Subject: Phase Two Environmental Site Assessment Update
Lot 4, Concession 4, Parts 1, 2, 3, 4, 5 Gloucester, Ontario
(3646, 3636, 3604 Innes Road, Ottawa, Ontario)
161-06382-00

Dear Mr. Morissette,

We are pleased to forward our update to the report documenting the results of the Phase Two Environmental Site Assessment (ESA) completed at the above-noted property.

The Phase Two ESA was completed in general accordance with *Ontario Regulation (O. Reg.) 153/04* to document management and further investigation of areas of potential environmental concern (APECs) identified in previous reports.

Based on the findings of the investigation, elevated concentrations of contaminants remain in soil and groundwater at the Site. Additional investigations are recommended to assess the extent of groundwater impacts. The management of impacted soil is recommended to be managed through risk assessment.

If you have any questions or require further information, please contact the undersigned.

Yours truly,

WSP Canada Inc.

Manager, Environmental Management

EXECUTIVE SUMMARY

WSP Canada Inc. (WSP) was retained by The Builders Warehouse Inc./La Coop Federee to update a Phase Two Environmental Site Assessment (ESA) of the seven (7) parcels of land located at Part of Lot 4, Concession 4, Parts 1, 2, 3, 4, 5 Gloucester, Ontario (with municipal addresses of 3646, 3636, 3604 Innes Road, Ottawa, Ontario, and Part of Lot 4, Concession 3, Part 2, Plan 5R8348, Gloucester, Ontario) (the "Site"). The Site is a rectangular shaped vacant property with a square portion located on the northeast corner along Innes Road.

There are eight (8) structures present on the north side of the Site, which are currently vacant commercial buildings (a former BMR hardware store). The south portion of the Site is vacant forested land that has not been developed.

The Phase Two ESA was completed to characterize subsurface conditions according to the industry standards in effect at the time, in general accordance with *Ontario Regulation (O. Reg.) 153/04*. We understand that the Site may be sold and the south, vacant portion of the Site may be developed for residential uses; the north portion of the Site would remain commercial use. The filing of a Record of Site Condition (RSC) would be required if the north portion of the Site is used for residential or parkland purposes.

WSP identified two Areas of Potential Environmental Concern (APECs) at the Site resulting from two on site PCAs, and one APEC that was attributed to one off-site PCA with the potential for contaminant migration through groundwater movement. The Phase Two ESA consisted of the completion of 13 boreholes to a maximum depth of 7.01 m below ground surface (mbgs), installation of groundwater monitoring wells, and the collection of soil and groundwater samples for chemical analysis. As the Phase One ESA identified multiple well records that may be located on the Site and within the Phase One Study Area, the applicable generic soil and groundwater standards selected for evaluating subsurface conditions are the Ontario Ministry of the Environment and Climate Change (MOECC) Table 2: Full Depth Generic Site Condition Standards (SCS) in a Potable Ground Water Condition. The north portion of the site would be suitable for comparison to industrial, commercial and community (ICC) land use standards and for the south portion of the Site, standards for residential, parkland and institutional (RPI) property uses would apply.

The Phase Two ESA update indicated:

- Chemical analysis of metals and inorganics of the soil submitted within the fill and native materials across the Site identified exceedances of barium, cobalt, and vanadium. Due to the presence of these chemicals in the native silty clay or clayey silt (in both 2013 and 2016 drilling programs), they may be representative of background in this area and not necessarily indicative of any off-Site or on-Site sources of contamination.
- The elevated concentrations of electrical conductivity (EC) and sodium adsorption ratio (SAR) identified in BH16-6 and BH16-8 may be attributed to the historic application of road salt on the Site. These areas are within the commercial portion of the site and values of EC and SAR meet the ICC standards. The salt impacts were identified in the shallow native soils.
- In 2013, elevated concentrations of PHC- F3 and F4 were identified within the fill material at TE-02 (located on the southeast corner of the 'overstock storage yard', from ground surface to 0.35 mbgs. The fill material was described as 55% brick, wood, burnt wood, plastic and 45% sandy silt with trace organic material. In 2016, BH16-4, BH/MW16-5 and BH16-6 were advanced around TE-02 to delineate the PHC F3 and F4 contamination. All samples collected from these boreholes met the applicable Table 2 SCS, indicating that impacts are limited to surface soil at TE-02.

- Elevated concentrations of ethylbenzene and PHC F2 were present in the groundwater of MW16-5 (located in the southeast corner of the 'overstock storage yard') when compared to the Table 2 SCS.

Based on the Phase Two ESA Update and remediation conducted at the Site on November 2, 2016, impacted soils located in the vicinity of TE-02 were removed and soil remaining in this area at the Site meets the applicable SCS for ICC Property Use.

Impacts from the use of road salt in the commercial portion of the site are within standards established for ICC Property Use.

The groundwater in the vicinity of MW16-5 had an exceedance of ethylbenzene and PHC F1 to F4. Additional investigation with the installation of monitoring wells is recommended to delineate the impacts and assess the extent of groundwater contamination.

The elevated metal concentrations in soil in the former Phase Two ESAs can be managed through a risk assessment process to identify risk management measures that will allow this soil to remain onsite. This management of the contaminants, even though they may be naturally occurring will be required prior to filing a Record of Site Condition.

1 PHASE TWO ESA UPDATE

1.1 BACKGROUND

WSP Canada Inc. (WSP) was retained by The Builders Warehouse Inc. to conduct a Phase Two Environmental Site Assessment (ESA) of seven (7) parcels of land identified as Part of Lot 4, Concession 4, Parts 1, 2, 3, 4, 5 Gloucester, Ontario and Part of Lot 4, Concession 3, Part 2, Plan 5R8348, Gloucester, Ontario, making up municipal addresses 3646, 3636, and 3604 Innes Road, Ottawa, Ontario, (the "Site"). The Site is a rectangular shaped property with a square portion jutting out on the northeast corner along Innes Road. The Site location is shown in Figure 1 and Figure 2.

We understand that the Site is being offered for sale. The Site has two distinct areas, a vacant, undeveloped south portion and a commercial north portion. If redevelopment plans include residential parkland or institutional (RPI) property uses on lands historically used for commercial purposes (i.e., the north portion), the filing of a Record of Site Condition (RSC) would be required. If residential or parkland uses are restricted to the south portion of the Site, filing of a RSC would be voluntary, or in compliance with municipal development requirements rather than provincial legislation.

The Phase Two ESA was completed to characterize subsurface conditions according to current industry standards, in general accordance with Ontario Regulation (O. Reg.) 153/04. Results of previous investigations identified an area of soil contamination, and remediation was conducted under this work program. Groundwater with evidence of impacts identified in a previous investigation was reassessed in this work program. In addition, results from previous assessments were verified at two locations.

This update to the Phase Two ESA provides documentation of the remediation and supplemental soil and groundwater sampling. It summarizes the current subsurface conditions at the Site. Additional investigation and remediation work will be required prior to issuing a Phase Two ESA report that can support the filing of a RSC.

1.2 SOIL AND GROUNDWATER QUALITY

Soil and groundwater quality at the Site has been assessed in 2013 and again in 2016, as reported in a Phase Two ESA issued July 27, 2016. The report identified metal and inorganic (MI) parameters in native soil, and petroleum hydrocarbon compounds (PHCs), including fractions F1 to F4 and benzene, toluene, ethylbenzene and xylenes (BTEX) in soil and groundwater at concentrations exceeding the Table 2 Site Condition Standards (SCS) issued by the Ministry of the Environment and Climate Change (MOECC). Exceedances encountered across the Site are presented in Figure 3 to Figure 5. In summary:

- The concentrations of barium, cobalt, and vanadium exceeded SCS in the native silty clay or clayey silt. Because elevated concentrations were present on the developed and undeveloped portions of the land (in both 2013 and 2016 drilling programs), they may be representative of background in this area and not necessarily indicative of any off-Site or on-Site sources of contamination.

- Elevated values of electrical conductivity (EC) and sodium adsorption ratio (SAR) identified in BH16-6 and BH16-8 may be attributed to the historic application of road salt on the Site. The salt impacts were identified in the shallow native soils.
- The 2016 delineation of PHC- F3 and F4 contamination confirmed only the fill material at TE-02 (2013) at the southeast corner of the 'overstock storage yard' was impacted. The fill material at surface was described as 55% brick, wood, burnt wood, plastic and 45% sandy silt with trace organic material.
- Elevated concentrations of ethylbenzene and PHC F2 were measured in the groundwater at MW16-5 (located in the southeast corner of the 'overstock storage yard') when compared to the Table 2 SCS.

The scope of work in November 2016 included remediation of contaminated soil at TE-02, resampling of groundwater at MW16-5 and verification of soil quality through test pitting at two areas that required supplemental assessment after the previous investigations (WSP 2016). This supplemental work is presented as an update to Phase Two ESA documentation and confirmation of remedial actions.

2 SCOPE OF WORK

2.1.1 PHASE TWO ESA UPDATE

The soil and groundwater quality at the Site was investigated at the locations shown on Figure 2 through the advancement of test pits and the sampling of an existing monitoring well (MW16-5) to characterize current environmental conditions. Investigation methods followed Standard Operating Procedures prepared by WSP for the conduct of environmental investigations. The investigation methods are described in the following sections.

2.1.1.1 SOIL

WSP retained A. Lacroix Equipment Rentals Ltd. (Lacroix) to conduct test pitting activities at the Site under the supervision of WSP field staff on November 2, 2016.

Four test pits (TP16-1 to TP16-4) were advanced on each side of the planned remedial excavation to assess soil conditions beyond the anticipated limits of the contamination at TE-02. Samples were recovered at different depths and maintained at the WSP office pending the receipt of confirmatory sample results from the remedial action. In addition, two other test pits were excavated to assess gaps that resulted from the previous Phase Two ESA, as follows:

- One test pit (TP16-5) in the vicinity of MW/BH16-8 to reassess the exceedance of electrical conductivity from 0.20 to 1.52 mbgs; and,
- One test pit (TP16-6) in the northwest corner of the property located at 3646 Innes Road (located on the northeast corner of the Site) where a fuel tank that reportedly contained heating oil was historically located.

Soil samples were recovered from each of the test pits, visually inspected and logged. The test pit logs are presented in Appendix B and locations of the test pits are presented in Figure 2.

Soil samples were collected with dedicated nitrile gloves to prevent cross contamination between sampling locations and were split into two portions: one placed into labeled polyethylene bags for field screening and another jarred into the appropriate laboratory-supplied sample containers and stored in a cooler with ice for possible chemical analysis. For samples considered for PHC fraction F1 analysis, a core of soil was placed in a pre-weighed laboratory prepared vial containing a measured amount of methanol. Soil samples considered to be representative of “worst-case” environmental conditions were selected for chemical analysis based on visual and olfactory observations and field vapour readings.

A total of two soil samples (including one field duplicate sample) were submitted to AGAT Laboratories in Ottawa, Ontario.

2.1.1.2 GROUNDWATER

On November 2, 2016, MW16-5 was purged of three well volumes and sampled for PHC F1-F4 including BTEX. The depth to groundwater and depth to the bottom of the well was measured with an oil/water interface probe.

2.1.2 REMEDIAL ACTIONS

Soil in the vicinity of TE-02 was removed with an excavator operated by Lacroix and disposed of off-Site at Green for Life's (GFL) Moosecreek facility. Based on weigh bills provided by the contractor, 78.36 metric tonnes of PHC F3-F4 impacted soil was removed during the remedial excavation. No soil was imported to the Site to backfill the excavation. The Pre-remediation and Post-remediation conditions are presented in Figure 6 and Figure 7.

2.2 FREE FLOWING PRODUCT

Free flowing product was not encountered during this remedial excavation and previous subsurface investigations completed at the Site.

3 DISCUSSION OF RESULTS

3.1 GENERAL

For completeness, results from previous investigations are included in Tables and Figures provided with this report. Tables 1 and 3 provide data from the 2013 investigation for parameters that include MI parameters, PAHs, PHCs and BTEX. Data for these parameters from the 2016 borehole and test pit programs are provided in Tables 2 and 4. Table 5 provides data for confirmatory sampling. Groundwater data are provided in Tables 6 and 7.

3.2 SOIL QUALITY RESULTS

3.2.1 TEST PITTING PROGRAM

A sample was submitted from TP16-5 from 1.00 to 1.14 m bgs as a duplicate sample to BH16-8-1 from June 2016 to assess the value of electrical conductivity in this area. The result from November was 0.906 mS/cm and when averaged with the June result (Table 2), the value of electrical conductivity in this area does not exceed Table 2 SCS (industrial commercial and community (ICC) property use).

The soil sample submitted from TP16-6 from 0.66 to 0.68 m bgs in the area of a former fuel tank indicated no evidence of impacts from this past use. The concentration of PHC F3 (Table 4) measured at 145 ug/g (average) did not exceed the MOECC Table 2 SCS for RPI and ICC property use.

3.2.2 CONFIRMATION SAMPLING AND ANALYSIS

Confirmatory soil samples were collected from the floor and walls of the excavation in accordance with MOECC requirements as documented in O. Reg. 153/04. Through the removal of the impacted soil, verification sampling (Table 5) confirmed that the PHC F1 to F4 including BTEX concentrations in the remaining soil at the completed limits of the excavation meet the Table 2 SCS for ICC property use.

3.3 GROUNDWATER QUALITY RESULTS

A comparison of the laboratory analytical results for the groundwater sampled from MW16-5 to the Table 2 SCS (All Property Uses) identified elevated concentrations of ethylbenzene and PHC F1 to F3 (Table 7).

3.4 QUALITY ASSURANCE AND QUALITY CONTROL RESULTS

AGAT completed a variety of QA/QC measures on the soil and groundwater samples submitted as part of the sampling program. These QA/QC measures include: sample replicates, matrix spiked laboratory blanks, and process blanks.

Soil samples were randomly selected by the WSP field staff for field duplicate testing. Duplicate samples were selected for every 10 samples submitted for analysis. WSP submitted the following field duplicate soil samples:

- TP16-6 SA101 was a blind field duplicate of TP16-6 SA1 (0.66 to 0.68 m) and analyzed for PHC F1 to F4 including BTEX; and,
- FL-101 was a blind field duplicate of FL-01 (0.91 m) and analyzed for PHC F1 to F4 including BTEX.

The results from the duplicate samples were used to assess the accuracy and reliability of the laboratory procedures and instruments.

A calculation of the relative percent difference (RPD) between the sample and its duplicate was performed and compared to the acceptance limits outlined in the Protocol for Analytical Methods Used in the Assessment of Properties under Part XV.1 of the Environmental Protection Act, April 2011 (Table 8 for Soil and Table 9 for Groundwater). The RPD calculation is only applicable when both the sample and the field duplicate concentrations are greater than five times the reported detection limit. Where the concentrations were sufficient to allow the calculation of the RPD, previous investigations indicated heterogeneity in soils assessed for metals and inorganics. For this investigation, acceptable concentrations were only achieved at one location, for a single parameter (PHC F3) and the correlation was acceptable.

3.5 CONCLUSIONS

Based on the Phase Two ESA Update and remediation conducted at the Site on November 2, 2016, impacted soils located in the vicinity of TE-02 were removed and soil remaining in this area at the Site meets the applicable SCS for ICC Property Use.

Impacts from the use of road salt in the commercial portion of the site are within standards established for ICC Property Use.

The groundwater in the vicinity of MW16-5 had an exceedance of ethylbenzene and PHC F1 to F4. Additional investigation with the installation of monitoring wells is recommended to delineate the impacts and assess the extent of groundwater contamination.

The elevated metal concentrations in soil in the former Phase Two ESAs can be managed through a risk assessment process to identify risk management measures that will allow this soil to remain onsite. This management of the contaminants, even though they may be naturally occurring will be required prior to filing a Record of Site Condition.

4

QUALIFICATIONS OF THE ASSESSORS

The Phase Two ESA was completed by **Ms. Kathryn Maton, C.E.T.**, Environmental Technologist. Kathryn has over 6 years of experience in environmental site assessments. She has conducted Phase One and Two Environmental Site Assessments for industrial, commercial and residential properties. In completing this work she has contributed to identifying, defining and quantifying potential environmental liabilities to satisfy due diligence and regulatory obligations.

The Phase Two ESA was managed and reviewed by **Ms. Carolyn Adams, M.A.Sc., P.Eng.**, Senior Project Manager at WSP. Carolyn is a Chemical Engineer with a Master of Applied Science degree in Environmental Engineering. She has 26 years of experience in completing environmental investigations and has the knowledge and experience to identify potential sources of contamination and the fate and behaviour of contaminants in the environment. Carolyn is a Qualified Person (QP_{ESA}) under the Ministry of the Environment O. Reg. 153/04.

4.1 SIGNATURES

WSP carried out this Phase Two ESA and confirms the findings and conclusions presented in this report.

BOREHOLE/TEST PIT LOGS

RAPPORT DE FORAGE : F-01

Page 1 de 1

Préparé par : Catherine Tardy Laporte
Vérifié par : Annie Gauthier

Date début : 2013-06-27
Date fin : 2013-06-27

Nom du projet : Évaluation Environnementale de site (ÉES) Phase II
Site : Site # 38 Orléans
Secteur : 3636-3646, chemin Innes, Orléans (Ontario)
Client : La Coop fédérée

Numéro de projet : 131-13558-00
Coordonnées géographiques : X = 75.5191369842 °O
Y = 45.4458564224 °N
Élévation surface : 90.69 m ()
Élévation margelle :

Entrepreneur forage : Marathon Drilling Co. Ltd.
Type de foreuse : CME 75
Équipement de forage : Tarière tige pleine /
Diamètre du forage : 200 mm
Fluide forage : Aucun
Équip. d'échantillonnage : Carottier fendu

ODEUR
F - Faible odeur
M - Odeur moyenne
P - Odeur persistante

VISUEL
D - Produit disséminé
S - Sol saturé de produit

TYPE D'ÉCHANTILLON
CD - Carrottier à diamants
CF - Cuillère fendue
PS - Échantilleur à piston

TC - Tube creux
TM - Tarière manuelle
TR - Truelle
TS - Tube Shelby
TT - Tube transparent

ANALYSES CHIMIQUES
BPC Biphenyles polychlorés
BTEX Benzène, toluène, éthybenzène, xylyne
COT Carbone organique total
C. inorg. Autres composés inorganiques (cyanure, fluorure, bromure, soufre total)
C. Phénol. Composés phénoliques
COV Hydrocarbures HAM et HAC
Diox. & Fur. Dioxines et furanes

HAC Hydrocarb. aliphatiques chlorés
HAM Hydrocarbures aromatiques monocycliques
HAP Hydrocarbures aromatiques polycycliques

Page 1 de 1

Préparé par : Catherine Tardy Laporte
Vérifié par : Annie Gauthier

Date début : 2013-06-27
Date fin : 2013-06-27

Nom du projet : Évaluation Environnementale de site (ÉES) Phase II
Site : Site # 38 Orléans
Secteur : 3636-3646, chemin Innes, Orléans (Ontario)
Client : La Coop fédérée

Numéro de projet : 131-13558-00
Coordonnées géographiques : X = 75.5198284892 °O
Y = 45.4453512328 °N
Élévation surface : 89.21 m ()
Élévation margelle :

Entrepreneur forage : Marathon Drilling Co. Ltd.
Type de foreuse : CME 75
Équipement de forage : Tarière tige pleine /
Diamètre du forage : 200 mm
Fluide forage : Aucun
Équip. d'échantillonnage : Carottier fendu

ODEUR
F - Faible odeur
M - Odeur moyenne
P - Odeur persistante
VISUEL
D - Produit disséminé
S - Sol saturé de produit

TYPE D'ÉCHANTILLON
CD - Carottier à diamants
CF - Cuillère fendue
PS - Échantillonneur à piston
TC - Tube creux
TM - Tarière manuelle
TR - Truelle
TS - Tube Shelby
TT - Tube transparent

ANALYSES CHIMIQUES
BPC Biphenyles polychlorés
BTEX Benzène, toluène, éthylbenzène, xylyne
COT C. inorg. Carbone organique total
COV Autres composés inorganiques (cyanure, fluorure, bromure, soufre total)
C. Phénol. Composés phénoliques
Diox. & Fur. Hydrocarbures HAM et HAC
Dioxines et furanes

HAC Hydrocarb. aliphatiques chlorés
HAM Hydrocarbures aromatiques monocycliques
HAP Hydrocarbures aromatiques polycycliques

Dear David Feghali:

Please find attached the analytical results for your samples. If you have any questions regarding this report, please do not hesitate to call (613-727-5692).

Report Comments:

APPROVAL: _____

Lorna Wilson
Laboratory Supervisor, Inorganics

APPROVAL: _____

Charlie (Long) Qu
Laboratory Supervisor, Organics

Exova (Ottawa) is certified and accredited for specific parameters by:

CALA, Canadian Association for Laboratory Accreditation (to ISO 17025), OMAFRA, Ontario Ministry of Agriculture, Food and Rural Affairs (for farm soils), Licensed by Ontario MOE for specific tests in drinking water.

Exova (Mississauga) is certified and accredited for specific parameters by:
SCC, Standards Council of Canada (to ISO 17025)

Please note: Field data, where presented on the report, has been provided by the client and is presented for informational purposes only.

Dear David Feghali:

Please find attached the analytical results for your samples. If you have any questions regarding this report, please do not hesitate to call (613-727-5692).

Report Comments:

APPROVAL: _____

Lorna Wilson
Laboratory Supervisor, Inorganics

APPROVAL: _____

Charlie (Long) Qu
Laboratory Supervisor, Organics

Exova (Ottawa) is certified and accredited for specific parameters by:
CALA, Canadian Association for Laboratory Accreditation (to ISO 17025), OMAFRA, Ontario Ministry of Agriculture, Food and Rural Affairs (for farm soils), Licensed by Ontario MOE for specific tests in drinking water.

Exova (Mississauga) is accredited for specific parameters by:
SCC, Standards Council of Canada (to ISO 17025)

Please note: Field data, where presented on the report, has been provided by the client and is presented for informational purposes only.

Dear David Feghali:

Please find attached the analytical results for your samples. If you have any questions regarding this report, please do not hesitate to call (613-727-5692).

Report Comments:

APPROVAL: _____

Lorna Wilson
Laboratory Supervisor, Inorganics

APPROVAL: _____

Charlie (Long) Qu
Laboratory Supervisor, Organics

Exova (Ottawa) is certified and accredited for specific parameters by:

CALA, Canadian Association for Laboratory Accreditation (to ISO 17025), OMAFRA, Ontario Ministry of Agriculture, Food and Rural Affairs (for farm soils), Licensed by Ontario MOE for specific tests in drinking water.

Exova (Mississauga) is accredited for specific parameters by:
SCC, Standards Council of Canada (to ISO 17025)

Please note: Field data, where presented on the report, has been provided by the client and is presented for informational purposes only.

Dear Catherine Tardy Laporte:

Please find attached the analytical results for your samples. If you have any questions regarding this report, please do not hesitate to call (613-727-5692).

Report Comments:

APPROVAL: _____

Lorna Wilson
Laboratory Supervisor, Inorganics

APPROVAL: _____

Charlie (Long) Qu
Laboratory Supervisor, Organics

Exova (Ottawa) is certified and accredited for specific parameters by:

CALA, Canadian Association for Laboratory Accreditation (to ISO 17025), OMAFRA, Ontario Ministry of Agriculture, Food and Rural Affairs (for farm soils), Licensed by Ontario MOE for specific tests in drinking water.

Exova (Mississauga) is certified and accredited for specific parameters by:

SCC, Standards Council of Canada (to ISO 17025)

Please note: Field data, where presented on the report, has been provided by the client and is presented for informational purposes only.

SOIL ANALYSIS REVIEWED BY: Amanjot Bhela, Inorganic Coordinator

TRACE ORGANICS REVIEWED BY: Neli Popnikolova, Senior Chemist

DATE REPORTED: Jun 15, 2016

PAGES (INCLUDING COVER): 21

VERSION*: 2

Should you require any information regarding this analysis please contact your client services representative at (905) 712-5100

***NOTES**

VERSION 2: Revised report sent on June 15, 2016. Data for Inorganics has been added this report.

All samples will be disposed of within 30 days following analysis. Please contact the lab if you require additional sample storage time.

Comments: RDL - Reported Detection Limit; G / S - Guideline / Standard

7608081-7608133 Results are based on the dry weight of the soil.

Note: The result for Benzo(b)Fluoranthene is the total of the Benzo(b)&(j)Fluoranthene isomers because the isomers co-elute on the GC column.

Comments: RDL - Reported Detection Limit; G / S - Guideline / Standard

7608096 Results are based on sample dry weight.

The C6-C10 fraction is calculated using Toluene response factor.

The C10 - C16, C16 - C34, and C34 - C50 fractions are calculated using the average response factor for n-C10, n-C16, and n-C34.

Gravimetric Heavy Hydrocarbons are not included in the Total C16-C50 and are only determined if the chromatogram of the C34 - C50 hydrocarbons indicates that hydrocarbons >C50 are present.

The chromatogram has returned to baseline by the retention time of nC50.

Total C6 - C50 results are corrected for BTEX contributions.

This method complies with the Reference Method for the CWS PHC and is validated for use in the laboratory.

nC6 and nC10 response factors are within 30% of Toluene response factor.

nC10, nC16 and nC34 response factors are within 10% of their average.

C50 response factor is within 70% of nC10 + nC16 + nC34 average.

Linearity is within 15%.

Extraction and holding times were met for this sample.

Fractions 1-4 are quantified with the contribution of PAHs. Under Ontario Regulation 153, results are considered valid without determining the PAH contribution if not requested by the client.

Quality Control Data is available upon request.

O. Reg. 153(511) - PHCs F1 - F4 (Water) - BTEX/F1

DATE RECEIVED: 2016-06-07

DATE REPORTED: 2016-06-13

SAMPLE DESCRIPTION: Trip Blank			
SAMPLE TYPE: Water			
DATE SAMPLED: 5/25/2016			
Parameter	Unit	G / S	RDL
Benzene	µg/L	0.20	<0.20
Toluene	µg/L	0.20	<0.20
Ethylbenzene	µg/L	0.10	<0.10
Xylene Mixture	µg/L	0.20	<0.20
F1 (C6 to C10)	µg/L	25	<25
F1 (C6 to C10) minus BTEX	µg/L	25	<25

Comments: RDL - Reported Detection Limit; G / S - Guideline / Standard

7615703 The C6-C10 fraction is calculated using Toluene response factor.

Total C6-C10 results are corrected for BTEX contributions.

This method complies with the Reference Method for the CWS PHC and is validated for use in the laboratory.

nC6 and nC10 response factors are within 30% of Toluene response factor.

Extraction and holding times were met for this sample.

Fractions 1-4 are quantified with the contribution of PAHs. Under Ontario Regulation 153/04, results are considered valid without determining the PAH contribution if not requested by the client.

NA = Not Applicable

Terphenyl	%	60-140	80	89	89	89	68

Comments: RDL - Reported Detection Limit; G / S - Guideline / Standard

7615636-7615693 The C6-C10 fraction is calculated using Toluene response factor.

The C10 - C16, C16 - C34, and C34 - C50 fractions are calculated using the average response factor for n-C10, n-C16, and nC34.

Gravimetric Heavy Hydrocarbons are not included in the Total C16 - C50 and are only determined if the chromatogram of the C34 - C50 Hydrocarbons indicated that hydrocarbons >C50 are present.

The chromatogram has returned to baseline by the retention time of nC50.

Total C6-C50 results are corrected for BTEX and PAH contributions.

This method complies with the Reference Method for the CWS PHC and is validated for use in the laboratory.

nC6 and nC10 response factors are within 30% of Toluene response factor.

nC10, nC16 and nC34 response factors are within 10% of their average.

C50 response factor is within 70% of nC10 + nC16 nC34 average.

Linearity is within 15%.

Extraction and holding times were met for this sample.

Pueffs.

Comments: NA signifies Not Applicable.

Duplicate Qualifier: As the measured result approaches the RL, the uncertainty associated with the value increases dramatically, thus duplicate acceptance limits apply only where the average of the two duplicates is greater than five times the RL.

Comments: RDL - Reported Detection Limit; G / S - Guideline / Standard: Refers to Table 2: Full Depth Generic Site Condition Standards in a Potable Ground Water Condition - Soil - Industrial/Commercial/Community Property Use - Coarse Textured Soils

7980909-7980942 Results are based on sample dry weight.

The C6-C10 fraction is calculated using Toluene response factor.

The C10 - C16, C16 - C34, and C34 - C50 fractions are calculated using the average response factor for n-C10, n-C16, and n-C34.

Gravimetric Heavy Hydrocarbons are not included in the Total C16-C50 and are only determined if the chromatogram of the C34 - C50 hydrocarbons indicates that hydrocarbons >C50 are present.

The chromatogram has returned to baseline by the retention time of nC50.

Total C6 - C50 results are corrected for BTEX contributions.

This method complies with the Reference Method for the CWS PHC and is validated for use in the laboratory.

nC6 and nC10 response factors are within 30% of Toluene response factor.

nC10, nC16 and nC34 response factors are within 10% of their average.

C50 response factor is within 70% of nC10 + nC16 + nC34 average.

Linearity is within 15%.

Extraction and holding times were met for this sample.

Fractions 1-4 are quantified with the contribution of PAHs. Under Ontario Regulation 153, results are considered valid without determining the PAH contribution if not requested by the client.

Quality Control Data is available upon request.

7980748-7980755 Results are based on sample dry weight.

The C6-C10 fraction is calculated using Toluene response factor.

The C10 - C16, C16 - C34, and C34 - C50 fractions are calculated using the average response factor for n-C10, n-C16, and n-C34.

Gravimetric Heavy Hydrocarbons are not included in the Total C16-C50 and are only determined if the chromatogram of the C34 - C50 hydrocarbons indicates that hydrocarbons >C50 are present.

The chromatogram has returned to baseline by the retention time of nC50.

Total C6 - C50 results are corrected for BTEX contributions.

This method complies with the Reference Method for the CWS PHC and is validated for use in the laboratory.

nC6 and nC10 response factors are within 30% of Toluene response factor.

nC10, nC16 and nC34 response factors are within 10% of their average.

C50 response factor is within 70% of nC10 + nC16 + nC34 average.

Linearity is within 15%.

Extraction and holding times were met for this sample.

Fractions 1-4 are quantified with the contribution of PAHs. Under Ontario Regulation 153, results are considered valid without determining the PAH contribution if not requested by the client.

Quality Control Data is available upon request.

STANDARD LIMITATIONS

PHASE II ENVIRONMENTAL SITE ASSESSMENT (PHASE II ESA)

These Standard Limitations form part of the Report to which they are appended and any use of the Report is subject to them.

1. EXCLUSIVE USE BY CLIENT

This Report was prepared for the exclusive use of the client identified as the intended recipient. Any use of the report by any other party without the written consent of MMM Group Limited is the sole responsibility of such party. MMM Group Limited accepts no responsibility for damages that may be suffered by any third party as a result of decisions made or actions taken based on this Report.

2. SCOPE, TERMS AND CONDITIONS OF CONTRACT

The observations and investigations (hereinafter referred to as the "Work") upon which this Report is based were carried out in accordance with the scope, terms and conditions of the contract or the proposal pursuant to which the Work was commissioned. The conclusions presented in the Report are based solely upon the scope of services described in the contract or the proposal and governed by the time and budgetary constraints imposed by them.

3. STANDARD OF CARE

The Phase II ESA was carried out in accordance with generally accepted environmental study and/or professional practices, industry standards and applicable environmental regulations. No other warranties are either expressed or implied with respect to the professional services provided under the terms of the contract or proposal and represented in this Report.

4. SCOPE OF THE PHASE II ESA

A Phase II ESA is conducted to obtain information about environmental conditions in the land or water on, in or under the subject property. This Report has been prepared based on information obtained at discrete borehole, test pit, monitoring well, or other (e.g., surface water) sampling locations. The conditions reported herein were those encountered at the subject property at the time the Work was performed and as present

at the discrete sampling locations. Conditions between sampling locations may be different than those encountered at the sampling locations and MMM Group Limited is not responsible for such differences.

5. REASONABLE CONCLUSIONS

The conclusions of the Phase II ESA regarding the environmental conditions at the subject property are based on the investigations conducted during the Work and information from other sources as may be indicated in the Report. The accuracy of information from other sources was not verified unless specifically noted in the Report, nor was it determined if the reviewed information constituted all information that exists and pertains to the subject property.

The conclusions made are based on reasonable and professional interpretation of the information considered. If additional information concerning environmental conditions of relevance to this Report is obtained during future work at the subject property, MMM Group Limited should be notified in order that we may determine if modifications to the conclusions presented in this Report are necessary.

6. REPORT AS A COMPLETE DOCUMENT

This Report must be read as a whole and sections taken out of context may be misleading. If discrepancies exist between the preliminary (draft) and final versions of the Report, the final version of the Report shall take precedence.

7. LIMITATION OF LIABILITY

MMM Group Limited's liability with respect to the Phase II ESA is limited to re-performing, without cost, any part of the Work that is unacceptable solely as a result of failure to comply with industry standards. MMM Group Limited's maximum liability is limited in accordance with terms in the original contract, provided that notice of claim is made within regulated timelines as of the date of delivery of the Report.
