RE: TREE CONSERVATION REPORT – 21 WITHROW AVENUE, OTTAWA (ADDENDUM)

Dear Joey,

This brief report serves as an addendum to the Tree Conservation Report (TCR) prepared by *IFS Associates Inc.* for the above-noted property on May 13, 2019. The need for this addendum is related specifically to tree #34 – a grouping of Norway spruce located adjacent to Withrow Avenue (see relevant section of Table 1 below taken from the original TCR). Although originally slated for preservation and protection, the requirement by Hydro Ottawa to bury their lines along Withrow Avenue and the installation of a pedestal transformer within this grouping of trees requires they be removed instead. They will not survive the excavation necessary for this work.

Table 1. Species, condition, diameter and status of trees at 21 Withrow Avenue.

Tree No.	Tree Species	Condition (VP→E)	DBH ¹ (cm)	Tree Condition Notes & Preservation Status (to be removed or preserved and protected)
34	Portion of spruce line: 13 Norway spruce and 21 white spruce	Fair-Good	Norway 28-47; white 6-21	Mature; line of white spruce generally suppressed by faster growing Norway spruce located to south; planted; to be removed due to conflicts with underground Hydro lines and pedestal transformer

¹Diameter at breast height, or 1.4m from grade (unless otherwise noted).

Please do not hesitate to contact me with any questions concerning this addendum.

Yours,

Andrew Boyd
