as a Mission of St. Patrick Fallowfield in 1840 by Bishop Ignace Bourget of Montreal. The church was enlarged in 1850 and used until the present church was built in 1887 on two acres land donated by John Lahey on part of Lot 14 Concession 4. The parish was usually referred to the Mission of March, but in 1883 Archbishop Joseph-Thomas *Duhamel* of Ottawa called it St. Isidore (St. Isidore Parish 1987).

In 1837, General Lloyd (previously Colonel) initiated action to construct a second Anglican church near the small hamlet of South March. Funds were raised by the community and land donated by John Armstrong and O. Riddell on part of Lot 10, Concession 4. By 1840, St. John's church was completed, and shortly after was visited by John Strachan the Anglican Bishop of Toronto. This church eventually preceded that of St. Mary's and still stands today (Walker and Walker 1968).

For numerous years in the early development of the township there were not enough children of school age to necessitate the construction of a schoolhouse. When the need arose, either people were too scattered or too poor to require a school. In 1827, there is reference to a school opened in the home of Mrs. Thomas Read to educate the children of the wealthier families in the township (Burns et al. 1972). Sometime later the first hewed log school building was erected on the land of John G. Street, the son of Captain Street, on his land on Lot 19, Concession 7. For the first two years that the school was open, Street paid the schoolteacher himself. The first public school erected in the interior of the township was on John Armstrong's land on Lot 11, Concession 3. The first schoolteacher was John Younghusband, who lived on Lot 12, Concession 4 (Belden 1879). By 1863, there were 6 log schools in the township with a total of 155 students in attendance (Walker and Walker 1968).

The first post office was established on Lt. Thomas Read's riverfront property sometime prior to 1825. Mail from Hull took as long as four days to arrive. There were no roads to the post office so residents canoed, walked, or went by horseback to retrieve their mail. In one instance, a man named Henry MacLaren drowned while paddling his canoe to receive a letter from his mother in Scotland. By 1825, settlers near March Corners petitioned for a post office, but it was not granted at the time, consequently Jeremiah Goodman was appointed courier to travel weekly between March Corners and the post office on Read's land to deposit and collect mail. By 1848, a post office opened in March Corners with Goodman as postmaster. By 1864, a post office had opened in the hamlet of Dunrobin north of Constance Lake, with Henry Younghusband as the postmaster (Burns et al. 1972). In 1870, the post office on Thomas Read's property burnt down, and was relocated slightly to the south on Lot 20 with W. H. Berry as postmaster. By 1879, this post office was receiving tri-weekly mail, while the post office at March Corners had become more prominent and was receiving daily mail (Belden 1879). By the 1880s, there were three additional post offices established at Marchurst, Malwood, and Harwood Plains (Burns et al. 1972).

By 1842, *Smith's Canadian Gazetteer* noted a significant increase in population to 831 inhabitants (Burns et al. 1972). By 1846, the township produced 6,800 bushels of wheat, 8,900 bushels of oats, 18,700 bushels of potatoes, 700 lbs of butter, and 2,300 lbs of wool. By this time a second sawmill had opened, run by Mr. Headley on Lot 18 Concession 4, while there was still only one gristmill located on Pinhey's land.

March Township reached its boom period in the 1850s and 60s (Burns et al. 1972). In 1851, there were 1,125 inhabitants in the township. There were 8 stone houses, 1 frame house, 88 log cabins, and 70 shanties (Bond 1968). There were 140 farmers actively involved in agriculture on their own land and approximately 70-80 farm labourers. The township had three blacksmiths, four shoemakers, four carpenters, two tailors, two merchants, and one lumber merchant (Burns et al. 1972). By 1861, the population had grown to 1,454 living in 10 stone houses, 3 frame houses, and 197 log cabins (Bond 1968). A total of 153 farmers farmed 21,200 acres of land. Oats were the dominant crop yielding 31,000 bushels, but the dependence on the potato is seen by the 243 acres of potatoes planted that yielded 25,000 bushels (the surveyor noted this was a low yield for the year due to the prevalence of rot). There was growth within the trades as the township now had a total of five blacksmiths, one harness maker, four inn keepers, seven carpenters, six shoemakers, four tanners (all at McMurtry's tannery on Lot 11, Concession 2), one tailor, three weavers, and one

wagon maker (Burns et al. 1972). Directories from this period reflect this prosperity in their detailed returns (Mitchell and Co 1864).

In the summer of 1870, a great fire passed through Carleton County and destroyed much of March Township, although March Corners and Horaceville escaped the flames. Crops, homes, and livestock were burned, though most inhabitants took refuge in rivers and wells. The fire significantly changed the composition of the land as it cleared trees and soil was lost from erosion, altering the drainage system. Swampy areas had dried out and turned into good land for agriculture (Burns et al. 1972).

The first railway to pass through the township was lumber and railway baron John Rudolphus Booth's Ottawa, Arnprior, and Renfrew line in 1888. This line eventually connected to the Canada Atlantic Railway which connected Ottawa to Vermont and facilitated transporting lumber from the interior of Ontario to markets in the United States. In 1904, this line was bought by the Grand Trunk Railway and eventually the CNR line. In 1910-1914 William Mackenzie and Donald Mann's Canadian Northern railway was laid through the township. It is now a part of CNR's main line linking Ontario to the West (Burns et al. 1972: 30).

#### 4.2.5 Study Area Specific History

On June 12, 1824, the patent for all 200 acres of Lot 13, Concession 4 was granted to Edward Sands Bradley, the son of Captain William Brown Bradley (OLR:Ottawa-Carleton (04), March, Book 3). Captain Bradley commanded the 104th Regiment of Foot during the War of 1812, renowned for leading his company on an unprecedented 52-day overland winter march from Fredericton, New Brunswick, to Kingston, Ontario in 1813 to reinforce the British army in Upper Canada against the advancing Americans (Prytula 2015).

In 1825, Edward sold the lot to William Montgomery. That same year, Montgomery sold the north half of Lot 13 to George Morgan and the south half was sold to Dominick Burk (OLR:Ottawa-Carleton (04), March, Book 3). The property history is henceforth divided into the northern and southern halves associated with the W. Mogan Site (BiFv-26) and Edey/Davis Sites (BiFx-25) respectively.

#### **North Half of Lot 13, Concession 4 (W. Mogan Site [BiFv-26])**

When George Morgan acquired the north half of Lot 13, Concession 4, from Montgomery in 1825 he already had a connection to the area as his older brother, Thomas, was granted the south half of Lot 13 Concession 3, located across the concession road to the west. Later in 1828, George acquired more land in the area when he received the patent for the north half of Lot 13 Concession 3 (OLR:Ottawa-Carleton (04), March, Book 3) – also to the west, across the concession road, where he build his home and resided.

The Morgan brothers were Anglicans of Irish decent (Statistics Canada 1851) and worked as shipwrights in England. At first, Thomas was the only one to occupy the land while George worked as a carpenter in Hull, England which may account for the land patented being issued to George four years after Thomas' land grant (Senior Citizen's Club of March Township 1974). Both George and Thomas Morgan are listed on an 1843 document having contributed 162 pounds 10 shillings and 145 pounds respectively for levies for road work (Younghusband 1843). These sums are quite high compared to many of the other ones listed, perhaps suggesting a certain degree of affluence.

In 1853, George conveyed all his property (north half of Lot 13, Concessions 3 and 4) to John Armstrong et. al., and in 1856 it was sold by John Armstrong et al. back to George Morgan (OLR:Ottawa-Carleton (04), March, Book 3). The 1863 Walling map shows George Morgan as the

owner of both the north halves of Lot 13, Concessions 3 and 4, but with a structure on his property on Concession 3 (outside the current study area) (Map 6). George is listed as a farmer on the 1851 census with his wife Maria (also born in Ireland) and children John and William. The census notes that they were inhabiting a one storey log structure at the time (Statistics Canada 1851). Maria is not listed in the 1861 census, but George is not listed as widowed (Statistics Canada 1861). There is, however, a Maria Morgan of the same age listed on the 1861 Goulburn census as a non-family member resident of the household of William Healy. The Morgan home is a log structure and noted as having two storeys in 1861, and two additional children (Maria and Emma) are listed. Another non-family member – an Irish carpenter named John Shone – is listed as a resident and the head of household.

On the 1871 census, George is again listed as married and living with his daughters Maria and Emma, but his wife Maria is not listed. In Schedule 3 of the same census, he is listed as owning 200 acres of land, two dwelling houses, three barns/stables, one carriage/sleigh, three cars/wagons/sleds, two ploughs/cultivators, a horse rake, a threshing machine, and a fanning mill. Schedule 4 confirms his occupation of Lot 13 Concession 3 as owner (outside of the current study area). On the 1881 census, he is listed as living alone at the age of 85 (Statistics Canada 1881). He died in 1884 at the age of 88 of bronchial pneumonia (Ancestry. com 2010).

In 1870, George sold his property on Lot 13, Concession 4 to his son William (OLR:Ottawa-Carleton (04), March, Book 3). The 1871 census indicates that William Morgan and his family resided at Lot 13, Concession 4. William was married to Frances Morgan and had six children – Eli, Robert, Margaret, Maria, Mary, and Fleming (Statistics Canada 1871, 1881, 1891). The 1879 Belden map shows William Morgan as the owner of Lot 13 Concession 4, living in a structure fronting the concession road, well aligned with the W. Morgan Site location (Map 6). The 1885 directory, however, notes William Morgan's address as Lot 13 Concession 3, indicating he had taken over his father's house following his death (Union Publishing 1885). In 1888, William deeded the 50 acres of the south half of the north half of Lot 13, Concession 4 to his son Eli, and in 1896 he deeded 40 acres of the front part of the north half of that lot to his son Robert, the remaining 10 acres to Eli. The 1891 lists Eli Morgan as a single farmer and Robert is still listed as living with his parents. The property stayed in the Morgan family until the north half was sold in 1966 and the remainder in the 1990s (OLR:Ottawa-Carleton (04), March, Book 3).

### **South Half of Lot 13, Concession 4 (Edey/Davis Sites [BiFx-25])**

Although Dominick Burk acquired the south half of Lot 13, Concession 4 in 1825, the next entry for the south half of Lot 13 is for an 1873 sale from Elizabeth Edey to Joseph Davis (OLR:Ottawa-Carleton (04), March, Book 3). While it is unclear when the Edey's acquired the property, a "Edy T. H" (tenant house), is shown on the 1863 Walling map (Map 4) near the road and adjacent to Shirley's Brooke. Although no Elizabeth Edey could be located living in the March Township in census records, there was an Elizabeth Edey that lived in Huntley, an adjoining community less than 10 km southwest of March with her husband Moses and their seven kids (Statistics Canada 1861). Given the census, land registry, and status of the structure as a tenant house, it is possible the Edey family arrived as tenant farmers circa 1861-1863 (after the census but before the Walling survey), then purchased the property sometime between 1863 and the sale in 1873 to Joseph Davis.

Joseph Davis, who acquired the south half of Lot 13 in 1873, is depicted on the 1879 Belden map as residing in a structure on the concession road at Shirley's Brooke, possibly the same structure from the Edey occupation seen on the 1863 map (Map 6). The 1871 census records Joseph, a 28-year-old Irish farmer, and his wife Frances, 26, as already residing in March with their two young children Isaac and Frances, who had been born that same year. This is the same location as the

Edey/Davis Site (BiFx-27). This lot stayed in the Davis family, who operated a farm there until the early 1990s (OLR:Ottawa-Carleton (04), March, Book 3).

### 4.3 Archaeological Context

#### 4.3.1 Current Conditions

The Stage 3 assessments were undertaken along the western border of the development area of 1020 and 1070 March Road, Part Lot 13, Concession 4, in the Geographic Township of March, City of Ottawa, Ontario, legally described as PINs 04527-0071, 04527-0074, 04527-0075. Both are located near March Road.

The W. Morgan site is the northernmost of the two sites excavated. It is within an agricultural field (Figure 1) that, at the time of assessment, was bordered to the west and south by an active construction staging and stockpiling area (Figure 2 to Figure 7) for road construction not associated with the development. The area to the west had been previously disturbed by the presence of a gravel parking lot as shown in aerial imagery (Map 5). The disturbances, in combination in decreasing artifact yields, served to delineate the south and western expansion of the assessment area. To the north is existing residential development and to the east is additional agricultural land within the development area.

The Edey/Davis Site is the southernmost of the two sites and spans across agricultural fields (ploughed and fallow) (Figure 8) into a forested area (Figure 9) (Map 3). Is bordered to the west by a ditch and March Road (Figure 10). The southern part of the site extends from ploughed farm field into the wooded area (Figure 11) which encompasses the remnants of the Davis house (herein referred to as the house mound), which was removed in the 1990s. The northern part of the site ends to the edge of the forested area where a recent parking area divides the forest from the adjacent fallow field (Figure 12). Piled on top of the house mound was a modern refuse pile which included large timbers, concrete blocks, and rubble (Figure 13, Figure 14). To the east is additional agricultural land within the development area.

#### 4.3.2 Physiography

The study area lies within the Ottawa Valley Clay Plains. The region is characterized by poorly drained topography of clay plains interrupted by ridges of rock or sand that offer moderately better drainage. This topography was influenced by the post glacial sequence Champlain Sea (ca. 10,500 to 8,000 B.C.) that deposited these clay soils and were subsequently covered by sand deposits from the emerging freshwater drainage. Some of these sands were eroded to the underlying clay deposits by later channels of the developing Ottawa River. The sections to the north and south of the Ottawa River are characteristically different. On the Ontario side there is a gradual slope, although there are also some steep scarps (Chapman and Putnam 2007:205–208).

The study area consists entirely of Brandon Soils. Brandon series soils consist of a poorly draining Orthic Humic Gleysol non-stony silty clay loam on a nearly level surface. These soils are generally very dark greyish brown to very dark grey in colour and have subangular blocky to granular structure. Subsoil is typically dark grey with prominent yellowish-brown mottling (Schut and Wilson 1987:37).

The surficial geology of the study area is massive, well laminated clay derived from Champlain Sea offshore marine deposits. These are typically clay, silty clay and silt, commonly calcareous and fossiliferous; locally overlain by thin sands. Upper parts are generally mottled or laminated reddish brown and bluish grey and may contain lenses and pockets of sand, but at depth the clay is uniform and blue grey.

### 4.3.3 Previous Archaeological Assessments

The Stage 1 assessment of the development area was completed as a component of a larger assessment of the overall Kanata North Urban Expansion Area on Part Lots 11, 12, 13, and 14 Concession 3 and Part Lots 12 and 13 Concession 4 (Paterson Group 2013). The Stage 1 background assessment concluded that, based on criteria outlined in the MHSTCI's *Standards and Guidelines for Consultant Archaeologists* (Section 1.3, 2011), the study area had both pre-contact Indigenous as well as historical Euro-Canadian archaeological potential.

The Stage 2 archaeological assessment of the development area (Matrix Heritage 2021a) involved a pedestrian survey at 5 m intervals of the area where ploughing was possible. Subsurface testing occurred in areas that could not be ploughed such as woodlots, which consisted of hand excavated test pits at 5 m intervals. The test pit survey resulted in no positive test pits. This investigation resulted in two distinct artifact scatters of historical material that represent the remains of two historical farmsteads occupied in the mid to late 19<sup>th</sup> century, the focus of this report. These sites have been registered with the MHSTCI as the Edey/Davis Site (BiFx-27) and The W. Morgan Site (BiFx-28). It was recommended that both sites be subject to Stage 3 archaeological assessments to further understand the occupational content, extent, and the composition of the identified artifact scatters.

Archaeological work in the region has primarily consisted of cultural resource management studies related to specific properties or development projects.

On parcels adjacent to the study area, Paterson Group undertook a Stage 2 assessment to the immediate southeast at 936 March Road on Part Lot 12 Concession 4 (Paterson Group 2020a). This resulted in the discovery of two Euro-Canadian farmstead sites: the Armstrong Site (BiFx-25) and the Younghusband Site (BiFx-26), both of which were subject to Stage 3 (Paterson Group 2020b, 2020c) and Stage 4 assessments (Paterson Group 2020d, 2021). A Stage 1 and 2 assessment was completed for 910 March Road (Paterson Group 2020e), located immediately south of 936 March Road on Part Lots 11 and 12, Concession 4. This property was revealed to be largely disturbed. Across March Road, Paterson Group conducted a Stage 2 archaeological assessment of 1075 March Road on Part Lot 14 Concession 3, which identified two Euro-Canadian farmsteads: the Morgan Site (BiFx-23) and the Lahey Site (BiFx-24). A Stage 3 assessment was undertaken for the Morgan Site and it was determined to have no further CHVI (Paterson Group 2020f). A Stage 3 assessment and Stage 4 mitigation was undertaken at the Lahey Site (Matrix Heritage 2021b; Paterson Group 2020f). Paterson Group also completed a Stage 1 assessment of the March Road Sanitary Trunk Sewer, which includes portions of Lots 10 and 11, Concession 3 and Lots 9 and 10, Concession 4 (Paterson Group 2018). This corridor study area was determined to be entirely disturbed.

Other nearby archaeological assessments include a Stage 1 and 2 assessment of Part Lot 11 Concession 4 (Adams 2004), Stage 1 and 2 Archaeological Assessment of Morgan's Creek Subdivision, located at 760 March Road, Part Lot 10, Concession 4 (Adams 2000a; Golder Associates 2011), a Stage 3 assessment of a lime Kiln (BiFx-5) (Adams 2000b), a Stage 1 to 3 assessment of Part Lot 17 Concession 3 (Adams 2009b), a Stage 1 to 3 for the Richardson Ridge Residential Development (Jackson 2009a, 2009b), a Stage 1 and 2 Archaeological Assessment of 30 Richardson Side Road (Golder Associates 2011), a Stage 1 to 3 assessment for the Kanata West Business Park (Adams 2009a), and a Stage 1 Archaeological Assessment of Part Lot 20, Concession IV (Hember 2009).

#### 4.3.4 Registered Archaeological Sites and Commemorative Plaques

A search of the Ontario Archaeological Sites Database indicated the South March Lime Kiln Site (BiFx-5) is located directly to the south of the study areas on Lot 11 Concession 3. To the west of the study area, the Morgan (BiFx-23) and Lahey (BiFx-24) sites are on Lots 13 and 14 of Concession 3. The Morgan site is a late 19<sup>th</sup>-20<sup>th</sup> century historic site with no further cultural value following Stage 3 assessment (Paterson Group 2020b), while the Lahey site is a locally significant historic site that was subject to Stage 4 mitigation (Paterson Group, 2021). As for the Armstrong (BiFx-25) and Younghusband Sites (BiFx-26) they are located to the southeast of the study area on Lot 12 Concession 4 and both sites consist of 19<sup>th</sup> century Euro-Canadian homesteads.

No commemorative plaques or monuments are in the vicinity of the subject property; however, approximately 6 km to the southwest is the historical plaque for Christ Church built in 1838 in neighbouring Huntley Township that was used by Huntley and March parishes until 1853. The historical plaque for Pinhey's Point Historic Site is located approximately 8 km to the northeast and commemorates Hamnett Kirkes Pinhey, one of the first settlers of March Township.

There are also several listed or designated heritage buildings in the immediate vicinity. Examples within 1 km of the site area include a brick farmhouse at 1135 March Road constructed ca. 1886 (the manse affiliated with the St. Isidore Catholic Church), two Ontario Cottage type houses constructed ca. 1870 and 1890 at 1210 and 1126 March Road respectively and a vernacular type log cabin constructed ca. 1870 at 9 Campbell Reid Court (City of Ottawa 2021).

#### 4.4 Archaeological Potential

Based on the Archaeological Resource Potential Map, the development area has archaeological potential (Archaeological Services Inc. and Geomatics International Inc. 1999). Potential for pre-contact Indigenous sites is based on physiographic variables that include distance from the nearest source of water, the nature of the nearest source/body of water, distinguishing features in the landscape (e.g., ridges, knolls, eskers, wetlands), the types of soils found within the area of assessment, and resource availability. The study area consists of some well-draining St. Thomas soils; and the Shirley's Brook tributary is located within the study area. Based on current knowledge of the pre-contact Indigenous archaeology of the Ottawa Valley, there is potential for pre-contact Indigenous archaeological sites in this area.

Potential for historical Euro-Canadian sites is based on proximity to historical transportation routes, historical community buildings such as schools, churches, and businesses, and any known archaeological or culturally significant sites. The development area exhibits high potential for historical period archaeological sites as there are several historical structures located within the study area. Based on the 1863 Walling map there is a structure located in the south section of the property, owned by Edy T.H. and another owned by G. Morgan in the northwest corner of the property. On the later Belden map of 1879, two other historic structures can be observed within the study area. The first is located in the south of the property and is owned by Joseph Davis, while another structure owned by W.M. Morgan can be seen in the northwest corner. The property was granted by the Crown as early as 1824 while also being transected roughly North to South by a railway.

## 5.0 Field Methods

The Stage 3 assessments involved the controlled surface pickup (CSP) and mapping of the surface artifact distributions at both the Edey/Davis Site (BiFx-27) and the W. Morgan Site (BiFx-28). At the time of the CSP, the site area had been recently ploughed, adequately weathered by recent heavy rainfall, and the fields exhibited some new growth, but surface visibility was at least 80% as per Section 3.2.1 Standard 1 (MHSTCI 2011). The CSP was undertaken by walking the sites at 1 m intervals and flagging find spots (Map 3 and 5) (Figure 8, Figure 15 to Figure 18). During the controlled surface pickup all artifact locations were recorded using a Bad Elf Surveyor GPS with DGPS enabled paired to an iPad with ArcGIS FieldMap. Average accuracy at the time of survey was approximately 1 m horizontal. (Standard 2, Section 3.2.1). Diagnostic or formal artifact types were all collected, bagged, and labelled by find spot as per Standard 5 Section 3.2.1, as was a collection of non-diagnostics (Standard 6 Section 3.2.1).

### **Edey/Davis Site (BiFx-27)**

As per the Stage 2 recommendations for the Edey/Davis Site (BiFx-27), as it was not clearly evident that the site would eventually proceed to Stage 4, the Stage 3 grid was laid out in the form of 1 x 1 m excavation units on the full 5 m grid as per Standard 1, Section 3.2.3 (MHSTCI 2011). However, test unit excavation commenced on 10 m intervals and with the plan to narrow to 5 m until it became evident whether to proceed to Stage 4 as per Section 3.3.3 of the Archaeology of Rural Historical Farmsteads (MHSTCI 2014). Narrowing to 5 m intervals was not required as it became clearly evident on the 10 m grid, with partial infill unit excavation, that the site would not require Stage 4 mitigation of development impact. Accordingly, the Stage 3 assessment of the Edey/Davis Site (BiFx-27) involved the excavation of 44 1 x 1 meter units across a 10-meter grid (Section 3.2.3, Table 3.1, Standard 3) (Map 3) (Figure 19-Figure 23). Infill unit excavation stopped at 12 units (27%) as the combined historical research, stratigraphic data, and assemblage from the 10 m grid and the off-grid units excavated clearly demonstrated the ongoing use of the site had impacted the context of the site and a Stage 4 mitigation was not required. Therefore, as per Section 3.3.3 of the Archaeology of Rural Historical Farmsteads (MHSTCI 2014), excavation was stopped when sufficient data had been gained from all areas of the site.

The limits of the Edey/Davis (BiFx-27) Stage 3 area were determined through repetitive decreasing and/or low yield units on the peripheries (Map 3). Unit yield categories for determining “low” yield units and thereby the limit of excavations were initially determined with field tallies of artifacts. To lend further rigour to the process, ESRI’s ArcMap Pro was employed in the post-excavation analysis to empirically determine quantitative categories of artifact yields using Jenks Natural Breaks classification method with five classes (Table 1 and Map 3). This helped empirically determine the extent of the sites proper versus scattered artifacts around the periphery created from years of agricultural ploughing. Expansion of the Stage 3 10 m grid was considered complete when tallies along the edge of testing entered the low to very low categories. The extent of the grid was expanded southward beyond initial low yield units to encompass the majority of the Stage 2 and Stage 3 CSP find spots. Find spots beyond the extent of the 10 m testing grid in the south are plough scatter not indicative of the extent of the site proper.

Anomalies in grid expansion include unit 800E 450N, which is mapped as high yield at 67 artifacts. However, that tally includes 29 wire nails along with other modern items, making the historical item tally only 25. In the northwest, deep disturbances from ditching and a parking area adjacent to March Road impeded expansion on the 10 m grid into that corner.

<b>Artifact Quantity</b>	<b>No. of Test Units</b>
Very Low (0-20)	20
Low (21-49)	6
Medium (50-109)	10
High (110-221)	10
Very high (222-402)	10

**Table 1: Artifact quantities by the test unit at the Edey/Davis Site.**

As per the Stage 2 recommendations for the W. Morgan Site (BiFx-28) (Matrix Heritage 2021), as it was not clearly evident that the site would eventually proceed to Stage 4, the Stage 3 grid was laid out in the form of 1 x 1 m excavation units on the full 5 m grid as per Standard 1, Section 3.2.3 (MHSTCI 2011). However, test unit excavation commenced on 10 m intervals and was planned to narrow until it became evident whether to proceed to Stage 4 as per Section 3.3.3 of the Archaeology of Rural Historical Farmsteads (MHSTCHI 2014). Accordingly, the Stage 3 assessment of the W. Morgan Site (BiFx-28) commenced with the excavation of 1 x 1 meter units at 10-meter intervals (Section 3.2.3, Table 3.1, Standard 3) (Map 5) with the plan to narrow to a 5 m grid and complete infill as required (Figure 24-Figure 26). This strategy was used to determine the nature and chronology of the artifacts and the extent of the site. Per unit artifact yields from the site on the 10 m grid were generally low on the initial 10 m grid and therefore it was not evident whether the site would proceed to Stage 4. Accordingly, additional 1 x 1 meter units were then dug to fill in to complete the 5-meter grid for a total of 24 on-grid units. An additional six infill units (25% of the on-grid total) were excavated to examine areas of interest within the site, with the goal of better documenting artifact concentrations, drop-offs, increasing the sample size to better determine the nature and chronology of the site, and to delineate the extent of the site (Section 3.2.3, Table 3, Standard 2) (MHSTCI 2011).

The limits of the W. Morgan Site (BiFx-28) Stage 3 area were determined in the south and west by the presence of deep disturbances, and otherwise through repetitive decreasing and/or low yield units on the peripheries (Map 6). Unit yield categories for determining “low” yield units and thereby the limit of excavations were initially determined with field tallies of artifacts. To lend further rigour to the process, ESRI’s ArcMap Pro was employed in the post-excavation analysis to empirically determine quantitative categories of artifact yields using Jenks Natural Breaks classification method with four classes (Table 2 and Map 6). This helped empirically determine the extent of the sites proper versus scattered artifacts around the periphery created from years of agricultural ploughing. Expansion of the Stage 3 grid was considered complete when tallies along the edge of testing entered the low category. Only four classes were used for the W. Morgan Site versus the six at the Edey/Davis Site as the artifact assemblage of the former is much smaller (totalling 1,013 artifacts from the W. Morgan Site in comparison to 6,460 artifacts from the Edey/Davis Site), and fewer units were excavated.

<b>Historic Artifact Quantity</b>	<b>No. of Test Units</b>
Very Low (0-11)	10
Low (12-37)	10
Medium (38-64)	7
High (65-111)	3

**Table 2: Artifact quantities by the test unit at the W. Morgan Site.**

No cultural features were encountered at either site and all test units were hand excavated to a depth of 5 cm into subsoil. All soil was screened using 6 mm mesh. Each unit was recorded on iPads using a standardized digital context form in a FileMaker database. Where archaeologically relevant, scaled profile drawings were recorded in Microsoft OneNote on iPads. All recovered artifacts were collected,

and their provenience recorded. All artifacts were returned to Matrix's lab facility for washing, sorting, inventory, analysis, and storage. All excavated units were backfilled upon completion.

Two site datums were established at each site: a fixed point within the archaeological site and a permanent datum (wooden stake) off site. UTM Zone 18N coordinates were determined using a Trimble Catalyst GNSS receiver with an Android tablet interfaced with ArcGIS Field Map. Average accuracy during the survey on the morning of September 20<sup>th</sup>, 2021 was approximately 2 cm with clear conditions. (Standard 3 Section 3.2 (MHSTCI 2011)). The excavation grid was established with a Nikon DTM-322 total station and all excavation units and site features were total station surveyed. All survey data is compiled into ArcGIS and every survey point has a UTM Zone 18T NAD 83 coordinate. Site coordinates are listed in Table 3.

<b>Location</b>	<b>W. Morgan Site</b>	<b>Edey/Davis Site</b>

**Table 3: W. Morgan and Edey/Davis Site Coordinates (UTM 18N NAD 83)**

The provenience system used for this project is based on the Stage 3 Matrix Heritage project number (MH1037), plus the grid coordinates of the excavation unit, followed by lot number. If no lot number is noted in the provenience, it indicates that a single stratum was present over subsoil. Thus, the provenience of an artifact from Lot 1 in unit 300E 500N would be recorded as MH1037 300E 500N-1. The site grids were differentiated using separate coordinate origins with W. Morgan being based around 600E 300N and Edey/Davis around 800E 400N

Photographs were taken during fieldwork to document the current land conditions (see Map 3 and 5 for photo locations by figure number) as per Standard 1.a., Section 7.8.6 (MHSTCI 2011). Additionally, a representative sample of all categories of diagnostic artifacts were photographed (Section 7.5.11, Standards 1-2). Photo catalogue, artifact inventory, map inventory, and daily field notes (including sketch maps drawn in the field) are listed in Appendix A, B, C, and D.

Field work was carried out over 16 days on September 20, 21, 24, 27-30 and October 1, 4-8, and 12-14 2021. Weather conditions ranged from sunny to overcast with a couple days of intermittent light rain that did not inhibit excavations or artifact recovery. Temperatures ranged from 8-25° Celsius. Permission to access the property was provided by Cavanagh.

## 6.0 Record of Finds

All artifacts from the Stage 3 Archaeological Assessment are contained in three banker's boxes held at Matrix Heritage's lab facility for long term storage. All artifact dates are sourced from the Parks Canada Archaeological Resources Database (Parks Canada 2012) unless otherwise noted. Artifact inventory, map inventory, and daily field notes (including sketch maps drawn in the field) are listed in Appendix A, B, C, and D.

### 6.1 Edey/Davis Site (BiFx-27)

#### 6.1.1 Controlled Surface Pickup

A total of 184 artifacts (from 41 findspots) were collected during the Stage 3 CSP, which was performed to establish and refine the limits of the site found in the Stage 2 assessment (Map 3). Findspots cover an area measuring approximately 71 x 55 m. This Stage 3 CSP artifact distribution is different from the Stage 2 pedestrian find area (Map 3). It spreads more to the west and north with few artifacts recovered within the Stage 2 area, in the central portion of the overall spread. Reploughing of the field prior to the CSP exposed a broader scatter, but it appears, as was later confirmed by hand excavation, that artifact densities in the field are low and therefore the Stage 2 collection gathered almost all artifacts within that area, hence nothing new being ploughed up.

Most of the artifacts found during the CSP are related to food service and are domestic in nature. These included porcelain vessel fragments (n=11) that are largely plain with a few sherds are decorated with hand painted designs (n=2) and lithographs (n=1); Refined White Earthenware (RWE) fragments (n=6) that are either undecorated (n=2), transfer printed (n=1) (Figure 27, Figure 28), painted (n=2), or are decorated in an unspecified green moulded edgeware design (n=1); Vitrified White Earthenware (VWE) fragments (n=76) (Figure 29) that are either undecorated (n=49), moulded with various designs (n=5) (Figure 30), or transfer printed (n=10) in various colours including blue, green, black and teal, as well as painted, gilded, and slipped; lastly two fragments of yellowware were also recovered. Other artifacts recovered during this phase of work included pane glass, a pewter button, modern manganese tinted, amber/brown, and green/yellow pop bottle glass, aqua and colourless threaded bottle finish (Figure 31), and modern refuse in the form of unidentified plastic fragments.

#### 6.1.2 Stratigraphy

Stratigraphy across the Edey/Davis Site is variable from field to treed areas. The southern half of the site, in the agricultural field, is characterized by a medium brown silty sandy clay plow zone (20-30 cm) on top of a mottled yellowish red sandy subsoil (Figure 32 and Figure 33). Units in the overgrown section of the site, near and on the mounded remnants of the former residence, were often much deeper, sometimes extending up to 1 m in depth and were composed of several layers including a layer of large rocks and rubble that was part of the house structure (demolished in the 1990s), an occupation layer with an intermixing of modern and historic artifacts, an ash layer with a historic and modern materials, all on top of a light grey compact silty clay subsoil (Figure 34-Figure 37). These deeper deposits had a much higher concentration of historic artifacts than units to the south but were still largely intermixed with modern artifacts. To better understand the depositional sequence and confirm that the site generally lacked context owing from ongoing occupation into the 1990s, the correlation of cultural layers from multi-layered units was examined. While some lots within units may not include modern items in all stratigraphic layers, when examining the boarder site formation processes in terms of stratigraphic deposits correlated across the site it becomes evident that all stratigraphic contexts do demonstrate their modern deposition through the presence of modern items. Notably, there is an ash layer overlying subsoil that is found across multiple units

and when examined as a single deposit, not split artificially by archaeological unit, it is notably the earliest cultural layer identified on the site, and the context includes modern items such as wire nails. When interpreting the site based on broader contextual deposits that are spread between units, it is clear that the ongoing use of the site into the 1990s has impacted all areas and archaeological deposits on the site. While the origin of this as layer is not defined, it is speculated, given its 20<sup>th</sup> century origin, that perhaps an older structure (maybe the original homestead), burned sometime after or around 1900. The site was leveled and capped, and a new structure was build on the same location, which was then occupied into the 1990s before being demolished. This theory fits well with the “house mound” stratigraphy (Figure 34 to Figure 36).

### 6.1.3 Features

Perhaps owing to the ongoing use of the site as an active farm into the 1990s, no subsurface cultural features were encountered. A ‘house mound’ was identified in the northwestern part of the site (Figure 38-Figure 40). This feature is the remains of the structure demolished circa 1990, pushed into the basement depression to infill and covered over with large planks and wooden beams (Figure 35 and Figure 41). The mound has some very large sink holes visible throughout and the surface is very uneven.

### 6.1.4 Finds

A total of 6,276 artifacts were collected from the 1x1 m unit excavations at the Edey-Davis Site. A general breakdown of the assemblage by material type is shown in Table 4.

<b>Material</b>	<b>Quantity</b>
Flora	2
Lithic / Minerals	14
Leather and Textiles	17
Fuels and Industrial Mat.	24
Synthetics	55
Mortar/Plaster/Brick	89
Fauna	464
Glass	1353
Ceramic	1753
Metal	2503
<b>Grand Total</b>	<b>6276</b>

**Table 4: Breakdown of the Edey/Davis Site assemblage by material type.**

Most of the finds consist of glass, metal, and ceramic fragments. Ceramics are mostly domestic in origin, including various types of tablewares, as well as coarser utilitarian and kitchen wares. The vast majority of the metal category is represented by mostly wire and cut nails, in addition to other structural hardware. Glass fragments are primary pane glass, modern bottle glass, in addition to a variety of food and household-related bottles and containers. A variety of clay smoking pipe fragments are also represented. There is also an appreciable quantity of faunal material in the assemblage, mainly representative of a range of domesticated mammals, some of which show signs of butchering.

An analysis by functional groups allows for a better understanding of the nature of site (Table 5). As is typical on 19<sup>th</sup> century and later domestic sites, the assemblage is dominated by household and structural items.

a. Faunal

A total of 458 fragments of faunal material were recovered from the Edey/Davis Site. Of these, 430 are identified as mammal bone and teeth, while twenty-eight fragments of bird bone were also recovered. Most of the mammal bone derives from large domesticates typically seen on 19<sup>th</sup>-century farmsteads. Ninety-five fragments show signs of sawing from butchering while sixty-nine fragments are burned or calcined.

<b>Grand Total</b>	<b>6276</b>

**Table 5: Breakdown of the Edey/Davis Site assemblage by functional type.**

b. Household/Domestic

This Household and Domestic category is the second largest represented at the Edey/Davis Site. It is dominated by ceramics (n=1,840) related to eating and food preparation. Ceramic artifacts are particularly useful because they can be readily dated based on the ware type and decoration. It should be cautioned that the time lag effect can impact the efficacy with which ceramics and glass objects can date sites. Research on late 19<sup>th</sup> century domestic sites has shown that ceramic objects often date close to 20 years earlier than the time of an archaeological deposit. These numbers can vary widely depending on factors such as local economies (transportation and distribution networks) and socioeconomic status, which are difficult to quantify, but the potential effect of time lag should nonetheless be acknowledged (Adams 2002:66). Ware types and decorative patterns for the assemblage are summarized in Table 6.

Ceramic forms and function are often difficult to identify because of the fragmentary nature of the sherds; however, the largest category is represented by tableware forms used in the serving and consumption of food and drink. Ware types represented in this category are refined white earthenware (RWE), vitrified white earthenware (VWE), porcelain, pearlware, fine earthenware, and creamware. Identified forms include bowls, plates, jugs/pitchers, mugs, saucers, and teacups, amongst a variety of unidentified flat and hollow wares. Utilitarian storage and kitchen wares are also present in the vitrified white earthenware and coarse earthenware, coarse stoneware, and yellowware categories (Figure 42). These forms include crocks, milk pans, jugs, ewers, and a variety of unidentified vessels.

The most common ware type is VWE (48% or n=727), followed by RWE (20% or n=304). The presence of a larger percentage of VWE is suggestive of a mid to late-19<sup>th</sup> century occupation, as the increase in popularity of vitrified earthenwares occurred over the latter half of the 19<sup>th</sup> century (Miller 1991:10). Decorative types on RWE and VWE in the assemblage are quite similar, with plain sherds representing the bulk of the assemblage (41% for RWE and 70% VWE). It should be noted that these numbers are inflated because of the nature of the data set (sherd count): a vessel count would show a lower proportion of plain decoration. The high proportion of plain vessels in the VWE category relates to the variety of moulded designs that were popular on these wares (Majewski and O'Brien 1987).

Ware Type	Decoration	Sum of Quantity	Date Range

**Table 6: Summary of ware types and decorative patterns on ceramics from the Edey/Davis Site.**

Transfer prints are the next most common decorative type (26% for RWE, 13% for VWE) and are present in various colours including purple (Figure 43), brown (Figure 44), black (Figure 45), green/teal (Figure 46), and blue (Figure 47). A variety of patterns and motifs are present, including the ubiquitous Blue Willow, British generic scenes, pastoral scenes, floral scenes, and Flow Blue (Figure 48). Broadly speaking, transfer printed wares were most popular in the years leading up to the mid-19<sup>th</sup> century, with a resurgence in the 1880s (Samford 1997:4).

There are a small number of painted pieces (10% for RWE, 2.5% for VWE) most of which are Late Palette fragments which became popular in the 1830s (Figure 49), although there are a few pieces of Early Palette (Figure 50) (n=5) and blue painted (Figure 51) (n=8) Pearlware in the collection. Moulded sherds are also popular for VWE fragments (8%) and included wheat/cheres designs (Figure 52). Blue edgeware sherds (8% for RWE), are also numerous and can range from the late 18<sup>th</sup> to the late 19<sup>th</sup> century depending on the type of decoration (Figure 53). Finally, sponged, stamped (Figure 54), industrial slipped (9% for RWE, 1.5 % for VWE) (Figure 55) lithographed (Figure 56), and lustre (Figure 57) are present in smaller numbers.

While wear types are commonly VWE and RWE, there are also a few pieces of yellowware (n=18) (1827-1972), creamware (n=20) (1775-1830), pearlware (n=29) (1775-18330), fine red/buff earthenware (n=21) (mostly early 19<sup>th</sup> c.), and porcelain (n=45) (Figure 58, Figure 59).

Most of the remainder of the Household/Domestic group is composed of glass artifacts (n=226). Glass vessels can also be dated based on rapidly changing methods of manufacture in the 19<sup>th</sup> century. They are often a more reliable indicator of the date of a site, because of their short use-life, and consequently shorter time lag, when compared to ceramics. The time lag for glass on late 19<sup>th</sup> century sites has been demonstrated to be in the order of 3-6 years (Adams 2002:66). This said, the majority of glass fragments from archaeological contexts are difficult or impossible to date, given their fragmentation. Where present, bases and finishes (rim/lip area) are the most diagnostic for dating purposes.

The vast majority of glass fragments in the Edey/Davis Site assemblage derive from machine made bottles (n=150) of unidentified function in a variety of colour including yellow, dark olive green, green, blue/green (aqua), and clear. There are also 56 sherds with a distinct purple hue, which is the result of a manganese additive used to decolour glass between the period ca. 1880-1920 (Adams 1994:100). When exposed to sunlight, this manganese additive turns a distinct purple colour (Figure 60). Three threaded finishes, common beginning in the 1890s, and still widely used today (Jones et al. 1989), were recovered (Figure 61). Dating before machine manufacture was common are 78 examples of hand tooled bottle finish fragments, which were manufactured until the 1870s. There are also 20 examples of press moulded glassware fragments (1830-). White opaque milk glass is also present, albeit in a small number (n=3).

The remainder of the Household/Domestic group is comprised of a bone handled fork, an unidentified bone utensil handle which is threaded on the interior, a metal utensil handle, a whole teaspoon as well as fragments of a large serving spoon (Figure 62), and two modern pull tops for cans or bottles, four metal bottle caps for crown closure bottles, a white plastic threaded bottle cap (20<sup>th</sup> c.), a gold plastic cap inscribed with "Deus Pretector Noster" (God is our Protector) (Figure 63), plastic disposable cup fragments, modern foil food wrappers, fragments of a plastic tarp, miscellaneous unidentifiable plastic garbage fragments, and Bakelite pieces. Much of the modern refuse and later items were retained as they demonstrate the ongoing use of the site throughout the stratigraphic deposits on the site.

### c. Personal/Societal

The items in the personal and societal category represent some of the most intriguing artifacts from the Edey/Davis site. Numerous pharmaceutical/toiletry bottles were found, accounting for 16 of the 170 artifacts. Many of these are most likely patent or proprietary “cure-all” medicines which were produced commercially and did not require prescriptions (as opposed medicines prescribed by doctors) (Brighton 2008:142). Many have embossed commercial labels, but most are too fragmentary to identify. Health/hygiene items are also represented by fragments of a VWE washbasin and ewer with molded decoration, two plastic toothpick fragments, as well as a toothpaste tube of ‘Colgate Ribbon Dental Cream’ and its red plastic threaded cap, which date from the 1950s and were made in Canada (Figure 64).

Clay smoking pipe stems and bowl fragments are the most common artifact in this category (n=69). Decorated bowls include unidentified moulded vine, ridges & facets, thistle, and ribbed patterns. Three glazed mouthpieces were also found along with three mouthpieces that have visible bit marks on the end. Single examples of Henderson, Montreal (1847-1876) (Figure 65), Bannerman, Montreal (1888-1907) mark, Coghill, Glasgow (1805-1967) maker’s marks are present. A fourth stem has a ‘DOU’ mark, perhaps a portion of a “Douglas” mark.

Clothing-related items are present in the form of fifteen buttons of various materials (Figure 66), seven belt or shoe buckles (Figure 67), two unspecified clothing clasps, twenty-two eyelet or grommets for shoes, a sewing pin, seven leather shoe fragments, a copper alloy watch cover, and two snap fasteners. The buckles (n=7) are all made of ferrous material and range in size, with some appropriate for shoes or a belt, while one is large and may relate to harness tack rather than clothing. The buttons are made of a variety of materials, including plastic, porcelain, glass, copper alloy, shell, and iron. They range in size from 10-20 mm. The small sizes suggest that the buttons were used for shirts, trousers, or undergarments, rather than outerwear such as coats. Many of the buttons are utilitarian and are undecorated Prosser or 2-hole buttons while there is one plain flat disc button with an Omega shank (1794-).

Other personal items of note include an almost complete coarse stoneware inkwell, two fragments of coarse earthenware Derbyshire style blacking bottles (Figure 68), a modern multicoloured rainbow rubber ball for kids, five sleigh bells, a broken and corroded mouth harp frame that is missing the tongue (Figure 69), a clay marble, and a circular tobacco tag (Figure 70). Lastly, two historical tokens were recovered. One is only identifiable as a ‘Seated Britannia’ with much of both faces being illegible (Figure 71). Seated Britannia coinage was common from the 1850s to the 1890s. The other is an 1816 Isaac Brock ½ penny token inscribed “Sir Isaac Brock the Hero of Upper Canada” with two angels placing a wreath on a Brock’s monument (1812), perhaps commemorating his death. The other side reads “Success to Commerce and Peace to the World” (Figure 71).

### d. Structural

This category represents the largest functional group from the Edey/Davis Site and accounts for 42% of the entire assemblage. Nails make up the bulk of the structural group, accounting for nearly half (73%, n=1,933). They are represented by four different types, which are listed in chronological order as nail manufacturing technology evolved over time: wrought (n=4, ~0.2%), cut (n=1,531, 79%), wire (n=393, 20%), and spiral (n=6, ~0.3%). The general progression of wrought to cut to wire nails is a ubiquitous trend, but the dates at which the different types appear is variable and highly regionally dependant (Adams 2002). By the late 18<sup>th</sup> century, machines for cutting nails from large plates were in limited use; these early nails still required handmade heads. Several decades later, machines were produced which could cut and head nails as part of a single process (Adams 2002:67–68). Wire nails came to dominate the market in the late 19<sup>th</sup> century, though limited

production began sometime around mid-century. It was not until the 1880s, however, that they began to be produced in appreciable quantities in North America (Adams 2002:69). Early patent dates and initial production certainly do not correlate with consumer use of types of nails. Other local factors might delay the adoption of new technologies, especially in more rural areas. Furthermore, time lag may be introduced through the re-use and recycling of nails from earlier structures. Thus, while there is a general chronological progression, accurate dating is difficult.

Nonetheless, the breakdown of the nail assemblage from the Edey/Davis Site is informative. The dominance of the cut nail type suggests that major construction activities took place before the widespread use of wire nail in the last couple decades of the 19<sup>th</sup> century.

A small number of other fasteners are also present including screws, tacks, washers, nuts and bolts, large staples, rivets, roofing nails, an eye hook for a door or window, and cut spikes.

The second common object in the structural group is pane glass, accounting for 21% of the category (n=554). Building materials include brick, coarse earthenware and iron drainage pipe, tile, and mortar. Miscellaneous scraps of metal, chain link, and wire are also present as are unidentifiable rectangular fragments of metal strapping.

#### e. Tools and Equipment

A small collection of items related to various types of tools and equipment is present (n=235). Several bucket or pail fragments were recovered as well as miscellaneous agricultural equipment parts. Other tools include a spigot, a piece of a whetstone (Figure 72), a corroded head for a claw hammer, six clothespeg springs, a head of a felling axe, several spent chunks of coal and charcoal as well as clinker. A fair number of unglazed terracotta pieces are also present, which likely represent flowerpots or earthenware tiles. A modern pencil lead was also found that was still attached to the rubber eraser end. Several rounded pieces of ferrous metal were also found, which could represent shovel blade fragments. Writing activities are also represented by five fragments of slate board and five incomplete slate pencils.

#### f. Arms and Ammunition

Arms and ammunition is comprised of several shotgun cartridge bases of various calibers. Five of the bases were unidentifiable while the rest had impressed markings around the rim. This included two bases that read "Dominion Canuck No. 12" which were made in Canada between 1935 and 1950. One of the cartridge bases belong to smaller caliber rifle and reads "UMC 45-75 SH" which possibly belongs to an 1876 Winchester lever-action rifle. These were manufactured between 1876 and 1935 while the impressed 'UMC' stands for the Union Metallic Cartridge Company which was founded in 1867. The last cartridge base reads "WW6 DA SS" (Figure 73). Lastly, a fragment of a gun flint was also recovered (Figure 70).

#### g. Furnishing

Furnishing account for 159 items, which are largely lamp chimney fragments. Other furnishing pieces include a handle for a drawer and the plastic base of a furniture leg. Lastly, a small iron latch was found with wood still present in the hinge section.

## 6.2 W. Morgan Site (BiFx-28)

### 6.2.1 Controlled Surface Pickup

A total of 25 artifacts (from 11 findspots) were collected during the CSP, which was performed to establish and refine the limits of the site found in the Stage 2 assessment (Map 5). Artifacts recovered during this phase of work are primarily related to food service and are domestic in nature. This included 13 pieces of VWE, mostly plain with a few sherds being moulded, one cut black glass button with a bent pewter shank, and three pipe stem fragments (Figure 74). One stem includes a partial Montreal based maker's mark which dates between 1847 to 1907. The findspots cover an area measuring approximately 20 x 20 m, correlating with the Stage 2 pedestrian survey findspots.

### 6.2.2 Stratigraphy

Stratigraphy across the W. Morgan site is not complex. Most units consisted of a dark brown dry sandy clay plough zone overlaying a compact yellowish grey clay sandy subsoil (Figure 75 and Figure 76). Subsoil was generally reached between 20 to 30 centimeters below surface. There were no culturally significant features found.

### 6.2.3 Finds

A total of 1,013 artifacts were recovered from the combined CSP (25) and unit excavations (988). A breakdown of the assemblage by material type is show in Table 7.

<b>Material</b>	<b>Quantity</b>
Lithic / Minerals	2
Leather and Textiles	4
Synthetics	10
Fauna	26
Mortar/Plaster/Brick	41
Glass	188
Metal	223
Ceramic	494
<b>Grand Total</b>	<b>988</b>

**Table 7: Breakdown of the W. Morgan Site assemblage by material type.**

Most of the finds consist of ceramic, metal, and glass fragments. Ceramics are mostly domestic in origin, including various types of tablewares, as well as coarser utilitarian and kitchen wares. Most of the metal category is represented by cut and wire nails, in addition to some other structural hardware. Glass fragments are primary windowpane glass, in addition to a variety of food and household-related bottles and containers. A variety of clay smoking pipe fragments are also represented. There is also a small quantity of faunal material in the assemblage, mainly representative of a range of domesticated mammals, some of which show signs of heating (burnt or calcined) as well as butchering.

An analysis by functional group allows for a better understanding of the site (Table 8). And, as is typical on 19<sup>th</sup>-century domestic sites, the assemblage is dominated by household and structural items.

Row Labels	Quantity
Furnishing	8
Tools and Equipment	18
Ecological (Fauna/Flora)	26
Personal/Societal	34
Not Classified	59
Structural	381
Food (Household/Domestic)	462
<b>Grand Total</b>	<b>988</b>

**Table 8: Breakdown of the W. Morgan Site assemblage by functional type.**

a. Household/Domestic

The broad Household/Domestic category is the largest represented at the W. Morgan Site. It is dominated by ceramics (n=452) related to various eating and drinking functions. Ceramic artifacts are particularly useful because they can be readily dated based on the ware type and decoration. Ware types and decorative patterns for the assemblage are summarized in Table 9.

Ware Type	Decoration	Quantity	Date Range

**Table 9: Summary of ware types and decorative patterns on ceramics from the W. Morgan Site.**

Note: CEW = Coarse Earthenware, RWE = Refined White Earthenware, VWE = Vitriified White Earthenware

Ceramic forms and function are often difficult to identify because of the fragmentary nature of the sherds; however, the largest category is represented by tableware forms used in the serving and consumption of food and drink. Ware types represented in this category are refined white earthenware (RWE) and vitriified white earthenware (VWE). Identified forms include bowls, plates, mugs, saucers, and teacups, amongst a variety of unidentified flat and hollow wares. Utilitarian storage and kitchen wares are also present in the yellowware (Figure 77) and coarse earthenware category. These forms include crocks, milk pans, jugs, and a variety of unidentified wares.

The most common ware type is VWE (n=262), followed by RWE (n=132). The presence of a larger percentage of VWE is suggestive of a late 19<sup>th</sup>, early 20<sup>th</sup>-century occupation, as the increase in popularity of vitriified earthenwares occurred over the latter half of the 19<sup>th</sup> century (Miller 1991:10). Decorative types on RWE and VWE in the assemblage are quite similar, with plain sherds

representing the bulk of the assemblage (85% for RWE and 91% for VWE). It should be noted that these numbers are inflated because of the nature of the data set (sherd count): a vessel based count would show a lower proportion of plain decoration. The higher proportion of plain vessels in the VWE category also relates to the variety of moulded designs that were popular on these wares (Majewski and O'Brien 1987).

The most common decorative type on VWE are moulded patterns, specifically the wheat/cheres design (4%) while the most popular on RWE are stamped/sponged fragments (4.5%). Transfer prints are also present in small numbers (2% for RWE, 1.5% for VWE) and occur in various colours including green, brown, and blue. Most of the printed patterns could not be identified due to the fragmentary nature of the artifacts. Broadly speaking, transfer printed wares were most popular in the years leading up to the mid-19<sup>th</sup> century, with a resurgence in the 1880s (Samford 1997:4). Finally, painted, industrial slipped, and edged wares are present in very small numbers (Figure 78, Figure 79).

Most of the remainder of the Household/Domestic group is composed of glass artifacts (n=6). Most glass fragments in the W. Morgan Site assemblage derive from unidentifiable beverage bottles in a variety of colours including amber/brown, aqua, dark green, and colourless. There is an aqua coloured stopper (Figure 80) along with a shard with a distinct purple hue, which is the result of a manganese additive used to decolour glass between the period ca. 1880-1920 (Adams 1994:100). The bottle finish in this category is colourless with a straight, tall finish with a moulded ring at the bottom. A pewter utensil handle fragment was also recovered.

#### b. Personal/Societal

Personal or societal items in this category represent some of the most intriguing from the site. Numerous clay smoking pipe pieces, including bowl and stem fragments, were found, accounting for 25 of the 34 artifacts. Roughly half of these are undecorated (n=13) while the rest have dotted, panel, ridged/faceted, or thistle designs. One stem fragment includes a "D. Ford – Montreal" maker's mark which dates between 1857 and 1873. Two stem fragments state "Montreal" with no manufacture name identified, which can date from 1847 to 1907. One pipe stem is may of red clay, rather than the more common white ball clay (Figure 81).

A few clothing-related items are present in the form of buttons, a buckle, and leather shoe fragments. The buckle (n=1) is made of ferrous material and is rectangular in shape. The two buttons are porcelain Prosser buttons. They range in size from 10-17 mm. The small sizes suggest that the buttons were used for shirts, trousers, or undergarments, rather than outerwear such as coats. One button is decorated with a black calico transfer print (Figure 82) while the other is plain and white.

Other personal items of note include a 1944 Canadian penny, a 1978 Canadian .25 cent coin (Figure 83), a porcelain doll arm (Figure 82), a fragmented Stoneware Derbyshire type ink/blacking bottle (Figure 84), two pieces of a slate board, and a circular tobacco tag (Figure 82). A few pieces of modern garbage were also found and retained to document context in the form of foil food wrappers, and unidentifiable pieces of white, red, and purple plastic.

#### c. Structural

The structural category represents the second largest functional group from the W. Morgan Site accounting for roughly 38.5% of the entire assemblage. Nails make up the bulk of the structural group, accounting for just under half (48.5%) of the category (n=381). They are represented by two different types, cut (n=177 [95%]) and wire (n=8 [5%]). The breakdown of the nail assemblage from the W. Morgan Site is informative. Notably, no earlier period wrought nails are present, cut nails are

common, and more modern wire nails are rare. A small number of other fasteners are also present, including nuts and bolts, a tack, a threaded eye hook and three washers.

The second most common object in the structural group is pane glass, accounting for 28.5% of the category (n=147). Building materials encountered include brick, drainage tile, plaster fragments, mortar samples, as well as two modern artifacts: black electrical tape and a fragment of plastic ABS piping. Miscellaneous scraps of metal, chain link, and fence wire (barbed as well as not) are also present as are unidentifiable rectangular fragments of metal strapping. A limited number of unglazed terracotta pieces are also present, which likely represent flowerpots (n=11).

#### d. Furnishing

Furnishing account for only eight items, which are all fragments of colourless glass from lamp chimneys.

## 7.0 Analysis and Conclusions

### 7.1 Edey/Davis Site (BiFx-27)

The Edey/Davis Site (BiFx-27) includes an overgrown area, elevated above the surrounding agricultural fields. This raised area is what remains of the residence that was on the property into the 1990's and is shown on the site maps as a "house mound". The house was that of the Davis family, but the site likely has some ties back to the earlier owners, the family of Elizabeth Edey. While it is unclear when the Edey's acquired the property, a "Edy T. H" (tenant house), is shown on the 1863 Walling map in the general location of the archaeological site (Map 6). An Elizabeth Edey could not be located living in the March Township in historical census records, but there was an Elizabeth Edey enumerated in 1861 living in Huntley, an adjoining community less than 10 km southwest of March. Elizabeth was living with her husband Moses and their seven children (Statistics Canada 1861). Given the census, land registry, and status of the structure as a tenant house, it is possible the Edey family arrived as tenant farmers circa 1861-1863 (after the census but before the Walling survey), then purchased the property between 1863 and the sale in 1873 to Joseph Davis. Some of the earlier artifacts from the assemblage may well represent the Edey family occupancy of the property, although contexts are too mixed to clearly define such a connection.

Joseph Davis, who acquired the south half of Lot 13 in 1873, is depicted in 1879 with a structure in the same location as that show in 1863 map (Map 6). Joseph and family were living in March at least a couple of years prior to purchasing the property as the 1871 census of March Township includes Joseph, then a 28-year-old Irish farmer, and his wife Frances, 26, with their two young children, Isaac and Frances. After Joseph's purchase, the lot stayed in the Davis family and was an active farm until the early 1990s (OLR:Ottawa-Carleton (04), March, Book 3). Aerial imagery shows the use of the home into the early 1990s and that it was demolished by 2002 (Map 4).

The artifact assemblage from the Edey/Davis site clearly documents a later occupancy as is it overwhelmingly a late-19<sup>th</sup> to 20<sup>th</sup> century assemblage with 48% of ceramics found on site being VWE while only 20% are RWE and modern items such as plastics and wire nails throughout. Although the bulk of the Edey/Davis Site collection dates to the late 1800s, there are a few artifacts present that may represent a curated collection brought to the site by the Edey or Davis families. These include painted pearlware and creamware vessels. These wares do not constitute more than 2% of the entire ceramic collection for the site, are from mixed contexts, and therefore do not represent a contextual early late 18<sup>th</sup> or early 19<sup>th</sup> century occupation of the site.

Virtually all archaeological units across the site were found to contain modern (early 20<sup>th</sup> century or later) artifacts down to subsoil. In total, 56 units in were dug across the site and 35 of those units (64%) were disturbed with modern artifacts found throughout deposits. While individual units were encountered without modern items, further analysis demonstrates all archaeological contexts from the site are indeed of modern deposition. For example, units dug in and around the "house mound" have an ash layer that sits on top of a hardened clay subsoil. In some units this layer, in the context of a single unit, appears historical in origin as nothing modern was encountered. However, when correlated across multiple units as an event deposition, the modern origin is shown through the presence of wire nails and other items. Furthermore, this ash layer is the lowest stratigraphic cultural deposit on the site, which is modern in origin, and therefore illustrates there are no intact historic deposits across the site. The origins of the ash deposit are unknown, but perhaps it represents the loss of the homestead circa 1900. Subsequently, the site was capped with fill and a new residence was built on top and then occupied until continuously into the 1990s.

Only a sample of modern items were retained (699 artifacts) to inform the overall analysis of the site, but the percentage of modern material (11% of the assemblage) does not fully represent what was

present on site as there was much more that was not collected as it does not have Cultural Heritage Value or Interest. Further, per-unit artifact counts are generally low across the site (< 100), except in areas immediately surrounding the house mound in the northwest section of the site, it is within this vicinity that artifact counts exceed 150. Historical material (predominantly late 19<sup>th</sup> century) was mixed with explicitly modern debris in almost all excavated units. Notable artifacts found throughout the site evidencing this later use include machine-made bottles with threaded or crown closures, wire nails, solarized manganese-tinted glass, and plastics. Which fits with the historical record that demonstrates continuous inhabitation of the property until at least the early 1990s.

Consequently, the Edey/Davis Site (BiFx-27) is not considered culturally significant as 80% or more the archaeologically documented occupation of the property does not predate 1870 as per Section 3.4.2, Standard 1.a (MHSTCI 2011). Furthermore, the site is not associated with the first generation of settlement in the area as per Section 3.4.3, Standard 1 (MHSTCI 2011). Moreover, the site lacks archaeological integrity as all stratigraphic horizons from the site include the above noted modern artifacts documenting the ongoing occupation of the site well into the 20<sup>th</sup> century.

## 7.2 W. Morgan Site (BiFx-28)

Stage 3 assessment of the W. Morgan Site (BiFx-28) produced an assemblage of 1,013 artifacts (988 from 1x1 m unit excavation and 25 during the CSP). This collection is largely material typical of a rural mid to late-19<sup>th</sup> century Euro-Canadian farmstead. Structural evidence in the form of considerable numbers of cut nails and pane glass demonstrate that a building was constructed on the site sometime in the mid-19<sup>th</sup> century. A small number of wire nails hint at modification or repairs undertaken later in the 19<sup>th</sup> century or intrusive refuse scattering from later occupancy. Although no foundations or cultural features were uncovered, the amount of domestic refuse recovered suggests that the site was associated with a residence rather than an outbuilding.

The north half of Lot 13, Concession 4 was owned in the early 19<sup>th</sup> century by George Morgan, who resided on the west side of March Road in Concession 3, outside of the study area (Map 6). He likely used the lands within the study area for farming, as no structure is shown on the 1863 Walling map (Map 6). In 1870, William Morgan purchased the Concession 4 lands from his father George (OLR:Ottawa-Carleton (04), March, Book 3), and in 1879 is shown as the occupant with a structure in the location of the archaeological site (Map 6). Additionally, the 1871 census indicates that William Morgan and his family resided on Lot 13, Concession 4. Based on this documentary evidence, which aligns chronologically with the artifacts recovered, the site is associated with William Morgan and his family's 1870 arrival.

William was married to Frances Morgan and had six children – Eli, Robert, Margaret, Maria, Mary, and Fleming (Statistics Canada 1871, 1881, 1891). The 1879 Belden map shows William Morgan as the owner of Lot 13 Concession 4, living in a structure fronting the concession road in the same area as the archaeological site (Map 6). The 1885 directory, however, notes William Morgan's address as Lot 13 Concession 3, likely indicating he had taken over his father's house following his death (Union Publishing 1885).

In 1888, William deeded the 50 acres of the south half of the north half of Lot 13, Concession 4 to his son Eli, and in 1896 he deeded 40 acres of the front part of the north half of that lot to his son Robert and the remaining 10 acres to Eli. The 1891 census lists Eli Morgan as a single farmer and Robert is still listed as living with his parents. The property stayed in the Morgan family until the north half was sold in 1966 and the remainder in the 1990s (OLR:Ottawa-Carleton (04), March, Book 3).

The bulk of the W. Morgan Site collection dates to the late 1800s which correlates with William Morgan's roughly fifteen-year occupation of the site (1870-1885) and may represent their time living

in the structure fronting the concession road before moving into his father's home across the road. Chronological evidence based on the material culture further demonstrates that the occupation of the site spans primarily the late-19<sup>th</sup> century. The presence of a larger percentage of VWE (n=262) in comparison to RWE (n=132) is suggestive of a late-19<sup>th</sup> century occupation, as the increase in popularity of vitrified earthenwares occurred over the latter half of the 19<sup>th</sup> century (Miller 1991). There is very limited evidence to suggest any occupation of the site after the turn of the 20<sup>th</sup> century.

While artifact concentrations are dropping to the southeast, the site may have once extended south and west of the excavation limits. However, this area has been deeply disturbed to create a gravel parking lot to the west (visible on aerial imagery, Map 4) while to the southwest to southeast the area has been more recently stripped or gouged to subsoil, partly converted to gravel parking lot, and is used for temporary materials stockpiling and construction laydown associated with road construction along March Road that was ongoing at the time of the assessment.

The W. Morgan Site (BiFx-28) is not considered culturally significant as the bulk of the collection of artifacts date the occupation of the site to post-1870s as per Section 3.4.2, Standard 1.a (MHSTCI 2011). Furthermore, the site is not associated with the first generation of settlement in the area as per Section 3.4.3, Standard 1 (MHSTCI 2011). Therefore, no further archaeological study is required for the W. Morgan Site (BiFx-28) as delineated in Map 1.

## **8.0 Recommendations**

Based on the results of the investigation of the Edey/Davis Site (BiFx-27) it is recommended that:

1. No further archaeological study is required for the subject property as delineated in Map 1.
2. Should deeply buried archaeological material be found on the property during construction activities, the Ministry of Heritage, Sport, Tourism and Cultural Industries should be notified immediately.

Based on the results of the investigation of the W. Morgan Site (BiFx-28) it is recommended that:

1. No further archaeological study is required for the subject property as delineated in Map 1.
2. Should deeply buried archaeological material be found on the property during construction activities, the Ministry of Heritage, Sport, Tourism and Cultural Industries should be notified immediately.

## 9.0 Advice on Compliance with Legislation

- a. This report is submitted to the *Minister of Tourism and Culture* as a condition of licencing in accordance with Part VI of the *Ontario Heritage Act*, R.S.O. 1990, c 0.18. The report is reviewed to ensure that it complies with the standards and guidelines that are issued by the Minister, and that the archaeological fieldwork and report recommendations ensure the conservation, protection and preservation of the cultural heritage of Ontario. When all matters relating to archaeological sites within the project area of a development proposal have been addressed to the satisfaction of the Ministry of Tourism and Culture, a letter will be issued by the ministry stating that there are no further concerns with regard to alterations to archaeological sites by the proposed development.
- b. It is an offence under Sections 48 and 69 of the *Ontario Heritage Act* for any party other than a licenced archaeologist to make any alteration to a known archaeological site or to remove any artifact or other physical evidence of past human use or activity from the site, until such time as a licensed archaeologist has completed archaeological fieldwork on the site, submitted a report to the Minister stating that the site has no further cultural heritage value or interest , and the report has been filed in the Ontario Public Register of Archaeology Reports referred to in Section 65.1 of the *Ontario Heritage Act*.
- c. Should previously undocumented archaeological resources be discovered, they may be a new archaeological site and therefore subject to Section 48 (1) of the *Ontario Heritage Act*. The proponent or person discovering the archaeological resources must cease alteration of the site immediately and engage a licenced consultant archaeologist to carry out archaeological fieldwork, in compliance with Section 48 (1) of the *Ontario Heritage Act*.
- d. The *Cemeteries Act*, R.S.O. 1990 c. C.4 and the *Funeral, Burial and Cremation Services Act*, 2002, S.O. 2002, c.33 (when proclaimed in force) require that any person discovering human remains must notify the police or coroner and the Registrar of Cemeteries at the Ministry of Consumer Services.

## 10.0 Closure

Matrix Heritage has prepared this report in a manner consistent with the time limits and physical constraints applicable to this report. No other warranty, expressed or implied is made. The sampling strategies incorporated in this study comply with those identified in the Ministry of Heritage, Sport, Tourism and Culture Industries' *Standards and Guidelines for Consultant Archaeologists* (2011) however; Archaeological Assessments may fail to identify all archaeological resources.

The present report applies only to the project described in the document. Use of this report for purposes other than those described herein or by person(s) other than Cavanaugh or their agent(s) is not authorized without review by this firm for the applicability of our recommendations to the altered use of the report.

This report is pending Ministry approval.

We trust that this report meets your current needs. If you have any questions or we may be of further assistance, please contact the undersigned.

**Figure 2: Barriers and dumpster along the western edge of the Morgan site, by unit 585E 305N (MH1037-D016).**

**Figure 3: Construction material next to the W. Morgan Site (MH1037D013).**

**Figure 4: Gravel pile and parking lot along the southern edge of the W. Morgan Site (MH1037-D027).**

**Figure 5: General view of construction material around the W. Morgan Site (MH1037-D024).**

**Figure 6: Gravel parking lot along the southern edge of the W. Morgan Site (MH1037-D030).**

**Figure 7: Gravel and weeds along the southern edge of the W. Morgan Site (MH1037-D034).**

**Figure 8: General site conditions during CSP at Edey/Davis Site (MH1037-D062).**

**Figure 9: General conditions at the western side of the house mound, along the 420 N line of the Edey/Davis Site (MH1037-D082).**

**Figure 10: General view of area to the west of the house mound (Edey/Davis Site) (MH1037-D116).**

**Figure 11: General view of "house mound" at the Edey/Davis Site (MH1037-D067).**

**Figure 12: General shot of northeastern corner of the "house mound" by unit 780E 440N (Edey/Davis Site) (MH1037-D112).**

**Figure 13: Large blocks of rock and concrete piled in middle of mound (Edey/Davis Site) (MH1037-D086).**

**Figure 14: Wood timbers laid over large pile of rocks, concrete, and rubble in house mound (Edey/Davis Site) (MH1037-D091).**

**Figure 15: Conducting CSP prior to excavation at the W. Morgan Site (MH1037-D001).**

**Figure 16: Completing CSP, setting up grid, and commencing excavation (MH1037-D004).**

**Figure 17: Flags marking CSP waypoints on Edey/Davis Site (MH1037-D058).**

**Figure 18: CSP Conditions at Edey Davis Site (MH1037-D063).**

**Figure 19: Excavations along the 800E line (Edey/Davis Site) (MH1037-D068).**

**Figure 20: Excavations on the 410N line at the Edey/Davis Site (MH1037-D072).**

**Figure 21: General shot of unit excavations at the Edey/Davis Site (MH1037-D076).**

**Figure 22: Excavation of unit 751E 421N at the Edey/Davis Site (MH1037-D097).**

**Figure 23: Recording of unit 770E 440N at the Edey/Davis Site (MH1037-D102).**

**Figure 24: Excavations underway, from southwest corner of the W. Morgan Site (MH1037-D018).**

**Figure 25: Excavations underway at the W. Morgan Site, gravel pile and parking area in background (MH1037-D020).**

**Figure 26: Excavations underway at the W. Morgan Site (MH1037-D022).**

Figure 27: Fragment of VWE vessel decorated with purple transfer print found during CSP of the Edey/Davis Site (MH1037-D164).

Figure 28: Fragments of green and teal transfer printed VWE sherds found during CSP of the Edey/Davis Site (MH1037-D165).

Figure 29: Bottom of a VWE plate with Ironstone Chinaware Co. maker's mark found during CSP of the Edey/Davis Site (MH1037-D166).

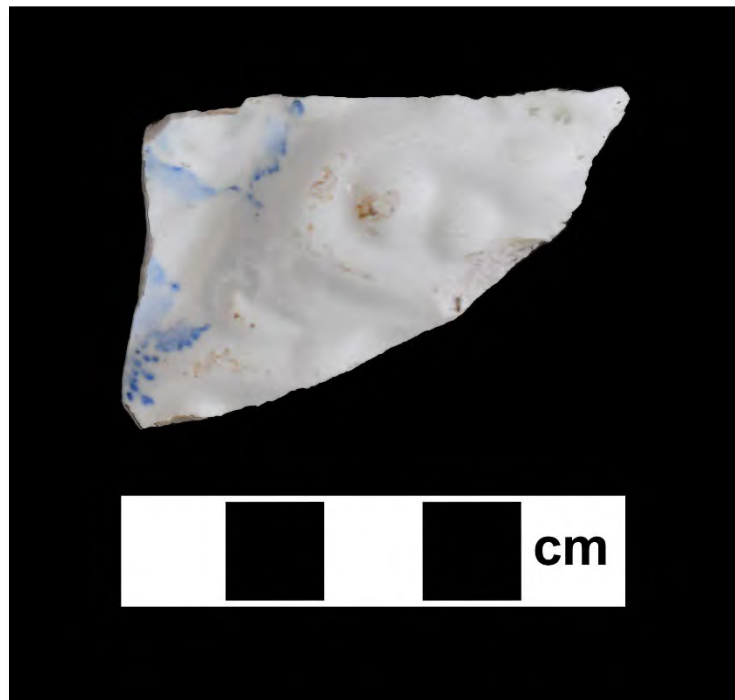

Figure 30: Fragment of a moulded and transfer printed VWE vessel found during the CSP of the Edey/Davis Site (MH1037-D167).

Figure 31: Colourless threaded bottle finish with patent date 1930 found during CSP of Edey/Davis Site (MH1037-D168).

Figure 32: North profile of 770E 400N at the Edey/Davis Site (MH1037-D142).

Figure 33: North profile of 810E 400N at the Edey/Davis Site (MH1037-D143).

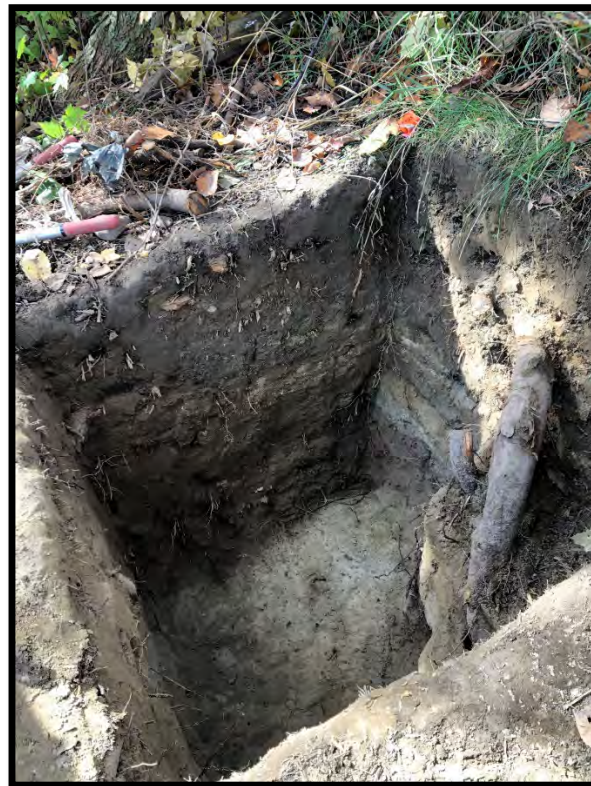

Figure 34: Fully excavated unit 768E 426N, with ash layer over subsoil and multiple fill or levelling layers at the Edey/Davis Site (MH1037-D133).

**Figure 35: Plan view of circa 1990 house demolition rubble, Lot 2 unit 770E 430N at the Edey/Davis Site (MH1037-D146).**

**Figure 36: South profile of 760E 430N, with ashy layer 5 over subsoil and later fills overlying at the Edey/Davis Site (MH1037-D153).**

**Figure 37: West profile of 790E 440N at the Edey/Davis Site (MH1037-D163).**

**Figure 38: General view of eastern side of house mound by units 780E 435N and 780E 430N at the Edey/Davis Site (MH1037-D129).**

**Figure 39: General view of site, excavation of 780E 430N at the Edey/Davis Site (MH1037-D092).**

**Figure 40: General site conditions and CSP waypoints at the Edey/Davis Site looking at area of former house (MH1037-D061).**

Figure 41: Rubble and timber fill in house area with water trough made of old water heater at the Edey/Davis Site (MH1037-D085).

Figure 42: Fragments of mocha and plain Yellowware vessels found during excavation of the Edey/Davis Site (MH1037-D169).

Figure 43: Examples of purple transfer prints on VWE found during excavation of the Edey/Davis Site (MH1037-D170).

Figure 44: Examples of brown transfer print on RWE found during excavation of the Edey/Davis Site (MH1037-D171).

Figure 45: Examples of black transfer print on RWE and VWE found during excavation of the Edey/Davis Site (MH1037-D172).

Figure 46: Examples of green transfer print on VWE found during excavation of the Edey/Davis Site (MH1037-D173).

Figure 47: Examples of blue transfer print on RWE and VWE found during excavation of the Edey/Davis Site (MH1037-D174).

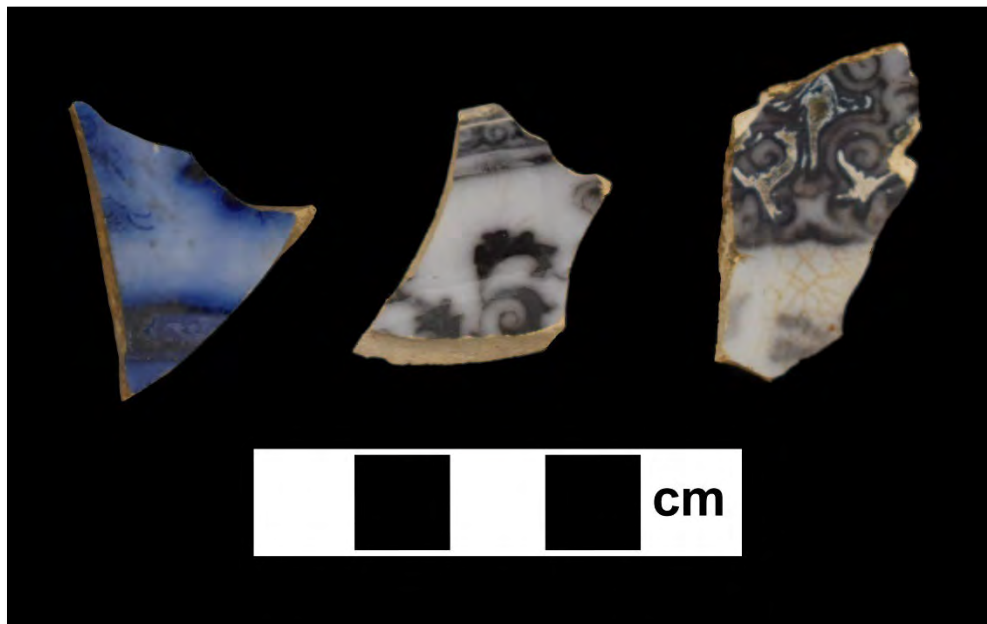

Figure 48: Examples of blue and black flow transfer print on VWE found during excavation of the Edey/Davis Site (MH1037-D175).

Figure 49: Late Palette painted flower motifs on RWE found during excavation of the Edey/Davis Site (MH1037-D176).

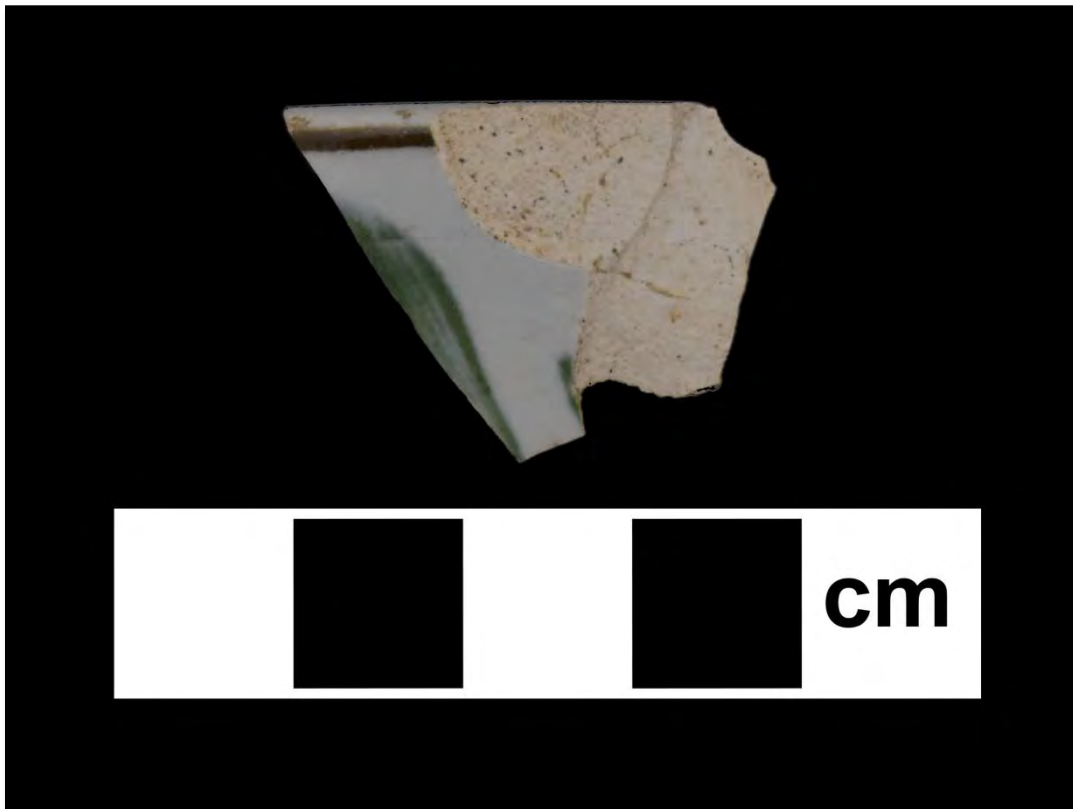

Figure 50: Early Palette painted decoration on pearlware found during excavation of the Edey/Davis Site (MH1037-D177).

Figure 51: Blue painted pearlware found during excavation of the Edey/Davis Site (MH1037-D178).

Figure 52: Various moulded VWE fragments found during excavation of the Edey/Davis Site (MH1037-D179).

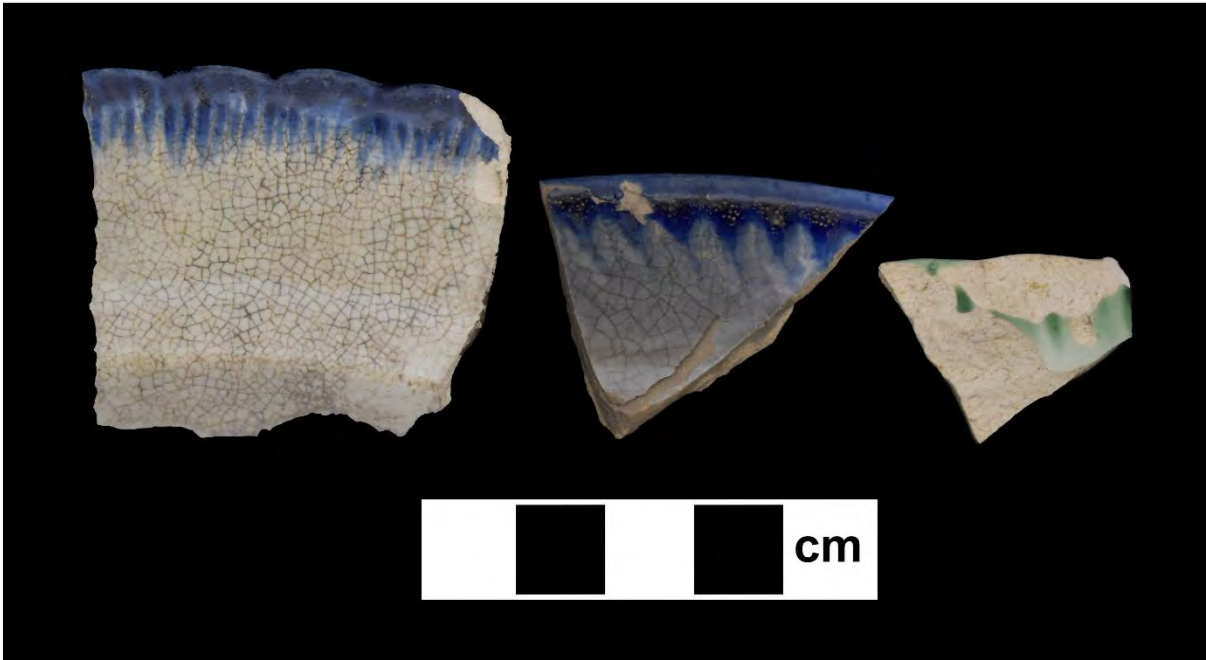

Figure 53: Various blue and green edgework fragments found during excavation of the Edey/Davis Site (MH1037-D180).

Figure 54: Various stamped and sponged motifs on RWE found during excavation of the Edey/Davis Site (MH1037-D181).

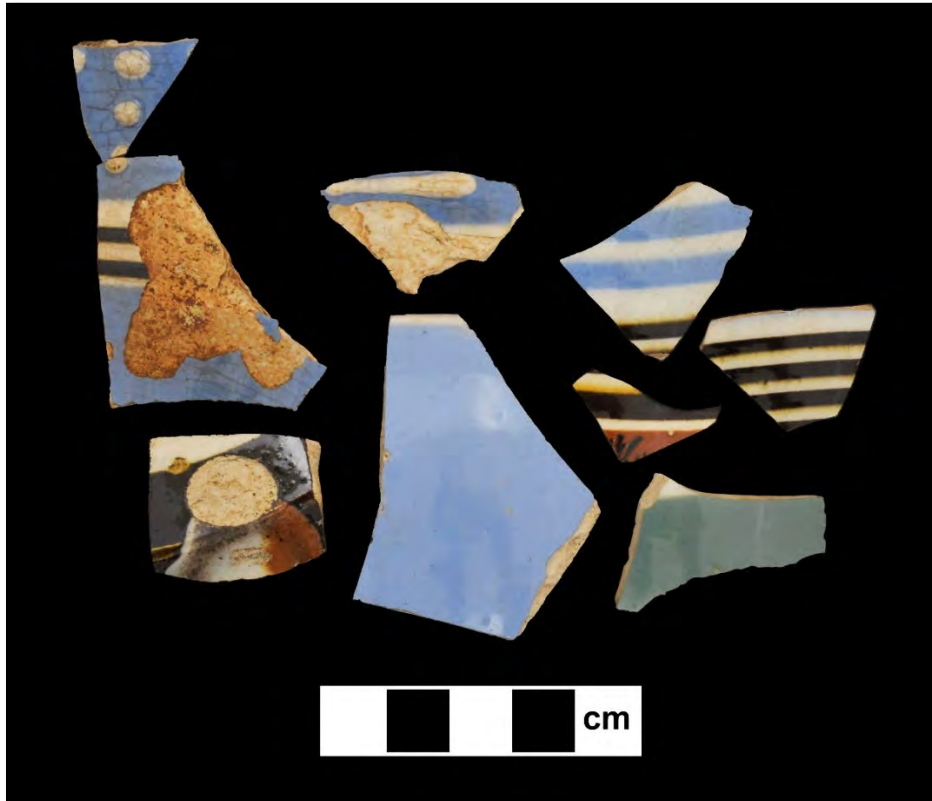

Figure 55: Examples of RWE fragments with industrial slipped designs (banded, solid, mocha, and cabled) found during excavation of the Edey/Davis Site (MH1037-D182).

Figure 56: Lithographed design on a scalloped VWE vessel found during excavation of the Edey/Davis Site (MH1037-D183).

Figure 57: Examples of lustre decoration on Fine earthenware, RWE, and VWE found during excavation of the Edey/Davis Site (MH1037-D184).

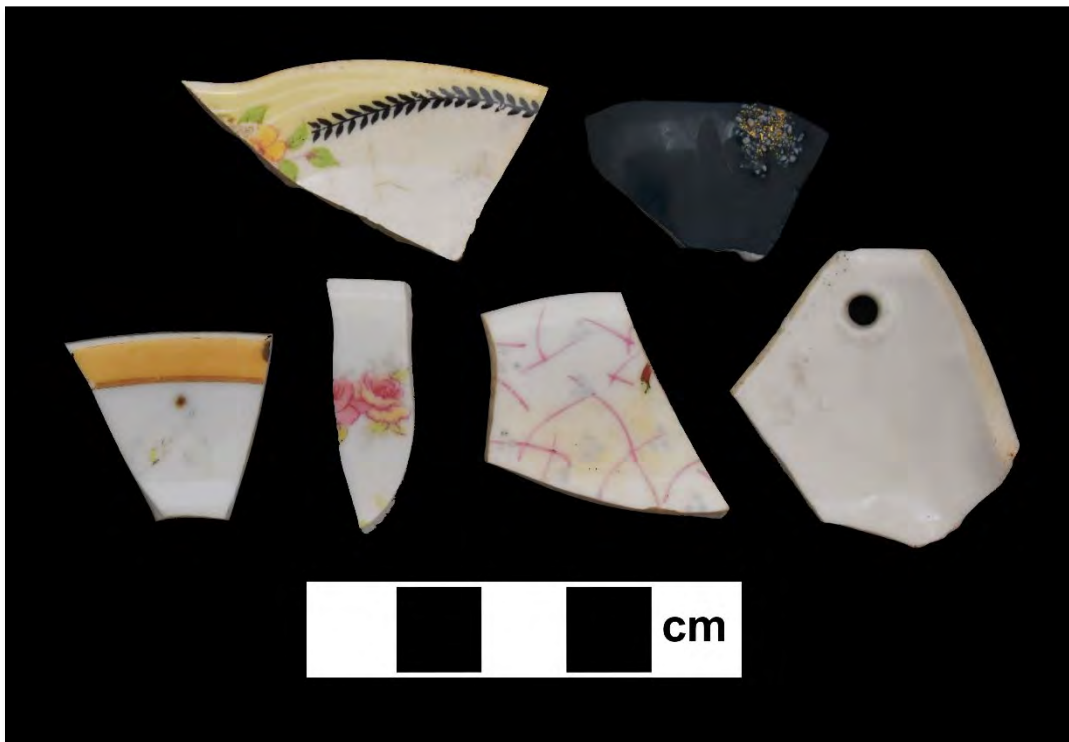

Figure 58: Different examples of decorated porcelain (lithograph and painted) found during excavation of the Edey/Davis Site (MH1037-D185).

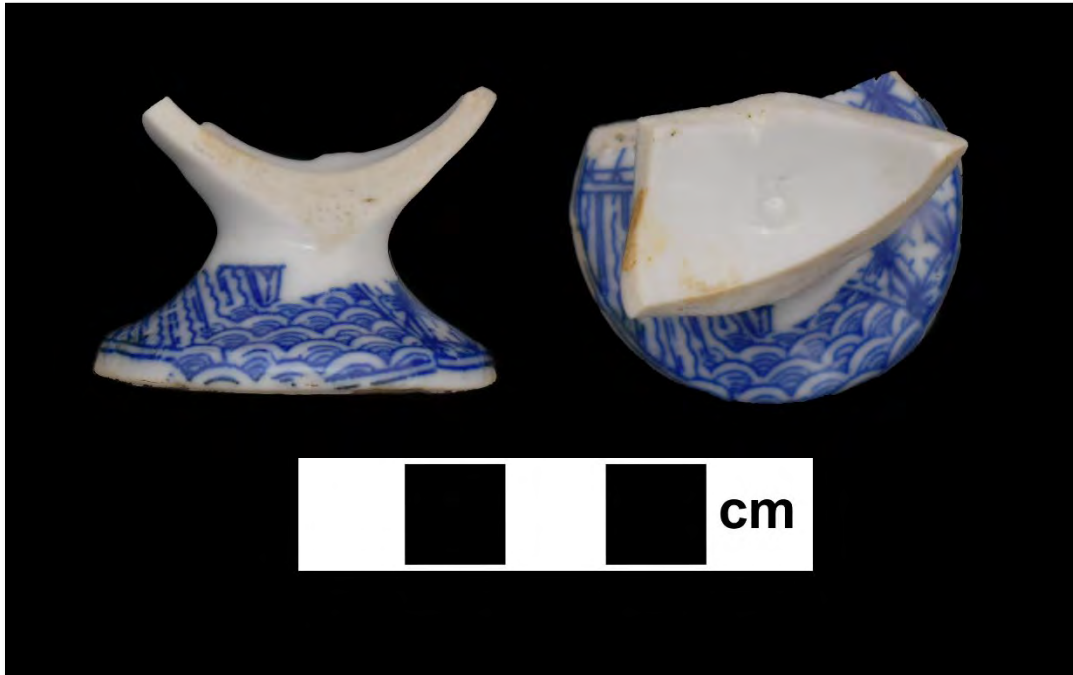

Figure 59: A porcelain eggcup with transfer print decoration found during excavation of the Edey/Davis Site (MH1037-D186).

Figure 60: Manganese tinted glassware found during excavation of the Edey/Davis Site (MH1037-D187).

Figure 61: Manganese tinted threaded bottle finish found during excavation of the Edey/Davis Site (MH1037-D188).

Figure 62: Carved bone handle and iron fork, a teaspoon, serving spoon, and threaded bone handle found during excavation of the Edey/Davis Site (MH1037-D189).

Figure 63: Modern pencil lead with rubber eraser end and an embossed plastic gold cap found during excavation of the Edey/Davis Site (MH137-D190).

Figure 64: 20<sup>th</sup> century Colgate toothpaste tube and cap found during excavation of the Edey/Davis Site (MH1037-D191).

Figure 65: Clay smoking pipe stems (plain, Henderson, and Glasgow), a ridged pipe bowl, chewed mouthpieces, and a glazed pipe stem found during excavation of the Edey/Davis Site (MH1037-D192).

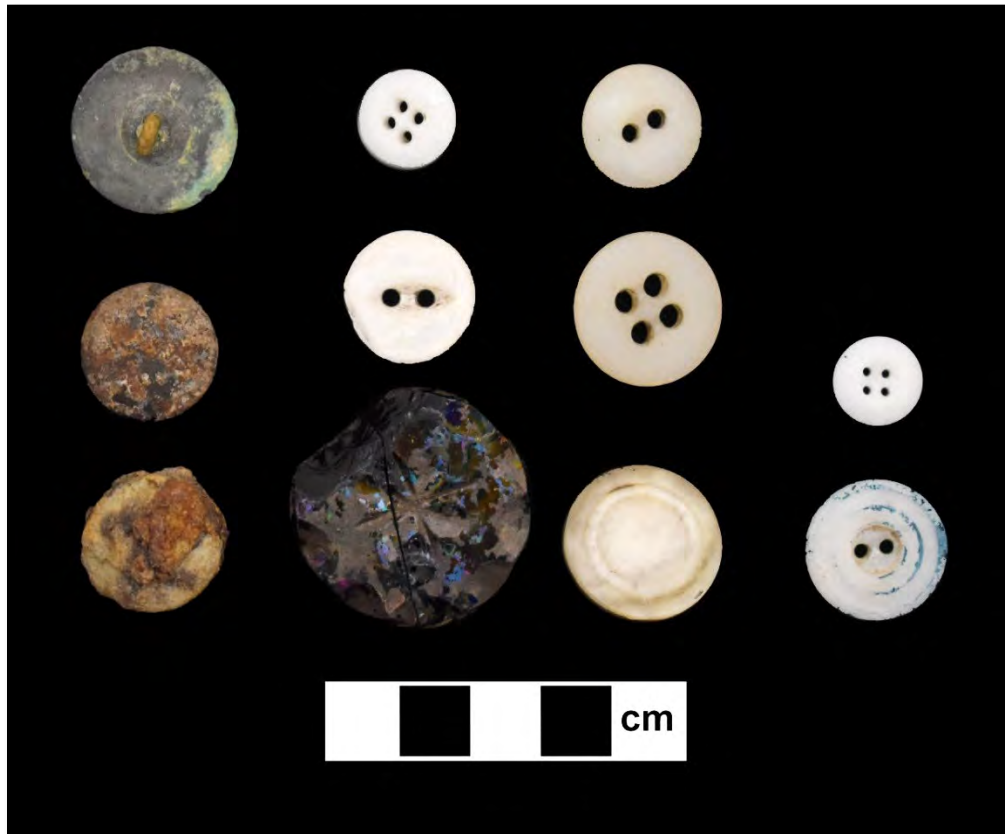

Figure 66: Buttons made of various materials including shell, glass, metal, porcelain, and plastic found during excavation of the Edey/Davis Site (MH1037-D194).

Figure 67: Corroded belt buckles found during excavation of the Edey/Davis Site (MH1037-D195).

Figure 68: A coarse stoneware inkwell and the rim of a Derbyshire type blacking bottle found during excavation of the Edey/Davis Site (MH1037-D196).

Figure 69: A corroded mouth harp, copper alloy key, and a jingle bell found during excavation of the Edey/Davis Site (MH1037-D197).

Figure 70: A clay marble, a circular tobacco tag, an amber coloured glass bottle stopper and a gun flint found during excavation of the Edey/Davis Site (MH1037-D198).

Figure 71: A Sir Isaac Brock Memorial Coin (1812), and a seated Britannia coin from the 19th c. found during excavation of the Edey/Davis Site (MH1037-D199).

Figure 72: A broken whetstone found during excavation of the Edey/Davis Site (MH1037-D200).

Figure 73: A cartridge casing "WW6 DA SS" and a Dominion Canuck No. 12 shotgun cartridge base found during excavation of the Edey/Davis Site (MH1037-D201).

Figure 74: A black glass moulded button and pipe stem fragments found during the CSP of the W. Morgan Site (MH1037-D202).

Figure 75: North profile of 600E 300N at the W. Morgan Site (MH1037-D056).

Figure 76: North profile of 590E 286N at the W. Morgan Site (MH1037-D057).

Figure 77: Fragments of plain and banded yellowware found during the excavation of the W. Morgan Site (MH1037-D203).

Figure 78: Blue impressed edgeware on RWE found during the excavation of the W. Morgan Site (MH1037-D204).

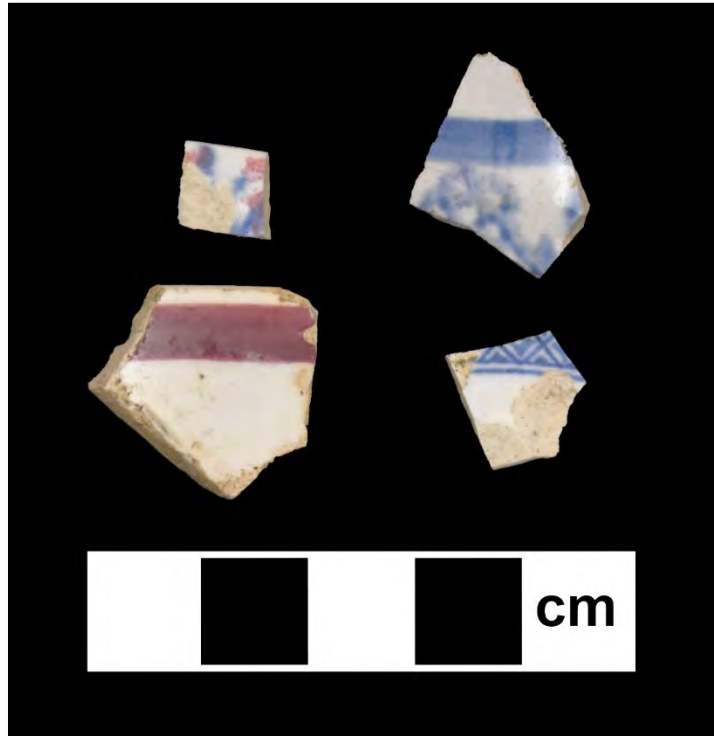

Figure 79: Decorated RWE fragments: sponged, stamped, painted and blue transfer print found during the excavation of the W. Morgan Site (MH1037-D205).

Figure 80: Aqua coloured glass bottle stopper found during the excavation of the W. Morgan Site (MH1037-D206).

Figure 81: Decorated clay smoking pipe bowls, white, and red clay stems found during the excavation of the W. Morgan Site (MH1037-D207).

Figure 82: A corroded tobacco tag, a calico transfer printed Prosser button, and a broken porcelain doll arm found during the excavation of the W. Morgan Site (MH1037-D208).

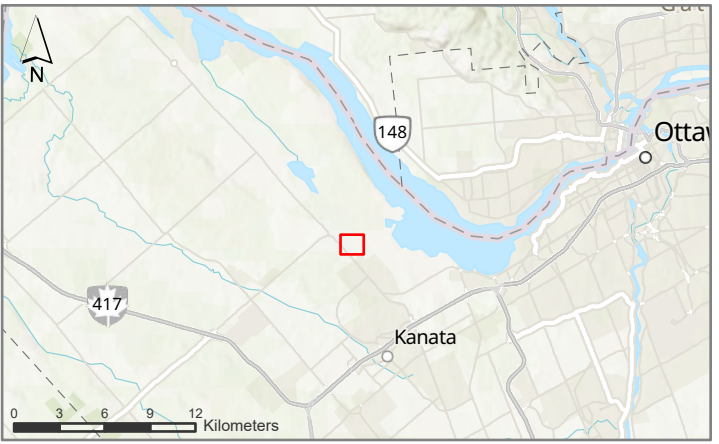

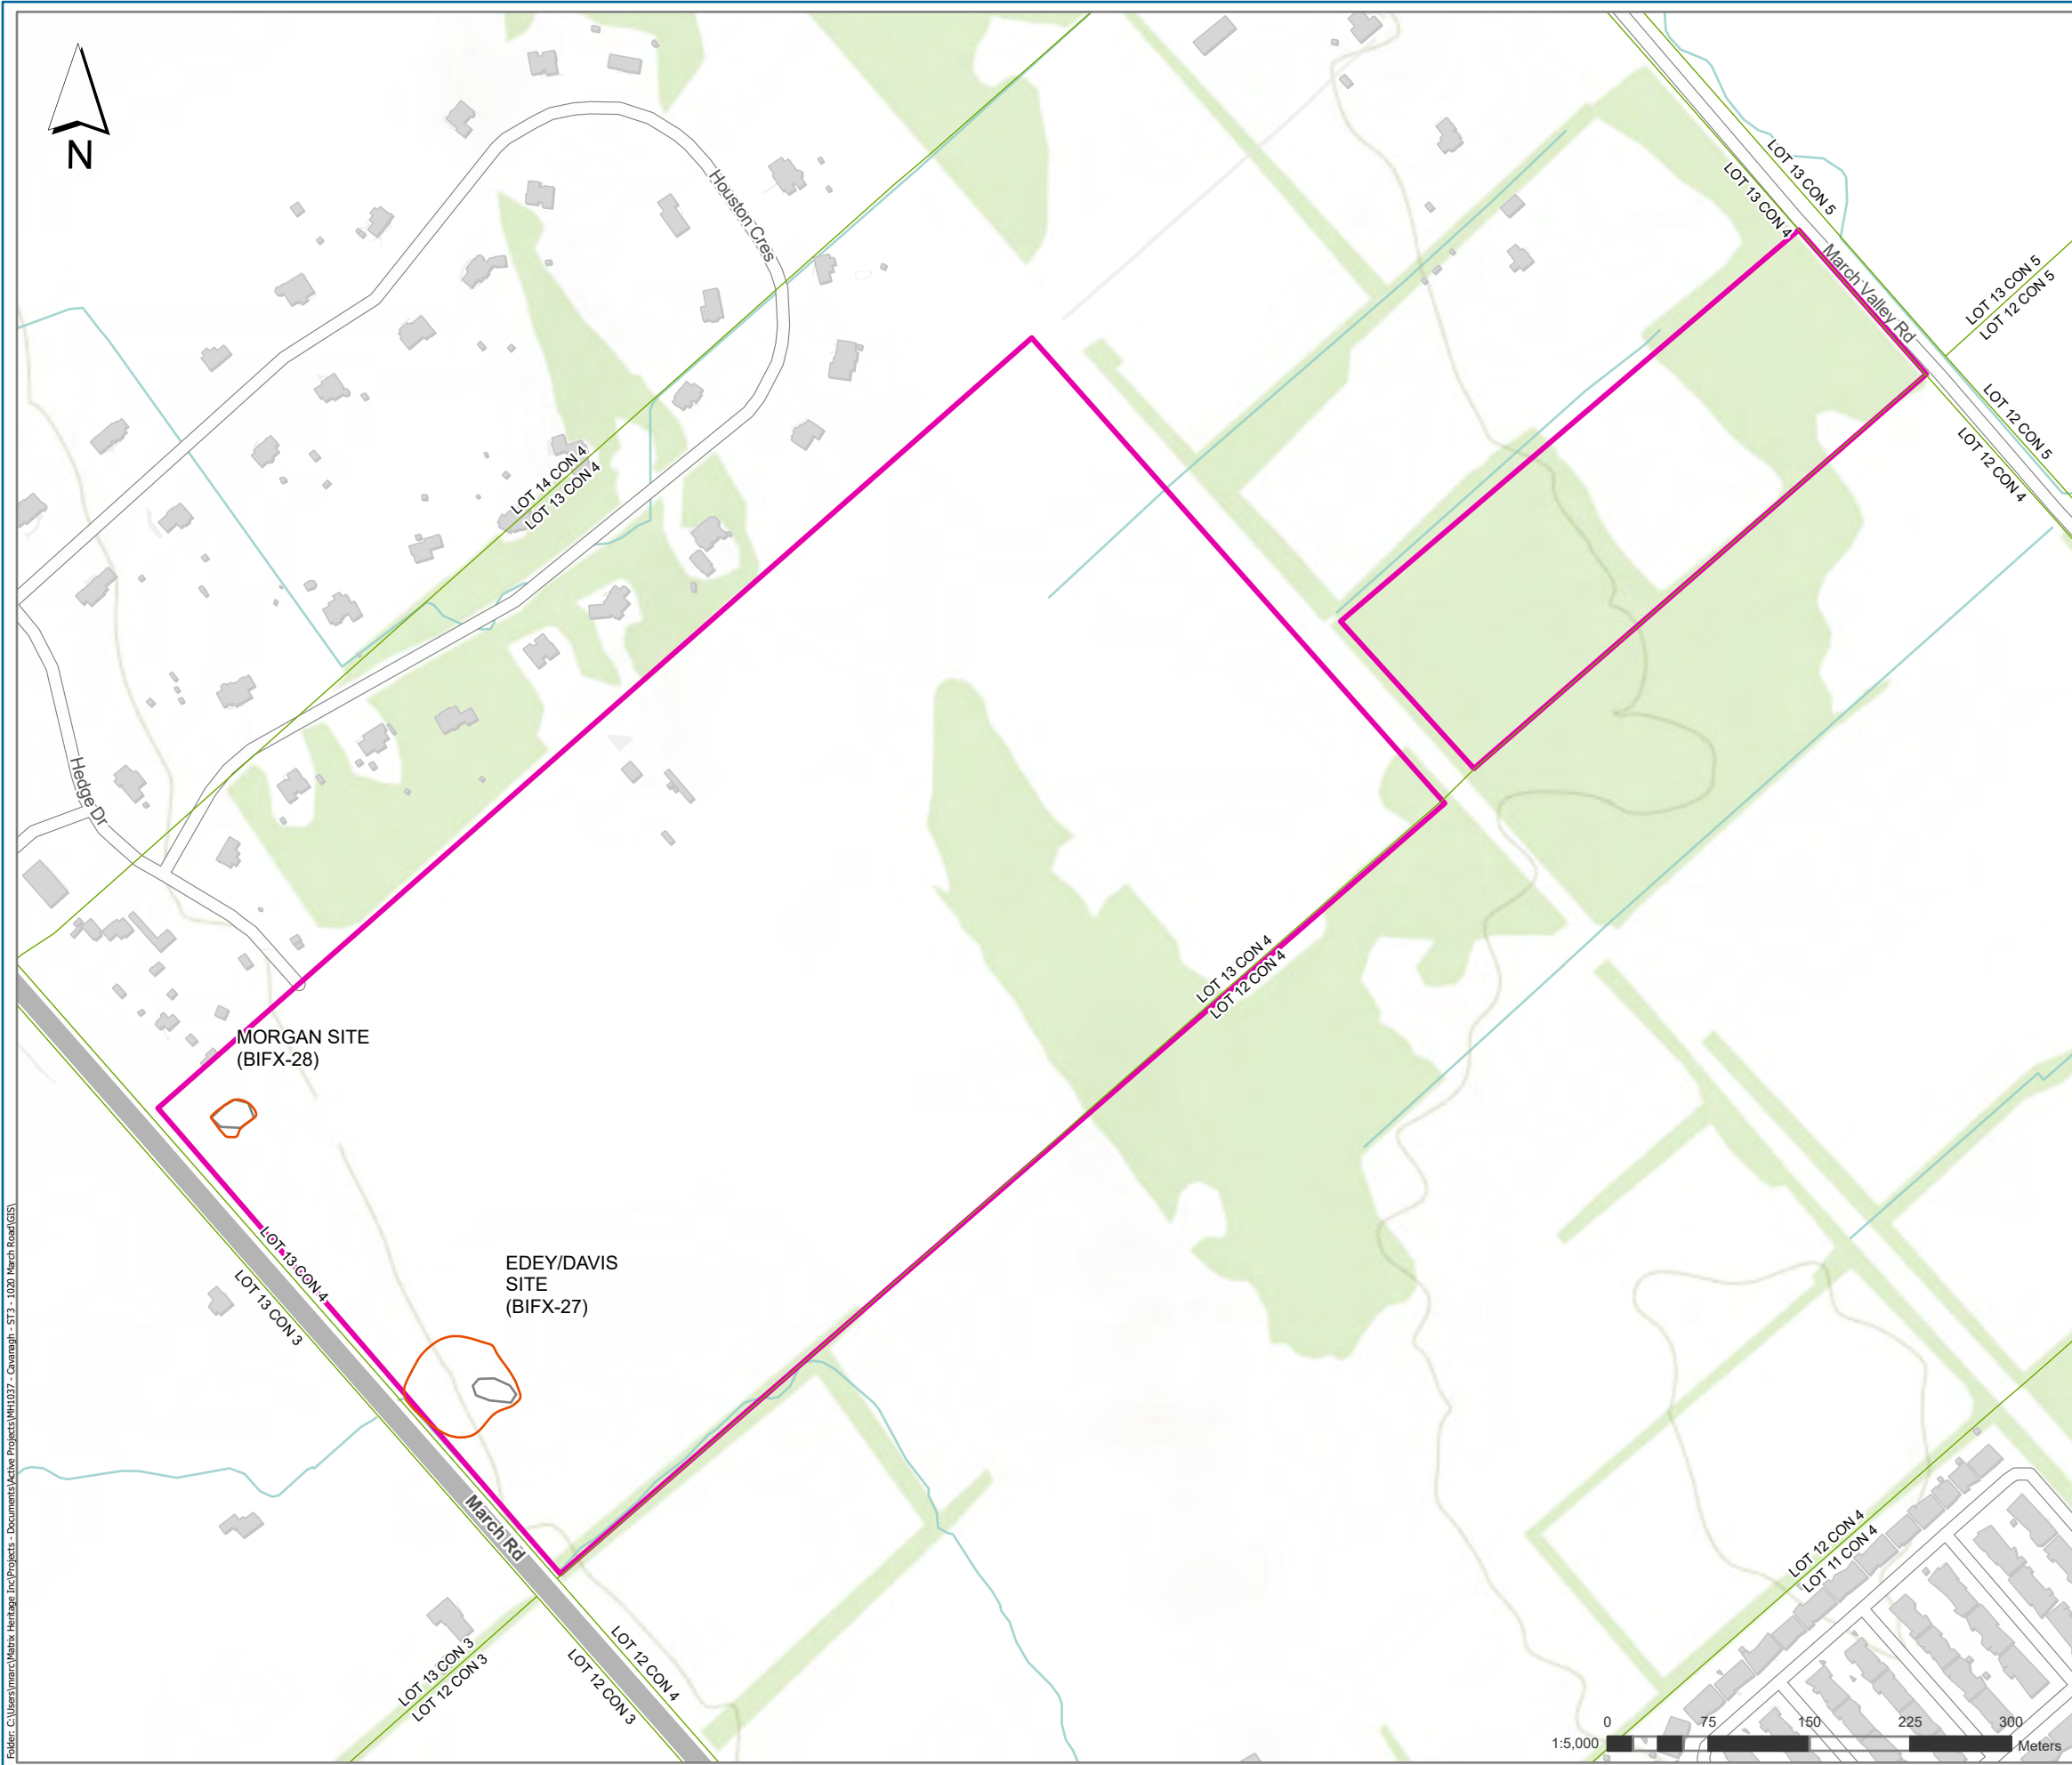

Figure 83: Canadian penny from 1944 and a quarter from 1978 found during the excavation of the W. Morgan Site (MH1037-D209).

Figure 84: Base of a Derbyshire type blacking bottle found during the excavation of the W. Morgan Site (MH1037-D210).

MH1037-D206	Aqua coloured glass bottle stopper found in 595E 290N		W. Morgan	14-Dec-21	M. Hunter
MH1037-D207	Decorated clay smoking pipe bowls (600E 295N, 590E 290N, 585E 295N, 598E 297N) and plain white (597E 289N) and red (605E 290N) clay stems		W. Morgan	14-Dec-21	M. Hunter
MH1037-D208	A corroded tobacco tag (595E 290N), a calico transfer printed prosser button (595E 300N), and a broken porcelain doll arm (590E 305N)		W. Morgan	14-Dec-21	M. Hunter
MH1037-D209	Canadian penny from 1944 (600E 310N) and a quarter from 1978 (585E 290N)		W. Morgan	14-Dec-21	M. Hunter
MH1037-D210	Base of a Derbyshire type blacking bottle found in 600E 300N		W. Morgan	14-Dec-21	M. Hunter

### Appendix B: Document Catalogue

Project	Description	Created By
MH1037	1020 and 1070 March Road Field Notes Stage 3 (One Note File)	A. Jackson

55496	MH1037	750E 430N 2	1	Holloware unspecified	RWE - Refined White Earthenware	black stem	Late Palette - Red/black/lt. Blue/lt. Green	Painted	green	body	Fragmentary
55486	MH1037	750E 430N 2	2	Tableware unspecified	RWE - Refined White Earthenware		Plain			body	Fragmentary
55489	MH1037	750E 430N 2	1	Tableware unspecified	Coarse Earthenware red			Lead glaze			Fragmentary
55492	MH1037	750E 430N 2	1	Tableware unspecified	RWE - Refined White Earthenware		Unspecified Transfer	Other transfer (2nd series/lt. green blue brown purple)	Brown	body	Fragmentary
55498	MH1037	750E 430N 2	2	Tableware unspecified	RWE - Refined White Earthenware		Unspecified Transfer	Blue transfer	Blue	body	Fragmentary
55499	MH1037	750E 430N 2	1	Tableware unspecified	VWE - Vitriified White Earthenware	pink/red band around rim and painted teal leaf	Moulded	Painted	pink	rim	Burned / Melted
55481	MH1037	750E 430N 2	2	Utensil handle unspecified	iron						Concretion / corroded
55484	MH1037	750E 430N 2	2	Bottle unidentified	Colourless Glass					body	Fragmentary
55485	MH1037	750E 430N 2	1	Bottle unidentified	Blue/Green Glass (aqua)					body	Fragmentary
55480	MH1037	750E 430N 2	3	scrap	iron						Concretion / corroded
55483	MH1037	750E 430N 2	1	screw	Metal						Complete
55479	MH1037	750E 430N 2	1	wire	Metal						Concretion / corroded
55488	MH1037	750E 430N 2	1	Brick	Red Brick						Fragmentary
55476	MH1037	750E 430N 2	3	Cut nail	Metal						Complete
55477	MH1037	750E 430N 2	12	Cut nail	Metal						Incomplete
55482	MH1037	750E 430N 2	8	Pane glass	Colourless Glass						Fragmentary
55474	MH1037	750E 430N 2	1	Wire / drawn nail	Metal						Complete

Rec Num	Project	Prov	#	Object	Material	Comment	Decorative Pattern	Primary Diagnostic	Decorative Colour	Portion	Condition
55475	MH1037	750E 430N 2	1	Wire / drawn nail	Metal						Incomplete
55487	MH1037	750E 430N 2	1	Flower pot	Coarse Earthenware red			Unglazed		body	Fragmentary
55038	MH1037	751E 421N 1	1	Cartridge base	Brass (copper + zinc)	Dominion Canuck No 12 shotgun cartridge base		20th Century			Fragmentary
55043	MH1037	751E 421N 1	3	Bottle finish	Colourless Glass	squared oval shaped finish, collar seam is undulating, maybe melted?		MACHINE MADE BOTTLE		finish / rim	Mended
55042	MH1037	751E 421N 1	2	Tableware unspecified	Coarse Earthenware red	brownish orange glaze		Lead glaze		body	Mended
55039	MH1037	751E 421N 1	1	Bottle unidentified	Amber/Brown Glass					body	Fragmentary
55045	MH1037	751E 421N 1	1	Bottle unidentified	Colourless Glass					body	Fragmentary
55040	MH1037	751E 421N 1	1	wire	Metal						Concretion / corroded
55041	MH1037	751E 421N 1	3	Pane glass	Colourless Glass						Fragmentary
55044	MH1037	751E 421N 1									
56326	MH1037	751E 421N 2	1	Holloware unspecified	Porcelain unspecified					footring	Fragmentary
56325	MH1037	751E 421N 2	1	Bottle unidentified	Blue Glass (light)					body	Fragmentary
56322	MH1037	751E 421N 2	1	Cut nail	Metal						Complete
56323	MH1037	751E 421N 2	2	Cut nail	Metal						Incomplete
56324	MH1037	751E 421N 2	3	Pane glass	Colourless Glass						Fragmentary
57148	MH1037	751E 421N 3	2	Holloware unspecified	Coarse Earthenware red			Unglazed		rim	Burned / Melted
57147	MH1037	751E 421N 3	2	Cut nail	Metal						Incomplete
57146	MH1037	751E 421N 3	1	Pane glass	Colourless Glass						Fragmentary
55112	MH1037	751E 421N 4	1	Mammal bone	Bone						Burned / Melted
55113	MH1037	751E 421N 4	1	Mammal bone	Bone						Fragmentary
55114	MH1037	751E 421N 4	1	Mammal tooth / teeth	Dentine (Tooth)	worn					
55111	MH1037	751E 421N 4	1	Holloware unspecified	RWE - Refined White Earthenware		Banded	Industrial slip	Blue	body	Fragmentary
55115	MH1037	751E 421N 4	2	Tableware unspecified	Coarse Earthenware red			Lead glaze		body	Fragmentary
55109	MH1037	751E 421N 4	2	Cut nail	Metal						Concretion / corroded
55110	MH1037	751E 421N 4	1	Pane glass	Colourless Glass						Fragmentary
56363	MH1037	752E 440N 1	1	Mammal bone	Bone					cut	Fragmentary
56364	MH1037	752E 440N 1	1	Glassware unidentified	Colourless Glass						Burned / Melted
56371	MH1037	752E 440N 1	1	Holloware unspecified	VWE - Vitrified White Earthenware		Plain			rim	Fragmentary
56372	MH1037	752E 440N 1	1	Holloware unspecified	VWE - Vitrified White Earthenware		Stamped	Stamped	Pink	body	Fragmentary
56373	MH1037	752E 440N 1	1	Holloware unspecified	Coarse Earthenware red			Lead glaze		body	Fragmentary
56374	MH1037	752E 440N 1	1	Holloware unspecified	Coarse Earthenware red			Unglazed		body	Fragmentary
56370	MH1037	752E 440N 1	2	Tableware unspecified	VWE - Vitrified White Earthenware		Plain			body	Fragmentary
56366	MH1037	752E 440N 1	1	Bottle unidentified	Solarized Glass Manganese Tint					body	Fragmentary
56369	MH1037	752E 440N 1	3	Bottle unidentified	Colourless Glass			Modern section machine bottle			Fragmentary
56368	MH1037	752E 440N 1	1	Clay smoking pipe bowl	White Clay					bowl	Fragmentary
56375	MH1037	752E 440N 1	1	Mouth harp	iron	small, for higher notes, one of the tines is broken, inside of loop is					Concretion / corroded
56367	MH1037	752E 440N 1	1	Panel bottle	Blue/Green Glass (aqua)			Cup bottom mould		base	Fragmentary
56362	MH1037	752E 440N 1	1	Charcoal	Charcoal						Burned / Melted
56359	MH1037	752E 440N 1	2	Cut nail	Metal						Complete
56360	MH1037	752E 440N 1	10	Cut nail	Metal						Incomplete
56358	MH1037	752E 440N 1	2	Wire / drawn nail	Metal						Complete
56361	MH1037	752E 440N 1	1	Wire / drawn nail	Metal						Incomplete
56365	MH1037	752E 440N 1	1	Slate pencil	Slate						Fragmentary

Rec Num	Project	Prov	#	Object	Material	Comment	Decorative Pattern	Primary Diagnostic	Decorative Colour	Portion	Condition
