The following protection measures must be implemented for retained trees, both on site and on adjacent sites, prior to any tree removal or site works and maintained for the duration of construction on site:

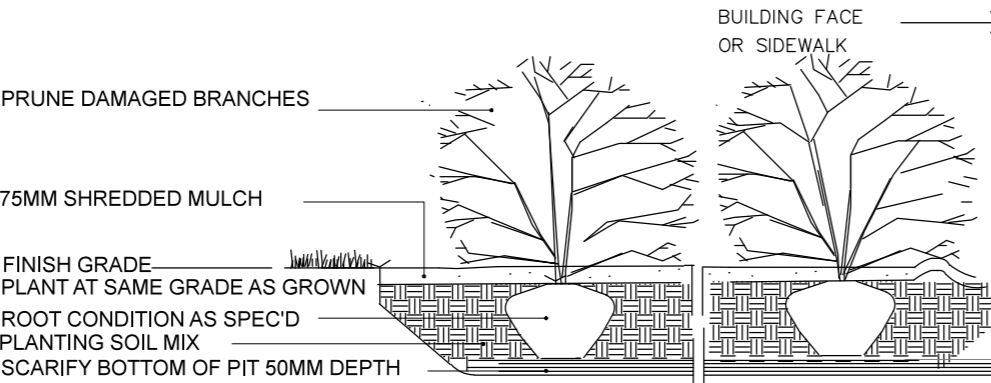

Under the guidance of an arborist, erect a fence at the critical root zone (CRZ) of trees where the CRZ is established as being 10 centimetres from the trunk of a tree for every centimetre of trunk diameter at breast height. The CRZ is calculated as DBH X 10 cm.; Do not place any material or equipment within the CRZ of the tree; Do not attach any signs, notices or posters to any tree; Do not raise or lower the existing grade within the CRZ without approval; Turnout or bore when digging within the CRZ of a tree; Do not damage the root system, trunk, or branches or any tree; Ensure that exhaust fumes from all equipment are NOT directed towards any tree canopy.
