1. EXECUTIVE SUMMARY

Fisher Environmental Ltd. (Fisher) was retained by Dymon Group of Companies to conduct a Phase One Environmental Site Assessment (Phase One ESA) of the property located at 5210 Innes Road, Ottawa (Orleans), Ontario, herein referred to as the “Site” or “phase one property”. The Phase One ESA was conducted in support of a liability assessment for a proposed acquisition of the Site and in support of approval for future commercial development. It is understood that filing of a Record of Site Condition (RSC) with the Environmental Site Registry is not required.

The Phase One ESA was conducted in accordance with Part VII and Schedule D of the Ontario Regulation 153/04 (Records of Site Condition – Part XV.1 of the EPA), as amended as of July 1, 2011.

The scope of work included records review, interviews, site reconnaissance, review and evaluation of information collected, preparation of tables with Current and Past Uses of the phase one property and Areas of Potential Environmental Concern (APECs), a Conceptual Site Model (CSM), preparation of a written report with conclusions and recommendations, and submission of the report to Dymon Group of Companies.

Records Review

The applicable search distance for the phase one study area records review included the phase one property, properties located, wholly or partly, within 250 m from the nearest point on a boundary of the Site, and other neighboring properties where activities considered being Potentially Contaminating Activities (PCAs) were apparent or anticipated.

A review of aerial photographs dated between 1946 and 2018 indicated that the Site was undeveloped/agricultural land.

In July 2009, O'Connor Associates Environmental Inc. (O'Connor) conducted a Phase I ESA at the Site for Imperial Oil Limited. The Site was indicated to have been historically used for agricultural purposes. Based on the information gathered and observations made during that investigation, the report identified potential environmental concerns associated with off-site activities, including three (3) underground fuel storage tanks (USTs) and diesel fuel spill located on the City of Ottawa public works yard, further south of the Site, and a diesel fuel spill occurred in 1985 at the intersection of Trim Road and Innes Road.

In August 2009, O'Connor conducted a Phase II ESA for Imperial Oil Limited to evaluate soil and groundwater conditions at the Site from potential migration of contaminants associated with the off-site USTs and historical spills identified from the Phase I ESA. A total of four (4) test pits, to depths of up to 4.0 m below ground surface (bgs), and one (1) borehole (BH4), to a depth of

6.10 m bgs, were advanced at the Site. The borehole (BH4), located at the central-northern portion of the Site, was completed with monitoring well to facilitate groundwater level monitoring and sampling.

Site topography is relatively flat. On the basis of the test pits and borehole completed, the stratigraphy at the investigated areas of the Site generally consists of organic/topsoil overlying native clayey silt and silty clay. Groundwater was encountered at 1.1 m bgs.

A total of five (5) soil and two (2) groundwater samples recovered from the test pits and/or borehole/monitoring well, including one (1) field duplicate soil sample and one (1) field duplicate groundwater samples for quality assurance/quality control (QA/QC) purposes, were submitted to the laboratory for analysis of Metals, Petroleum Hydrocarbon (PHC) Fractions 1 to 4 (F1-F4), Benzene, Toluene, Ethylbenzene and Xylenes (collectively “BTEX”), Volatile Organic Compounds (VOC), Polychlorinated Biphenyl (PCBs) and/or pH.

The results of chemical analysis for all analyzed soil and groundwater samples were found to be in compliance with the applicable Ministry of the Environment (MOE) 2004 Standards (Table 3, Residential/Parkland/Institutional (R/P/I) Property Use, medium to fine textured soil) for all analyzed parameters. No further investigation was recommended at that time.

Site Reconnaissance/Interviews

The phase one property is rectangular in shape and has an area of 4,643 m². It was vacant and undeveloped during our inspection on February 25, 2021. It is bounded by Innes Road followed by commercial and residential properties to the north, vacant land to the east, vacant land followed by commercial property to the south, and Trim Road followed by a commercial plaza to the west.

No current operations, representing PCAs at the phase one property and remaining phase one study area, were identified at the time of the site reconnaissance.

Conclusions and Recommendations

The records review, interviews and site reconnaissance conducted as part of the present Phase One ESA have identified no PCAs within the phase one study area that may contribute to APECs on the phase one property.

Considering the findings of the current Phase One ESA, it is concluded that a Phase Two ESA is not required for the phase one property. It is expected that the Site could continue to be used for commercial purposes, and no further investigation is required at this time.

2. INTRODUCTION

Fisher Environmental Ltd. (Fisher) conducted a Phase One Environmental Site Assessment (Phase One ESA) of the property located at 5210 Innes Road, Ottawa (Orleans), Ontario, , herein referred to as the “Site” or “phase one property”. Mr. Sean Fisher of Fisher conducted the Site Reconnaissance on February 25, 2021.

Fisher received authorization to carry out the Phase One ESA from Mr. James Byck of Dymon Group of Companies, whose address is 2-1830 Walkley Road, Ottawa, ON K1H 8K3, and can be contacted at 416-317-7328.

The owner of the subject property is 7749805 Canada Inc.

2.1. Phase One Property Information

2.1.1. Site Location

The phase one property is located on the southeast corner of the intersection of Innes Road and Trim Road in Ottawa (Orleans), ON. NAD 83 Datum for the centroid of the property is 17-464576-45035301. It is bounded by Innes Road followed by commercial and residential properties to the north, vacant land to the east, vacant land followed by commercial property to the south, and Trim Road followed by a commercial plaza to the west. The Site has an area of 4,643 m².

For purposes of discussion, Innes Road is referenced to run east-west and Trim Road is referenced to run north-south. Please refer to Appendix A for the Site Location Map (Figure A).

2.1.2. Legal Description

The Site is legally described as *PART LOT 1 CONCESSION 8, PART 1 PLAN 4R12824; CUMBERLAND*, with the PIN 14565-0003 (LT) – Recently re-entry from 14525-0825 (LT). Please refer to Appendix A for the Legal Survey drawing and land title search report.

3. SCOPE OF INVESTIGATION

3.1 Objectives

The Phase One ESA was conducted in support of a liability assessment for a proposed acquisition of the Site and in support of approval for future commercial development. It is understood that filing of a Record of Site Condition (RSC) with the Environmental Site Registry is not required.

The purpose of the Phase One ESA was to develop a preliminary determination of the likelihood that one or more contaminants have affected any land or water on, in or under the phase one property, and to determine the need and provide the basis for carrying out any Phase Two Environmental Site Assessment (Phase Two ESA).

3.2 Regulatory Framework

The roles and powers of the Ministry of the Environment, Conservation and Parks (MECP) when dealing with contaminated sites are outlined primarily in the Environmental Protection Act (EPA) (R.S.O 1990). The MECP has a mandate to address conditions where there is an adverse effect, or the likelihood of an adverse effect, associated with the presence or discharge of a contaminant.

The Phase One ESA was conducted in accordance with Part VII and Schedule D of the Ontario Regulation 153/04 (Records of Site Condition – Part XV.1 of the EPA), as amended as of July 1, 2011.

The amended Ontario Regulation 153/04 (Records of Site Condition – Part XV.1 of the EPA) provides roles and responsibilities to property owners and consultants to use when assessing the environmental condition of a property, when determining whether or not restoration is required, and in determining the kind of restoration needed to allow continued use or reuse of the property.

3.3 Scope of Work

A Phase One ESA is the systematic preliminary process by which an assessor seeks to determine whether a particular property is subject to actual or potential contamination. A Phase One ESA does not involve the investigative procedures of sampling, analyzing, and measuring, unless enhancements are agreed upon between the client and the assessor.

The principal components of this Phase One ESA consisted of the following:

1. Records review;
2. Interviews;
3. Site reconnaissance;
4. Review and evaluation of collected information;
5. Preparation of tables with Current and Past Uses of the phase one property and Areas of Potential Environmental Concern (APECs);
6. Preparation of a Conceptual Site Model (CSM);
7. Preparation of a written report; and
8. Submission of the report to Dymon Group of Companies.

4. RECORDS REVIEW

4.1. General

The specific objectives of a records review are to obtain information on the current and past uses of, and activities at, or affecting the phase one property in order to determine if an APEC exists at the Site and to interpret any potential environmental concern. Additionally, a review of records that relate to properties in the phase one study area, other than the phase one property, determines if a Potentially Contaminating Activity (PCA) may be contributing to an APEC at the phase one property.

4.1.1. Phase One Study Area Determination

The applicable search distance for the phase one study area records review included the phase one property, properties located, wholly or partly, within 250 m from the nearest point on a boundary of the Site, and other neighboring properties where activities considered being potential sources of environmental contamination, were apparent or anticipated.

4.1.2. Municipal Property Use Directories for Phase One Study Area

A review of municipal directories was conducted in order to obtain a listing of previous occupants for the subject property and relevant properties located, wholly or partly, within 250 m from the boundaries of the phase one property. This information is useful in determining the past and/or present uses and associated environmental risks at properties within the phase one study area.

It should be noted that due to current closure of the Toronto Reference Library, no access to the search for municipal directories was available at this time. However, information provided from other sources are determined to be sufficient to evaluate potential environmental concerns for the Site.

The occupants and past and present use of the phase one property are listed in the table included in section 7.1.

The occupants and past and present use of properties within phase one study area other than the phase one property are listed in the table included in section 6.3.

4.1.3. First Developed Use Determination for Phase One Property

Based on a review of aerial photographs dated between 1946 and 2018, as well as a previous Phase I ESA conducted in 2009 (refer to Section 4.1.6), the Site has historically been used for agricultural purposes and was never developed.

4.1.4. Fire Insurance Plans

Fire Insurance Plans (FIPs) were originally created to provide insurance companies with detailed information so that they could assess insurance risks as a fire hazard. A search was conducted at the Toronto Reference Library and the catalogue of Canadian FIP 1875-1975, and no FIP was available for this Site or surrounding properties.

4.1.5. Chain of Title and Assessment Rolls for Phase One Property

A land title search was conducted by Wentzel Title as part of a previous Phase I ESA conducted in 2009, and reviewed by Fisher. At that time, the title search was conducted back to 1944 until 2009. In addition, an up-to-date search of the Chain of Title of the phase one property was carried out at the time of this study by Domsons Title Search Inc.

A review of the Land Registry document indicated that the chronology of ownership for the Site is as follows:

TABLE 1: Chronological Chain of Title

Date of Property Transfer	Parties From	Parties To
1944	Cecil Deavy	Gracia Laplante (deed)
1955	Gracia Laplante (deed)	Eugene and Anna Hurley (deed)
1957	Eugene and Anna Hurley (deed)	Eelke and Gerlof Bakker (deed)
1960	Eelke and Gerlof Bakker (deed)	Eelke Bakker (quit claim deed)
1990	Eelke Bakker (quit claim deed)	907431 Ontario Inc. in trust (deed)
1993	907431 Ontario Inc. in trust (deed)	Imperial Oil Limited (deed)
2000	Imperial Oil Limited (deed)	John Read in trust (deed)
2009	John Read in trust (deed)	Imperial Oil Limited (deed)
2011 until present	Imperial Oil Limited	7749805 Canada Inc. (Current Owner)
Notes: Considering that the aerial photographs available for the period 1946 to 2018 confirm that the Site was never developed and historically used as agricultural land, the Chain of Title search has not been conducted from 1875 until 1944.		

Based on a review of the title search records, potential concerns associated with retail fuel outlet operation of Imperial Oil Limited (1993 – 2011) were identified for the Site; however, based on a review of aerial photographs during this time period, no building structures/activities associated

with retail fuel outlet operation were identified, and the Site appeared to have remained vacant and unoccupied. As a result, no potential environmental concerns were identified.

Please refer Appendix A for a copy of the land title records.

4.1.6. Previous Environmental Reports for Phase One Property

The following previous reports were reviewed by Fisher and were used as a source of background information:

TABLE 2: Previous Reports

Report Title	Prepared By/For	Date	Scope and Conclusions
Phase I Environmental Site Assessment, Trim Road and Innes Road, Orleans, Ontario	O'Connor Associates Environmental Inc. (O'Connor) for Imperial Oil Limited	July 27, 2009	The Site has historically been used for agricultural purposes. The report identified potential environmental concerns associated with off-site activities, including three (3) underground fuel storage tanks (USTs), installed in 1985, and diesel fuel spill at the southern neighbouring property at 2035 Trim Road, and a diesel fuel spill at the intersection of Trim Road and Innes Road in 2001*.
Phase II Environmental Site Assessment, Trim Road and Innes Road, Orleans, Ontario	O'Connor Associates Environmental Inc. (O'Connor) for Imperial Oil Limited	August 4, 2009	At the time of this investigation, the Site was vacant/undeveloped land. The owner of the Site was Imperial Oil Limited. The Site was bounded by vacant land to the south and east, Trim Road to the west and Innes Road to the north. The Site has an area of approximately 0.47 ha. The Phase II ESA included advancing four (4) test pits to depths of up to 4.0 m below ground surface (bgs) using an excavator on July 16 and 17, 2009 and one (1) borehole/monitoring well to a depth of 6.1 m bgs on September 2, 2008. Site topography of the Site is relatively flat. On the basis of the test pits and boreholes completed, the stratigraphy at the investigated areas of the Site generally consists of organic/ topsoil overlying native clayey silt and silty clay. Groundwater static level measurement was taken at the monitoring well location on September 18, 2008 and it was noted at 1.1 m bgs.

Report Title	Prepared By/For	Date	Scope and Conclusions
			Soil and groundwater samples recovered from the test pits and/or borehole/monitoring well were analyzed for Metals, Petroleum Hydrocarbon (PHC) Fractions 1 to 4 (F1-F4), Benzene, Toluene, Ethylbenzene and Xylenes (collectively “BTEX”), Volatile Organic Compounds (VOC), Polycyclic Aromatic (Polyaromatic) Hydrocarbons (PAHs), Polychlorinated Biphenyls (PCB) and/or pH. For the purpose of this Phase II ESA, the appropriate standards were identified as: The Ministry of the Environment (MOE) 2004 Table 3 Site Condition Standards for Residential/ Parkland/Institutional (R/P/I) Property Use. medium and fine textured soils. The results of chemical analysis for all analyzed soil and groundwater samples were found to be in compliance with the MOE 2004 Table 3 R/P/I Standards for all analyzed parameters.** No further investigation was recommended at that time. * A review of the ERIS report attached in the appendix indicated that the spill occurred in 2001, but it was reported to have occurred in 1985 and 2005 by O'Connor. ** Since the previous data were obtained from investigations conducted prior to the current Ontario Regulation 153/04, Records of Site Condition – Part XV.1 of the Act, became effective (i.e., July 1, 2011), they are considered deficient per current regulatory standards. Since the previous data may not fully represent the current environmental condition of the Site, they were only reviewed as a source of background information for the assessment of the Site.

4.2. Environmental Source Information

Reasonable accessible information and documents pertaining to the phase one study area have been searched by making inquiries to various Federal and Provincial environmental sources, including the information and documents listed in paragraph 7 of subsection 3 (2) in Schedule D of O. Reg. 153/04. A “Standard Report” was also ordered from Environmental Risk Information Services (ERIS) for any records pertaining to properties located, in whole or in part, within 250 m of the Site boundaries (attached in Appendix B). The results of the search for records within the phase one study area (within 250 m of the Site boundaries) are summarized as follows:

TABLE 3: Environmental Source Information Search

Source	Findings Pertaining to Phase One Study Area
National Pollutant Release Inventory (NPRI) information maintained by Environment Canada	A search conducted in the NPRI On-Line Data Base and NPRI Google Earth™ Map Layers by ERIS returned no records for properties located within the phase one study area.
Ontario Inventory of PCB Storage Sites, October 2004 and December 2013; and National Inventory of PCBs in Use and PCB Wastes in Storage in Canada, 2008, information maintained by Environment Canada.	Properties within the phase one study area are not identified as PCB storage sites.
Certificate of Approval (CA), Environmental Bill of Rights Registry (EBR), Environmental Activity and Sector Registry (EASR), Environmental Compliance Approval (ECA), Chemical Register (CHEM), Permit To Take Water (PTTW), Certificate of Property Use (CPU) or similar instruments.	Based on the ERIS report, two (2) CAs, associated with approval industrial sewage works for 1985 Trim Road, and Innes Road and Trim Road, Part A and Lot 1, Concession 8, Word 1, in 2007 and 2005, respectively; one (1) EASR associated with water taking (dewatering) during construction at 1980 Trim Road in 2018; two (2) ECAs, associated with approval industrial sewage works for 1985 Trim Road in 2007 and water taking (dewatering) during construction at 1980 Trim Road in 2018 were listed within the phase one study area. With no anticipated impacts to the environmental quality of soil, groundwater or sediment, no specific concerns are associated with these records pertained to the Site. No other EBR, CHEM, PTTW, CPU or similar instruments were issued for properties within the phase one study area.
Inventory of Coal Gasification Plant Waste Sites in Ontario, MOE, April 1987	Properties within the phase one study area are not listed as former coal gasification plant waste sites.
Compliance and conviction records regarding environmental incidents, notices, orders, offences, spills and inspection reports	Based on the ERIS Report, no properties within the phase one study area were documented for compliance or conviction regarding environmental notices, orders, or offences. Based on the ERIS report, one (1) records was registered in the TSSA Historical Incident (HINC) database for the property 110 Briargate (Private) located within the phase one study area, for release of

Source	Findings Pertaining to Phase One Study Area
of the Ministry, or submitted to the Ministry	natural gas to air due to pipe line incident during construction activities in 2006. Based on the ERIS report, six (6) spill records were registered within the phase one study area which could pose some environmental concern, as follows: • <u>Intersection of Trim, Innes Road and Provence Road (located 30 m northwest of the Site)</u> - a release of diesel on roadway by Laidlaw Transit school bus was reported in 2001. Environmental impact to land and water was reportedly confirmed; - a release of 14 L coolant on roadway by City of Ottawa transport was reported in 2016. Environmental impact to land was reportedly confirmed. • <u>2035 Trim Road (located 50 m south of the Site)</u> - a release of 5 L of diesel to catch basin and parking lot due to equipment leak was reported in 2018. Environmental impact was not confirmed; - a release of diesel fuel to ground from underground storage tank due to equipment failure in 1999. Environmental impact to land was reportedly confirmed; - a release of <20 L of hydraulic oil to ground due to hose leak in 2001. Environmental impact to land was reportedly confirmed. • <u>5150 Innes Road (located 50 m west of the Site)</u> - a release of 100 L of mineral oil to grass and gravel by Hydro One transformer in 2019. Environmental impact was reportedly confirmed for soil. At the time of report issuance, a response from the MECP Freedom of Information and Privacy Protection Office (FOI) had not yet been received. Fisher will advise Dymon Group of Companies if any outstanding environmental source information changes the conclusion or recommendations of this report. A copy of the request is provided in Appendix B.
Private and retail fuel storage tanks information maintained by the Technical Standards and Safety Authority (TSSA) and from other documents	Based on the ERIS report, the following records were obtained within the phase one study area from Private and Retail Fuel Storage Tank (PRT), Fuel Storage Tanks (FST) and Fuel Storage Tanks – Historic (FSTH) databases, as follows: • <u>2035 Trim Road (located 50 m south of the Site)</u> - Regional Municipality of Ottawa was listed in the FST, FSTH and PRT databases as an active private fuel

Source	Findings Pertaining to Phase One Study Area
	storage facility in 2008. Three (3) diesel and gasoline single wall fiberglass storage tanks (USTs) installed in 1985 are registered at this property; - Three (3) tanks at this property are listed as expired in 2009 in the List of Expired Fuels Safety Facilities (EXP) database. • <u>1985 Trim Road (located 50 m north of the Site across Innes Road)</u> - Mac's Convenience Stores Inc. was listed in the FST database as an active commercial fuel storage facility in 2009. Four (4) diesel and gasoline double wall fiberglass tanks (USTs) installed in 2007 are registered at this property. A reply to Fisher's electronic inquiry to the TSSA, dated March 3, 2021, indicated that four (4) records as Active FS Facility and three (3) Expired FS Liquid Fuel Tanks are registered for 2035 Trim Road, and FS Facility with four (4) FS Liquid Fuel Tanks are registered for 1985 Trim Road. It should be noted that the Fuels Safety Division of TSSA did not register private fuel underground or aboveground storage tanks prior to January 1990 or furnace oil tanks prior to May 1, 2002. A copy of the TSSA response letter is provided in Appendix B. Due to the intervening distance from the Site and/or being situated at a lower grade elevation, the tank records at these properties are not considered as a potential concern for the Site.
Pesticide Register, database maintained by the Ministry of the Environment and Climate Change (MOECC), Oct. 2011 – Dec. 31, 2020	Based on the ERIS report, no pesticide registered facilities or pesticide operators were listed within the phase one study area.
Dry Cleaning Facilities (CDRY), Jan 2004-Dec. 2018	Based on the ERIS report, no dry cleaning facilities were listed within the phase one study area.

Source	Findings Pertaining to Phase One Study Area
MECP Regulation 347 Public Information Data Set and the MOE's Hazardous Waste Information Network (HWIN)	Based on the ERIS report, the Site was not listed as generators of hazardous wastes. Three (3) properties located within the phase one study area were listed as generators of hazardous wastes as follows: • <u>2035 Trim Road (located 50 m south of the Site)</u> - Cumberland, Township of Municipal Roads Garage & Regional Municipality of Ottawa-Carlton – waste class: acid waste-heavy metals (112), alkaline wastes-other metals (122), paint/pigment/ coating residues (145), inorganic laboratory chemicals (148), aliphatic solvents (212), petroleum distillates (213), light fuel (221), heavy fuels (222), halogenated solvents (241), halogenated pesticides (242), oil skimmings and sludges (251), waste oils & lubricants (252), pharmaceuticals (261), organic laboratory chemicals (263), non-halogenated pesticides(269), waste compressed gases (331), for years 1990 to 2017. • <u>5150 Innes Road (located approximately 40 m west of the Site across Trim Road)</u> - Sobeys Pharmacy – waste class: pharmaceutical (261) and pathological wastes (312) for years 2018 to 2010. • <u>2010 Trim Road, Unit 14 (located 150 m southwest of the Site across Trim Road)</u> - Trim Pet Hospital – waste class: pharmaceutical (261) and pathological wastes (312), and photoprocessing wastes (264) for years 2007 to 2020. Due to the intervening distance and/or cross-gradient locations from the Site, waste generations from these properties are not considered as a potential concern for the Site.
Waste Disposal Site Inventories, MOE, June 1991	Properties within the phase one study area are not located within 1 km of any active or closed landfill sites.
Notices and instruments, including Records of Site Condition, posted in the Environmental Site Registry	Based on the ERIS report, one (1) RSC, under O. Reg. 153/04 (Part XV.1 of the Environmental Protection Act), had been filed for the Site (Part of Lot 1, Concession 8, Part 1 Plan 4R 12824, Cumberland): • The RSC (No. 61717) was filed by Imperial Oil on February 11, 2010 on the basis of Phase I ESA and Phase II ESA without remedial efforts. Contaminants of potential concern (CPCs) identified in this RSC comprised various Metals, VOCs, PHCs, PAHs and/or PCBs in soil

Source	Findings Pertaining to Phase One Study Area
	and groundwater. According to the RSC, maximum concentrations of the CPCs were within the MOE full depth Site Condition Standards, with non-potable groundwater, medium/fine textured soil, for industrial/commercial/community property use.
Information on areas of natural significance maintained by the Ministry of Natural Resources and Forestry (MNRF) and Conservation Authorities	A review of the MNRF online Natural Heritage Area Map indicated that the phase one study area is not within or adjacent to any Provincially Significant Wetlands, Areas of Natural Heritage and Scientific Interest (ANSIs), Niagara Escarpment Plan (NEP) or Oak Ridges Moraine Conservation Plan (ORM). Information from Ontario Conservation Authorities has been examined. No part of the phase one study area is located within or in the vicinity of such an area.

Unplotted report in the ERIS report was also reviewed. No detailed address/information is available for those databases; thus, the environmental concern from those databases to the Site could not be determined.

4.3. Physical Setting Sources

4.3.1. Aerial Photographs

The earliest aerial photograph available for the phase one study area was dated 1946. Aerial photographs dated 1946, 1955, 1967, 1976, 1991, 2002, 2008, and 2018 were obtained from the previous Phase I ESA report (O'Connor, 2009) and Google Earth. The rationale for the selected years was to corroborate any changes that occurred within the phase one study area with information gathered from other records review.

The selected photographs were examined stereoscopically to assess site conditions. A description of the aerial photographs reviewed is as follows:

TABLE 4: Description of Aerial Photographs

Year	Description	
	Site	Surrounding Area
1946	The property was occupied by agricultural land.	North: Innes Road and agricultural land beyond. East: Agricultural land. South: Agricultural land and two residential buildings beyond.

Year	Description	
	Site	Surrounding Area
		West: Trim Road and agricultural land across the road with several residential buildings. Northwest: Innes Road and Trim Road intersection and agricultural land and several residential buildings across the intersection.
1955	Similar as in 1946.	Similar as in 1946.
1967	Similar as in 1955.	Similar as in 1955.
1976	Similar as in 1967.	Similar as in 1967.
1991	Similar as in 1976.	Similar as in 1976. In addition, one rectangular-shaped commercial building and two sheds were developed further south.
2002	Similar as in 1991.	Similar as in 1991. In addition, a school was constructed further west and residential houses were constructed further northwest.
2008	The Site was occupied by vacant land.	Similar as in 2002. In addition, a gas service station and residential houses were constructed to the north across Innes Road, and commercial plaza with four buildings was constructed to the west across Trim Road.
2018	Similar as in 2008.	Similar as in 2008. In addition, two commercial buildings were constructed further southeast. Some earthwork was observed to the east and further southeast.

Copies of the aerial photographs (Figures B1 to B8) are included in Appendix A.

4.3.2. Topography, Geology and Hydrogeology of Phase One Study Area

Regional Topographical, Geological and Hydrogeological Conditions are presented in the following table:

TABLE 5: Topographical, Geological and Hydrogeological Sources

Topography and Drainage	
Source:	Google Earth, The Atlas of Canada Toporama Topographical Map and Plan of Topographic Survey.
Regional Conditions:	Grade elevation along Innes Road slightly slopes eastwards from approximately 88 m above sea level (asl) at the intersection with Provence Avenue to approximately 87 m asl at the intersection with Valin Street. Grade elevation along Trim Road slightly slopes southwards from approximately 89 m asl at the intersection with Salzburg Drive to approximately 87 m asl at the intersection with Valin Road.
Phase One Property Conditions:	The phase one property is situated at an elevation of 87-88 m asl. Site topography is relatively flat at the similar elevation as neighbouring properties to the east and south and Innes and Trim Roads. Run-off drainage/infiltration is expected to be by infiltration or directed towards street catch basins.
Overburden Geology	
Source:	Ontario Geological Survey 2010. Surficial geology of Southern Ontario; Ontario Geological Survey, Miscellaneous Release--Data 128-REV; and previous Phase II ESA (O'Connor, 2009).
Regional Stratigraphic Conditions:	26 – Glaciomarine and marine deposits: silt and clay, basin and quiet water deposit.
Phase One Property Conditions:	Soil description obtained from the previous Phase II ESA (O'Connor, 2009) indicated that the stratigraphy at the investigated areas of the Site generally consists of organic/ topsoil overlying native clayey silt and silty clay.
Bedrock Geology	
Source:	Bedrock Geology of Ontario (Southern Sheet), Map 2544 of Ministry Northern Development and Mines, and previous Phase II ESA (O'Connor, 2009).
Regional Bedrock Conditions:	Middle Ordovician limestone, dolostone, shale, arkose, sandstone of the 51a – Ottawa Group Simcoe Group, Shadow Lake Formation or 51b - Chazy Group, Rockcliffe Formation.

	A review of the well records available for the phase one study area indicated that limestone bedrock was encountered at depths ranging from 14.0 m (46 ft) to 39.0 m (128 ft) below grade (refer to Section 4.3.5).
Phase One Property Conditions:	It is expected that bedrock conditions underlying the Site approach regional stratigraphic conditions.
Hydrogeology	
Source:	Freeze and Cherry 1979 and Holtz and Kovacs 1981 and previous Phase II ESA (O'Connor, 2009).
Regional Conditions:	The surficial deposits within the study area consist of silt and clay, having a typical range of hydraulic conductivity of 10^{-6} – 10^{-9} cm/sec.
Phase One Property Conditions:	Groundwater static level measurement obtained from the previous Phase II ESA (O'Connor, 2009) indicated that groundwater level was encountered at depth of 1.1 m bgs (elevation 86.6 m asl).
Nearest Open Water Body:	A tributary of Cardinal Creek, located approximately 325 m north of the Site.
Inferred Groundwater Flow Direction:	North-Northeast, based on regional topography and distance to the nearest water body.

Regional Topographical and Geological Maps that include the phase one study area are attached in Appendix C.

4.3.3. Fill Materials

The grade surface at the phase one property was generally flat and at a similar grade to the adjoining properties. No evidence of imported fill material was observed on the Site.

4.3.4. Water Bodies and Areas of Natural Significance

A tributary of Cardinal Creek, which runs northwest-southeast, is located approximately 325 m north of the Site.

No part of the phase one study area is located within or in the vicinity of an area of natural significance.

4.3.5. Well Records

Well record information within the phase one study area available from the ERIS report was reviewed. Please refer to Appendix B for a copy of the ERIS report.

The search returned results indicating the presence of thirty-one (31) water well records; only three (3) of them were constructed for the purpose of domestic and livestock supply in 1960, 1963 and 1982 for properties to the north, west and northwest; the rest of the wells were constructed for the purpose of monitoring and test hole between 2006 and 2016 for neighbouring properties to the north and south; nine (9) of the records were for abandoning the wells.

Three (3) well records are listed for the Site; one of these wells (Well ID 7132442 with well tag number No. A068593) was constructed at the Site in 2009 and was abandoned in 2009.

In addition, a map and the list of wells records within the phase one study area were obtained from the MECP Well Records web side. Refer to the well record map and print out data attached in Appendix B.

The domestic and livestock wells located within the phase one study area are described in Table 6 below.

TABLE 6: MECP Water Supply Well Digital Data Records

Item No.	MECP Well ID	UTM Easting-Northing	Well Record filed Date	Casing Diameter (in) / Material	Well Depth (ft)	Water Found at (ft)	Water Use	Soil/Bedrock Types
1.	1518164	464529.8-5035421	04/1982	6 / steel	68	17	Domestic water supply	Yellow clay (0–16 ft); Blue clay (16–38 ft); Grey gravel (38–46 ft); grey limestone (46–68 ft).
2.	1512775	464392.8-5035385	12/1960	2 / steel	100	19	Domestic water supply	Blue clay (0–90 ft); Grey gravel (90–100 ft).
3.	1512782	464389.8-5035190	07/1963	2 / steel	142	19	Livestock/ Domestic water supply	Blue clay (0–120 ft); Medium sand with gravel (120–128 ft); Grey

Item No.	MECP Well ID	UTM Easting-Northing	Well Record filed Date	Casing Diameter (in) / Material	Well Depth (ft)	Water Found at (ft)	Water Use	Soil/Bedrock Types
								limestone (128-142 ft).

Based on a summary of Water Well Print Out Data, three (3) of the twenty-two (22) listed wells (Item No. 1 to 3 above) appear to have been constructed between 1960 to 1982, and were completed to intercept the groundwater table to a maximum depth of 142 ft. These wells are used for “Domestic” and/or “Livestock” purpose. These wells were completed in gravel and limestone formations.

It should be noted that these three (3) water supply wells are located on neighbouring properties currently occupied by new residential and commercial developments. As a result, the wells on these properties were likely decommissioned prior to development. No information regarding decommissioning of these wells were found.

4.4. Site Operating Records

No site operating records are available for review. Information provided by the current owner, historical records, and obtained from this assessment are determined to be sufficient to evaluate potential environmental concerns for the Site from the historical and current operations.

4.5. Enhanced Investigation Property Due to Previous Use

Based on the review of records and interviews conducted as part of the current Phase One ESA, it is concluded that the Site is not an enhanced investigation property.

5. INTERVIEWS

Interviews with persons relevant to the objectives of the phase one environmental site assessment are conducted to obtain information determining if an area of potential environmental concern exists at the phase one property, and to identify details of potentially contaminating activities or potential contaminant pathways in, on or under the phase one property.

5.1. Methodology

Fisher’s Standard Questionnaire was used to conduct interviews with the Dymon Group of Companies representative. The interviews were conducted in writing via e-mail on March 2, 2021.

5.2. Limitations

All interview participants answered the asked questions to the best of their knowledge.

5.3. Interview Participants

- a. Dymon Group of Companies representative: Mr. James Byck.

Written summary of each interview, with the date, time, duration, method and place of the interview, name of interviewed person and reason for person selection, key questions and answers for each of the topics of the interview, and comparison of info from interviews to other data sources to assess validity of interview info, are included in Documentation of Interviews forms in Appendix B.

6. SITE RECONNAISSANCE

A visit at the Site, and at remaining publicly accessible phase one study area, was conducted by Mr. Sean Fisher of Fisher on February 25, 2021. Selected photographs taken at the Site visit are included in Appendix B.

6.1. General Requirements

The objectives of the site reconnaissance are to determine if APECs exist through observations about current and past uses and PCAs on, in or under the phase one property, and where practicable, current and past uses and PCAs at the remaining phase one study area.

Additionally, the objective of the site reconnaissance is to identify details of potential contaminant transport pathways on, in or under the phase one property and contaminants of potential concern.

6.1.1. Methodology

TABLE 7: Site Reconnaissance Methodology

Date and Time of Investigation:	February 25, 2021, 4:00 p.m.
Weather Conditions:	Cloudy, -2°C.
Duration of the Investigation:	1 hour
Operational Industrial or Commercial Facility:	No
Enhanced Investigation Property:	No

Observation Methods:	Visual assessment and photographs of the Site's features.
Name and Qualifications of Assessor:	Sean Fisher, M.Sc. Eng.

6.1.2. Limitations

Fisher was permitted access to all areas of the phase one property. Inspection of the Site was limited due to the presence of snow and ice.

6.1.3. Current Property Use and Activities

The Site was vacant and undeveloped. No current Site operations, representing Potentially Contaminating Activities, were identified at the phase one property at the time of the site visit.

6.1.4. Evaluation of Phase One Property Photographs

Photographs of the Site are summarized below and are attached in Appendix B.

Photo 1 shows the Site as an undeveloped land, looking southwest.

Photo 2 shows the Site as an undeveloped land, looking southeast.

Photo 3 shows the Site looking east along the Innes Road.

Photo 4 shows the Site looking south along Trim Road and neighbouring commercial property located further south of the Site.

Photo 5 shows the northern neighbouring property (1985 Trim Road) occupied by a gas service station.

Photo 6 shows the northwest neighbouring property (1980 Trim Road) occupied by a new developed residential building.

6.2. *Written Description of Specific Observations at Phase One Property*

The phase one property is rectangular in shape and consists of vacant and undeveloped land.

TABLE 8: Summary of Property Description

Property Area:	0.4643 hectares
Year Built:	Site is currently vacant/ undeveloped and covered with snow.
Number of Buildings and Area:	Not applicable; the Site has no building(s)
Number of Levels:	
Basement:	
General Construction:	
Building Use:	

6.2.1. Exterior Aboveground and Underground Structures

The Site is currently undeveloped/vacant. Refer to photos 1 to 4 in Appendix B.

6.2.2. Underground Utility and Service Corridors

Since there is no building on Site, there is no natural gas, water, sanitary sewer, hydro electricity or telephone services at the Site. Storm water accumulated at the Site is draining by infiltration and/or overland flow towards an off-site ditch to the south and catch basins along Innes Road and Trim Road, located to the north and west, respectively.

6.2.3. Potable Water Supply

Properties within the phase one study area rely on municipal water, obtained from surface water bodies, as a source of drinking water.

6.2.4. Wells, Pits, Lagoons, Watercourses, Ditches or Standing Water

No evidence of abandoned or existing wells, pits, lagoons, watercourses, ditches or standing water was identified on the Site. The wells reportedly installed on the Site (refer to Section 4.3.5) were not observed during our site visit, due to the presence of snow and ice.

6.2.5. Stained Materials, Stressed Vegetation and Fill Materials

No stained surficial materials or stressed vegetation were observed at the Site; however it should be noted that a thin layer of snow covered the surface of the Site during the site visit on February 25, 2021.

No evidence of imported fill materials was noted on-site. In addition, no fill materials was noted during the previous Phase II ESA (O'Connor, 2009).

6.2.6. Interior of Buildings or Structures

There are no buildings on the Site. Refer to photos 1 to 4 in Appendix B.

6.2.7. Heating and Cooling

There are no buildings on the Site.

6.2.8. Stains

No evidence of stains was observed on the Site. It should be noted that the surface of the Site was covered with a thin layer of snow.

6.2.9. Drains, Sumps, Pits and Oil/Water Separators

No sumps, pits, interceptors, trenches or oil/water separators were observed on the Site. Under the present conditions, no virtual pathways of contaminant migration were noted on the Site.

6.2.10. Hydraulic Equipment

No hydraulic equipment related to building systems and/or on-site operations was identified.

6.2.11. Hazardous Materials Inventory

No hazardous materials and their storage were observed at the Site during a site visit.

6.2.12. Fuels and Chemicals

No fuels or fuel storage were identified on-site at the time of our visit.

No chemicals or chemicals storage were identified on-site at the time of our visit.

6.2.13. Waste Generation and Storage

No waste materials were observed at the Site during a site visit.

6.2.14. Unidentified Substances

No unidentified substances or unidentified substances storage were noted on-site at the time of our visit.

6.2.15. Designated Substances and Other Special Attention Items

Occupational Health and Safety Act (OHSA), R.S.O. 1990 defines a toxic substance as a chemical, biological or physical agent whose presence or use in the workplace may endanger the health and safety of a worker. The parts of the Act that deals with toxic substances are intended to:

- 1) ensure that worker exposure to toxic substances is controlled;
- 2) ensure that toxic substances in the workplace are clearly identified and that workers receive enough information about them to be able to handle them safely; and
- 3) provide the general public with access to information about toxic substances used by industry in their communities.

The Act allows a toxic substance to be “designated”, and its use in the workplace to be either prohibited or strictly controlled. Designation is reserved for substances that are particularly hazardous.

There are no buildings or structures on the Site, and no evidence of the presence of designated substances at the Site was observed.

6.2.16. Adjacent Properties

The phase one study area consisted of a mix of commercial and residential uses. Refer to photos 4 to 5 in Appendix B.

Properties located adjacent to the Site at the time of our inspection are listed as follows:

- **North:** Innes Road, followed by a commercial gas service station (1985 Trim Road, approximately 44 m north), likely developed in 2007 and situated at a similar grade as the Site; residential properties are located further to the north, northeast and northwest.
- **East:** Vacant land, situated at a similar grade as the Site.
- **South:** Vacant land, followed by a commercial facility operated by Trim Depot Garage Trim the Regional Municipality of Ottawa-Carleton public work yard (2035 Trim Road, approximately 50 m south), situated at a similar grade as the Site.
- **West:** Trim Road, followed by a commercial plaza (5150 and 5160 Innes Road, and 2010 and 2020 Trim Road, located approximately 40 m west), developed approximately in 2006 and situated at a similar grade as the Site.

6.2.17. Enhanced Investigation Property Due to Current Use

Based on a record review, interview and site reconnaissance conducted as part of the present Phase One ESA, it is concluded that the current operations conducted at the Site are not consistent with those that define an enhanced investigation property.

6.3. Written Description of Investigation

The site reconnaissance was conducted to identify, describe, and document specific items at the Site and at surrounding properties within the phase one study area, in accordance with Schedule D of O. Reg. 153/04. Written descriptions detailing the observations made by Fisher during the site reconnaissance are provided above in Section 6.2, for the phase one property and phase one study area.

Discussions regarding the identification of PCAs on the Site and on surrounding properties with the phase one study area are provided below in Section 7.2.

7. REVIEW AND EVALUATION OF INFORMATION

The review of information is conducted to evaluate and interpret the data obtained from the records review, the interviews and the site reconnaissance, in order to achieve the general and specific objectives of the Phase One ESA.

Identification of current and past uses of the phase one property, existence and location of any APECs on, in or under the phase one property and description of any PCA at the phase one property and within the phase one study area, that may be contributing to an APEC at the phase one property, is presented in the following sections.

7.1 Current and Past Uses of the Phase One Property

TABLE 9

Year	Name of Owner	Description of Property Use	Property Use	Other Observations from Aerial Photographs, Title Search, Previous Investigations, etc.
Prior to 1944	Cecil Deavy	Agricultural land use or undeveloped land	Agricultural or other use	Date of ownership and name of owner based on the title search.

Year	Name of Owner	Description of Property Use	Property Use	Other Observations from Aerial Photographs, Title Search, Previous Investigations, etc.
1944-1955	Gracia Laplante (deed)	Agricultural land use or undeveloped land	Agricultural or other use	Date of ownership and name of owner based on the title search. Aerial Photo (1946) – Undeveloped agricultural field and no buildings located at the Site.
1955-1957	Eugene and Anna Hurley (deed)	Agricultural land use or undeveloped land	Agricultural or other use	Date of ownership and name of owner based on the title search. Aerial Photo (1955) – Undeveloped agricultural field and no buildings located at the Site.
1957-1960	Eelke and Gerlof Bakker (deed)	Agricultural land use or undeveloped land	Agricultural or other use	Date of ownership and name of owner based on the title search.
1960-1990	Eelke Bakker (quit claim deed)	Agricultural land use or undeveloped land	Agricultural or other use	Date of ownership and name of owner based on the title search. Aerial Photos (1967 and 1976) – Undeveloped agricultural field and no buildings located at the Site.
1990-1993	907431 Ontario Inc. in trust (deed)	Agricultural land use or undeveloped land	Agricultural or other use	Date of ownership and name of owner based on the title search. Aerial Photo (1991) – Undeveloped agricultural field and no buildings located at the Site.
1993-2000	Imperial Oil Limited (deed)	Agricultural land use or undeveloped land	Agricultural or other use	Date of ownership and name of owner based on the title search.
2000-2009	John Read in trust (deed)	Agricultural land use or undeveloped land	Agricultural or other use	Date of ownership and name of owner based on the title search. Aerial Photos (2002 and 2008) – Undeveloped agricultural field and no buildings located at the Site.

Year	Name of Owner	Description of Property Use	Property Use	Other Observations from Aerial Photographs, Title Search, Previous Investigations, etc.
2009-2011	Imperial Oil Limited (deed)	Vacant Land	Commercial	Date of ownership and name of owner based on the title search. Based on the previous Phase I ESA (O'Connor, 2009), the Site was vacant/ undeveloped land. Record of Site Condition was filed with the MOE for the Site, with intention to convert the agricultural property use land to commercial.
2011 until present	7749805 Canada Inc. (Current Owner)	Vacant Land	Commercial	Date of ownership and name of owner based on the title search. Aerial Photo (2018) – the Site was vacant/ undeveloped land. Based on the site visit, the Site was vacant land. Based on the Interview with site representative the Site was vacant land never developed.

7.2 Potentially Contaminating Activities

A PCA as defined in O. Reg. 153/04 is a use or activity set out in Column A of Table 2 of Schedule D that is occurring or has occurred in the Phase One Study Area. No PCAs were identified at the phase one property. The following is a list of the neighbouring PCAs within the phase one study area. The locations of the PCAs within the phase one study area are shown on Figure 1 and are listed in the following table.

TABLE 10: PCAs Identified Within the Phase One Study Area

Address and Proximity to Site	PCA	Description	Source of information	Uncertainty	Considered to Contribute to an APEC
Intersection of Innes Road and Trim Road, approximately 30 m northwest of the Site (off-Site)	PCA: Others (Historic Spill).	Former spill of diesel fuel from school bus in 2011.	ERIS report, Previous Phase I and II ESAs (2009).	Quantity of spill is unknown.	No. Due to intervening distance, downgradient location from the Site, and low hydraulic conductivity of the native silty and clayey soil, this PCA is unlikely to represent sources of contamination on and/or under the phase one property.
1985 Trim Road, approximately 40 m north of the Site (off-Site)	PCA 28: Gasoline and Associated Products Storage in Fixed Tanks.	Gas service station with four (4) double wall fiberglass USTs operated at this property from 2008 until present.	ERIS report, Previous Phase I and II ESAs (2009), aerial photographs, site inspection.	Operation practices are unknown.	No. Due to intervening distance, downgradient location from the Site, and low hydraulic conductivity of the native silty and clayey soil, this PCA is unlikely to represent sources of contamination on and/or under the phase one property.

Address and Proximity to Site	PCA	Description	Source of information	Uncertainty	Considered to Contribute to an APEC
2035 Trim Road, approximately 50 m south of the Site (off-Site)	PCA 28: Gasoline and Associated Products Storage in Fixed Tanks. PCA: Others (Waste Generator). PCA: Others (Historic Spill).	Former operation of three (3) USTs installed in 1985 and listed as expired in 2009. Former waste generation from 1990 to 2017. Former spill of diesel fuel from UST in 1999.	ERIS report, Previous Phase I and II ESAs (2009), aerial photographs, site inspection.	Operation practices are unknown. Quantity of spills are unknown.	No. Due to intervening distance, low hydraulic conductivity of the native silty and clayey soil, and wastes generated being likely limited in quantity based on the type of operation, these PCAs are unlikely to represent sources of contamination on and/or under the phase one property.

7.3 Areas of Potential Environmental Concern

TABLE 11: APECs

Area of Potential Environmental Concern	Location of APEC on Phase One Property	Potentially Contaminating Activity (PCA)	Location of PCA (off-site)	Contaminants of Potential Concern (CPC)	Media Potentially Impacted (Groundwater, soil and/or sediment)
None identified.	None	None	N/A	N/A	None

7.4 Phase One Conceptual Site Model (CSM)

This Phase One CSM synthesizes relevant information gathered during the phase one study area evaluation, co-relates the Site's features and geological/hydrogeological conditions in the area

with on-site and/or off-site PCAs, identifies transport pathways, and identifies CPCs that may contribute to APECs on, in or under phase one property.

The graphic form of the Phase One CSM includes:

- Figure 1 – Site plan of the phase one study area that shows any existing buildings, water bodies, anticipated groundwater flow direction and areas of natural significance located in whole or in part on the phase one study area, roads that include names, uses of properties adjacent to the phase one property, water supply wells, tanks, and areas where any PCA has occurred.

The narrative form of the phase one CSM below is prepared on the assumption that the Site will maintain its residential use. The associated Figure 1 is attached in Appendix D.

TABLE 12: Phase One CSM

Areas where Potentially Contaminating Activities have occurred on-site and/or off-site, and associated Contaminants of Potential Concern:	No PCAs identified within the phase one study area are likely to have contributed to an APEC on the Site.
Surface and subsurface structures that may affect contaminant distribution and transport:	None.
Geological and hydrogeological interpretations:	Based on the previous Phase II ESA (O'Connor, 2009), the stratigraphy at the investigated areas of the Site generally consists of organic/topsoil overlying native clayey silt and silty clay. Groundwater was encountered at depth of 1.1 m bgs in one (1) monitoring well installed at the Site during the 2009 Phase II ESA investigation. The nearest surface water body is a tributary of Cardinal Creek, located approximately 325 m north of the Site. Regional groundwater flow is predicted to be to the north-northeast.
Uncertainty or absence of information:	It is inferred that subsurface conditions at the phase one property approach the regional geological and hydrogeological conditions. Therefore, in the absence of readily identifiable contaminant transport pathways from properties within phase one study area to the phase one property, the actual contribution of natural (or anthropogenic) pathways to

	contaminant transport and distribution under the phase one property is uncertain and could affect the conclusions of this report. This Phase One Conceptual Site Model represents current understanding of the site in terms of the relevant potentially contaminating sources, subsurface materials and processes, serves as the basis for further site characterization, and will ultimately support the evaluation of various remedial alternatives, if necessary. Because of the limited intrusive and/or non-intrusive investigations data on the phase one study area, the site conceptual model can only provide an approximation to the real world. At the early stages of site conceptual model development, it is possible that several realizations will be tenable however, as more monitoring and other data become available, the subsequent site conceptual models should provide a more detailed picture of fluid flow and material transport, and transformation processes.
--	--

8. CONCLUSIONS

8.1. Requirement for Phase Two Environmental Site Assessment

Considering the findings of the current Phase One ESA, it is concluded that a Phase Two ESA is not required for the phase one property. The rationale for this conclusion is presented below.

PCAs have been identified for properties located 50 m south of the Site, 40 m north of the Site and 30 m northwest of the Site within the phase one study area, as noted in sections 7.2 and 7.3 of this report. Due to intervening distances, downgradient locations from the Site (where applicable), and low hydraulic conductivity of the native silty and clayey soil, these PCAs are unlikely to represent sources of contamination on and/or under the phase one property. Based on the above, these off-site PCAs are not likely to have contributed to an APEC on the Site.

8.1. Record of Site Condition Based on Phase One ESA Alone

The records review, interviews and site reconnaissance conducted as part of the present Phase One ESA have identified no PCAs within phase one study area that may contribute to APECs at the phase one property, and no further investigation is required.

It is expected that the phase one property could continue to be used for commercial purposes.

8.2. Signatures

Fisher Environmental Ltd. carried out the present Phase One Environmental Site Assessment at the request of Dymon Group of Companies, and by signing below the qualified person confirms the findings and conclusions of this report.

Respectfully submitted,

A circular stamp for a Licensed Professional Engineer in the Province of Ontario. The text around the circle reads "LICENSED PROFESSIONAL ENGINEER" at the top and "PROVINCE OF ONTARIO" at the bottom. In the center, it says "D.A. FISHER". A handwritten signature in blue ink is written over the stamp.

David Fisher, B.A.Sc., C. Chem., P. Eng.
Principal
Fisher Environmental Ltd.

A handwritten signature in blue ink, consisting of a stylized 'L' followed by 'S' and a dash.

Larissa Sakhnenko, B.A.Sc.
Project Manager
Fisher Environmental Ltd.

10. QUALIFICATIONS OF THE ASSESSOR

The records review and Site visit for this assessment were conducted by Mrs. Larissa Sakhnenko, who has been trained and has over 23 years of experience in conducting Phase I ESAs in accordance with the CSA Standard and Ontario Regulation 153/04 (RSC – Part XV.1 of the EPA). Larissa Sakhnenko has conducted more than 400 Phase I ESAs for commercial/industrial/residential clients and government agencies and is routinely engaged in this field.

As a Qualified Person who conducts and supervises Phase I ESAs, Mr. David Fisher, president of Fisher Environmental Ltd., is a senior Managerial and Environmental Engineering Specialist with over 30 years of progressive, innovative experience in the Petrochemical and Environmental Engineering Industry. Mr. Fisher is responsible for the development and management of a progressive environmental consulting engineering company specializing in environmental site assessments and remediation, geotechnical and hydrogeological investigations, tank removals, PCB waste treatment, land reclamation, recycling, hazardous waste disposal, and associated laboratory analytical practices.

Fisher Environmental Ltd. has been established as a team of engineers and consultants since 1989, and continues to develop a strong, wide client base. The company is staffed with personnel holding graduate or postgraduate qualifications at the Markham headquarters, as well as specialist associates offering a broad range of expertise and knowledge in environmental consulting. With a background in the petroleum industry, extensive experience has been gained in the prevention and cleanup of contamination in air, water and soil.

11. LIMITATIONS

This report was prepared for use by Dymon Group of Companies, and is based on the work as described in the Scope of Work. The conclusions presented in this report reflect existing Site conditions within the scope of this assignment.

Some information presented in this report was provided through existing documents and interviews. Although attempts were made, whenever possible, to consult alternative sources of information, in certain cases Fisher Environmental Ltd. has been required to assume that the information provided is accurate. The findings and conclusions presented in this report are based predominately on interpretation of data obtained from visual observations, records review at publicly accessible areas, as conducted. Considering the uncertainties or absence of information noted in the report, there is no warranty, expressed or implied, by Fisher Environmental that this assessment has identified all Potential Contaminating Activities or Contaminants of Potential Concern at the phase one study area, or that the subject site is free from any and all contamination from past or current practices other than that noted, nor that all issues of environmental compliance have been addressed.

No investigation method can eliminate the possibility of obtaining partially imprecise or incomplete information; it can only reduce the possibility to an acceptable level. Professional judgment was exercised in gathering and analyzing the information obtained and the formulation of the conclusions and recommendations. Like all professional persons rendering advice, we do not act as absolute insurers of the conclusions reached, but commit ourselves to care and competence in reaching those conclusions. No warranty, whether expressed or implied, is included or intended in this report.

The scope of services performed may not be appropriate for the purposes of any other users. This report should not be used in contexts other than pertaining to the evaluation of the property at the current time. Written authorization must be obtained from Fisher Environmental Ltd. prior to use by any other parties, or any future use of this document or its findings, conclusions, or recommendations represented herein. Any use that a third party makes of this report, or any reliance on or decisions made on the basis of it, are the responsibility of the third party. Fisher Environmental Ltd. accepts no responsibility for damages, if any, suffered by any third party as a result of decisions made or actions based on this report.

Notice: IMPORTANT LIMITATIONS and YOUR LIABILITY

Reliance on information in Report: This report DOES NOT replace a full Phase I Environmental Site Assessment but is solely intended to be used as a database review of environmental records.

License for use of information in Report: No page of this report can be used without this cover page, this notice and the project property identifier. The information in Report(s) may not be modified or re-sold.

Your Liability for misuse: Using this Service and/or its reports in a manner contrary to this Notice or your agreement will be in breach of copyright and contract and ERIS may obtain damages for such mis-use, including damages caused to third parties, and gives ERIS the right to terminate your account, rescind your license to any previous reports and to bar you from future use of the Service.

No warranty of Accuracy or Liability for ERIS: The information contained in this report has been produced by ERIS Information Limited Partnership ("ERIS") using various sources of information, including information provided by Federal and Provincial government departments. The report applies only to the address and up to the date specified on the cover of this report, and any alterations or deviation from this description will require a new report. This report and the data contained herein does not purport to be and does not constitute a guarantee of the accuracy of the information contained herein and does not constitute a legal opinion nor medical advice. Although ERIS has endeavored to present you with information that is accurate, ERIS disclaims, any and all liability for any errors, omissions, or inaccuracies in such information and data, whether attributable to inadvertence, negligence or otherwise, and for any consequences arising therefrom. Liability on the part of ERIS is limited to the monetary value paid for this report.

Trademark and Copyright: You may not use the ERIS trademarks or attribute any work to ERIS other than as outlined above. This Service and Report (s) are protected by copyright owned by ERIS Information Limited Partnership. Copyright in data used in the Service or Report(s) (the "Data") is owned by ERIS or its licensors. The Service, Report(s) and Data may not be copied or reproduced in whole or in any substantial part without prior written consent of ERIS.

Appendix: Database Descriptions

*Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. **Note:** Databases denoted with " * " indicates that the database will no longer be updated. See the individual database description for more information.*

Abandoned Aggregate Inventory:

Provincial

[AAGR](#)

The MAAP Program maintains a database of abandoned pits and quarries. Please note that the database is only referenced by lot and concession and city/town location. The database provides information regarding the location, type, size, land use, status and general comments.*

Government Publication Date: Sept 2002*

Aggregate Inventory:

Provincial

[AGR](#)

The Ontario Ministry of Natural Resources maintains a database of all active pits and quarries. The database provides information regarding the registered owner/operator, location name, operation type, approval type, and maximum annual tonnage.

Government Publication Date: Up to Sep 2020

Abandoned Mine Information System:

Provincial

[AMIS](#)

The Abandoned Mines Information System contains data on known abandoned and inactive mines located on both Crown and privately held lands. The information was provided by the Ministry of Northern Development and Mines (MNDM), with the following disclaimer: "the database provided has been compiled from various sources, and the Ministry of Northern Development and Mines makes no representation and takes no responsibility that such information is accurate, current or complete". Reported information includes official mine name, status, background information, mine start/end date, primary commodity, mine features, hazards and remediation.

Government Publication Date: 1800-Oct 2018

Anderson's Waste Disposal Sites:

Private

[ANDR](#)

The information provided in this database was collected by examining various historical documents which aimed to characterize the likely position of former waste disposal sites from 1860 to present. The research initiative behind the creation of this database was to identify those sites that are missing from the Ontario MOE Waste Disposal Site Inventory, as well as to provide revisions and corrections to the positions and descriptions of sites currently listed in the MOE inventory. In addition to historic waste disposal facilities, the database also identifies certain auto wreckers and scrap yards that have been extrapolated from documentary sources. Please note that the data is not warranted to be complete, exhaustive or authoritative. The information was collected for research purposes only.

Government Publication Date: 1860s-Present

Aboveground Storage Tanks:

Provincial

[AST](#)

Historical listing of aboveground storage tanks made available by the Department of Natural Resources and Forestry. Includes tanks used to hold water or petroleum. This dataset has been retired as of September 25, 2014 and will no longer be updated.

Government Publication Date: May 31, 2014

Automobile Wrecking & Supplies:

Private

[AUWR](#)

This database provides an inventory of known locations that are involved in the scrap metal, automobile wrecking/recycling, and automobile parts & supplies industry. Information is provided on the company name, location and business type.

Government Publication Date: 1999-Dec 31, 2020

Borehole:

Provincial

[BORE](#)

A borehole is the generalized term for any narrow shaft drilled in the ground, either vertically or horizontally. The information here includes geotechnical investigations or environmental site assessments, mineral exploration, or as a pilot hole for installing piers or underground utilities. Information is from many sources such as the Ministry of Transportation (MTO) boreholes from engineering reports and projects from the 1950 to 1990's in Southern Ontario. Boreholes from the Ontario Geological Survey (OGS) including The Urban Geology Analysis Information System (UGAIS) and the York Peel Durham Toronto (YPDT) database of the Conservation Authority Moraine Coalition. This database will include fields such as location, stratigraphy, depth, elevation, year drilled, etc. For all water well data or oil and gas well data for Ontario please refer to WWIS and OOGW.

Government Publication Date: 1875-Jul 2018

Certificates of Approval:

Provincial CA

This database contains the following types of approvals: Air & Noise, Industrial Sewage, Municipal & Private Sewage, Waste Management Systems and Renewable Energy Approvals. The MOE in Ontario states that any facility that releases emissions to the atmosphere, discharges contaminants to ground or surface water, provides potable water supplies, or stores, transports or disposes of waste, must have a Certificate of Approval before it can operate lawfully. Fields include approval number, business name, address, approval date, approval type and status. This database will no longer be updated, as CofA's have been replaced by either Environmental Activity and Sector Registry (EASR) or Environmental Compliance Approval (ECA). Please refer to those individual databases for any information after Oct.31, 2011.

Government Publication Date: 1985-Oct 30, 2011*

Dry Cleaning Facilities:

Federal CDRY

List of dry cleaning facilities made available by Environment and Climate Change Canada. Environment and Climate Change Canada's Tetrachloroethylene (Use in Dry Cleaning and Reporting Requirements) Regulations (SOR/2003-79) are intended to reduce releases of tetrachloroethylene to the environment from dry cleaning facilities.

Government Publication Date: Jan 2004-Dec 2018

Commercial Fuel Oil Tanks:

Provincial CFOT

Locations of commercial underground fuel oil tanks. This is not a comprehensive or complete inventory of commercial fuel tanks in the province; this listing is a copy of records of registered commercial underground fuel oil tanks obtained under Access to Public Information.

Note that the following types of tanks do not require registration: waste oil tanks in apartments, office buildings, residences, etc.; aboveground gas or diesel tanks. Records are not verified for accuracy or completeness.

Government Publication Date: Jul 31, 2020

Chemical Manufacturers and Distributors:

Private CHEM

This database includes information from both a one time study conducted in 1992 and private source and is a listing of facilities that manufacture or distribute chemicals. The production of these chemical substances may involve one or more chemical reactions and/or chemical separation processes (i.e. fractionation, solvent extraction, crystallization, etc.).

Government Publication Date: 1999-Jan 31, 2020

Chemical Register:

Private CHM

This database includes a listing of locations of facilities within the Province or Territory that either manufacture and/or distributes chemicals.

Government Publication Date: 1999-Dec 31, 2020

Compressed Natural Gas Stations:

Private CNG

Canada has a network of public access compressed natural gas (CNG) refuelling stations. These stations dispense natural gas in compressed form at 3,000 pounds per square inch (psi), the pressure which is allowed within the current Canadian codes and standards. The majority of natural gas refuelling is located at existing retail gasoline that have a separate refuelling island for natural gas. This list of stations is made available by the Canadian Natural Gas Vehicle Alliance.

Government Publication Date: Dec 2012 -Dec 2020

Inventory of Coal Gasification Plants and Coal Tar Sites:

Provincial COAL

This inventory includes both the "Inventory of Coal Gasification Plant Waste Sites in Ontario-April 1987" and the Inventory of Industrial Sites Producing or Using Coal Tar and Related Tars in Ontario-November 1988) collected by the MOE. It identifies industrial sites that produced and continue to produce or use coal tar and other related tars. Detailed information is available and includes: facility type, size, land use, information on adjoining properties, soil condition, site operators/occupants, site description, potential environmental impacts and historic maps available. This was a one-time inventory.*

Government Publication Date: Apr 1987 and Nov 1988*

Compliance and Convictions:

Provincial CONV

This database summarizes the fines and convictions handed down by the Ontario courts beginning in 1989. Companies and individuals named here have been found guilty of environmental offenses in Ontario courts of law.

Government Publication Date: 1989-Nov 2020

Certificates of Property Use:

Provincial CPU

This is a subset taken from Ontario's Environmental Registry (EBR) database. It will include all CPU's on the registry such as (EPA s. 168.6) - Certificate of Property Use.

Government Publication Date: 1994-Jan 31, 2020

Drill Hole Database:

Provincial

[DRL](#)

The Ontario Drill Hole Database contains information on more than 113,000 percussion, overburden, sonic and diamond drill holes from assessment files on record with the department of Mines and Minerals. Please note that limited data is available for southern Ontario, as it was the last area to be completed. The database was created when surveys submitted to the Ministry were converted in the Assessment File Research Image Database (AFRI) project. However, the degree of accuracy (coordinates) as to the exact location of drill holes is dependent upon the source document submitted to the MNDM. Levels of accuracy used to locate holes are: centering on the mining claim; a sketch of the mining claim; a 1:50,000 map; a detailed company map; or from submitted a "Report of Work".

Government Publication Date: 1886 - Sep 2020

Delisted Fuel Tanks:

Provincial

[DTNK](#)

List of fuel storage tank sites that were once found in - and have since been removed from - the list of fuel storage tanks made available by the regulatory agency under Access to Public Information.

Government Publication Date: Jul 31, 2020

Environmental Activity and Sector Registry:

Provincial

[EASR](#)

On October 31, 2011, a smarter, faster environmental approvals system came into effect in Ontario. The EASR allows businesses to register certain activities with the ministry, rather than apply for an approval. The registry is available for common systems and processes, to which preset rules of operation can be applied. The EASR is currently available for: heating systems, standby power systems and automotive refinishing. Businesses whose activities aren't subject to the EASR may apply for an ECA (Environmental Compliance Approval). Please see our ECA database.

Government Publication Date: Oct 2011-Dec 31, 2020

Environmental Registry:

Provincial

[EBR](#)

The Environmental Registry lists proposals, decisions and exceptions regarding policies, Acts, instruments, or regulations that could significantly affect the environment. Through the Registry, thirteen provincial ministries notify the public of upcoming proposals and invite their comments. For example, if a local business is requesting a permit, license, or certificate of approval to release substances into the air or water; these are notified on the registry. Data includes: Approval for discharge into the natural environment other than water (i.e. Air) - EPA s. 9, Approval for sewage works - OWRA s. 53(1), and EPA s. 27 - Approval for a waste disposal site. For information regarding Permit to Take Water (PTTW), Certificate of Property Use (CPU) and (ORD) Orders please refer to those individual databases.

Government Publication Date: 1994-Jan 31, 2020

Environmental Compliance Approval:

Provincial

[ECA](#)

On October 31, 2011, a smarter, faster environmental approvals system came into effect in Ontario. In the past, a business had to apply for multiple approvals (known as certificates of approval) for individual processes and pieces of equipment. Today, a business either registers itself, or applies for a single approval, depending on the types of activities it conducts. Businesses whose activities aren't subject to the EASR may apply for an ECA. A single ECA addresses all of a business's emissions, discharges and wastes. Separate approvals for air, noise and waste are no longer required. This database will also include Renewable Energy Approvals. For certificates of approval prior to Nov 1st, 2011, please refer to the CA database. For all Waste Disposal Sites please refer to the WDS database.

Government Publication Date: Oct 2011- Dec 31, 2020

Environmental Effects Monitoring:

Federal

[EEM](#)

The Environmental Effects Monitoring program assesses the effects of effluent from industrial or other sources on fish, fish habitat and human usage of fisheries resources. Since 1992, pulp and paper mills have been required to conduct EEM studies under the Pulp and Paper Effluent Regulations. This database provides information on the mill name, geographical location and sub-lethal toxicity data.

Government Publication Date: 1992-2007*

ERIS Historical Searches:

Private

[EHS](#)

ERIS has compiled a database of all environmental risk reports completed since March 1999. Available fields for this database include: site location, date of report, type of report, and search radius. As per all other databases, the ERIS database can be referenced on both the map and "Statistical Profile" page.

Government Publication Date: 1999-Oct 31, 2020

Environmental Issues Inventory System:

Federal

[EIIS](#)

The Environmental Issues Inventory System was developed through the implementation of the Environmental Issues and Remediation Plan. This plan was established to determine the location and severity of contaminated sites on inhabited First Nation reserves, and where necessary, to remediate those that posed a risk to health and safety; and to prevent future environmental problems. The EIIS provides information on the reserve under investigation, inventory number, name of site, environmental issue, site action (Remediation, Site Assessment), and date investigation completed.

Government Publication Date: 1992-2001*

Emergency Management Historical Event:

Provincial

EMHE

List of locations of historical occurrences of emergency events, including those assigned to the Ministry of Natural Resources by Order-In-Council (OIC) under the Emergency Management and Civil Protection Act, as well as events where MNR provided requested emergency response assistance. Many of these events will have involved community evacuations, significant structural loss, and/or involvement of MNR emergency response staff. These events fall into one of ten (10) type categories: Dam Failure; Drought / Low Water; Erosion; Flood; Forest Fire; Soil and Bedrock Instability; Petroleum Resource Center Event, EMO Requested Assistance, Continuity of Operations Event, Other Requested Assistance. EMHE record details are reproduced by ERIIS under License with the Ontario Ministry of Natural Resources © Queen's Printer for Ontario, 2017.

Government Publication Date: Dec 31, 2016

Environmental Penalty Annual Report:

Provincial

EPAR

This database contains data from Ontario's annual environmental penalty report published by the Ministry of the Environment and Climate Change. These reports provide information on environmental penalties for land or water violations issued to companies in one of the nine industrial sectors covered by the Municipal Industrial Strategy for Abatement (MISA) regulations.

Government Publication Date: Jan 1, 2011 - Dec 31, 2019

List of Expired Fuels Safety Facilities:

Provincial

EXP

List of facilities and tanks for which there was once a fuel registration. This is not a comprehensive or complete inventory of expired tanks/tank facilities in the province; this listing is a copy of previously registered tanks and facilities obtained under Access to Public Information. Includes private fuel outlets, bulk plants, fuel oil tanks, gasoline stations, marinas, propane filling stations, liquid fuel tanks, piping systems, etc; includes tanks which have been removed from the ground.

Notes: registration was not required for private fuel underground/aboveground storage tanks prior to January 1990, nor for furnace oil tanks prior to May 1, 2002; registration is not required for waste oil tanks in apartments, office buildings, residences, etc., or aboveground gas or diesel tanks. Records are not verified for accuracy or completeness.

Government Publication Date: Jul 31, 2020

Federal Convictions:

Federal

FCON

Environment Canada maintains a database referred to as the "Environmental Registry" that details prosecutions under the Canadian Environmental Protection Act (CEPA) and the Fisheries Act (FA). Information is provided on the company name, location, charge date, offence and penalty.

Government Publication Date: 1988-Jun 2007*

Contaminated Sites on Federal Land:

Federal

FCS

The Federal Contaminated Sites Inventory includes information on known federal contaminated sites under the custodianship of departments, agencies and consolidated Crown corporations as well as those that are being or have been investigated to determine whether they have contamination arising from past use that could pose a risk to human health or the environment. The inventory also includes non-federal contaminated sites for which the Government of Canada has accepted some or all financial responsibility. It does not include sites where contamination has been caused by, and which are under the control of, enterprise Crown corporations, private individuals, firms or other levels of government. Includes fire training sites and sites at which Per- and Polyfluoroalkyl Substances (PFAS) are a concern.

Government Publication Date: Jun 2000-Sep 2020

Fisheries & Oceans Fuel Tanks:

Federal

FOFT

Fisheries & Oceans Canada maintains an inventory of aboveground & underground fuel storage tanks located on Fisheries & Oceans property or controlled by DFO. Our inventory provides information on the site name, location, tank owner, tank operator, facility type, storage tank location, tank contents & capacity, and date of tank installation.

Government Publication Date: 1964-Sep 2019

Federal Identification Registry for Storage Tank Systems (FIRSTS):

Federal

FRST

A list of federally regulated Storage tanks from the Federal Identification Registry for Storage Tank Systems (FIRSTS). FIRSTS is Environment and Climate Change Canada's database of storage tank systems subject to the Storage Tank for Petroleum Products and Allied Petroleum Products Regulations. The main objective of the Regulations is to prevent soil and groundwater contamination from storage tank systems located on federal and aboriginal lands. Storage tank systems that do not have a valid identification number displayed in a readily visible location on or near the storage tank system may be refused product delivery.

Government Publication Date: May 31, 2018

Fuel Storage Tank:

Provincial

FST

List of registered private and retail fuel storage tanks. This is not a comprehensive or complete inventory of private and retail fuel storage tanks in the province; this listing is a copy of registered private and retail fuel storage tanks, obtained under Access to Public Information.

Notes: registration was not required for private fuel underground/aboveground storage tanks prior to January 1990, nor for furnace oil tanks prior to May 1, 2002; registration is not required for waste oil tanks in apartments, office buildings, residences, etc., or aboveground gas or diesel tanks. Records are not verified for accuracy or completeness.

Government Publication Date: Jul 31, 2020

Fuel Storage Tank - Historic:

Provincial

FSTH

The Fuels Safety Branch of the Ontario Ministry of Consumer and Commercial Relations maintained a database of all registered private fuel storage tanks. Public records of private fuel storage tanks are only available since the registration became effective in September 1989. This information is now collected by the Technical Standards and Safety Authority.

Government Publication Date: Pre-Jan 2010*

Ontario Regulation 347 Waste Generators Summary:

Provincial

GEN

Regulation 347 of the Ontario EPA defines a waste generation site as any site, equipment and/or operation involved in the production, collection, handling and/or storage of regulated wastes. A generator of regulated waste is required to register the waste generation site and each waste produced, collected, handled, or stored at the site. This database contains the registration number, company name and address of registered generators including the types of hazardous wastes generated. It includes data on waste generating facilities such as: drycleaners, waste treatment and disposal facilities, machine shops, electric power distribution etc. This information is a summary of all years from 1986 including the most currently available data. Some records may contain, within the company name, the phrase "See & Use..." followed by a series of letters and numbers. This occurs when one company is amalgamated with or taken over by another registered company. The number listed as "See & Use", refers to the new ownership and the other identification number refers to the original ownership. This phrase serves as a link between the 2 companies until operations have been fully transferred.

Government Publication Date: 1986-Jul 31, 2020

Greenhouse Gas Emissions from Large Facilities:

Federal

GHG

List of greenhouse gas emissions from large facilities made available by Environment Canada. Greenhouse gas emissions in kilotonnes of carbon dioxide equivalents (kt CO₂ eq).

Government Publication Date: 2013-Dec 2018

TSSA Historic Incidents:

Provincial

HINC

List of historic incidences of spills and leaks of diesel, fuel oil, gasoline, natural gas, propane, and hydrogen recorded by the TSSA in their previous incident tracking system. The TSSA's Fuels Safety Program administers the Technical Standards & Safety Act 2000, providing fuel-related safety services associated with the safe transportation, storage, handling and use of fuels such as gasoline, diesel, propane, natural gas and hydrogen. Under this Act, the TSSA regulates fuel suppliers, storage facilities, transport trucks, pipelines, contractors and equipment or appliances that use fuels. Records are not verified for accuracy or completeness. This is not a comprehensive or complete inventory of historical fuel spills and leaks in the province. This listing is a copy of the data captured at one moment in time and is hence limited by the record date provided here.

Government Publication Date: 2006-June 2009*

Indian & Northern Affairs Fuel Tanks:

Federal

IAFT

The Department of Indian & Northern Affairs Canada (INAC) maintains an inventory of aboveground & underground fuel storage tanks located on both federal and crown land. Our inventory provides information on the reserve name, location, facility type, site/facility name, tank type, material & ID number, tank contents & capacity, and date of tank installation.

Government Publication Date: 1950-Aug 2003*

Fuel Oil Spills and Leaks:

Provincial

INC

Listing of spills and leaks of diesel, fuel oil, gasoline, natural gas, propane, and hydrogen reported to the Spills Action Centre (SAC). This is not a comprehensive or complete inventory of fuel-related leaks, spills, and incidents in the province; this listing is a copy of incidents reported to the SAC, obtained under Access to Public Information. Includes incidents from fuel-related hazards such as spills, fires, and explosions. Records are not verified for accuracy or completeness.

Government Publication Date: Jul 31, 2020

Landfill Inventory Management Ontario:

Provincial

LIMO

The Landfill Inventory Management Ontario (LIMO) database is updated every year, as the Ministry of the Environment, Conservation and Parks compiles new and updated information. Includes small and large landfills currently operating as well as those which are closed and historic. Operators of larger landfills provide landfill information for the previous operating year to the ministry for LIMO including: estimated amount of total waste received, landfill capacity, estimated total remaining landfill capacity, fill rates, engineering designs, reporting and monitoring details, size of location, service area, approved waste types, leachate of site treatment, contaminant attenuation zone and more. The small landfills include information such as site owner, site location and certificate of approval # and status.

Government Publication Date: Feb 28, 2019

Canadian Mine Locations:

Private

MINE

This information is collected from the Canadian & American Mines Handbook. The Mines database is a national database that provides over 290 listings on mines (listed as public companies) dealing primarily with precious metals and hard rocks. Listed are mines that are currently in operation, closed, suspended, or are still being developed (advanced projects). Their locations are provided as geographic coordinates (x, y and/or longitude, latitude). As of 2002, data pertaining to Canadian smelters and refineries has been appended to this database.

Government Publication Date: 1998-2009*

Mineral Occurrences:

Provincial

MNR

In the early 70's, the Ministry of Northern Development and Mines created an inventory of approximately 19,000 mineral occurrences in Ontario, in regard to metallic and industrial minerals, as well as some information on building stones and aggregate deposits. Please note that the "Horizontal Positional Accuracy" is approximately +/- 200 m. Many reference elements for each record were derived from field sketches using pace or chain/tape measurements against claim posts or topographic features in the area. The primary limiting factor for the level of positional accuracy is the scale of the source material. The testing of horizontal accuracy of the source materials was accomplished by comparing the plan metric (X and Y) coordinates of that point with the coordinates of the same point as defined from a source of higher accuracy.

Government Publication Date: 1846-Jan 2020

National Analysis of Trends in Emergencies System (NATES):

Federal

NATE

In 1974 Environment Canada established the National Analysis of Trends in Emergencies System (NATES) database, for the voluntary reporting of significant spill incidents. The data was to be used to assist in directing the work of the emergencies program. NATES ran from 1974 to 1994. Extensive information is available within this database including company names, place where the spill occurred, date of spill, cause, reason and source of spill, damage incurred, and amount, concentration, and volume of materials released.

Government Publication Date: 1974-1994*

Non-Compliance Reports:

Provincial

NCPL

The Ministry of the Environment provides information about non-compliant discharges of contaminants to air and water that exceed legal allowable limits, from regulated industrial and municipal facilities. A reported non-compliance failure may be in regard to a Control Order, Certificate of Approval, Sectoral Regulation or specific regulation/act.

Government Publication Date: Dec 31, 2018

National Defense & Canadian Forces Fuel Tanks:

Federal

NDFT

The Department of National Defense and the Canadian Forces maintains an inventory of all aboveground & underground fuel storage tanks located on DND lands. Our inventory provides information on the base name, location, tank type & capacity, tank contents, tank class, date of tank installation, date tank last used, and status of tank as of May 2001. This database will no longer be updated due to the new National Security protocols which have prohibited any release of this database.

Government Publication Date: Up to May 2001*

National Defense & Canadian Forces Spills:

Federal

NDSP

The Department of National Defense and the Canadian Forces maintains an inventory of spills to land and water. All spill sites have been classified under the "Transportation of Dangerous Goods Act - 1992". Our inventory provides information on the facility name, location, spill ID #, spill date, type of spill, as well as the quantity of substance spilled & recovered.

Government Publication Date: Mar 1999-Apr 2018

National Defence & Canadian Forces Waste Disposal Sites:

Federal

NDWD

The Department of National Defence and the Canadian Forces maintains an inventory of waste disposal sites located on DND lands. Where available, our inventory provides information on the base name, location, type of waste received, area of site, depth of site, year site opened/closed and status.

Government Publication Date: 2001-Apr 2007*

National Energy Board Pipeline Incidents:

Federal

NEBI

Locations of pipeline incidents from 2008 to present, made available by the Canada Energy Regulator (CER) - previously the National Energy Board (NEB). Includes incidents reported under the Onshore Pipeline Regulations and the Processing Plant Regulations related to pipelines under federal jurisdiction, does not include incident data related to pipelines under provincial or territorial jurisdiction.

Government Publication Date: 2008-Dec 31, 2020

National Energy Board Wells:

Federal

NEBP

The NEBW database contains information on onshore & offshore oil and gas wells that are outside provincial jurisdiction(s) and are thereby regulated by the National Energy Board. Data is provided regarding the operator, well name, well ID No./UWI, status, classification, well depth, spud and release date.

Government Publication Date: 1920-Feb 2003*

National Environmental Emergencies System (NEES):

Federal

NEES

In 2000, the Emergencies program implemented NEES, a reporting system for spills of hazardous substances. For the most part, this system only captured data from the Atlantic Provinces, some from Quebec and Ontario and a portion from British Columbia. Data for Alberta, Saskatchewan, Manitoba and the Territories was not captured. However, NEES is also a repository for previous Environment Canada spill datasets. NEES is composed of the historic datasets ' or Trends ' which dates from approximately 1974 to present. NEES Trends is a compilation of historic databases, which were merged and includes data from NATES (National Analysis of Trends in Emergencies System), ARTS (Atlantic Regional Trends System), and NEES. In 2001, the Emergencies Program determined that variations in reporting regimes and requirements between federal and provincial agencies made national spill reporting and trend analysis difficult to achieve. As a consequence, the department has focused efforts on capturing data on spills of substances which fall under its legislative authority only (CEPA and FA). As such, the NEES database will be decommissioned in December 2004.

Government Publication Date: 1974-2003***National PCB Inventory:**

Federal

NPCB

Environment Canada's National PCB inventory includes information on in-use PCB containing equipment in Canada including federal, provincial and private facilities. Federal out-of-service PCB containing equipment and PCB waste owned by the federal government or by federally regulated industries such as airlines, railway companies, broadcasting companies, telephone and telecommunications companies, pipeline companies, etc. are also listed. Although it is not Environment Canada's mandate to collect data on non-federal PCB waste, the National PCB inventory includes some information on provincial and private PCB waste and storage sites. Some addresses provided may be Head Office addresses and are not necessarily the location of where the waste is being used or stored.

Government Publication Date: 1988-2008***National Pollutant Release Inventory:**

Federal

NPRI

Environment Canada has defined the National Pollutant Release Inventory ("NPRI") as a federal government initiative designed to collect comprehensive national data regarding releases to air, water, or land, and waste transfers for recycling for more than 300 listed substances.

Government Publication Date: 1993-May 2017**Oil and Gas Wells:**

Private

OGWE

The Nickle's Energy Group (publisher of the Daily Oil Bulletin) collects information on drilling activity including operator and well statistics. The well information database includes name, location, class, status and depth. The main Nickle's database is updated on a daily basis, however, this database is updated on a monthly basis. More information is available at www.nickles.com.

Government Publication Date: 1988-Aug 31, 2020**Ontario Oil and Gas Wells:**

Provincial

OOGW

In 1998, the MNR handed over to the Ontario Oil, Gas and Salt Resources Corporation, the responsibility of maintaining a database of oil and gas wells drilled in Ontario. The OGSR Library has over 20,000+ wells in their database. Information available for all wells in the ERIS database include well owner/operator, location, permit issue date, and well cap date, license No., status, depth and the primary target (rock unit) of the well being drilled. All geology/stratigraphy table information, plus all water table information is also provide for each well record.

Government Publication Date: 1800-Jun 2020**Inventory of PCB Storage Sites:**

Provincial

OPCB

The Ontario Ministry of Environment, Waste Management Branch, maintains an inventory of PCB storage sites within the province. Ontario Regulation 11/82 (Waste Management - PCB) and Regulation 347 (Generator Waste Management) under the Ontario EPA requires the registration of inactive PCB storage equipment and/or disposal sites of PCB waste with the Ontario Ministry of Environment. This database contains information on: 1) waste quantities; 2) major and minor sites storing liquid or solid waste; and 3) a waste storage inventory.

Government Publication Date: 1987-Oct 2004; 2012-Dec 2013**Orders:**

Provincial

ORD

This is a subset taken from Ontario's Environmental Registry (EBR) database. It will include all Orders on the registry such as (EPA s. 17) - Order for remedial work, (EPA s. 18) - Order for preventative measures, (EPA s. 43) - Order for removal of waste and restoration of site, (EPA s. 44) - Order for conformity with Act for waste disposal sites, (EPA s. 136) - Order for performance of environmental measures.

Government Publication Date: 1994-Jan 31, 2020**Canadian Pulp and Paper:**

Private

PAP

This information is part of the Pulp and Paper Canada Directory. The Directory provides a comprehensive listing of the locations of pulp and paper mills and the products that they produce.

Government Publication Date: 1999, 2002, 2004, 2005, 2009-2014**Parks Canada Fuel Storage Tanks:**

Federal

PCFT

Canadian Heritage maintains an inventory of known fuel storage tanks operated by Parks Canada, in both National Parks and at National Historic Sites. The database details information on site name, location, tank install/removal date, capacity, fuel type, facility type, tank design and owner/operator.

Government Publication Date: 1920-Jan 2005*

Pesticide Register:

Provincial PES

The Ontario Ministry of the Environment and Climate Change maintains a database of licensed operators and vendors of registered pesticides.

Government Publication Date: Oct 2011-Dec 31, 2020

Pipeline Incidents:

Provincial PINC

List of pipeline incidents (strikes, leaks, spills). This is not a comprehensive or complete inventory of pipeline incidents in the province; this listing is an historical copy of records previously obtained under Access to Public Information. Records are not verified for accuracy or completeness.

Government Publication Date: Oct 31, 2020

Private and Retail Fuel Storage Tanks:

Provincial PRT

The Fuels Safety Branch of the Ontario Ministry of Consumer and Commercial Relations maintained a database of all registered private fuel storage tanks and licensed retail fuel outlets. This database includes an inventory of locations that have gasoline, oil, waste oil, natural gas and/or propane storage tanks on their property. The MCCR no longer collects this information. This information is now collected by the Technical Standards and Safety Authority (TSSA).

Government Publication Date: 1989-1996*

Permit to Take Water:

Provincial PTTW

This is a subset taken from Ontario's Environmental Registry (EBR) database. It will include all PTTW's on the registry such as OWRA s. 34 - Permit to take water.

Government Publication Date: 1994-Jan 31, 2020

Ontario Regulation 347 Waste Receivers Summary:

Provincial REC

Part V of the Ontario Environmental Protection Act ("EPA") regulates the disposal of regulated waste through an operating waste management system or a waste disposal site operated or used pursuant to the terms and conditions of a Certificate of Approval or a Provisional Certificate of Approval. Regulation 347 of the Ontario EPA defines a waste receiving site as any site or facility to which waste is transferred by a waste carrier. A receiver of regulated waste is required to register the waste receiving facility. This database represents registered receivers of regulated wastes, identified by registration number, company name and address, and includes receivers of waste such as: landfills, incinerators, transfer stations, PCB storage sites, sludge farms and water pollution control plants. This information is a summary of all years from 1986 including the most currently available data.

Government Publication Date: 1986-2016

Record of Site Condition:

Provincial RSC

The Record of Site Condition (RSC) is part of the Ministry of the Environment's Brownfields Environmental Site Registry. Protection from environmental cleanup orders for property owners is contingent upon documentation known as a record of site condition (RSC) being filed in the Environmental Site Registry. In order to file an RSC, the property must have been properly assessed and shown to meet the soil, sediment and groundwater standards appropriate for the use (such as residential) proposed to take place on the property. The Record of Site Condition Regulation (O. Reg. 153/04) details requirements related to site assessment and clean up.

RSCs filed after July 1, 2011 will also be included as part of the new (O.Reg. 511/09).

Government Publication Date: 1997-Sept 2001, Oct 2004-Jan 2021

Retail Fuel Storage Tanks:

Private RST

This database includes an inventory of retail fuel outlet locations (including marinas) that have on their property gasoline, oil, waste oil, natural gas and / or propane storage tanks.

Government Publication Date: 1999-Dec 31, 2020

Scott's Manufacturing Directory:

Private SCT

Scott's Directories is a data bank containing information on over 200,000 manufacturers across Canada. Even though Scott's listings are voluntary, it is the most comprehensive database of Canadian manufacturers available. Information concerning a company's address, plant size, and main products are included in this database.

Government Publication Date: 1992-Mar 2011*

Ontario Spills:

Provincial SPL

List of spills and incidents made available the Ministry of the Environment, Conservation and Parks. This database identifies information such as location (approximate), type and quantity of contaminant, date of spill, environmental impact, cause, nature of impact, etc. Information from 1988-2002 was part of the ORIS (Occurrence Reporting Information System). The SAC (Spills Action Centre) handles all spills reported in Ontario. Regulations for spills in Ontario are part of the MOE's Environmental Protection Act, Part X.

Government Publication Date: 1988-Mar 2020; Jul 2020 - Aug 2020

Wastewater Discharger Registration Database:

Provincial

[SRDS](#)

Information under this heading is combination of the following 2 programs. The Municipal/Industrial Strategy for Abatement (MISA) division of the Ontario Ministry of Environment maintained a database of all direct dischargers of toxic pollutants within nine sectors including: Electric Power Generation; Mining; Petroleum Refining; Organic Chemicals; Inorganic Chemicals; Pulp & Paper; Metal Casting; Iron & Steel; and Quarries. All sampling information is now collected and stored within the Sample Result Data Store (SRDS).

Government Publication Date: 1990-Dec 31, 2017

Anderson's Storage Tanks:

Private

[TANK](#)

The information provided in this database was collected by examining various historical documents, which identified the location of former storage tanks, containing substances such as fuel, water, gas, oil, and other various types of miscellaneous products. Information is available in regard to business operating at tank site, tank location, permit year, permit & installation type, no. of tanks installed & configuration and tank capacity. Data contained within this database pertains only to the city of Toronto and is not warranted to be complete, exhaustive or authoritative. The information was collected for research purposes only.

Government Publication Date: 1915-1953*

Transport Canada Fuel Storage Tanks:

Federal

[TCFT](#)

List of fuel storage tanks currently or previously owned or operated by Transport Canada. This inventory also includes tanks on The Pickering Lands, which refers to 7,530 hectares (18,600 acres) of land in Pickering, Markham, and Uxbridge owned by the Government of Canada since 1972; properties on this land has been leased by the government since 1975, and falls under the Site Management Policy of Transport Canada, but is administered by Public Works and Government Services Canada. This inventory provides information on the site name, location, tank age, capacity and fuel type.

Government Publication Date: 1970 - Dec 2020

Variances for Abandonment of Underground Storage Tanks:

Provincial

[VAR](#)

Listing of variances granted for storage tank abandonment. This is not a comprehensive or complete inventory of tank abandonment variances in the province; this listing is a copy of tank abandonment variance records previously obtained under Access to Public Information. In Ontario, registered underground storage tanks must be removed within two years of disuse; if removal of a tank is not feasible, an application may be sought for a variance from this code requirement.

Records are not verified for accuracy or completeness.

Government Publication Date: Jul 31, 2020

Waste Disposal Sites - MOE CA Inventory:

Provincial

[WDS](#)

The Ontario Ministry of Environment, Waste Management Branch, maintains an inventory of known open (active or inactive) and closed disposal sites in the Province of Ontario. Active sites maintain a Certificate of Approval, are approved to receive and are receiving waste. Inactive sites maintain Certificate(s) of Approval but are not receiving waste. Closed sites are not receiving waste. The data contained within this database was compiled from the MOE's Certificate of Approval database. Locations of these sites may be cross-referenced to the Anderson database described under ERIS's Private Source Database section, by the CA number. All new Environmental Compliance Approvals handed out after Oct 31, 2011 for Waste Disposal Sites will still be found in this database.

Government Publication Date: Oct 2011-Dec 31, 2020

Waste Disposal Sites - MOE 1991 Historical Approval Inventory:

Provincial

[WDSH](#)

In June 1991, the Ontario Ministry of Environment, Waste Management Branch, published the "June 1991 Waste Disposal Site Inventory", of all known active and closed waste disposal sites as of October 30th, 1990. For each "active" site as of October 31st 1990, information is provided on site location, site/CA number, waste type, site status and site classification. For each "closed" site as of October 31st 1990, information is provided on site location, site/CA number, closure date and site classification. Locations of these sites may be cross-referenced to the Anderson database described under ERIS's Private Source Database section, by the CA number.

Government Publication Date: Up to Oct 1990*

Water Well Information System:

Provincial

[WWIS](#)

This database describes locations and characteristics of water wells found within Ontario in accordance with Regulation 903. It includes such information as coordinates, construction date, well depth, primary and secondary use, pump rate, static water level, well status, etc. Also included are detailed stratigraphy information, approximate depth to bedrock and the approximate depth to the water table.

Government Publication Date: Apr 30, 2020

Definitions

Database Descriptions: This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

Detail Report: This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

Distance: The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

Direction: The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

Elevation: The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

Executive Summary: This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

Map Key: The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

Unplottables: These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.

Phase I ESA Documentation of Interviews

a) Dymon Group of Companies Representative: James Byck

Date, Time and Duration of Interview:		March 2, 2021
Method and Place of Interview:		In writing.
Name of Person:		James Byck
Reason for Person Selection:		Person with detailed knowledge of current site activities.
Key Questions:		Answers:
1.	Have a Phase I ESA, Phase II ESA and/or other reports been previously conducted for the Site, when, and are they available for review?	Phase I ESA was conducted by O'Connor Associates Environmental Inc. for Imperial Oil Limited in July 2009; Phase II ESA was conducted by O'Connor Associates Environmental Inc. for Imperial Oil Limited in August 2009. Both reports provided to Fisher for review.
2.	What is (was) the main current (past) activity conducted at the Site? Since when?	Vacant/undeveloped land, historically agricultural field. Current property owner is 7749805 Canada Inc.
3.	Was there any construction activity conducted at the site in the past years?	No.
4.	Are there any company records available for review, such as: site plans, process control diagrams, utility drawings, inventory of chemicals, MSDS, waste management records?	Plan of Topographic Survey and Concept Plan for proposed Dymon Storage Development provided to Fisher Environmental Ltd. for review.
5.	Do you have knowledge of any current or former underground or aboveground storage tanks, and their location at the site?	No.
6.	Are there any spill reporting and emergency response plans, asbestos surveys and C of A available?	No.
7.	Do you have knowledge of any activities and events occurred at neighboring properties that may have affected their environmental condition?	No.

1. 5210 Innes Road – View of the Site looking southwest.

2. 5210 Innes Road – View of the Site looking southeast.

3. 5210 Innes Road – View of the Site looking east along Innes Road.

4. 5210 Innes Road – View of the Site looking south along Trim Road.

5. 1985 Trim Road – Commercial Gas Service Station operated by Ultramar located to the north of the Site.

6. 1980 Trim Road – Willowbend Retirement Community building located to the northwest of the Site.

Freedom of Information Request

This form is for requesting documents which are in the Ministry's files on environmental concerns related to properties. Please refer to the guide on completion and use of this form. Our fax no. is (416) 314-4285.

Map: Well records

This map allows you to search and view well record information from reported wells in Ontario.

Full dataset is available in the [Open Data catalogue](#).

You may search by **Well ID**, **Well Tag #** or see [help](#) for advanced options.

☐ Search current map display only

Your search returns **34** well records, which are displayed as red pins over blue dots.

Latitude:45.46932, Longitude:-75.44668 (UTM Zone:18, Easting:465084, Northing:5035185)
