CANOPY COVER METHODOLOGY:

The projected canopy calculations for the 40 year estimate were done referencing the Oakville methodology.
<https://www.oakville.ca/getmedia/8d1f16b69-4100-495e-a9da-3c32d6f02b2/planning-diag-ud-canopy-cover-plan-guidelines.pdf>. The methodology was slightly adapted in the following ways to accommodate for site-relevant specifics:

- [illegible]

40-YEAR CANOPY COVER CALCULATIONS:

EXISTING CANOPY

Existing canopy area within private lot (excluding wetlands): 4490 sq

Existing canopy cover within private lot (excluding wetlands): 25%

Existing canopy cover in public zone : 3%

PROJECTED CANON

Projected canopy area within private lot (excluding wetlands): 6273 m²

Projected canopy cover within private lot (excluding wetlands): 35%

1. The first step is to identify the problem or question that needs to be answered. This involves understanding the context and the specific requirements of the task.

Projected canopy area in public zone : 2914 m²

Projected canopy cover in public zone : 42%

ADDITIONAL NOTE: it is relevant to mention that a section of the buffer zone, within the lot area, could be used for more canopy cover, however since that environment is meant to be a rewarded zone benefitting the local ecosystem, we chose to have a portion of it with lower-height vegetation, favoring a shrub-layer and wetland-like ecosystem, to support the local wildlife and their varied needs.
