Executive Summary

The Executive Summary highlights key points from the report only; for complete information and findings, as well as the limitations, the reader should examine the complete report.

Golder Associates Ltd. (Golder) was retained by Canada Lands Company ("CLC") to complete a Phase One Environmental Site Assessment ("Phase One ESA") of the properties located at 405 Rochester Street and 550, 552, 556, 558, 562 and 568 Booth Street in Ottawa, Ontario (herein after referred to as the "Site" or "Phase One Property") as shown on Figures 1, 2A, 2B and 2C. For reporting purposes, Site north has been defined such that Booth Street has a north-south axis. At the time of the Site visits, conducted on June 13 and 20, 2018, the Site consisted of an approximately 6.0 acre parcel of land. The Site was developed with seven former industrial buildings (the main Site buildings), a hazardous substances chemical storage shed and a butler hut building which provided access to an underground service tunnel. The Site buildings were part of the National Resources Canada complex, still operational to the south and east of the Phase One Property. The Site buildings include the former industrial mines and ceramics laboratory building, ore dressing laboratory buildings, fuel research laboratory buildings, metallurgy laboratory buildings and a mechanical shop and storage building. The other main Site building was the central heating plant that was formerly owned and operated by Public Works and Government Services Canada. All buildings on the Site were unoccupied and mostly empty aside from some out-of-service mechanical, electrical, laboratory and industrial equipment. No operations were being conducted at the Site at the time of the Site visit.

It is understood that the Phase One Property is to be redeveloped with residential and commercial properties. The Site is owned by CLC.

The Phase One ESA was completed in accordance with Ontario Regulation (O. Reg. 153/04), as amended, and included a review of available current and historical information regarding the Site and surrounding properties, a Site reconnaissance, interviews, evaluation of readily available information, and reporting, subject to the limitations outlined in Section 9.0 of this report. Given that the latest land use of the Phase One Property was industrial and that the Phase One Property is to be redeveloped with residential and commercial buildings, there will be a change in the land use from less sensitive to more sensitive. As such, there is a mandatory requirement for a RSC to be filed for the Site.

Based on the information collected as part of this Phase One ESA, the following APECs were identified on the Site:

Area of Potential Environmental Concern	APEC Location	Potentially Contaminating Activity	Location of PCA (on-Site or off-Site)	Chemical of Concern	Media Potentially Impacted
APEC 1 - Potential for subsurface impacts due to the former presence of a machine shop, lumberyard carriage shop and railway located on the northern portion of the Site and a former lumberyard immediately north of the Site.	Northeast corner of the Site.	Former presence of a machine shop, lumberyard carriage shop and railway located on the Site and former lumberyard located immediately north of the Site (PCAs 34, 46, 57 and 59).	On-Site and off-Site	PHC F1 to F4, BTEX, VOCs, PAHs, metals and phenols	Soil and Groundwater
APEC 2 - Potential for subsurface impacts due to the former presence of a coal storage shed located on the eastern portion of the Site, east of the 556 Booth Street building.	Central portion of Site along eastern Site boundary.	Former presence of a coal storage shed on the Site (unlisted PCA).	On-Site	PHC F1 to F4, BTEX and PAHs	Soil
APEC 3 - Documented soil (fill) impacts outside the building footprints on the central and southern portions of the Site.	Central and southern portions of the Site.	Presence of impacted fill material on the Site (PCA 30).	On-Site	PHC F1 to F4, BTEX, VOC, PAHs, and metals	Soil and Groundwater
APEC 4 - Potential for limited areas of soil (fill) impacts due to the presence of residual impacted fill material beneath and adjacent to structures/utilities on the northern portion of the Site.	Northern portion of the Site.	Presence of residual impacted fill material on the Site (PCA 30).	On-Site	PHC F1 to F4, BTEX, PAHs, and metals	Soil
APEC 5 - Documented metals and VOC impacts in groundwater across the Site.	Site-wide.	On-Site activities and PCAs all have the potential to contribute to this APEC (unlisted PCA).	On-Site	Metals and VOCs	Groundwater

Area of Potential Environmental Concern	APEC Location	Potentially Contaminating Activity	Location of PCA (on-Site or off-Site)	Chemical of Concern	Media Potentially Impacted
APEC 6 - Potential for subsurface impacts due to the former presence of a an AST of unknown content south of the 550 Booth Street building and an oil spill in the southeast corner of the 550 Booth Street basement.	Northern portion of Site at the southeast corner of the 550 Booth Street building.	Potential presence of a former AST of unknown content and historic oil spill on the Site (PCA 28).	On-Site	PHCs F1 to F4, BTEX and VOCs.	Soil and Groundwater
APEC 7 - Potential for subsurface impacts due to the former bulk storage of chemicals, former metal fabrication and current transformers in the building at 568 Booth Street.	Southern portion of Site around the building at 568 Booth Street.	Former bulk storage of chemicals, former metal fabrication and current transformers on the Site (PCAs 8, 34 and 55).	On-Site	PHC F1 to F4, BTEX, VOCs, PCBs and metals	Soil and Groundwater
APEC 8 - Potential for subsurface impacts due to the former bulk storage of chemicals and current transformers in the building at 562 Booth Street.	Central and eastern portion of the Site around the building at 562 Booth Street.	Former bulk storage of chemicals and current transformers on the Site (PCAs 8 and 55).	On-Site	PHC F1 to F4, BTEX, VOCs, PCBs and metals	Soil and Groundwater
APEC 9 - Potential for subsurface impacts due to the former bulk storage of chemicals, equipment maintenance and current transformers in the building at 556 Booth Street.	Central and western portion of the Site around the building at 556 Booth Street.	Former bulk storage of chemicals, equipment maintenance and current transformers on the Site (PCAs 8 and 55).	On-Site	PHC F1 to F4, BTEX, VOCs, PCBs and metals	Soil and Groundwater

Area of Potential Environmental Concern	APEC Location	Potentially Contaminating Activity	Location of PCA (on-Site or off-Site)	Chemical of Concern	Media Potentially Impacted
APEC 10 - Potential for subsurface impacts due to the current and/or former presence of fuel USTs in the butler hut building and PHC impacted groundwater identified north of the butler hut building.	Central and western portion of the Site around the butler hut building.	Current and/or former fuel USTs and documented groundwater impacts on the Site (PCA 28).	On-Site	PHC F1 to F4 and BTEX	Soil and Groundwater
APEC 11 - Potential for subsurface impacts due to the former bulk storage of chemicals in the hazardous substances storage shed and an oil spill on the north side of the 556 Booth Street sub-basement floor.	Western portion of the Site around the hazardous substances storage shed and northern portion of the building at 556 Booth Street.	Former bulk storage of chemicals and historical oil spill on the Site (PCAs 8 and 55).	On-Site	PHC F1 to F4, BTEX, VOCs and metals	Soil and Groundwater
APEC 12 - Potential for subsurface impacts due to former ore dressing, coal gasification, fuels research and current transformers in the building at 552 Booth Street.	Northern portion of the Site around the building at 552 Booth Street.	Former ore dressing, fuels research, coal gasification and current transformers on the Site (PCAs 9, 35, 55 and unlisted PCA).	On-Site	PHC F1 to F4, BTEX, VOCs, PAHs, PCBs, phenols, metals and inorganics	Soil and Groundwater
APEC 13 - Potential for subsurface impacts due to former ore dressing and current transformers in the building at 550 Booth Street.	Northeast portion of the Site around the building at 550 Booth Street.	Former ore dressing and current transformers on the Site (PCAs 35 and 55).	On-Site	PHC F1 to F4, BTEX, VOCs, PCBs, metals and inorganics	Soil and Groundwater

Area of Potential Environmental Concern	APEC Location	Potentially Contaminating Activity	Location of PCA (on-Site or off-Site)	Chemical of Concern	Media Potentially Impacted
APEC 14 - Potential for subsurface impacts due to presence of a generator and former day tank located on the northeast corner of the building at 558 Booth Street.	Western portion of the Site at the northeast portion of the building at 558 Booth Street	Current generator and former fuel AST on the Site (PCA 28).	On-Site	PHC F1 to F4 and BTEX	Soil and Groundwater
APEC 15 - Potential for subsurface impacts due to presence of a hydraulic hoist, and historic fuel spills in the sub-basement of the northern portion of the 568 Booth Street building and former oil storage shed and current generator with fuel AST located on the south side of the northern portion of the 568 Booth Street building.	Southern portion of the Site at the northwest corner of the 568 Booth Street building.	Current presence of a hydraulic hoist, generator and fuel AST on the Site and former oil storage shed and historic oil spills on the Site (PCAs 8 and 28).	On-Site	PHC F1 to F4 and BTEX	Soil and Groundwater
APEC 16 - Potential for subsurface impacts due to current presence of transformers in the southeast corner of the sub-basement floor at 450 Rochester Street.	Northern portion of the Site at southeast corner of the building at 450 Rochester Street.	Current presence of transformers on the Site (PCA 55).	On-Site	PHC F1 to F4, BTEX and PCBs	Soil and Groundwater

Area of Potential Environmental Concern	APEC Location	Potentially Contaminating Activity	Location of PCA (on-Site or off-Site)	Chemical of Concern	Media Potentially Impacted
APEC 17 - Potential for subsurface impacts along the east side of the Site due to former off-Site lumber yard and associated rail lines approximately 15 m east of the Site and documented soil and groundwater impacts on the adjacent property east of the Site at 615 Booth Street.	Easternmost portion of the Site.	Former lumberyard and rail lines and impacts soil and ground on the adjacent property east of the Site (PCAs 46, 59 and unlisted PCA).	Off-Site	PHC F1 to F4, BTEX, PAHs, VOCs, phenols and metals	Soil and Groundwater

Based on the findings of the Phase One ESA, further investigation in the form of a Phase Two ESA is required at the Site in order to assess the potential for soil and groundwater quality impacts and/or delineate the previously identified soil and groundwater impacts in the 17 APECs that were identified on the Site.

At the time of preparation of this report, a response to Golder's request for information had not been received from the Ontario Ministry of Environment and Climate Change or the Ministry of Natural Resources and Forestry. However, based on the body of information acquired, it is considered that the absence of this information should not likely affect the final conclusion of the Phase One ESA. Golder will review the responses to these regulatory requests upon their receipt and should the responses affect the findings of this Phase One ESA, they will be forwarded to the Client. There were no material deviations to the Phase One ESA requirements set out in O.Reg. 153/04 that would cause uncertainty or absence of information that would affect the validity of the Phase One Conceptual Site Model or the findings of this Phase One ESA

1.0 INTRODUCTION

1.1 Phase One Property Information

Golder Associates Ltd. ("Golder") was retained by Canada Lands Company ("CLC") to conduct a Phase One Environmental Site Assessment ("Phase One ESA") of the following properties:

Municipal Address	The Site is located at the 405 Rochester Street and 550, 552, 556, 558, 562 and 568 Booth Street.
Property Identification Number	041040151
Legal Description	Plan 13 Block 135; Plan 22, Lots 2 to 4 W Booth Street Lots 2 to 4 E Rochester Street Lots 1 and 2 S Lydia Street Lots 1 and 2 N Lydia Street RP 4R10779 Parts 1, City of Ottawa

The Site location is provided on Figure 1. A Site plan is provided on Figure 2A. A draft plan of survey for the Site is provided in Appendix A. For reporting purposes, Site north has been defined such that Booth Street has a north-south axis.

The contact information for the Site is:

Site Owner / Client	Address	Contact Information
Canada Lands Company	100 Queen Street, Suite 1050 Ottawa, Ontario K1P 1J9	Amanda Valiquette Office: 613-564-3029 Email: avaliquette@clc.ca

2.0 SCOPE OF INVESTIGATION

A Phase One ESA is a preliminary qualitative assessment of the environmental condition of a property, based on a review of current activities and historical information for the Site and a review of relevant and readily available environmental information for the surrounding properties located within a 250 metre ("m") radius of the boundary of the Site (collectively referred to as the "Phase One Study Area"). The boundary of the Phase One Study Area is presented in Figure 2A.

The objectives of the Phase One ESA are to:

- 1) Develop a preliminary determination of the likelihood that one or more contaminants have affected any land or water on, in, or under the Site;
- 2) Determine the need for a Phase Two Environment Site Assessment ("ESA");
- 3) Provide a basis for carrying out a Phase Two ESA;
- 4) Provide adequate preliminary information about environmental conditions in the land or water on, in, or under the Site for the conduct of a risk assessment following completion of a Phase Two ESA; and,
- 5) Identify and report on evidence of actual and/or potential contamination on the Site from current and historical activities at the Site or from adjacent properties.

3.0 RECORDS REVIEW

3.1 General

3.1.1 Phase One Study Area Determination

For the purpose of this Phase One ESA, the Phase One Study Area is the area within a 250 m radius of the boundary of the Site. Based on Golder's review of the historical and current information compiled as part of this Phase One ESA for the area surrounding the Site and observations of neighbouring properties made during the Site visit, it was concluded that an assessment of information pertaining to properties within 250 m of the boundary of the Site was sufficient to achieve the objectives of the Phase One ESA.

3.1.2 First Developed Use Determination

The date of first developed use of the Phase One Property was determined based on review of the aerial photographs, fire insurance plans (FIPs), the Environmental Risk Information Services Ltd. (ERIS) report, city directories, previous reports and information provided by the Site Representative. The Phase One Property was first listed in the 1890/91 street directories as being developed with nine residential dwellings. Seven of these residential dwellings were located on the northernmost portion of the Site, north of the current building at 552 Booth Street, at 385 Rochester Street and 11, 16, 20, 22, 31 and 40 Lydia Street. The other two dwellings were located at 507 and 513 Rochester Street on the southernmost portion of the Site, south of the current building at 568 Booth Street. There were no listings for the Site in the 1885/86 directories therefore, the first development on the Phase One Property was determined to be between 1885 and 1891.

3.1.3 Fire Insurance Plans

A review of the FIPs from 1901, 1912, 1925 revised 1948 and 1956 was completed and is described below.

Phase One Property

- 1901: the central portion of the Site is vacant; however, the northern and southern portions of the Site are developed as follows:
 - A railway intersects the northernmost portion of the Site from the northwest corner of the Site to the southeast corner of 550 Booth Street.
 - Lydia Street is east-west oriented and is located on the northern portion of the Site, immediately north of the buildings at 405 Rochester Street and 550 Booth Street. North of this street is a carriage shop, residential, industrial and/or commercial buildings as well as part of the of the J.R. Booth Fraserfield lumber yard with an associated building that encroaches on the northernmost portion of the Site, east of the railway. The carriage shop is located at the northwest corner of Lydia Street and Division Street (currently Booth Street) at 336 Division Street.
 - Several unlabelled residential, industrial and/or commercial buildings are located south of Lydia Street on the current 405 Rochester Street and 550 Booth Street portions of the Site. A building associated with the adjacent J.R. Booth lumber yard is located also located along the western Site boundary in the location of the current building at 552 Booth Street.
 - The southernmost portion of the Site is occupied by five residential, industrial and/or commercial buildings fronting on Norman Street.

- 1912: similar to 1901; however; one of the structures north of Lydia Street (11 Lydia Street) is now identified as a machine shop, the structures associated with the J.R. Booth lumber yard have been removed and a coal shed and a peat experimental plant with an associated gas suction engine are located on the easternmost portion of the Site. The peat experimental plant (also referred to as a fuel testing station) is located at the former 45 Division Street on the eastern portion of the current building at 552 Booth Street. The coal shed is located at the former 49 Division Street, east of the current building at 556 Booth Street. In addition, two more residential, industrial and/or commercial buildings have been constructed on the southernmost portion of the Site.
- 1925 revised 1948: the Site is now fully developed with most of the current Site buildings and some remaining buildings as following:
 - Lydia Street and a few residential houses remain on the north side of the current buildings at 405 Rochester Street and 550 Booth Street and several residential, industrial and/or commercial buildings remain on the southernmost portion of the Site.
 - All current Site buildings are present on the Site excluding the building at 556 Booth Street. The current Site buildings are occupied by the Dominion Government Department of Mines and Resources (currently National Resources Canada (NRCan)) laboratories and testing facilities as outlined below:
 - 405 Rochester Street, 550, 562 and 568 Booth Street: laboratories.
 - 552 Booth Street: fuel testing station and ore dressing (metals processing) lab with an associated filtering plant.
 - 558 Booth Street: appears to contain three coal fired boilers with coal storage and a smoke stack on the south side of the building.
 - A house is located between the buildings at 405 Rochester Street and 550 Booth Street and is noted to be torn down.
 - A laboratory and storage building is located to the east and in the vicinity of the current 556 Booth Street building. It fronts on Division Street and has a small building at its rear that houses two boilers.
 - The railway, carriage shop and machine shop are no longer present on the northern portion of the Site.
- 1956: similar to 1925 revised 1948. Most of the buildings north of Lydia and on the southernmost portion of the Site have been removed with only one residential building remaining on each end of the Site. The residential house between 405 Rochester Street and 550 Booth Street has been removed and a Quonset has been construction in this location. In addition, the laboratory and boiler storage buildings in the vicinity of 556 booth Street are no longer present and the current Site building at this location is now present.

Surrounding Area

- 1901: the surrounding properties within the Phase One Study Area are mainly residential, commercial and industrial land uses with some institutional (schools) land uses. Noteworthy commercial properties on the surrounding properties within the Phase One Study Area are as follows:
 - A east-west oriented railway is located approximately 20 m north of the Site;
 - The J.R. Booth Fraserfield lumber yard and associated rail lines are located approximately 15 m east of the Site and occupies the majority of the lands east and southeast of the southern portion of the Site;

- The Export Lumber Co. lumber yard with an associated rail line is located approximately 15 m west of the Site and occupied most of the surrounding lands west of the Site; and,
- Part of the lumber yard is located immediately north of the Site and encroaches onto the northern portion of the Site.
- 1912: similar to 1901 with increasing residential development. Another lumber yard is located along Division Street, approximately 80 m north of the Site; however, the lumber yard immediately north of the Site is no longer present.
- 1925 revised 1948: similar to 1912 with increasing residential, commercial and industrial development. Noteworthy commercial properties on the surrounding properties within the Phase One Study Area are as follows:
 - The railway on the adjacent lands north of the Site is still present;
 - The lumber yard north of the Site along Division Street and the large lumber yard and associated rail lines to the east of the Site are no longer present;
 - The lumber yard and rail lines to the west of the Site has been mostly removed. Some lumber remains on the land west of Rochester Street and north of Aberdeen Street;
 - An old quarry is identified on the north side of Carling Avenue, east of Lebreton Street South, approximately 140 m southeast of the Site;
 - A retail fuel outlet with three associated fuel USTs is located approximately 210 m southeast of the Site at 745 Carling Avenue;
 - An automotive garage with two associated fuel USTs is located at 765 Carling Avenue, approximately 200 m south of the Site;
 - An automotive garage with an associated fuel UST is located at 773 Carling Avenue, approximately 220 m south of the Site;
 - An automotive garage with two associated fuel USTs is located approximately 230 m south of the Site at 783 Carling Avenue;
 - A machine shop is located approximately 115 m south of the Site at the former 604 Division Street;
 - A dry cleaning facility is located at 787 Carling Avenue, approximately 215 m south of the Site;
 - A dry cleaning facility is located approximately 15 m west of the Site at 506 Rochester Street;
 - An automotive garage is located at 20 Beech Street (currently 492 Rochester Street), approximately 50 m west of the Site;
 - A planing mill is located at 60 Beech Street, approximately 100 m west of the Site;
 - The Smith Transportation Ltd. garage is located approximately 15 m west of the Site at 550 Beech Street;
 - A bottle factory is located approximately 100 m west of the Site at 22 Aberdeen Street;
 - Clark Dairy Ltd. with an associated automotive repair shop and fuel UST is located at 5 Aberdeen Street, approximately 40 m west of the Site;

- A machine shop is located at 25 Aberdeen Street, approximately 100 m west of the Site;
 - A truck repair shop is located at 339 Preston Street, approximately 100 m west of the Site;
 - Two fuel USTs and an oil storage shed are located approximately 175 m west of the Site at 339 Preston Street;
 - A coal yard with a coal shed and exterior coal storage associated with Hall Fuel Ltd. is located approximately 80 m northwest of the Site; and,
 - An automotive garage with two associated fuel USTs is located at 402 Preston Street, approximately 210 m west of the Site.
- 1956: mostly unchanged since 1925 revised 1948. The following properties were noteworthy on the surrounding properties within the Phase One Study Area:
- The railway on the adjacent lands north of the Site is still present;
 - An automotive garage with two associated fuel USTs is located approximately 170 m east of the Site at 316 Bell Street;
 - A fuel UST is present at a residential property at 308 Bell Street, approximately 170 m east of the Site;
 - An automotive garage is located at 360 Bell Street, approximately 180 m east of the Site;
 - The retail fuel outlet with three associated fuel USTs is still present at 745 Carling Avenue;
 - An automotive garages and associated fuel USTs remain at 765, 773 and 783 Carling Avenue and at 20 Beech Street;
 - 604 Division Street is no longer occupied by a machine shop;
 - The dry cleaning facility is still present at 787 Carling Avenue; however, the dry cleaning facility at 506 Rochester Street is now longer present;
 - The planing mill has been removed from 60 Beech Street and this property is now occupied by a metal fabrication shop that is heated by oil and therefore likely has a fuel oil tank;
 - A commercial printing shop is now located at 401 Preston Street; approximately 160 m west of the Site;
 - The Smith Transportation Ltd. garage remains at 550 Beech Street;
 - A bottle factory is still located at 22 Aberdeen Street;
 - 5 Aberdeen Street is still occupied by an automotive garage with an associated fuel UST;
 - The machine shop is no longer present at 25 Aberdeen Street;
 - Two fuel USTs and an oil storage shed are still located at 339 Preston Street;
 - A coal yard is still located northwest of the Site;
 - 402 Preston is still occupied by an automotive garage with two associated fuel USTs; and,
 - A machine shop is located at 374 Rochester Street, approximately 65 m north of the Site.

Based on the review of the FIPs, the former presence of a carriage shop, machine shop, coal shed, railway and part of lumber yard located on the northern portion of the Phase One Property are considered to be on-Site PCAs.

The former presence of fuel USTs and oil storage area, dry cleaning facilities, automotive garages and retail fuel outlets with associated fuel USTs, lumber yard, railways, machine shops, a planing mill, a metal fabrication shop, a bottle factory, a coal yard and a commercial printing shop located within the Phase One Study Area are off-Site PCAs.

3.1.4 Chain of Title

From Golder's review of aerial photography, street directories, FIPs and information provided by the Site Representative, the Phase One Property was first developed with residential properties, followed by mixed use of commercial, industrial and residential properties followed by the latest use as an industrial land property. Chain of Title information was not ordered as it was deemed that the other information from the records review would satisfy the objectives of the records search and that the information to be provided in a Chain of Title would not contribute additional environmental information relevant to the Phase One ESA. Previous owners of the Site were identified based on the review of this information and are provided in the following table. For the purpose of documenting previous ownership and development, the Site has been divided into the following three sections: the northernmost portion of the Site which includes the land north of the current buildings at 405 and 550 Booth Street, the southernmost portion of the Site which includes the land south of the currently building at 568 Booth Street and the central portion of the site which includes the land between the northernmost and southernmost portions of the Site and just defined.

Owner(s)	Dates of Ownership	Rationale
Northernmost Portion of Site		
Individual home owners	Sometime between 1885/86 and 1890/91 to 1901	The Site was not in the 1885/86 street directories; however, a few residential dwellings were listed on this portion of the Site in the 1890/91 street directories. No historical information was available for the Site prior to 1890/91.
Individual home owners, J.R. Booth and other industrial and/or commercial facility owners	1901 to 1948	Based on 1901 FIPs and street directories, this portion of the Site was occupied by a few residential dwellings and a couple industrial buildings including a carriage shop and a J.R. Booth lumberyard and associated building in 1901 and 1912.
Individual home owners	1948 to 1958	FIPs and street directories indicate this portion of the Site is only occupied by a few residential houses from 1948 to 1954 and one residential house in 1956.

Owner(s)	Dates of Ownership	Rationale
Northernmost Portion of Site		
NRCan (formerly Dominion Government Department of Mines and Resources)	1958 to 2015	1958 and subsequent aerial photographs show this portion of the Site as undeveloped parking lot which has been associated with the industrial facilities on the central portion of the Site owned by NRCan.
Canada Lands Company	October 2015 to Present	Canada Lands Company reported that they have owned the Site since October 2015, prior to which it was owned by NRCan and partly Public Works and Government Services Canada.
Central Portion of Site		
Individual home owners	Sometime between 1885/86 and 1890/91 to 1901	The Site was not in the 1885/86 street directories; however, a few residential dwellings were listed on this portion of the Site in the 1890/91 street directories.
Individual home owners and J.R. Booth	1901 to 1909	Based on street directories and the 1901 FIPs, this portion of the Site was occupied by several residential dwellings and a building owned by J.R. Booth at this time.
Individual home owners and NRCan (formerly Dominion Government Department of Mines and Resources)	1909-1934	Based on street directories and previous reports and 1912 FIPs, the central portion of the Site was developed with residential dwellings at this time and a fuel testing station/peat experimental plant owned by Dominion Government Department of Mines and Resources (currently NRCan) was constructed in 1909. This street directories indicate that this portion of the Site was no longer owned by residential home owners since 1934.
NRCan (formerly Dominion Government Department of Mines and Resources)	1934 to 1937	Based on street directories, FIPs, aerial photographs and previous reports, Dominion Government Department of Mines and Resources has owned this portion of the Site since 1909 and has since constructed various industrial buildings on this portion of the Site.

Owner(s)	Dates of Ownership	Rationale
Northernmost Portion of Site		
NRCan (formerly Dominion Government Department of Mines and Resources) and Public Works and Government Services Canada	1937-2015	Based on previous reports and information provided by the Site, the PSGWC has owned the central heating plant building at 558 Booth Street since its construction between 1937 and 1939 and the butler hut building which was constructed between 1976 and 1991. The other industrial buildings remained owned by the former Dominion Government Department of Mines and Resources.
Canada Lands Company	October 2015 to Present	Canada Lands Company reported that they have owned the Site since October 2015.
Southernmost Portion of Site		
Individual home owners	Sometime between 1885/86 and 1890/91 to 1958	The Site was not in the 1885/86 street directories; however, two residential dwellings were listed on this portion of the Site in the 1890/91 street directories. Based on subsequent street directories, aerial photographs this portion of the Site was occupied by a few residential houses from 1890/91 to 1954 and one residential house in 1956.
NRCan (formerly Dominion Government Department of Mines and Resources)	1958 to 2015	1958 and subsequent aerial photographs show this portion of the Site as undeveloped parking lot associated with the industrial facilities on the central portion of the Site owned by NRCan.
Canada Lands Company	October 2015 to Present	Canada Lands Company reported that they have owned the Site since October 2015.

3.1.5 City Directories

Golder ordered a street directory search from ERIS. A review of historical street directories for the years 1885/86, 1890/91, 1985, 1900, 1905, 1910, 1915, 1920, 1924, 1929, 1934, 1941, 1945, 1950, 1954, 1960, 1965, 1970, 1975, 1980, 1984, 1980, 1995/96, 1999/2000, 2005/06 and 2011 was completed by ERIS for the historical addresses located on the Phase One Property and select surrounding properties (within 250 m).

Based on Golder's review of the city directory information, the following summarizes the noteworthy findings for the Phase One Property:

- 550 Booth Street was listed as a residential building with one tenant and a fuel testing station in the 1915 and 1920 street directories and as a residential building with one tenant in the street directories searched between 1924 and 1934. It was not listed in the other street directories searched. Based on the FIPs and previous environmental reports, the fuel testing station was located at the current 552 Booth Street and was identified as the peat experimental plant on the 1902 revised 1912 FIPs.
- 536 Booth Street was listed as a residential building with one tenant in the street directories searched between 1915 and 1954 and not listed in the other directories searched.
- 572 and 574 Booth Street were listed as residential buildings with one tenant in the street directories searched between 1920 and 1954 and was not listed in the other directories searched.
- 11 and 16 Lydia Street were first listed in 1890/91 as residential buildings with one tenant and were either not listed or identified as residential buildings until 1934 after which were not listed.
- 20 Lydia Street was listed as a residential building with one tenant in the street directories searched between 1890/91 to 1934 and as the Department of Energy, Mines and Resources (currently NRCan) ore dressing laboratory in the street directories search between 1945 and 1975.
- 22 Lydia Street was identified as a residential building with one tenant between 1890/91 and 1934.
- 24 Lydia Street was identified as a residential building with one tenant between 1900 and 1934.
- 31 Lydia Street was listed as a residential building with one or two tenants from 1890/91 to 1934.
- 40 Lydia Street was listed as a residential building with one or two tenants from 1890/91 to 1910 and as Department of Mines, Energy and Resources (currently NRCan) industrial minerals department, mines branch, combustion engineering, mining research and fuels and mining practice division.
- 379, 381, 383 and 385 Rochester Street were identified as residential buildings with one tenant in the street directories searched between 1915 and 1954.
- 385, 507 and 513 Rochester Street was listed as residential buildings with one tenant in the street directories searched between 1890/91 and 1954.
- 505 Rochester Street was listed as a residential building with one tenant from 1910 to 1954.
- 45, 49, 100, 362, 368 and 368 Division Street, 14, 35, 36 and 39 Lydia Street and 31, 33, 35, 37 and 39 Norman Street were not listed in any of the street directories.

The noteworthy findings for the Phase One Study Area as are follows:

- The street directories searched between 1960 and 1990 identified 555 Booth Street as the Mines Building Department of Energy, Mines and Resources, Mines Branch Mineral Sciences Division Administration Library Explosives Division and/or Canadian Centre for Mineral and Energy Technology, all of which are associated with the current NRCan.
- 5 Aberdeen Street was identified as CGL Construction Lasers in the 1990 street directories and as a residential building with one tenant in the 2005/06 street directories.
- 34 Beech Street has been listed as commercial facilities since 1950. Noteworthy commercial facilities includes automotive garage and a silk manufacturing company.
- 386 Rochester Street was listed as a lumber yard from 1941 to 1960.
- 552 Rochester Street was identified as a residential building with one to two tenants between 1900 and 1970.
- 550 Rochester Street was not listed in any of the street directories searched.

Based on the review of the street directories, the current on-Site activities are considered as PCAs (i.e. ore dressing and fuel testing) and were first identified on the Site since around 1900. The street directories indicated that some of the adjacent properties were occupied by NRCan industrial research and/or testing buildings; however, given that the operations of these off-Site facilities were not specified, they are not considered to be PCAs based on the information provided from the street directories. Off-Site PCAs were identified including the former automotive garages and silk manufacturing facility located within the Phase One Study Area.

3.1.6 Environmental Reports

The following previous environmental reports were completed for the Site and/or surrounding properties and were reviewed as part of this Phase One ESA.

- **“2009 Phase II ESA of Northern Portion of Site”**, Phase II Environmental Site Assessment, Northwest Quadrant, 550-552 Booth Street and 405 Rochester Street, Ottawa, Ontario, dated October 23, 2009, prepared by Jacques Whitford Stantec Ltd. for NRCan;
- **“2009 Phase II ESA of Central Portion of Site”**, Phase II Environmental Site Assessment, Northern Portion of Central Quadrant, 568 Booth Street, Ottawa, Ontario, dated November 30, 2009, prepared by Jacques Whitford Stantec Ltd. for NRCan;
- **“2009 Phase II ESA of Southern Portion of Site”**, Phase II Environmental Site Assessment, Southern Portion of Central Quadrant, 556-562 Booth Street and 461 Rochester Street, Ottawa, Ontario, dated November 30, 2009, prepared by Jacques Whitford Stantec Ltd. for NRCan;
- **“2009 Phase II ESA of 615 Booth Street”**, Phase II Environmental Site Assessment, Southeast Quadrant, 601-615 Booth Street, Ottawa, Ontario, dated May 29, 2009, prepared by Jacques Whitford Stantec Ltd. for NRCan;
- **“2009 EA Report”**, Environmental Assessment Screening Report, Booth Street Remediation Project: Southeast, Central and Northwest Quadrants, Ottawa, Ontario, dated September 2009, prepared by Jacques Whitford Stantec Ltd. for PWGSC;

- **“2010 Radiation Testing Report”**, Survey for Building Surface Radiation Contamination, Selected Area, 552 Booth Street, Ottawa, ON, dated January 4, 2010, prepared by DST Consulting Engineers Inc. for SNC-Lavalin O&M Inc.;
- **“2012 Remediation Program”**, Booth Street Complex Remediation Project – Northwest Quadrant Remediation, dated January 2012, prepared by Dessau Inc. (Dessau) for PWGSC;
- **“2002 Asbestos Report - 405 Rochester Street”**, Asbestos Survey Report, 405 Rochester Street, dated March 2002, prepared by CSA Consulting Group Ltd. (CSA) for PWGSC;
- **“2002 Asbestos Report – 550 Booth Street”**, Asbestos Survey Report, 550 Booth Street, dated March 2002, prepared by CSA Consulting Group Ltd. (CSA) for PWGSC;
- **“2002 Asbestos Report – 552 Booth Street”**, Asbestos Survey Report, 552 Booth Street, dated March 2002, prepared by CSA Consulting Group Ltd. (CSA) for PWGSC;
- **“2002 Asbestos Report – 556 Booth Street”**, Asbestos Survey Report, 556 Booth Street, dated March 2002, prepared by CSA Consulting Group Ltd. (CSA) for PWGSC;
- **“2002 Asbestos Report – 562 Booth Street”**, Asbestos Survey Report, 562 Booth Street, dated March 2002, prepared by CSA Consulting Group Ltd. (CSA) for PWGSC;
- **“2002 Asbestos Report – 568 Booth Street”**, Asbestos Survey Report, 568 Booth Street, dated March 2002, prepared by CSA Consulting Group Ltd. (CSA) for PWGSC;

In addition to the above noted reports, several Parks Canada documents were provided for the on-Site building at 405 Rochester, 550 Booth, 552 Booth and 568 Booth, indicating that these buildings were Recognized Federal Heritage Buildings. These documents are referred to as the “Heritage Building Documents”.

Based on the review of the 2009 Phase II ESAs of the Northern, Central and Southern Portions of the Site, the following is of note for the Site:

- In 2009, the Site was developed with several vacant NRCan and PWGSC industrial buildings including the ceramics laboratory building at 405 Rochester Street, ore dressing laboratory buildings at 550 and 552 Booth Street, the mechanical shops and storage building at 556 Booth Street, the central heating plant at 558 Booth Street (formerly 461 Rochester Street), a fuel research laboratory building at 562 Booth Street, a building containing fuel oil tanks (i.e., the current ‘butler hut’ building) on the east side of the 562 Booth Street building and a physical metallurgy laboratory building at 568 Booth Street. Based on information provided in the ERIS Report discussed in Section 3.2.1, the fuel oil tanks in the butler hut were likely USTs.
- A railway formerly intersected the northern portion of the Site. The Site was occupied by residential structures from approximately 1902 to 1922, after which the majority of the Site was gradually converted to NRCan lands.
- The building at 552 Booth Street which was constructed in 1909 and was formerly the Dominion Government Fuel Testing Station. The two historical Quonset huts located on this portion of the Site were constructed in 1948/1949 for radioactive testing.
- It was assumed that no soil was present beneath the buildings on the Site.

- As part of the 2002 Phase II ESAs, 31 boreholes were completed on the northern portion of the Site, eight of which were completed as monitoring wells, 25 boreholes were completed on the central portion of the Site, six of which were completed as monitoring wells, and 25 boreholes were completed on the southern portion of the Site, four of which were completed as monitoring wells. All boreholes and monitoring wells were located outside of the building footprints.
- Subsurface conditions at the Site are generally asphalt to topsoil overlying sandy fill over limestone bedrock. Bedrock was encountered at depths ranging from 0.3 to 3.5 mbgs. The fill material contains solid wastes such as demolition debris (glass, wood, brick, tar, cement), ash, coal and metal pieces.
- Groundwater flow direction at the Site is to the southwest.
- The depth to groundwater at the Site ranges from 2.4 to 9.9 mbgs.
- Contaminated fill was identified across the Site. The impacts include metals, inorganics, volatile organic compounds (VOCs), petroleum hydrocarbons (PHCs) and polycyclic aromatic hydrocarbons (PAHs) above the provincial standards applicable at the time. The impacts in soil were limited to the subsurface soil. The surface soil was not reported to be contaminated. In total, approximately 21,000 m³ of contaminated fill was estimated to be present on the Site.
- Electrical conductivity (EC) and sodium adsorption ratio (SAR) impacts were identified in the fill on Site. It was noted that the O. Reg. 153/04 stated that “if an applicable site condition standard is exceeded at a property solely because of a substance has been used on a highway for the purpose of keeping the highway safe for traffic under conditions of ice or snow or both, the applicable site condition standard is deemed not to be exceeded for the purpose of this regulation”. The EC and SAR impacts were inferred to be associated with road salt on the adjacent public roadways and therefore, were not considered to be exceedances of the site condition standards.
- Approximately 150 cubic metres of hazardous soil was identified on the northern portion of the Site, east of the building at 550 Booth Street.
- The results of groundwater samples collected from the monitoring wells installed on the Site as part of the Phase II ESAs and existing monitoring wells at the Site indicated that groundwater with metals and inorganics impacts (above both previous and current applicable site standards) is present across the Site. VOC impacts were above the current and/or previous applicable site standards were identified on the northern portion of the Site around the buildings at 550 and 552 Booth Street, between the butler hut building at the 552 Booth Street building and on the southern portion of the Site adjacent to the southern portion of the 568 Booth Street building. Although not above the previous site standards, PHCs impacts exceeding the currently applicable standards were also present between the butler hut building at the 552 Booth Street building. PAHs were detected near the current standards in a monitoring well located on the west side of the building at 552 Booth Street building but did not exceed the current standards. The groundwater impacts at the Site have not been delineated vertically and/or laterally. No groundwater samples were collected from within the buildings.

Based on the review of the 2009 EA Report and 2009 Phase II ESA of 615 Booth Street, the following is of note for the Site:

- The Site and adjacent property east/southeast of the Site at 601 Booth Street (currently 615 Booth Street) were owned and operated by NRCan in 2009. The buildings on these lands were used for offices and laboratories.

- A railway and lumber yard were formerly located at the adjacent property at 601 Booth Street as well as two retail fuel outlets located along Carling Avenue. These are likely one is the retail fuel outlet that was identified at 745 Carling Avenue in the FIPs and the other at the automotive garage property that was identified at 765 Carling Avenue in the FIPs.
- NRCan development of the Site began in the early 1900's with buildings that were used as research facilities for metal, fuel and ore research as well as early radiation testing facilities (but there was no measured radiation contamination on the property). A hazardous substances storage shed was also located on the northern portion of the Site which was empty in 2009. This is likely the storage shed that was observed on the north side of the building at 556 Booth Street during the Site visit (as discussed in Section 5.0).
- The central heating plant building and the butler hut building located on the Site have always been owned and operated by PWGSC.
- A compressed natural gas fuelling station with associated storage tanks was located on the southernmost portion of the Site.
- An ESA was reportedly completed by TROW Consulting Ltd. in 2002 which concluded that the soil on the Site and the adjacent property at 601 Booth Street was contaminated with petroleum hydrocarbons (PHCs), polycyclic aromatic hydrocarbons (PAHs) and metals. The contaminant concentrations on the Site exceeded the federal standards for commercial land uses at the time. A 2009 Phase II ESA of 601 Booth Street confirmed these findings of the soil conditions at this property. These aforementioned reports were not available for review.
- The fill material at the adjacent property 615 Booth Street contained debris and was found to be contaminated, similar to the fill at the Site.
- The groundwater at 615 Booth Street contained metals impacts above the provincial standards applicable at the time and a sheen was noted in the groundwater at one monitoring well. Given that the applicable standards have since this Phase II ESA was completed, additional contaminants above the current standards may be present. It was assumed that remediation of the contaminated soils would address groundwater impacts.

Based on the review of the 2010 Radiation Testing Report, the following was considered noteworthy:

- Radiation levels detected in the building at 552 Booth Street were similar to the background levels measured within the building and no obvious sources of radioactive contamination was observed. Therefore, it was concluded that no radioactive surface contamination was present in this building.

Based on the review of the 2012 Remediation Program, the following is of note for the Site:

- The buildings at 405 Rochester Street and 550 and 552 Booth Street were vacant in 2010.
- The building at 552 Booth Street was the first building constructed on the Site (constructed in 1909) and was used as a fuel testing station which included diverse experiments involving various types of fuels (peat, coal and coal gas).
- Two Quonset huts were formerly present on the northern portion of the Site between 1948 and 1959 and were used for research into radioactivity.
- Rail and lumber yard were formerly present on the adjacent lands east and south of the Site.

- The soil in the northern portion of the Site, specifically 552 Booth Street, 550 Booth Street and 405 Rochester Street, was remediated in 2010.
- The majority of the northern portion of the Site, specifically the lands north of building at 552 Booth Street (i.e., 405 Rochester Street and 550 Booth Street properties) was remediated via excavation and off-Site disposal. Stantec completed third-party monitoring of the remediation.
- As part of the remediation, the majority of the overburden material located on this portion of the Site was removed from Site. The overburden material consisted of fill material impacted with PAH and metals as well as PHCs at some locations above the applicable federal and/or provincial standards at the time. Upon completion of the remediation program, residual impacted fill remained along the buildings at 405 Rochester Street, 550 Booth Street and the north side of 552 Booth Street, around some buried and surface infrastructure and some or all of the property limits. The exact locations of residual impacted fill was not identified.
- As part of the remediation approximately 16,000 metric tonnes of contaminated soil was removed from the Site, some of which was considered to be hazardous and was disposed of at a treatment facility.
- The depth of the excavations (and depth to bedrock) ranged from 0.3 to 2 mbgs with the shallowed bedrock in the northwest portion of the Site and the deeper bedrock.
- Groundwater was not encountered in the remedial excavations. However, it was reported that impacted groundwater remains in the bedrock at the Site.

Based on the review of the Heritage Documents, the following was considered noteworthy:

- The on-Site building at 405 Rochester Street and 550, 552 and 568 Booth Street at Recognized Federal Heritage Buildings;
- The building at 405 Rochester Street was constructed in 1939 and was historically the Industrial Minerals and Ceramics Laboratory;
- The building at 550 Booth Street was constructed between 1937 and 1939 and was historically used as an Ore Dressing Laboratory (metals processing laboratory);
- The building at 552 Booth Street was constructed in 1932 and was historically used as an Ore Dressing Laboratory;
- The building at 568 Booth Street was constructed between 1942 and 1952. It is a U-shaped building opening to the west and is a group of three attached buildings that are hereinafter referred to as the northern, eastern and southern portions of the building at 568 Booth Street. The western half of this building was constructed in 1942 while the eastern half of the building was later constructed by 1952. This building was formerly the Physical Metallurgy Laboratory in which various metal fabrication techniques were investigated.

Based on the review of the 2002 Asbestos Reports, the following was considered noteworthy:

- Designated Substances Surveys (DSS) were conducted at all main Site buildings include those at 405 Rochester Street and 550, 552, 556, 558, 562 and 568 Booth Street. The designated substances identified in these buildings include acrylonitrile, arsenic, asbestos, benzene, mercury, silica, vinyl chloride and/or lead.
- Several transformers were identified in these buildings and were reported to be dry-type transformers. This was later contradicted in the ERIS report which identified PCB containing transformers on the Site.

Based on the review of the previous environmental reports, the former presence of the railway, lumber yard, hazardous substances storage shed, ore dressing laboratories, fuel oil USTs, metal fabrications and fill material containing debris with known impacts on the Site are considered to be on-Site PCAs. The former presence of the railway, lumber yard and retail fuel outlets located within the Phase One Study Area are off-Site PCAs. It is also noted that contaminated groundwater is present across the Site and that contaminated fill and groundwater is present on the adjacent property east of the Site at 615 Booth Street.

3.2 Environmental Source Information

3.2.1 ERIS Report

Golder contracted ERIS to conduct a search of environmental sources, including federal, provincial, and private sector databases, for information on the Phase One Property and Study Area. The ERIS report is provided in Appendix C.

The databases searched included the following:

Federal	Provincial	Private
<ul style="list-style-type: none"> ■ Contaminated Sites on Federal Land ■ Dry Cleaning Facilities ■ Environmental Effects Monitoring ■ Environmental Issues Information System ■ Federal Convictions ■ Fisheries & Oceans Fuel Storage Tanks ■ Greenhouse Gas Emissions from Large Facilities ■ Indian & Northern Affairs Fuel Tanks ■ National Analysis of Trends in Emergencies System (NATES) ■ National Defence & Canadian Forces Fuel Storage Tanks ■ National Defence & Canadian Forces Spills ■ National Defence & Canadian Forces Waste Disposal Sites ■ National Energy Board Pipeline Incidents ■ National Energy Board Wells ■ National Environmental Emergencies System (NEES) ■ National PCB Inventory 	<ul style="list-style-type: none"> ■ Abandoned Aggregate Inventory ■ Abandoned Inventory ■ Aggregate Mine Information System ■ Borehole ■ Certificates of Approval ■ Certificates of Property Use ■ Commercial Fuel Oil Tanks ■ Compliance and Convictions ■ Drill Hole Database ■ Environmental Activity and Sector Registry ■ Environmental Compliance Approval ■ Emergency Management Historical Event ■ Environmental Registry ■ Fuel Storage Tank ■ Fuel Storage Tank – Historic ■ Inventory of Coal Gasification Plants and Tar Sites ■ Inventory of PCB Storage Sites ■ Landfill Inventory Management Ontario ■ List of TSSA Expired Facilities ■ Environmental Penalty Annual Report 	<ul style="list-style-type: none"> ■ Anderson's Storage Tanks ■ Anderson's Waste Disposal Sites ■ Automobile Wrecking & Supplies ■ Canadian Mine Locations ■ Canadian Pulp and Paper ■ Chemical Register ■ Compressed Natural Gas Stations ■ ERIS Historical Searches ■ Oil and Gas Wells ■ Retail Fuel Storage Tanks ■ Scott's Manufacturing Directory

Federal	Provincial	Private
<ul style="list-style-type: none"> ■ National Pollutant Release Inventory ■ Parks Canada Fuel Storage Tanks ■ Transport Canada Fuel Storage Tanks 	<ul style="list-style-type: none"> ■ Mineral Occurrences ■ Non-Compliance Reports ■ Ontario Oil and Gas Wells ■ Ontario Regulation 347 Waste Generators Summary ■ Ontario Regulation 347 Waste Receivers Summary ■ Ontario Spills ■ Orders ■ Permit to Take Water ■ Pesticide Register ■ Private and Retail Fuel Storage Tanks ■ Record of Site Condition ■ TSSA Historic Incidents ■ TSSA Incidents ■ TSSA Pipeline Incidents ■ TSSA Variances for Abandonment of Underground Storage Tanks ■ Waste Disposal Sites - MOECC 1991 Historical Approval Inventory ■ Waste Disposal Sites - MOECC CA Inventory ■ Wastewater Discharger Registration Database ■ Water Well Information System 	

The complete ERIS report, including a brief description of each of the databases searched for the Phase One ESA, is included in Appendix D.

The following is a summary of the findings as identified within the ERIS report for the Site and for the surrounding properties within the Phase One Study Area:

On-Site

Noteworthy records for the Site included the following:

- Borehole (BORE) – There are five borehole listings on the Site. Three of the boreholes were completed on the southeast corner of the Site in August 1991 to depths ranging between 0.7 and 3.7 mbgs and the other two were completed on the northwest portion of the Site in February 1990 to depths of 5.3 and 6.9 mbgs. The subsurface conditions encountered in the boreholes was topsoil and asphalt overlying sand fill overlying limestone bedrock which was encountered at depths ranging from 0.5 to 1.2 mbgs. The static water level at one borehole was reported to be 1.6 mbgs.

- Inventory of Coal Gasification Plants and Coal Tar Sites (COAL) – There is one record in the COAL database that indicated that the former fuel testing station at 552 Booth Street was a coal gas producer in the 1920's and that the former fuel research laboratory at 562 Booth Street operated a two tonne by-product coke oven in the 1920's and 1930's. The record also noted that fuel USTs have been present between the building at 552 and 562 Booth Street. It is likely that these fuel USTs are those that were located in the butler hut.
- Federal Contaminated Site (FCS) – The Site was listed as a Federal Contaminated Site with PHC, PAH and metals impacts in soil and/or groundwater. The Site was classed medium priority for action;
- Ontario Regulations 347 Waste Generators Summary (GEN) – The ERIS report identified 42 waste generation Site listings on the Site. The waste generators included NRCan and/or PWGSC. The details of the waste generating facility location, wastes generated and dates for which they were approved waste generators are listed below:
 - 552 Booth Street – waste generator of organic and inorganic laboratory chemicals, aliphatic solvents, halogenated solvents, emulsified oils, alkaline wastes - metals, acid wastes – heavy metals, neutralized wastes – heavy metals, light fuels, heavy fuels, oil skimmings and sludges, PCBs, petroleum distillates, other specific inorganics, waste oils and lubricants and waste compressed gases between 1986 and 2008.
 - 562 Booth Street – waste generator of other specific inorganics and alkaline wastes – heavy metals in 2006.
 - 556 Booth Street – waste generator of petroleum distillates, aromatic solvents, waste oils and lubricants, emulsified oils, paint/pigment/coating residues, halogenates solvents, light fuels, alkaline wastes - metals, acid wastes – heavy metals, oil skimmings and sludges, PCBs and inorganic laboratory chemicals between 1986 and 2014.
 - 405 Rochester Street - waste generator of alkaline wastes - metals, acid wastes – heavy metals, waste oils and lubricants and aliphatic solvents, petroleum distillates, light fuels, halogenates solvents, halogenated pesticides, non-halogenated pesticides, organic and inorganic laboratory chemicals, pharmaceuticals, pathological wastes, waste compressed gases, paint/pigment/coating residues and chemical fertilizer wastes between 1999 and 2010.
 - 550 Rochester – waste generator of alkaline wastes - metals, acid wastes – heavy metals, waste oils and lubricants and aliphatic solvents, petroleum distillates, light fuels, halogenates solvents, halogenated pesticides, non-halogenated pesticides, organic and inorganic laboratory chemicals, pharmaceuticals, pathological wastes, waste compressed gases, PCBs, paint/pigment/coating residues and chemical fertilizer wastes between 1989 and 2010.
 - 461 Rochester Street (currently 558 Booth Street) – waste generator of light fuels, petroleum distillates, waste oils and lubricants, inorganic laboratory chemicals, aliphatic solvents, alkaline wastes - metals, acid wastes – heavy metals, oil skimmings and sludges, other specific inorganics, paint/pigment/coating residues and waste compressed gases between 1990 and 2017.
 - 425 Rochester Street was listed as a waste generator between 1989 and 1994; however the wastes generated were not specified.

- National PCB Inventory (NPCB) – Records in the NPCB database indicates that Government of Canada Department of Energy, Mines and Resources (currently NRCan) located at 405 and 556 Booth Street stored PCB containing materials and/or equipment at 405 Rochester Street and 556 Booth Street. The records indicate that two PCB-containing transformers were present in an electrical room at 556 Booth Street in 1991. One was a 295 L transformer and the other was a 932 L transformer. The records did not document the details of the PCB storage at 405 Rochester Street but that PCB were in this building in 1990, 1993 and 1994;
- National Pollutant Release Inventory (NPRI) – There was one record for the central heating plant located on the Site at 558 Booth Street in the NPRI for release to air that occurred in 1983, 2003, 2004, 2009, 2010, 2011 and 2012;
- Inventory of PCB Storage Sites (OPCB) – The NRCan facility at 568 Booth Street was listed in the OPCB database as PCB storage site. It is likely that this record is associated with PCB-containing transformers in the building;
- Ontario Regulation 347 Waste Receivers Summary (REC) - The NRCan facility at 550 Booth Street was listed in the REC database as PCB storage site. It is likely that this record is associated with PCB-containing transformers in the building;
- Ontario Spills (SPL) – There are two records of spills occurring on the Site. One record was for hydrogen sulfide that released to the atmosphere from the building at 568 Booth Street in 2006. The other record was for 3 L of hydraulic oil that spilled to the ground at 568 Booth Street from a truck in 2013; and,
- Water Well Information System (WWIS) – There are five water well listing for the Site. The wells were constructed between April 2009 and March 2010 to depths ranging from 5.8 to 7.6 mbgs. The records indicated that the wells were completed for monitoring purposes. The static water levels were not provided.

Surrounding Properties within 250 metres of the Site

Noteworthy records for the Phase One Study Area (excluding the Phase One Property) included the following:

- A retail fuel outlet located at 450 Rochester Street (approximately 15 m west of the Site) was listed in the List of Expired TSSA Facilities (EXP) database as an expired TSSA facility that have since been removed from this property;
- A private and retail fuel outlet with one associated diesel AST was identified at 494 Rochester Street (approximately 15 m west of the Site) in the Fuel Storage Tank (FST) and Private and Retail Fuel Storage Tanks (PRT) databases;
- There was a record in the TSSA Incidents (INC) database for a leak that occurred at 316 Bell Street. Based on the FIPs and City of Ottawa HLUI, an automotive garage with fuel USTs was formerly located at this property. The record did not indicate the type of leak but it may have been a fuel leak from one of the USTs;
- The government buildings at 580 Booth Street (approximately 15 m south of the Site) and at 555 and 615 Booth Street (approximately 15 m east of the Site) were listed as PCB storage sites in the NPCB database. The records indicate that PCB-containing oil was stored at 555 and 580 Booth Street. The equipment using the oil at 580 Booth Street was reported to be transformers and although not documented in the record, it is likely that the PCB storage at 555 and 615 Booth Street is also referring to PCB-containing transformers. In

addition, Canada Post located approximately 200 m east of the Site at 10 Orangeville Street was listed as a PCB storage site with PCB-containing light ballasts;

- There is one record in the Canadian Pulp and Paper (PAP) database for a pulp and paper mill located approximately 15 m south of the Site at 580 Booth Street;
- Approximately 10 L of fuel oil spilled to the ground from a fuel AST at a private residence located at 245 Plymouth Street, approximately 125 m east of the Site. The record indicates that the spill occurred in 1991; and,
- The Ontario Regulations 347 Waste Generators Summary (GEN) database identified listed numerous waste generation Site listings within the Phase One Study Area. None of the waste generators were considered to be PCAs. The waste generator records and waste classes are included in the ERIS report in Appendix C;

Based on the review of the ERIS report, the current and/or former presence of fuel USTs, PCB containing transformers, coal gas production and contaminated soil and/or groundwater at the Site is considered to be on Site PCAs. The current and/or former presence of private and retail fuel outlets with associated fuel storage tanks, a pulp and paper mill, transformers with PCB-containing oil as well as spillage from potential fuel UST located within the Phase One Study Area are off-Site PCAs. The ERIS report identified a 10 L fuel oil spill that occurred from a fuel AST on the surrounding lands east of the Site. Given that the spill was not significant in size and that it occurred more than 100 m from the Site, it is not considered to be an issue of concern for the Site; however, it is an indication that heating oil ASTs have been located at private residences within the Phase One Study Area and these ASTs are considered to be off-Site PCAs. A hydrogen sulfide and 3 L hydraulic oil spill reportedly occurred on the Site; however, given that they entered the atmosphere or were not significant in size, they are not considered to be issues of concern for the Site.

3.2.2 Ministry of the Environment and Climate Change

A Freedom of Information (FOI) Request was sent to the Ontario Ministry of Environment and Climate Change (MOECC) asking the MOECC to report any environmental information relating to the Site.

At the time of preparation of this report a response from the MOECC was not received.

3.2.3 City of Ottawa

Golder completed a review of the City of Ottawa Historical Land Use Inventory (HLUI) for the Phase One Property and Phase One Study Area. The HLUI identified several dozen PCAs within the Phase One Study Area. The following summarizes the noteworthy findings of the City of Ottawa HLUI review:

- A carriage shop was located on the Site along Lydia Street. The address was not provided but it is likely the carriage shop that was identified in the FIPs at the former 366 Division Street on the northern portion of the Site.
- The J.R. Booth Faserfield lumber yard was identified on the northernmost portion of the Site along the former Lydia Street.
- A machine shop was identified on the northern portion of the Site at 44 Lydia Street.
- Automotive garages were located within the Phase One Study Area at the following properties:
 - 402 Preston Street (approximately 210 m west of the Site)
 - 34 Beech Street (approximately 15 m west of the Site)
 - The southwest corner of Rochester Street and Orangeville Street (approximately 15 m west of the Site)

- 765 Carling Avenue (approximately 200 m south of the Site). Three fuel USTs were noted at this property.
- On Carling Avenue between Booth Street and Preston Street. Two fuel USTs were identified at this property. The address was not provided but it is likely that this record is for the automotive garage at 783 Carling Avenue which were identified in the FIPs as having two fuel USTs.
- 410 Rochester Street (approximately 15 m west of the Site)
- 492 Rochester Street (approximately 50 m west of the Site)
- 316 Bell Street (approximately 170 m east of the Site). Two fuel USTs were listed at this property.
- 439 Preston Street (approximately 160 m west of the Site)
- 413 Arlington Street (approximately 170 m west of the Site)
- 290 Lebreton Street (approximately 90 m east of the Site)
- 317 Lebreton Street (125 m east of the Site)
- 517 Rochester Street (approximately 50 m south of the Site)
- Retail fuel outlets were located within the Phase One Study Area at the following properties:
 - 485 Preston Street (approximately 235 south m west of the Site)
 - 402 Preston Street (approximately 210 m west of the Site). Two fuel USTs were identified at this property.
 - 450 Rochester Street (approximately 15 m west of the Site)
 - 319 Preston Street (approximately 150 m west of the Site)
 - 745 Carling Avenue (approximately 210 m southeast of the Site). This facility has three associated fuel USTs.
- An iron works facility and a machine shop were located approximately 105 m north of the Site at 496 Booth Street.
- Machine shops were located at 72 Norman Street (approximately 115 m west of the Site), 66 Norman Street (approximately 70 m west of the Site), 374 Rochester Street (approximately 80 m west of the Site), 93 Norman Street (approximately 240 m west of the Site) and 604 Booth Street (approximately 115 m south of the Site).
- A silk manufacturing company was located at 34 Beech Street, approximately 15 m west of the Site.
- Clark Dairy Ltd. with an associated fuel UST was identified on Aberdeen. Based on information from the FIPs, this facility was located at 5 Aberdeen Street, approximately 40 m west of the Site.
- The Export Lumber Co. lumber yard was identified on the majority of the lands east of the Site between Rochester Street and Preston Street.
- J.R. Booth lumber yard was identified on the adjacent lands east of the Site between Booth Street and Bell Street.
- Dry cleaning facilities were located at 787 Carling Avenue (approximately 215 m south of the Site), 355 Preston Street (approximately 145 m west of the Site) and 506 Rochester Street (approximately 15 m west of the Site).

- A mica manufacturer was identified approximately 15 m west of the Site at 450 Rochester Street.
- Motorways Limited with two fuel USTs were listed at 339 Preston Street. These fuel USTs were identified in the FIPs along with an oil storage shed.
- Commercial printing shops were located at 401 Preston Street (approximately 160 m west of the Site) and 440 Preston Street (230 m southwest of the Site).
- An iron works facility was located at 77 Pamilla Street, approximately 136 m southwest of the Site.
- A petroleum products wholesaler was identified approximately 240 m west of the Site at 24 George Street.
- A bottle manufacturing facility was located at 22 Aberdeen Street; approximately 100 m west of the Site.
- A vehicle parts manufacturing facility was located approximately 160 m west of the Site at 60 Beech Street.
- Smith Transportation Ltd. was identified approximately 15 m west of the Site at 450 Rochester Street.
- A paint manufacturing facility was listed at 85 Pamilla Street, approximately 175 m southwest of the Site.

Based on the review of the City of Ottawa HLUI, the former presence of a carriage shop, machine shop and part of lumber yard located on the northern portion of the Phase One Property are considered to be on-Site PCAs. The former presence of fuel USTs, dry cleaning facilities, automotive garages and retail fuel outlets with associated fuel USTs, lumber yards, machine shops, commercial printing shops and various manufacturing facilities located within the Phase One Study Area are off-Site PCAs.

3.2.4 Ministry of Natural Resources and Forestry (MNRF)

An information request was sent to the Ministry of Natural Resources and Forestry (MNRF) on June 18, 2018. Records requested included any information relating to areas of natural significance in the vicinity of the Site, as well as any other environmental concerns that may be related to the Site and surrounding area.

At the time of preparation of this report a response from the MNRF was not received.

3.2.5 Technical Standards and Safety Authority, Fuel Safety Division Records

The Technical Standards and Safety Authority (TSSA) maintains records related to registered underground storage tanks ("USTs") for petroleum-related products. The TSSA was contacted to establish the status of the Site and to identify outstanding instructions, incident reports, fuel oil spills or contamination records.

The TSSA replied on June 18, 2018 and indicated that the TSSA had a record of a compressed natural gas fuelling station which was located on the southern portion of the Site at 568 Booth Street. The TSSA also had record of a former retail fuel outlet with two associated fuel storage tanks at 450 Rochester Street located approximately 15 m west of the Site.

3.3 Physical Setting Sources

3.3.1 Aerial Photographs

Aerial photographs of the Site and neighbouring properties were obtained from Golder's in-house photo records and were dated 1933 and 1945. In addition, the aerial photographs for 1928, 1958, 1965, 1976, 1991, 1999, 2002, 2005, 2007, 2008, 2014 and 2017 from the City of Ottawa geo-map (<http://maps.ottawa.ca/geoOttawa/>) were reviewed on-line. Golder selected aerial photographs based on availability and date intervals to help develop an understanding of the history of the development of the Phase One Property and Phase One Study Area. The information obtained from the aerial photographs was limited by the quality and scale of the available aerial photographs. The earliest aerial photograph available was from 1928.

Year	Site	Surrounding Area
1928 (GeoOttawa Image)	A few residential dwellings and a commercial or industrial building are present along Lydia Street which intersects the northernmost portion of the Site from east to west. A few industrial buildings are located on the central portion of the Site, one of which is the current building at 562 Booth Street. The southernmost portion of the Site is developed with a few residential dwellings. Additionally, a railway intersects the northernmost portion of the Site from the northwest corner of the Site to the southeast corner of 550 Booth Street. Filling is noted on the central portion of the Site, likely associated with the ongoing development of the Site.	<p>North: A railway located approximately 20 m north of the Site followed by several residential and/or commercial buildings.</p> <p>East: Booth Street followed by a railway and lumber yard as well as multiple residential and/or commercial buildings. The railway extends east of the Site to the lumber yard located approximately 15 m east of the Site.</p> <p>South: Norman Street followed by residential development with some commercial buildings. There appears to be filling on the lands approximately 140 m southwest of the Site. This is likely filling of the quarry that was identified in this area in the FIPs.</p> <p>West: Rochester Street followed by a lumber yard located approximately 15 m west of the northern portion of the Site, some residential, commercial and/or industrial buildings. Part of the west of the southern portion of the Site are vacant.</p>
1933	Similar to 1928; however the structures at 552 Booth Street have been removed and the current Site building in this location has been constructed. Another industrial type building and a small building are now located on the south side of the 552 Booth Street building. Filling is still noted on the central portion of the Site.	<p>North: As per 1928.</p> <p>East: As per 1928.</p> <p>South: As per 1928.</p> <p>West: Similar to 1928; however, the lumber yard is no longer present and a few commercial buildings have been constructed in this area.</p>

Year	Site	Surrounding Area
1945	<p>Some residential dwellings remain on the northern and southernmost portions of the Site. A couple of the smaller structures have been removed the central portion of the Site. The industrial buildings on the Site now include the current buildings at 405, 550 and 552 Booth Street, the structures located immediately south of the building at 552 Booth Street as well as the central heating plant at 558 Booth Street and the eastern portion of the 568 Booth Street building. A large smokestack is located on the south side of the central heating plant. The railway is no longer present on the northern portion of the Site.</p>	<p>North: As per 1933.</p> <p>East: The lumber yard and railway are no longer present to the east of the Site. This area is primarily vacant.</p> <p>South: As per 1933.</p> <p>West: Similar to 1928 with increasing residential and commercial development.</p>
1958 (GeoOttawa Image)	<p>All residential buildings have been removed from the Site and the northern and southernmost portion of the Site are occupied by parking lots. The western portion of the 568 Booth Street building, the current industrial building at 562 Booth Street have been constructed. All the current main Site buildings are now present. There are also two Quonset huts located on the north part of the Site between the 405 and 550 Booth Street buildings. A small addition has also been made to the east side of the central heating plant.</p>	<p>North: As per 1948.</p> <p>East: Similar to 1945; however, a few large commercial buildings have been constructed on the east side of Booth Street.</p> <p>South: The buildings south of Norman Street have been removed and a large commercial building is present near Carling Avenue. Several residential and commercial buildings remain to the southwest of the Site. The quarry to the southeast of the Site no longer present and has been developed with a commercial building.</p> <p>West: Similar to 1948 with increasing commercial development.</p>
1965 (GeoOttawa Image)	<p>As per 1958. The structure on the south side of the 562 Booth Street building now has a new configuration and another structure has been built to the south of it in the vicinity of the heating butler hut. Lydia Street no longer appears to be a roadway but provide access to the Site.</p>	<p>North: Orangeville Street has been constructed immediately north of the Site. The railway is no longer present, and Highway 417 has been constructed along its alignment. Additionally, several of the structures north of the highway have been removed.</p> <p>East: As per 1956.</p> <p>South: As per 1956.</p> <p>West: As per 1956.</p>

Year	Site	Surrounding Area
1976 (GeoOttawa Image)	Similar to 1965; however, part of the industrial building on the south side of 562 Booth Street has been removed and the building to its south has been removed. The two Quonset huts are also no longer present, and this area is a paved parking lot.	<p>North: The formerly vacant lands north of the highway have been development with townhouses and a large building.</p> <p>East: As per 1965.</p> <p>South: As per 1965 with the addition of a few commercial buildings include a high-rise office building across Norman Street.</p> <p>West: Similar to 1965. Some of the large commercial/industrial buildings have been removed and only a few remain.</p>
1991 (GeoOttawa Image)	Similar to 1976. The current butler hut building has been constructed on the east side of the 556 Booth Street building and there appears to be a link connecting the buildings at 405 and 550 Booth Street to the building at 552 Booth Street.	<p>North: The former large commercial/industrial buildings between are gone. A parking lot is no present between Beech Street and Aberdeen Street and a high-rise commercial office building is present north of Aberdeen Street.</p> <p>East: As per 1976.</p> <p>South: As per 1976 with the addition of a few commercial buildings include a high-rise office building across Norman Street.</p> <p>West: Similar to 1976. Some of the large commercial buildings have been removed and only a few remain.</p>
1999 (GeoOttawa Image)	Similar to 1991. An addition has been made to the south side of the 562 Booth Street building which connected this building to the northern portion of the building at 568 Booth Street. The structure on the south side of 552 Booth Street is no longer present.	North, East, South and West: As per 1991.
2002 (GeoOttawa Image)	Similar to 1999; however, part of the addition on the east side of the central heating plant has been removed and small trailer or structure is present on the southernmost portion of the Site on the south side of the 568 Booth Street building. In addition, a vertical white AST is located by the link between the 550 and 552 Booth Street buildings.	<p>North, East and South: As per 1999.</p> <p>West: As per 1991 with some construction activities occurring along Preston Street.</p>

Year	Site	Surrounding Area
2005 (GeoOttawa Image)	As per 1999 with the addition of a red storage shed (i.e., the current hazardous substances storage shed) located on the western portion of the Site on the north side of the building at 556 Booth Street.	North, East, South and West: As per 2002.
2007 (GeoOttawa Image)	As part 2005. Two vertical white ASTs are located in the parking lot on the southernmost portion of the Site.	North, East and South: As per 2005. West: As per 2005 with the addition of a few high-rise commercial office buildings.
2008 (GeoOttawa Image)	As per 2007. The AST on the northern portion of the Site is no longer present.	North, East, South and West: As per 2007.
2014 (GeoOttawa Image)	As per 2007. The ASTs on the southern portion of the Site are no longer present.	North, East, South and West: As per 2008.
2017 (GeoOttawa Image)	As per 2017.	North, East, South and West: As per 2014.

Based on the review of the aerial photographs, the Site was developed with residential buildings, commercial and/or buildings since prior to 1928. Increasing industrial development occurred on the Site between 1928 and 1965 and the residential buildings were removed from the Site by 1958. By 1965, the Site was developed with the current main Site buildings and the current butler hut and hazardous substances storage shed were constructed on the Site in the early 1990's and 2000's, respectively. A small trailer and two ASTs were formerly present on the southernmost portion of the Site and based on the information and photographs provided in the 2009 EA Report, the ASTs were likely natural gas tanks associated with the natural gas fueling station that was present in this area of the Site and are therefore not considered to be PCAs. A similar type of AST was present on the northern portion of the Site adjacent to the link between the 550 and 552 Booth Street buildings between 1999 and 2008; however, this may have been a fuel AST as its content cannot be confirmed and therefore it is considered to be an on-Site PCA. A railway intersected the northernmost portion of the Site since prior to 1928 to sometime between 1933 and 1945 and is an on-Site PCA. In addition, filling was observed on the central portion of the Site in the 1928 and 1933 aerial photographs. The presence of this fill material is considered to be an on-Site PCA. Given that several residential, commercial and industrial buildings were removed/demolished from the Site, there is a potential for building debris to be present in the fill on-Site.

The surrounding properties within the Phase One Study Area were developed prior to 1928 and consisted of residential, commercial and industrial properties. Most of the industrial buildings were removed from the surrounding lands by the 1990's and these former industrial lands were developed with high-rise commercial office buildings. A railway was present on the adjacent lands north and east of the Site and lumber yards were present on the adjacent lands east and west of the Site prior 1928, all of which were removed by 1965. In addition, there appeared to be infilling of a quarry on the surrounding lands southeast of the Site. The former presence of the railways and lumberyards and the presence of the fill material used to fill in the quarry are considered to be off-Site PCAs.

3.3.2 Topography, Hydrology and Geology

The following records were reviewed to identify topographic, geologic and hydrogeological conditions at the Site. A topographic map (Ontario Base Map) showing the Site and the Phase One Study Area and the location of any water bodies is provided in Figure 3. Additional information on Site features, as observed at the time of the Site visit, is provided in Section 6.

Topic	Conditions	Comment / Source
Topography of Site and Surrounding Area	The topography of the Site and surrounding area is uneven with an overall slope to the southwest.	Site and surrounding area observations and Figure 3 – Topographic Map and Areas of Natural Significance
Overburden Soils	The geological mapping indicates that the subsurface conditions at the majority of the Site are bedrock, specifically limestone, dolomite, sandstone and local shale, and that ill, plain with local relief (<5m) is expected to be present along the southern half of the western Site boundary. However, based on the review of previous environmental reports, the subsurface conditions at the Site consist of a sandy fill overlying limestone bedrock.	Bélanger, J. R. 2008 Urban Geology of the National Capital Area, Geological Survey of Canada, Open File 5311, 1 DVD. Previous Environmental Reports
Type of Bedrock	The geological mapping indicates that the bedrock at the Site of the Verulam Formation (limestone, and shale). Previous environmental reports indicate that bedrock at the Site consists of limestone.	Armstrong, D.K. and Dodge, J.E.P. 2007. Paleozoic Geology of Southern Ontario; Ontario Geological Survey, Miscellaneous Release – Data 219 Previous Environmental Reports

Topic	Conditions	Comment / Source
Depth to Bedrock	The geological mapping indicates that the depth to bedrock is expected to be at ground surface with the exception of the northernmost portion of the Site and the southwest corner of the Site where the bedrock is expected to be between 1 and 5 mbgs; however, the previous environmental reports indicate that the depth to bedrock ranges from 0.3 to 3.5 mbgs.	2010 Bélanger, J. R., Urban Geology of the National Capital Area, Geological Survey of Canada, Open File D3256, 2001 Previous Environmental Reports
Inferred Near Surface Groundwater Flow	Local groundwater is anticipated to flow southwest.	Site and surrounding area observations, Figure 1 – Key Plan and Figure 3 – Topographic Map and Areas of Natural Significance Previous Environmental Reports
Site Grade Relative to the Adjoining Properties	The Site is below the grade of the adjacent properties north and east of the Site and above the grade of the adjacent properties south and west of the Site.	Site and surrounding area observations and Figure 3 – Topographic Map and Areas of Natural Significance
Depth to Groundwater	The 2002 Phase II ESAs completed for the Site indicate that the depth to groundwater at the Site ranges from 2.4 to 9.9 mbgs.	Previous Environmental Reports

It should be noted that local groundwater flow may be influenced by underground utilities (i.e., service trenches) and building structures. For example, the gravel pack used around utilities, such as a water line, can act as interceptors and redirect groundwater flow along the direction of the pipe. If a more accurate description of geology, groundwater flow and groundwater quality is required, a subsurface investigation would be necessary.

3.3.3 Fill Materials

Topic	Conditions	Comment / Source
Fill Materials	No piles of fill material were observed on the Site. However, the previous reports indicate that fill material is present Site wide. The fill is reported contains construction debris as well as PHC, PAH and metals impacts. Most of the fill on the northernmost portion of the Site (north of 562 Booth Street) has been removed from the Site and was reportedly replaced with clean fill.	Site observations Previous Environmental Reports

3.3.4 Water Bodies and Areas of Natural Significance

Topic	Conditions	Comment / Source
Nearest Open Water Body	The nearest permanent watercourse is Dow's Lake which is located approximately 375 m south of the Site.	Site observations and Figure 1– Key Plan
Areas of Natural Significance	No areas of natural and scientific interest (ANSI) are known to be located on the Site or on the Phase One Study Area. Based on available information, the Site is not considered to be an environmentally sensitive area. However, a response from the MNRF has not been received to confirm this. As such, the Site is not considered an area of natural significance.	Figure 3 (Topographic Map and Areas of Natural Significance)

3.3.5 Well Records

Topic	Conditions	Comment / Source
Water Wells on Site (location, stratigraphy of the overburden, from ground surface to bedrock, depth to bedrock, depth to water table, drilling date, use)	<p>Based on the ERIS report and previous environmental reports, 18 monitoring wells were installed on the Site as part of the Phase II ESAs and several monitoring wells were installed on the Site as part of previous investigations (reports not provided for review). The 2002 Phase II ESAs reported that the depth to groundwater at the Site ranged from 2.4 to 9.9 mbgs. The ERIS report also identified five monitoring wells that were constructed on the Site between April 2009 and March 2010 to depths ranging from 5.8 to 7.6 mbgs. The static water level in these wells was not provided.</p> <p>At the time of the Site visit, only six monitoring wells were identified on the Site as follows:</p> <ul style="list-style-type: none"> -Two located on the northeast corner of the Site in the parking lot, one of which was installed as part of a geotechnical and hydrogeological program that was being completed on the Site at the time of the Site visit. -One located on the north side of the building at 556 Booth Street which was also installed as part of the latest geotechnical and hydrogeological program. -One on the central portion of the Site between 	Previous Environmental Reports, ERIS Report and Site Observations

Topic	Conditions	Comment / Source
	<p>the buildings at 558 and 562 Booth Street.</p> <ul style="list-style-type: none"> -One on the eastern portion of the Site between the buildings at 562 and 568 Booth Street. -One between the northern and southern portions of the 568 Booth Street building. -One on the southeast corner of the Site in the parking lot. 	
Water Wells on the Neighbouring Properties (location, stratigraphy of the overburden, from ground surface to bedrock, depth to bedrock, depth to water table, drilling rate, use)	<p>Based on the ERIS report, there are 14 water wells within the Phase One Study Area. They were constructed between August 1963 and May 2017 to depths ranging from 4.3 mbgs to 97.2 mbgs. The static water levels were not provided. Additional information regarding the water wells is included in the ERIS report in Appendix C.</p>	ERIS Report

3.4 Site Operating Records

At the time of the Site visit, the Phase One Property was developed with eight vacant buildings. No operations were being conducted at the Site and therefore no Site operating records were available for review. Where identified during the Site visit, discarded records, maps and schematics were reviewed for applicable information.

4.0 INTERVIEWS

At the time of the Site visit, Golder conducted an interview with the Site property manager, namely Lawrence Beaudry of Brookfield Global Integrated Solutions (hereinafter referred to as the "Site Representative") to discuss information about the historical and current activities carried out on the Site. Pursuant to the requirements O.Reg. 153/04, the Site Representative was interviewed as the "current owner" with knowledge of current Site operations.

Relevant information obtained during the interview and Site visit is provided in Section 5.0.

5.0 SITE RECONNAISSANCE

5.1 General Requirements

Alyssa Troke of Golder visited the Site on June 13 and 20, 2018. The Site visit consisted of a walk-around the Site along with a cursory inspection of surrounding properties from the Site and publicly accessible areas. The weather conditions on June 13 were rainy and cloudy and the weather conditions on June 20 were sunny. The Site was developed with seven main Site buildings (as described in Section 5.2), a hazardous substances storage shed and a 'butler hut' building which provided access to the underground service tunnel at the Site. At the time of the Site visit, all buildings were vacant and primarily empty. Access was not provided to the interior of the storage shed, butler hut building, a small addition on the southwest corner of the building at 558 Booth Street and some of the electrical rooms within the main Site buildings. As such, information on their interiors is based on information

provided from the Site Representative and/or what was observed from windows. Given the size and complexity of the Site, Golder did not completed walk-around of all building floors above the main ground floor and details of these levels is based on information provided by the Site Representative. Additionally, potentially asbestos-containing fibres were observed on the floor of the building at 552 Booth Street and therefore, a thorough investigation of this building could not be completed.

Photographs of relevant features noted during the Site visit are provided in Appendix D.

5.2 Specific Observations at Phase One Property

The specific observations made during the Site visit are presented in the following sections.

Topic	Observations	Source
Structures Number and Age of Buildings on the Site	<p>There are seven main Site buildings as follows:</p> <ul style="list-style-type: none"> -The building located on the northwest portion of the Site at 405 Rochester Street which was constructed in 1939. This building has an aboveground link on its south side that connects to the building at 552 Booth Street. -The building located on the northeast portion of the Site at 550 Booth Street which was constructed in 1937-1939. This building has an aboveground link on its south side that connects to the building at 552 Booth Street. -The building located on the northern portion of the Site at 552 Booth Street which was constructed in 1932. -The building located on the western portion of the Site at 556 Booth Street which was constructed between 1948 and 1958. -The building located on the western portion of the Site at 558 Booth Street which was constructed between 1933 and 1945. -The building located on the eastern portion of the Site at 562 Booth Street which was constructed in 1927-1929. -The building located on the southern portion of the Site at 568 Booth Street. This building is a U-shaped building opening to the west and is a group of three attached buildings referred to as the northern, eastern and southern portions. The eastern part of this building was constructed in 1942 and the western part of it was constructed between 1942 and 1952. The northern portion of this building is connected to the building at 562 Booth Street. -The butler hut building is located on the eastern portion of the building, east of the building at 556 Booth Street. It was constructed between 1976 and 1991. -The hazardous substances storage shed was located immediately north of the 556 Booth Street building and was construction between 2002 and 2005. 	<p>Site observations, Previous Reports, aerial photographs and Site Representative</p>
General	The following provides a general description of each building. It is	Site observations,

Topic	Observations	Source
Descriptions of Each Building (including improvements)	<p>noted that all buildings are currently vacant It is noted that the elevations of Orangeville Street and Booth Street are higher than the elevations of Rochester Street and Norman Street. Therefore, partial basements and sub-basements exist in some of the buildings which may be at or near ground surface on the northern and/or western sides of the buildings and may be below ground or partially below ground at the eastern and/or southern sides of the buildings.</p> <p><u>405 Rochester Street:</u></p> <p>The building at 405 Rochester Street was a former NRCan office and laboratory building that was known as the Industrial Mines and Ceramics Laboratory building. It is a rectangular shaped building with five levels including three aboveground levels, a partially below ground basement and a partially below ground sub-basement. Construction is brick on a poured concrete foundation. The interior of the building includes a mix of drywall, concrete block walls, tiled walls, floor tiles and poured concrete floors.</p> <p>The main floor consists of empty offices spaces and storage areas. A walk-over of the second and third floor was not completed; however, the Site Representative reported that these floors are occupied by empty office spaces. The basement floor includes empty laboratories, offices and storage areas and the sub-basement floor consists of empty open spaces with some mechanical equipment including a filter, water pumps and sprinkler system equipment as well as an electrical room that was located on the northern portion of the floor. There was a locked room on the southern portion of the sub-basement floor that could not be accessed. Electrical wires were observed in this room; however, the other contents in the room, if any, are unknown.</p> <p><u>550 Booth Street:</u></p> <p>The building at 550 Booth Street was one of the two former NRCan Ore Dressing (mineral processing) Laboratory buildings. It is a four-storey rectangular shaped building with one basement level. Construction is brick on a poured concrete foundation. The interior of the building includes a mix of drywall, concrete block walls and poured concrete floors. Tiled floors are like present in the upper levels.</p>	<p>Site Representative, Previous Reports and FIPs</p>

Topic	Observations	Source
	<p>The main floor includes primarily empty open concept rooms. The upper floors were not visited but were reported to be empty offices as well as a penthouse on the top floor (partially floor only) which provides access to the roof and likely houses some old mechanical equipment. The basement is mostly empty open spaces with some mechanical equipment including an old boiler and water tanks. A mechanical room was present on the southeast corner of the basement floor which contained a few compressors and other mechanical equipment. In addition, an electrical room was located on the southwest corner of the basement floor.</p> <p><u>552 Booth Street:</u></p> <p>The 552 Booth Street building was the former NRCan Ore Dressing and Metallurgy Laboratories building. Prior to this used it was the NRCan fuel testing laboratory buildings. It is a three-storey rectangular shaped building with one partially below ground basement level and a sub-basement level that is a partial floor only present at the western portion of the building and as such is aboveground. Construction is brick and concrete block on a poured concrete foundation. The interior of the building includes a mix of drywall, wallpaper on drywall, concrete block walls, brick walls, wooden ceilings, tiled flooring and poured concrete floors.</p> <p>The first, second and third floor consists of empty offices, laboratories and/or storage rooms. The basement level is large open areas and empty offices, laboratories and mechanical rooms that contained various equipment such as a boiler and air blowers. One of the open areas as well as the sub-basement level appeared to be formerly used as a concrete testing area and contained one or more industrial ovens.</p> <p><u>556 Booth Street:</u></p> <p>The 556 Booth Street building was the former NRCan mechanical shops and storage building. It is a T-shaped three-storey building with one partially below ground basement level and a sub-basement level that is a partial floor only present on the western portion of the building. Construction is brick on a poured concrete foundation. The interior of the building includes a mix of drywall, concrete block walls, brick walls, tiled flooring and poured concrete floors.</p>	

Topic	Observations	Source
	<p>The majority of the main floor was old mechanical shops that were mostly empty aside from some cranes and a parts washer. Empty some storage rooms and labs were present on the westernmost portion of this floor. The basement was primarily empty storage rooms, laboratories and offices as well as an electrical room located on the northern portion of the floor and an empty room located on the northwest corner of the floor that was identified as an oil storage room. The sub-basement also was a mostly empty mechanical shop area with a mechanical room and a high voltage electrical room located on the southern portion of the floor. Some mechanical equipment including a compressor, air dryer and fire sprinkler system was also located on the north portion of this level.</p> <p><u>558 Booth Street:</u></p> <p>The building at 558 Street was a former central heating plant. It is a rectangular shaped building with one partially below ground level. A former empty chemical storage room, diesel and pump room and a mechanical room were located on the northeast corner of this building. Other rooms in this building included an office, electrical control room, workshop, lunchroom and storage room. In addition, a large smokestack was present along the southern exterior wall of the building and a small addition to this building was located on the southeast corner of the building. The underground service tunnel located on the Site extended from the northeast corner of this building.</p> <p>Mechanical equipment including three large steam boilers, a water tank, condensate tank, air compressors as well as a generator were observed in this building. The generator was located in the room identified as diesel and pump room. The chemical storage room located on the northern portion of the building was likely used for water treatment chemicals rather than hazardous chemicals. A small addition to this building was located on the southeast corner of this building. It had one aboveground level that appeared to be used as a former storage building. Access was not provided to the addition on the southeast corner of the building; however, it appear to be empty from the windows aside from some wooden crates and shelving units.</p> <p>Construction of this building is brick on a poured concrete foundation. The interior of the building includes drywall and concrete block walls.</p>	

Topic	Observations	Source
	<p><u>562 Booth Street:</u></p> <p>The building at 562 Booth Street was a former NRCan Fuel Research Laboratory building. It is a rectangular shaped building with five levels including four aboveground levels and one partially below ground basement level. Construction is brick and concrete block on a poured concrete foundation. The interior of the building includes a mix of drywall, concrete block walls, brick walls, floor tiles and poured concrete floors.</p> <p>The first, second and third floor include primarily consists of vacant offices and laboratory rooms and the fourth floor is a partial floor that was the former penthouse. A floor plan found in the building indicated that foundry work was previously completed in the northwest corner of the first floor. Two large empty freezers were noted on the western portion of the second floor. The basement level include vacant laboratory rooms, mechanical and electrical rooms, an empty loading area, vacant lunchroom and a former chemical storage room. The mechanical and electrical rooms were observed on the northwest and southeast corners of the basement and contained various mechanical and electrical equipment such as compressors, a steam condensate tank, fire sprinkler system and transformers. Another small electrical room was observed on the northern portion of this floor. The electrical room on the northwest corner of the building could not be accessed and was identified as a confined space. The chemical storage room was located on the southeast portion of the basement and was mainly empty aside from a chemical storage locker, a sink, a fume hood and some containerized water treatment chemicals. Evidence in some of the basement laboratory rooms such as plastic doors/shields and emergency lights and alarms and labelling indicated that hazardous substances were used in these labs.</p> <p><u>568 Booth Street:</u></p> <p>The 568 Booth Street building was the former NRCan Physical Metallurgy Laboratory building in which metal fabrication occurred and is a U-shaped building. The northern portion of this building has three levels (one aboveground main level, one partially below ground basement level and one fully below ground sub-basement level). The eastern portion of this building had three levels (two aboveground and one partially below ground basement level). The southern portion of this building has five levels (three aboveground, a partially below ground basement level and a partially below ground sub-basement level). The sub-basements are only partial floors on the western portion of the building.</p>	

Topic	Observations	Source
	<p>Construction of this building is brick and concrete block on a poured concrete foundation. The interior of the building includes a mix of drywall, concrete block walls, floor tiles, drop ceiling tiles and poured concrete floors.</p> <p>The main floor and upper floors of this building are mostly vacant offices and laboratory rooms. The basement level of the eastern portion of this building is occupied by an old laboratory room and a few mechanical and electrical rooms with various mechanical equipment including hot water tanks, fire sprinkler system, air handling units, water pumps as well as some transformers. The basement level of the southern portion of this building was mainly occupied by vacant laboratory rooms, offices and an empty mechanical room. The sub-basement level of this portion of the building contained several vacant radioactive laboratory rooms, an empty mechanical workshop room that was located on the southwest corner of the building and a couple mechanical rooms with some equipment including a boiler and a glycol mixing tank and pump. A small electrical room was also noted on the eastern portion of the sub-basement level. The basement level of the northern portion of this building appeared to be an old workshop area with various industrial equipment and some offices. Gauges were observed along the southern interior wall. It is possible that these were for a former fuel storage tank; however, there is no other indication of a fuel storage tank located along this wall. A floor plan on the wall of this building indicated that this portion of the building was used as a foundry and metal forming lab. The sub-basement level on the northern portion of the building was located on the westernmost portion of the building and appeared to be a former metals workshop area with old industrial equipment including a forging press, an in-ground hydraulic hoist, two air compressors and other equipment.</p> <p>A high voltage electrical room was located at the southeast corner of the northern portion of this building and an oil storage room was located at the southwest corner of the northern portion of this building. These rooms were accessed from the building's exterior only.</p>	

Topic	Observations	Source
	<p><u>Butler Hut Building:</u> This building is a single storey rectangular shaped building. Access was not provided to this building; however, based on a previous Phase II ESA report and information provided by the Site Representative, fuel oil storage tanks were formerly present in this building. These tanks are suspected to have been removed; however, this could not be confirmed. Construction of this building is brick on a poured concrete foundation. Details of the building interior are unknown.</p> <p><u>Hazardous Substances Storage Shed:</u> This building is a square shaped steel storage shed on a concrete pad. Access was not provided to this interior of the storage shed; however, observations made from the window indicated that this building contained welding gas cylinders.</p>	
Building Areas	<ol style="list-style-type: none"> 1. 405 Rochester Street building: approximately 540 m². 2. 550 Booth Street building: approximately 540 m². 3. 552 Booth Street building: approximately 1,700 m². 4. 556 Booth Street building: approximately 800 m². 5. 558 Booth Street building: approximately 530 m². 6. 562 Booth Street building: approximately 1,830 m². 7. 568 Booth Street building: approximately 4,230 m². 8. Butler hut building: approximately 150 m². 9. Storage shed: approximately 15 m². 	Site observations
Number of Floors (include all levels, whether above or below ground)	<ol style="list-style-type: none"> 1. 405 Rochester Street building: five levels, three of which are aboveground and two of which are partially below ground. 2. 550 Street building: five levels, four of which are aboveground and one of which is below ground. The upper level is a penthouse and is only a partial level located on the central portion of the building. 3. 552 Booth Street building: five levels, three of which are aboveground, one of which is partially below ground and another (lowest level) which is aboveground as it is only a partial level located on the western portion of the Site. The upper level is also a partial floor and is located on the eastern portion of the building. 4. 556 Booth Street building: five levels, three of which are above ground, one of which is partially below ground and the other that is fully below ground. The upper level is a penthouse and is only a partial level located on the central portion of the building. 	Site observations and Site Representative

Topic	Observations	Source
	<p>5. 558 Booth Street building: one partially below ground level.</p> <p>6. 562 Booth Street building: five levels, four of which are aboveground and one of which is partially below ground. The upper level is a penthouse and is only a partial level on central portion of the building.</p> <p>7: 568 Booth Street building: the northern portion of this building has three levels, one of which is aboveground, one of which is partially below ground and another that is a partial floor located fully below ground on the western portion of the building. The eastern portion of this building has three levels, two of which is aboveground and one of which is partially below ground. The southern portion of this building has five levels, three of which are aboveground and two of which are partially below ground. The lowest level on this portion of the building is only present at the central and western portions of the building.</p> <p>8. Butler hut building: one partially below ground level.</p> <p>9. Storage shed: one aboveground level.</p>	
Number, Age, and Depth of Levels Below Ground Level	<p>1. 405 Rochester Street building: two partially below ground levels that were constructed in 1939.</p> <p>2. 550 Street building: one below ground level that was constructed in 1937-1939.</p> <p>3. 552 Booth Street building: one partially below ground level that was constructed between in 1932.</p> <p>4. 556 Booth Street building: one partially below ground level and one fully below ground level that were constructed between 1933 and 1945. This level is only a partial floor on the western portion of the building.</p> <p>5. 558 Booth Street building: one partially below ground level constructed between 1933 and 1945</p> <p>6. 562 Booth Street building: one partially below ground level that was constructed in 1927-1929.</p> <p>7: 568 Booth Street building: the northern portion of this building has one partially below ground level (constructed in 1942) and a partial floor that is located fully below ground on the western portion of the building (constructed between 1942 and 1952). The eastern portion of this building has one partially below ground level that was constructed in 1942. The southern portion of this building has two partially below ground levels, one that was constructed in 1942 and the other (lowest level) was constructed on between 1942 and 1952.</p>	<p>Site observations, Site Representative, Previous Reports and aerial photographs</p>

Topic	Observations	Source
	<p>8. Butler hut building: one partially below ground level constructed between 1976 and 1991.</p> <p>9. Storage shed: none</p>	
Number and Details of all Aboveground Storage Tanks (“ASTs”)	<p>A generator which formerly had an associated day tank was located on the northeast corner the central heating plant in the diesel and pump room. The former diesel day tank (AST) was likely located on a concrete pad that was observed adjacent to the generator. Two cut pipes were observed in the eastern wall of this room and were likely the supply lines that extended from the former day tank through the underground service tunnel to the fuel USTs in the butler hut building as stickers on the wall indicated fuel supply and return lines.</p> <p>A generator and associated fuel AST (likely diesel) was located in a generator shed on the roof of the basement level of the northern portion of the 568 Booth Street building on its south side. Access was not provided into this generator shed and therefore, the size and type of the fuel storage tank could not be confirmed.</p> <p>The current and/or former presence of these fuel ASTs on the Phase One Property are on-Site PCAs.</p>	Site observations and Site Representative
Number and Details of all Underground Storage Tanks (“USTs”)	Fuel oil storage tanks which were the main fuel oil supply to the central heating plant have been stored in the butler hut building. It is unknown if these tanks remain present in the building and the details of these tanks are unknown as access was not provided into this building. Based on the information provided in the ERIS report, these fuel storage tanks were USTs and as considered to be on-Site PCAs.	Site observations
Hazardous Building Materials	As discussed in Section 3.1.6, DSSs completed for the main Site buildings in 2002 identified hazardous building materials including acrylonitrile, arsenic, asbestos, benzene, mercury, silica, vinyl chloride and/or lead are present in these buildings. Details regarding the presence or absence of designated substances and hazardous building materials are reported in the 2002 Asbestos Reports.	Site observations, Site Representative and Previous Reports
Polychlorinated Biphenyls (PCB) Containing Materials and Equipment	At the time of the Site visit, several transformers were observed in most Site buildings. The 2002 Asbestos Report indicated that the transformers observed in the Site buildings did not contain PCBs; however, records in the ERIS report confirmed the presence of transformers with PCB-containing oil. Based on this information combined the age of the Site buildings, it is likely that some of the transformers present in the Site buildings are liquid filled transformers	Site observations, Previous Reports and ERIS Report

Topic	Observations	Source
	<p>with PCB-containing oil and therefore considered to be on-Site PCAs. During the Site visit, multiple transformers were located throughout the buildings at 550, 552, 556, 562 and 568 Booth Street and in the southeast corner of the sub-basement floor of the building at 405 Rochester Street. No transformers were identified in the central heating plant, the butler hut building or the hazardous substances storage shed. No evidence of spills or leaks was noted in the area of the transformers at the time of the Site visit.</p> <p>Additionally, there are a number of fluorescent lights in the main Site buildings and based on the age of these buildings, there is a potential for the fluorescent light ballasts within this building to contain PCBs.</p>	
<u>Underground Utilities</u> Potable and Non-Potable Water Sources	The Site is connected to the municipal water supply but the supply is currently shut off. There were no non-potable water sources identified at the Site at the time of the Site visit.	Site observations and Site Representative
Utility Lines Present (i.e. Electrical, Natural Gas, other)	No overhead utility lines were observed on the Site. Buried utility lines are present on the Site, the exact locations of which are unknown as utility drawings were not provided for the Site. An underground service tunnel which contained steam line and other utility lines intersected the central portion of the Site extended east from the central heating plant.	Site observations and Site Representative
Sanitary/Process Wastewater Receptor	<p>No sanitary or process wastewater is generated currently on-Site; however, the sanitary and process wastewater that was previously generated on Site was discharged to the municipal sanitary sewer.</p> <p>Several floor drains were present throughout the Site buildings including in chemical storage areas and industrial areas. Some floor drains were connected directly to the storm and/or sanitary sewer.</p>	Site observations and Site Representative
Sanitary Sewer Connection	The Site is connected to the municipal sanitary sewer.	Site observations and Site Representative
Septic Systems	None identified.	Site observations and Site Representative

Topic	Observations	Source
Storm Water Flow	Storm water run-off is collected via catch basins observed on the Site and along Orangeville Street, Booth Street, Rochester Street and Norman Street which convey the run-off to underlying municipal sewers.	Site observations
Storm Sewer Connection	The Site is connected to the municipal storm sewer. At the time of the Site visit, multiple sewer catch basins were observed in the paved portions of the Site. As noted above, several floor drains were present throughout the Site buildings including in chemical storage areas and industrial areas. Some floor drains were connected directly to the storm and/or sanitary sewer.	Site observations
<u>Interior of Structures</u> Entry and Exit Points for Site Buildings	<p>The main Site buildings have multiple entry and exit points. The main entry and exit points for these buildings are as follows:</p> <ul style="list-style-type: none"> -405 Rochester Street and 550 Booth Street buildings: north side -552, 556, 562 and 568 Booth Street buildings: east side -558 Booth Street building: west side <p>The butler hut building and hazardous substances storage shed have one entry and exit point on the south side and west side of the buildings, respectively.</p>	Site observations and Site Representative
Existing and Former Heating System(s) (include fuel type / source)	The Site buildings are current not heated. The main Site buildings were formerly heated by steam radiators and wall-mounted heaters connected to three large steam boilers located in the central heating plant located on the Site. Space heater were also observed in some of the buildings. The three boilers are currently out-of-service but were previously fueled by natural gas and originally fueled by coal. A previously discussed, a diesel generator was observed in the central heating plant as well as fuel lines extending towards the butler hut and location of former fuel oil tanks which suggests that the boilers were fueled with diesel/fuel oil prior to being fueled by natural gas. As access was not provided into the butler hut building, the continued presence of fuel tanks could not be confirmed. The hazardous substances storage shed was not heated.	Site observations and Site Representative
Existing and Former Cooling System(s) (include fuel type / source)	There are no cooler systems for any of the buildings on the Site. The main Site buildings were formerly cooled with window mounted air conditioners. There was no cooling in the butler hut building or the storage shed.	Site observations and Site Representative

Topic	Observations	Source
Drains, Pits, and Sumps (include current use, if any, and former use)	There were several sumps and floor drains observed in the lowest levels of the main Site buildings. Water was observed in many of the sump pits; however, no evidence of hydrocarbon odours or sheens were observed in the water. Some of the sumps were confirmed to discharge to the storm sewer but the discharge points of others could not be determined.	Site observations
Unidentified Substances	<p>Unidentified substances include the following:</p> <ul style="list-style-type: none"> -Four drums of unknown content were observed along the northern exterior wall of the building at 568 Booth Street. -A drum of unknown content was observed on the second floor of the 562 Booth Street building. -A closed waste bin labelled “danger, do not remove” was located on the sub-basement floor of the 552 Booth Street building. The contents of this waste bin are unknown. -Three pails were observed on in the southwest corner of the basement floor of the building 562 Booth Street. Two of the pails were empty, one of which was noted to formerly contain absorbent soaked with radioactive oil. The third pail was closed, the contents of which are unknown. -A pail of approximately 3 L of yellow oily fluid was observed in the chemical storage room in the 562 Booth Street building. 	Site observations and Site Representative
Floor Stains or Corrosion Located near a Potential Discharge Location	Oil staining was observed below a compressor in the vicinity of a floor drain on the sub-basement floor of the northern portion of the building at 568 Booth Street. In addition, oil stains and a pile of oil absorbent were observed around a floor drain beside two air compressors in the southeast corner of the basement at 550 Booth Street. Oil staining and a small amount of oil absorbent was also noted below a compressor in the vicinity of a floor drain on the north side of the sub-basement floor of the 556 Booth Street buildings.	Site observations
<u>Miscellaneous Exterior</u> Location of any Current and Former Wells	<p>Six wells were identified on the Site as follows:</p> <ul style="list-style-type: none"> -Two located on the northeast corner of the Site in the parking lot, one of which was installed as part of a geotechnical and hydrogeological program that was being completed on the Site at the time of the Site visit. -One located on the north side of the building at 556 Booth Street which was also installed as part of the latest geotechnical and hydrogeological program. 	Site observations and Site Representative

Topic	Observations	Source
	<ul style="list-style-type: none"> -One on the central portion of the Site between the buildings at 558 and 562 Booth Street. -One on the eastern portion of the Site between the buildings at 562 and 568 Booth Street. -One between the northern and southern portions of the 568 Booth Street building. -One on the southeast corner of the Site in the parking lot. <p>Several other monitoring wells were installed across the Site as part of previous Phase II ESA investigations but were not observed at the time of the Site visit.</p>	
Ground Cover (i.e., grass, gravel, soil, or pavement, etc.)	The majority of the Site exterior consists of paved parking lots. Some concrete access paths and a few small landscaped areas were present around the buildings. In addition, grass was observed along parts of the western Site boundary.	Site observations and Site Representative
Current or Former Railway Lines or Spurs	None currently observed, however, a railway spur was present crossing the northeast corner of the Site and the surrounding lands were occupied historically by several rail lines.	Site observations.
Presence of Stained Soil, Vegetation, or Pavement	Several areas of staining were noted on the building interiors, specifically around historical equipment such as the compressors in the basement levels of 558, 560 and 568 Booth Street.	Site observations
Presence of Stressed Vegetation	None observed.	Site observations
Areas Where Fill and/or Debris Materials Appear to Have Been Placed	No piles of fill material was observed during the Site visit. A small pile of debris material was observed on the northern side of the northern portion of the 568 Booth Street building.	Site observations

Topic	Observations	Source
<p>Potentially Contaminating Activity</p>	<p>The following PCAs were identified on the Site:</p> <ul style="list-style-type: none"> -Former metal fabrication conducted in the northern portion of the 568 Booth Street building. -Buried hydraulic hoist located in the sub-basement of the northern portion of the 568 Booth Street building. -Bulk storage of chemicals in the southern portion of the 568 Booth Street building (as discussed in Section 5.2.1). -Bulk chemical storage in the hazardous substances storage shed. -Oil formerly stored in the oil storage room on the southwest corner of the northern portion of the 568 Booth Street building. -Generator and associated day tank located on the southern side of the northern portion of the 568 Booth Street building. -Bulk storage of chemicals in the northwest corner of the basement at 556 Booth Street and former equipment maintenance conducted in this building. -Bulk storage of chemicals in the basement at 562 Booth Street building. -Generator and former day tank located on the northeast corner of the central heating plant (558 Booth Street building). -Current and/or former presence of fuel oil USTs in the butler hut building. -Former ore dressing laboratory and bulk storage of chemicals (as discussed in Section 5.2.1) located in the building at 552 Booth Street. -Former ore dressing laboratory located in the building at 550 Booth Street. -Current presence of multiple transformers located throughout the buildings at 550, 552, 556, 562 and 568 Booth Street and in the southeast corner of the sub-basement floor of the building at 405 Rochester Street. <p>In addition, it is noted that although fuel spills are not a listed PCA under O.Reg. 153/04, the following spills were considered to be activities that would result in an APEC on the Site as they were located in close proximity to floor drains in the lowest level of buildings:</p> <ul style="list-style-type: none"> -Oil spill from a compressor on the sub-basement floor of the northern portion of the building at 568 Booth Street. -Oil spill from air compressors in the southeast corner of the basement at 550 Booth Street. 	<p>Site observations and Site Representative</p>

Topic	Observations	Source
	<p>-Oil spill from a compressor on the north side of the sub-basement floor of the 556 Booth Street building.</p> <p>The presence of floor drains throughout the Site buildings, especially in areas of chemical use are considered PCAs but can be linked to the PCAs for bulk chemical storage and not considered as an independent PCA of its own.</p>	

5.2.1 Enhanced Investigation Property

Given that the Site was previously an industrial property, the Site is considered to be an enhanced investigation property as defined by O. Reg. 153/04. Relevant information is reported in the following table:

Topic	Observations	Source
Operations at the property, including processing or manufacturing	None observed or reported. However, minerals processing formerly took place in the ore dressing labs at 550 and 552 Booth Street and metals fabrication formerly occurred in the physical metallurgy laboratory at 568 Booth Street.	Site observations, Previous Reports and Site Representative
Hazardous materials used or stored at the Phase one property	<p>Hundreds of different hazardous materials were formerly used and stored on the Site. An inventory of all hazardous materials was not completed due to the long history of laboratory R&D on the Site. Observed chemicals included fuel stored in storage tanks, ethylene glycol stored in drums, acids, sodium nitrate, calcium chloride, radioactive substance and numerous other laboratory chemicals that were used in the former laboratories. In addition, small quantities (<20 L) of other chemicals including oils, lubricants, hydraulic fluid, paints, thinners, coolants and ethylene glycol were observed at various locations in the main Site buildings.</p> <p>Bulk storage of hazardous materials was identified at the following locations on the Site:</p> <ul style="list-style-type: none"> - The chemical storage room located on the southeast portion of the 562 Booth Street building basement. 	Site observations and Site Representative

Topic	Observations	Source
	<p>-On the sub-basement floor of 568 Booth Street building through the various laboratories including the radioactive laboratories.</p> <p>-The oil storage room located at the southwest corner of the northern portion of the 568 Booth Street building.</p> <p>-The butler hut which currently or formerly contained fuel oil tanks.</p> <p>-The hazardous chemical storage room.</p> <p>-An oil storage room was located on the northwest corner of the basement of the 556 Booth Street building. Papers on the door of this room indicated that storage in this room included various paint supply products, oils and lubricant and other miscellaneous chemicals including methyl hydrate, contact cement, duct sealer and varsol.</p> <p>These areas of bulk chemical storage are considered to be on-Site PCAs.</p>	
Products manufactured at the Phase one property	Various metals products were previously manufactured in the building at 568 Booth Street.	Site observations, Previous Reports and Site Representative
By-products and wastes at the Phase one property	A few waste disposal and recycling bins were observed in and beside the main Site buildings and were used to storage old commercial waste. Wastes and by-products would have been historically located on the Site as well; however, details were not provided.	Site observations, Previous Reports and Site Representative

Topic	Observations	Source
Raw materials handling and storage locations at the Phase one property	Various rocks and minerals have been handled and/or stored in the main Site buildings. Lumber would have been stored on the northernmost portion of the Site as the FIPs indicated that this area was formerly identified as a lumber yard. In addition, coal was formerly stored in the central heating plant at 558 Booth Street.	Site observations, FIPs, Previous Reports and Site Representative
Location and contents of drums, totes and bins at the Phase one property	<p>The following drums (all 200 L) were observed on the Site:</p> <ul style="list-style-type: none"> -Four drums of unknown content and one empty drum located along the northern exterior wall of the building at 568 Booth Street. -A drum of unknown content located on the second floor of the 562 Booth Street building. -An empty drum located on the main floor of 556 Booth Street. -A full drum of hydraulic fluid located on the main floor of 556 Booth Street near the parts washer (discussed below). -One drum partially full labelled ethylene glycol located on the sub-basement floor of 562 Booth Street. -Two drums on the north portion of the main floor at 550 Booth Street. One was full of plastic debris and the other contained water. No odours or sheen were noted in the water. -An empty drum of ethylene glycol was observed on the basement level of the southern portion of the 568 Booth Street building. 	Site observations and Site Representative
The location, installation date, source of incoming liquid and effluent discharge location for all oil-water separators	None observed or reported.	Site observations and Site Representative

Topic	Observations	Source
All vehicle and equipment maintenance areas, including the locations of maintenance, fluid storage, and waste storage areas	<p>The sub-basement and ground floor of the 562 Booth Street building were formerly used for mechanical shops in which equipment maintenance was conducted. Several cranes were observed on these floors and a parts washer was observed on the central portion of the main floor. A small pile of oil absorbent was present on the floor near the parts washer suggested oil spills have previously occurred from it. The parts washer was located on a concrete floor above a basement level and no floor drains were observed in its proximity. In addition, a 200 L closed drum of hydraulic oil was located in the vicinity of the parts washer. Other small quantities of chemicals (20 gallon or less) such as oils, lubricants, paint, primers and cleaners were located in this area as well.</p> <p>No other vehicle or equipment maintenance areas were reported or observed.</p>	<p>Site observations and Site Representative</p>
Details of all spills including the dates, locations, materials involved, and volumes of material spilled	<p>The ERIS report has two records of spills that occurred on the Site. One record was for hydrogen sulfide that released to the atmosphere from the building at 568 Booth Street in 2006. The other record was for 3 L of hydraulic oil that spilled to the ground at 568 Booth Street from a truck in 2013.</p> <p>At the time of the Site visit, evidence of spills (staining, presence of oil absorbent) from several pieces of mechanical equipment was observed. The noteworthy spills include those in close proximity to floor drains in the lowest level of the Site buildings. These includes the oil spills from compressors in the building at 550, 556 and 568 Booth Street as discussed in Section 5.2. The dates and volumes of these spills were not provided.</p>	<p>ERIS Report, Site observations and Site Representative</p>

Topic	Observations	Source
Details of liquid discharge points such as water and French drains, including their locations	Several floor drains were observed throughout the main Site buildings.	Site observations and Site Representative
Details of all hydraulic lift equipment at the property, including elevators, in-ground hoists and loading docks	<p>There was one hydraulic elevator located in the buildings at 405 Rochester Street and 550, 556 and 568 Booth Street and two hydraulic elevators located in the buildings at 552 and 562 Booth Street. All elevators are out of use.</p> <p>There was one loading dock with a hydraulic lift located on the north side of the 562 Booth Street buildings and a hydraulic piston was noted in the basement of 568 Booth Street.</p>	Site observations and Site Representative

5.3 Surrounding Land Use

During the Site visit, a visual reconnaissance of the outdoor operations in the Phase One Study Area was carried out from the Site and publicly accessible areas.

The surrounding properties include commercial, residential, parkland and institutional land uses, as illustrated on Figure 2A.

North: Orangeville Street followed by Highway 417 beyond which are several residential buildings (single residential houses and townhouses) and a school.

East: Booth Street following by government office and laboratory buildings and residential development (single residential houses and some apartment buildings). Fill and vent pipes for a fuel storage tank were observed approximately 75 m east of the Site on the north side of the adjacent government buildings located across Booth Street at 601 Booth Street. A park was also located at 343 Bell Street South.

South: Norman Street following by government office and/or laboratory buildings. The lands southwest of the Site were primarily occupied by residential buildings (mainly single residential houses) and some commercial buildings.

West: Rochester Street followed by a mix of residential development (mainly single residential houses and a few apartment buildings) and commercial development including restaurants, pubs, retail units, automotive garages and office buildings. Three automotive garages were located on the surrounding properties were of the Site. They were located at 402 Preston Street (approximately 210 m west of the Site), 50 Beech Street (approximately 70 m west of the Site) and 70 Beech Street (approximately 130 m west of the Site). A dry cleaning facility with an associated fuel AST was located approximately 170 m west of the Site at 361 Preston Street. Another dry cleaning facility was located at 451 Preston Street, approximately 225 m southwest of the Site; however, a sign on the door indicated that it was a drop-off depot only.

5.4 Written Description of Investigation

The Site is located at 405 Rochester Street and 550, 552, 556, 558, 562 and 568 Booth Street and is bounded to the north by Orangeville Street, to the east by Booth Street, to the south by Norman Street and to the west by Rochester Street. At the time of the Site visits, conducted on June 13 and 20, 2018, the Site consisted of an approximately 6.0 acre parcel of land. The Site was developed with seven former industrial buildings (the main Site buildings), a hazardous substances chemical storage shed and a butler hut building which provided access to an underground service tunnel. Six of the main Site buildings were former NRCan facilities including the industrial mines and ceramics laboratory building, ore dressing laboratory buildings, fuel research laboratory buildings, metallurgy laboratory buildings and a mechanical shops and storage building. The other main Site building was the central heating plant that was formerly owned and operated by PWGSC. The butler hut was also formerly owned by PWGSC. All buildings on the Site were vacant and mostly empty aside from some out of service mechanical, electrical, laboratory and industrial equipment. No operations were being conducted at the Site at the time of the Site visit. As discussed in Section 5.2, the following PCAs were identified on the Site at the time of the Site visit:

- Former metal fabrication conducted in the northern portion of the 568 Booth Street building.
- Buried hydraulic hoist located in the sub-basement of the northern portion of the 568 Booth Street building.
- Bulk storage of chemicals in the southern portion of the 568 Booth Street building.
- Bulk chemical storage in the hazardous substances storage shed.
- Oil formerly stored in the oil storage room on the southwest corner of the northern portion of the 568 Booth Street building.
- Generator and associated day tank located on the southern side of the northern portion of the 568 Booth Street building.
- Bulk storage of chemicals in the northwest corner of the basement at 556 Booth Street and former equipment maintenance conducted in this building.
- Bulk storage of chemicals in the basement at 562 Booth Street building.
- Generator and former day tank located on the northeast corner of the central heating plant (558 Booth Street building).
- Current and/or former presence of fuel oil USTs in the butler hut building.
- Former ore dressing laboratory and bulk storage of chemicals (as discussed in Section 5.2.1) located in the building at 552 Booth Street.
- Former ore dressing laboratory located in the building at 550 Booth Street.
- Current presence of multiple transformers located throughout the buildings at 550, 552, 556, 562 and 568 Booth Street and in the southeast corner of the sub-basement floor of the building at 405 Rochester Street.

In addition, there was evidence of oil spills (staining and/or absorbent soaked with oil) from some of the compressors on the Site. These spills were observed in close proximity to floor drains and are therefore considered to be activities that could potentially result in an APEC on the Site. These spills were noted on the sub-basement floor of the northern portion of the 568 Booth Street building, in the southeast corner of the basement of the 550 Booth Street building and on the northern portion of the sub-basement level of the 556 Booth Street building.

The surrounding properties within the Phase One Study Area included commercial, residential, parkland and institutional land uses. It was noted during the Site visit that a dry cleaning facility with an associated fuel AST was located approximately 170 m west of the Site at 361 Preston Street and fill and vent pipes for a fuel storage tank were observed approximately 75 m east of the Site on the north side of the adjacent government buildings located across Booth Street at 601 Booth Street and. Three automotive garages were also observed on the surrounding properties at 402 Preston Street (approximately 210 m west of the Site), 50 Beech Street (approximately 70 m west of the Site) and 70 Beech Street (approximately 130 m west of the Site). The current presence of the fuel storage tanks and automotive garages located within the Phase One Study Area are considered to be off-Site PCAs. It could not be confirmed if the dry cleaning facility at 361 Preston Street was a drop-off depot where no cleaning takes place, or if dry cleaning was undertaken at the facility and is therefore considered to be on off-Site PCAs. Another dry cleaning facility was located on the surrounding lands southwest of the Site but was identified as a drop-off depot only. Therefore, it is not considered to be a PCA.

6.0 REVIEW AND EVALUATION OF INFORMATION

6.1 Current and Past Uses of the Site

The following table summarizes the current and past uses of the Phase One Property based a review of FIPs, street directories, aerial photographs, previous environmental reports and information provided by the Site Representative. Similar to table outlining the current and past ownership of the Site, the Site has been divided into the following three sections in the following table: the northernmost portion of the Site which includes the land north of the current buildings at 405 and 550 Booth Street, the southernmost portion of the Site which includes the land south of the currently building at 568 Booth Street and the central portion of the site which includes the land between the northernmost and southernmost portions of the Site and just defined.

Year(s)	Description of Property Use	Property Land Use According to Reg.153/04
Northern Portion of Site		
Prior to 1885/86	Undeveloped	Agricultural or other use
Sometime between 1885/86 and 1890/91 to 1901	This portion of the Site is developed with a few residential dwellings.	Residential
1901 to 1948	This portion of the Site is occupied by a few residential dwellings and a couple industrial or commercial facilities including a carriage shop and a J.R. lumberyard and associated building.	Residential, Industrial and/or Commercial
1948 to 1958	Industrial facilities have been removed. This portion of the Site is now only occupied by residential dwellings.	Residential

Year(s)	Description of Property Use	Property Land Use According to Reg.153/04
1958 to Present	Occupied by parking lot associated with industrial buildings on the central portion of the Site.	Industrial
2015 to Present	Industrial buildings remain on the Site but are vacant. No operations are conducted.	Industrial
Central Portion of Site		
Sometime between 1885/86 and 1890/91 to 1901	Undeveloped	Agricultural or other use
Sometime between 1885/86 and 1890/91 to 1901	This portion of the Site is developed with a few residential dwellings.	Residential
1901 to 1934	Occupied by residential dwellings and a couple industrial buildings, specifically a building associated with the J.R. Booth lumberyard and a fuel testing/peat experimental plant.	Residential and Industrial
1934 to 2015	The residential dwellings are no longer present and this portion of the Site is occupied by various industrial buildings (NRCan laboratories, research and testing buildings and as well as a heating plant) which have been constructed on the Site between 1932 and 1991.	Industrial
2015 to Present	Industrial buildings remain on the Site but are vacant. No operations are conducted.	Industrial

Year(s)	Description of Property Use	Property Land Use According to Reg.153/04
Southernmost Portion of Site		
Prior to 1885/86	Undeveloped	Agricultural or other use
Sometime between 1885/86 and 1890/91 to 1958	This portion of the Site is developed with a few residential dwellings.	Residential
1958 to Present	Occupied by parking lot associated with industrial buildings on the central portion of the Site.	Industrial
2015 to Present	Industrial buildings remain on the Site but are vacant. No operations are conducted.	Industrial

6.2 Potentially Contaminating Activity

Potentially contaminating activities, which if currently or historically carried out at a Site, may contribute to an area of potential environmental concern (APEC). Based on the information obtained as part of this Phase One ESA, the following PCA was identified within the Phase One Study Area:

Location	Potentially Contaminating Activity	Information Source	Rationale for Potential Contribution of the PCA to an APEC
Phase One Property	34. Metal Fabrication – Former machine shop located on the northeast corner of the Site at the 11 Lydia Street.	FIPs, City of Ottawa HLUI	This PCA is located on the Site and is therefore considered to be a PCA that will result in an APEC on the Site.
	59. Wood Treating and Preservative Facility and Bulk Storage of Treated and Preserved Wood Products – Former lumber yard that encroached on the northernmost portion of the Site.	FIPs and City of Ottawa HLUI	This PCA is located on the Site and is therefore considered to be a PCA that will result in an APEC on the Site.
	57. Vehicle and Associated Parts Manufacturing - Former carriage shop located on the northeast corner of the Site at the former 366 Division.	FIPs and City of Ottawa HLUI	This PCA is located on the Site and is therefore considered to be a PCA that will result in an APEC on the Site.

Location	Potentially Contaminating Activity	Information Source	Rationale for Potential Contribution of the PCA to an APEC
	46. Rail Yards, Tracks and Spurs – Former presence of a railway intersecting the northern portion of the Site.	FIPs, aerial photographs	This PCA is located on the Site and is therefore considered to be a PCA that will result in an APEC on the Site.
	30. Importation of Fill Material of Unknown Quality – Fill material with documents impacts located on the Site outside of the building footprints, central and south portion of the Site. This fill material reportedly contains debris.	Previous Reports, aerial photographs, ERIS Report	This PCA is located on the Site and is therefore considered to be a PCA that will result in an APEC on the Site.
	30. Importation of Fill Material of Unknown Quality – Residual fill material with documented impacts is located on the northern portion of the Site beneath and adjacent to structures/utilities. This fill material reportedly contains debris.	Previous Reports, aerial photographs, ERIS Report	This PCA is located on the Site and is therefore considered to be a PCA that will result in an APEC on the Site.
	28. Gasoline and Associated Products Storage in Fixed Tanks – Former AST potentially containing fuel located adjacent to the link between the buildings at 550 and 552 Booth Street.	Aerial photographs	This PCA is located on the Site and is therefore considered to be a PCA that will result in an APEC on the Site.
	34. Metal Fabrication; 8. Chemical Manufacturing, Processing and Bulk Storage; and 55. Transformer Manufacturing, Processing and Use – Former bulk storage of chemicals and current presence of multiple transformers in the building at 568 Booth Street. Metal fabrication was also formerly conducted in the northern portion of the building.	Previous Reports, ERIS Report, Site Observations	This PCA is located on the Site and is therefore considered to be a PCA that will result in an APEC on the Site.
	8. Chemical Manufacturing, Processing and Bulk Storage; and 55. Transformer Manufacturing, Processing and Use – Former bulk storage of chemicals and current presence of multiple transformers in the building at 562 Booth Street.	Previous Reports, Site Observations	This PCA is located on the Site and is therefore considered to be a PCA that will result in an APEC on the Site.

Location	Potentially Contaminating Activity	Information Source	Rationale for Potential Contribution of the PCA to an APEC
	8. Chemical Manufacturing, Processing and Bulk Storage; and 55. Transformer Manufacturing, Processing and Use - Current presence of multiple transformers and former bulk storage of chemicals in the basement of the 556 Booth Street building. Equipment maintenance was also formerly conducted in this building.	Previous Reports, ERIS Report, Site Observations	This PCA is located on the Site and is therefore considered to be a PCA that will result in an APEC on the Site.
	28. Gasoline and Associated Products Storage in Fixed Tanks – Current and/or former fuel USTs in the butler hut building.	Previous Reports, ERIS Report, Site Observations	This PCA is located on the Site and is therefore considered to be a PCA that will result in an APEC on the Site.
	8. Chemical Manufacturing, Processing and Bulk Storage - Former bulk storage of chemicals in the hazardous substances storage shed.	Previous Reports, Site Observations	This PCA is located on the Site and is therefore considered to be a PCA that will result in an APEC on the Site.
	35. Mining, Smelting and Refining; Ore Processing; Tailings Storage; 9. Coal gasification; and 55. Transformer Manufacturing, Processing and Use - Current presence of multiple transformers and former ore dressing, fuels research and coal gasification conducted in the building at 552 Booth Street.	Previous Reports, Site Observations	This PCA is located on the Site and is therefore considered to be a PCA that will result in an APEC on the Site.
	35. Mining, Smelting and Refining; Ore Processing; Tailings Storage; and 8. Chemical Manufacturing, Processing; Bulk Storage; and 55. Transformer Manufacturing, Processing and Use - Current presence of multiple transformers and former ore dressing conducted in the building at 550 Booth Street.	Previous Reports, ERIS Report, Site Observations	This PCA is located on the Site and is therefore considered to be a PCA that will result in an APEC on the Site.

Location	Potentially Contaminating Activity	Information Source	Rationale for Potential Contribution of the PCA to an APEC
	28. Gasoline and Associated Products Storage in Fixed Tanks – Current generator and former day tank located on the northeast corner of the building at 558 Booth Street.	Site Observations	This PCA is located on the Site and is therefore considered to be a PCA that will result in an APEC on the Site.
	28. Gasoline and Associated Products Storage in Fixed Tanks – Current generator and associated fuel AST located on the southern side of the northern portion of the 568 Booth Street building.	Site Observations	This PCA is located on the Site and is therefore considered to be a PCA that will result in an APEC on the Site.
	28. Gasoline and Associated Products Storage in Fixed Tanks – Current hydraulic hoist located in the sub-basement of the northern portion of the 568 Booth Street building.	Site Observations	This PCA is located on the Site and is therefore considered to be a PCA that will result in an APEC on the Site.
	8. Chemical Manufacturing, Processing and Bulk Storage - Former oil storage in the oil storage room located on the southwest corner of the northern portion of the 568 Booth Street building.	Site Observations	This PCA is located on the Site and is therefore considered to be a PCA that will result in an APEC on the Site.
	8. Chemical Manufacturing, Processing; Bulk Storage; and Transformer Manufacturing, Processing and Use - Current presence of multiple transformers in the southeast corner of the sub-basement floor at 405 Rochester Street.	Site Observations	This PCA is located on the Site and is therefore considered to be a PCA that will result in an APEC on the Site.
Phase One Study Area	59 Wood Treating and Preservative Facility and Bulk Storage of Treated and Preserved Wood Products; and 46. Rail Yards, Tracks and Spurs – Former lumber yard and associated rail lines located approximately 15 m east of the Site.	FIPs, City of Ottawa HLUI, aerial photographs	Given that this PCA was located hydraulically up-gradient with respect to the Site, it is considered to represent an APEC on the Site.

Location	Potentially Contaminating Activity	Information Source	Rationale for Potential Contribution of the PCA to an APEC
	59. Wood Treating and Preservative Facility and Bulk Storage of Treated and Preserved Wood Products; and 46. Rail Yards, Tracks and Spurs – Former lumber yard and an associated rail line located approximately 15 m west of the Site.	FIPs, City of Ottawa HLUI, aerial photographs	Given that this PCA was located hydraulically down-gradient with respect to the Site and separated from the Site by Rochester Street and its underlying services, it is not considered to be a PCA that will result in an APEC on the Site.
	59. Wood Treating and Preservative Facility and Bulk Storage of Treated and Preserved Wood Products – Former lumber yard located immediately north of the Site.	FIPs	This PCA is located immediately north and up-gradient with respect to the Site and is therefore considered to result in an APEC on the Site.
	59. Wood Treating and Preservative Facility and Bulk Storage of Treated and Preserved Wood Products – Former lumber yard located approximately 80 m north of the Site.	FIPs	Given the distance and amount of infrastructure between the Site and this facility, it is not considered to be a PCA that will result in an APEC on the Site.
	28. Gasoline and Associated Products Storage in Fixed Tanks – Former retail fuel outlet with three associated fuel USTs located approximately 210 m southeast of the Site at 745 Carling Avenue.	FIPs, City of Ottawa HLUI, Previous Reports	Given the distance and amount of infrastructure between the Site and this facility and that this facility was located hydraulically cross-gradient with respect to the Site, it is not considered to be a PCA that will result in an APEC on the Site.
	28. Gasoline and Associated Products Storage in Fixed Tanks; and 10. Commercial Autobody Shops – Former retail fuel outlet and automotive garage with two associated fuel USTs at 765 Carling Avenue; approximately 200 m south of the Site.	FIPs, City of Ottawa HLUI, Previous Reports	Given the distance and amount of infrastructure between the Site and this facility and that this facility was located hydraulically down-gradient with respect to the Site, it is not considered to be a PCA that will result in an APEC on the Site.

Location	Potentially Contaminating Activity	Information Source	Rationale for Potential Contribution of the PCA to an APEC
	28. Gasoline and Associated Products Storage in Fixed Tanks; and 10. Commercial Autobody Shops – Former automotive garage with one associated fuel USTs at 773 Carling Avenue; approximately 220 m south of the Site.	FIPs, City of Ottawa, HLUI	Given the distance and amount of infrastructure between the Site and this facility and that this facility was located hydraulically down-gradient with respect to the Site, it is not considered to be a PCA that will result in an APEC on the Site.
	28. Gasoline and Associated Products Storage in Fixed Tanks; and 10. Commercial Autobody Shops – Former automotive garage with two associated fuel USTs located approximately 230 m south of the Site at 783 Carling Avenue.	FIPs	Given the distance and amount of infrastructure between the Site and this facility and that this facility was located hydraulically down-gradient with respect to the Site, it is not considered to be a PCA that will result in an APEC on the Site.
	34. Metal Fabrication – Former machine shop located approximately 115 m south of the Site at 604 Booth Street.	FIPs, City of Ottawa HLUI	Given the distance and amount of infrastructure between the Site and this facility and that this facility was located hydraulically down-gradient with respect to the Site, it is not considered to be a PCA that will result in an APEC on the Site.
	37. Operation of Dry Cleaning Facility (where chemicals are used) – Former dry cleaning facility located approximately 215 m south of the Site at 787 Carling Avenue.	FIPs, City of Ottawa HLUI	Given the distance and amount of infrastructure between the Site and this facility and that this facility was located hydraulically down-gradient with respect to the Site, it is not considered to be a PCA that will result in an APEC on the Site.
	37. Operation of Dry Cleaning Facility (where chemicals are used) – Former dry cleaning facility located approximately 15 m west of the Site at 506 Rochester Street.	FIPs, City of Ottawa HLUI	Given that this PCA was located hydraulically down-gradient with respect to the Site and separated from the Site by Rochester Street and its underlying services, it is not considered to be a PCA that will result in an APEC on the Site.

Location	Potentially Contaminating Activity	Information Source	Rationale for Potential Contribution of the PCA to an APEC
	10. Commercial Autobody Shops – Former automotive garage located approximately 50 m west of the Site at 20 Beech Street.	FIPs, City of Ottawa HLUI	Given the distance and amount of infrastructure between the Site and this facility and that this facility was located hydraulically down-gradient with respect to the Site, it is not considered to be a PCA that will result in an APEC on the Site.
	59. Wood Treating and Preservative Facility and Bulk Storage of Treated and Preserved Wood Products; 34. Metal Fabrication; and 28. Gasoline and Associated Products Storage in Fixed Tanks – Former planing mill and metal fabrication shop with heating oil tank located at 60 Beech Street; approximately 100 m west of the Site.	FIPs	Given the distance and amount of infrastructure between the Site and this facility and that this facility was located hydraulically down-gradient with respect to the Site, it is not considered to be a PCA that will result in an APEC on the Site.
	10. Commercial Autobody Shops – Former Smith Transportation Ltd. garage located approximately 15 m west of the Site at 550 Beech Street.	FIPs	Given that this PCA was located hydraulically down-gradient with respect to the Site and separated from the Site by Rochester Street and underlying services, it is not considered to be a PCA that will result in an APEC on the Site.
	29. Glass Manufacturing; and 43. Plastics (Including Fibreglass) Manufacturing and Processing – Former bottle manufacturing facility located at 22 Aberdeen Street; approximately 100 m west of the Site.	FIPs, City of Ottawa HLUI	Given the distance and amount of infrastructure between the Site and this facility and that this facility was located hydraulically cross- and down-gradient with respect to the Site, it is not considered to be a PCA that will result in an APEC on the Site.

Location	Potentially Contaminating Activity	Information Source	Rationale for Potential Contribution of the PCA to an APEC
	28. Gasoline and Associated Products Storage in Fixed Tanks; and 10. Commercial Autobody Shops – Former Clark Dairy Ltd. with an associated automotive repair shop and fuel UST located approximately 40 m west of the Site at 5 Aberdeen Street.	FIPs	Given the distance and amount of infrastructure between the Site and this facility and that this facility was located hydraulically cross- and down-gradient with respect to the Site, it is not considered to be a PCA that will result in an APEC on the Site.
	34. Metal Fabrication – Former machine shop located approximately 100 m west of the Site at 25 Aberdeen Street.	FIPs	Given the distance and amount of infrastructure between the Site and this facility and that this facility was located hydraulically cross- and down-gradient with respect to the Site, it is not considered to be a PCA that will result in an APEC on the Site.
	10. Commercial Autobody Shops – Former truck repair shop located at 339 Preston Street; approximately 175 m west of the Site.	FIPs	Given the distance and amount of infrastructure between the Site and this facility, it is not considered to be a PCA that will result in an APEC on the Site.
	28. Gasoline and Associated Products Storage in Fixed Tanks – Former presence of two fuel USTs and an oil storage shed located approximately 175 m west of the Site at 339 Preston Street.	FIPs, City of Ottawa HLUI	Given the distance and amount of infrastructure between the Site and this facility, it is not considered to be a PCA that will result in an APEC on the Site.
	28. Gasoline and Associated Products Storage in Fixed Tanks; and 10. Commercial Autobody Shops – Current automotive garage with two fuel USTs and former retail fuel outlet with two fuel USTs at 402 Preston Street; approximately 210 m west of the Site.	FIPs, City of Ottawa HLUI, Site Observations	Given the distance and amount of infrastructure between the Site and this facility, it is not considered to be a PCA that will result in an APEC on the Site.

Location	Potentially Contaminating Activity	Information Source	Rationale for Potential Contribution of the PCA to an APEC
	28. Gasoline and Associated Products Storage in Fixed Tanks; and 10. Commercial Autobody Shops – Former automotive garage with two associated fuel USTs and potential fuel spill at 316 Bell Street; approximately 170 m east of the Site.	FIPs, City of Ottawa HLUI, ERIS Report	Given the distance and amount of infrastructure between the Site and this facility, it is not considered to be a PCA that will result in an APEC on the Site.
	10. Commercial Autobody Shops – Former automotive garage located at 360 Bell Street; approximately 180 m east of the Site.	FIPs	Given the distance and amount of infrastructure between the Site and this facility, it is not considered to be a PCA that will result in an APEC on the Site.
	34. Metal Fabrication – Former machine shop located approximately 65 m north of the Site at the 374 Rochester Street.	FIPs	Given the distance and amount of infrastructure between the Site and this facility including Norman Street and its underlying services, it is not considered to be a PCA that will result in an APEC on the Site.
	10. Commercial Autobody Shops – Current automotive garage located at 50 Beech Street; approximately 70 m west of the Site.	Site Observations	Given the distance and amount of infrastructure between the Site and this facility and that this facility was located hydraulically cross- and down-gradient with respect to the Site, it is not considered to be a PCA that will result in an APEC on the Site.
	10. Commercial Autobody Shops – Current automotive garage located at 70 Beech Street; approximately 130 m west of the Site.	Site Observations	Given the distance and amount of infrastructure between the Site and this facility and that this facility was located hydraulically cross- and down-gradient with respect to the Site, it is not considered to be a PCA that will result in an APEC on the Site.

Location	Potentially Contaminating Activity	Information Source	Rationale for Potential Contribution of the PCA to an APEC
	37. Operation of Dry Cleaning Facility (where chemicals are used); and 28. Gasoline and Associated Products Storage in Fixed Tanks – Current dry cleaning facility with an associated fuel AST located approximately 170 m west of the Site at 391 Preston Street Carling Avenue.	Site Observations	Given the distance and amount of infrastructure between the Site and this facility, it is not considered to be a PCA that will result in an APEC on the Site.
	10. Commercial Autobody Shops; and 54. Textile Manufacturing and Processing – Former automotive garage and silk manufacturing company located at 34 Beech Street; approximately 15 m west of the Site.	City of Ottawa HLUI	Given that this PCA was located hydraulically down-gradient with respect to the Site and separated from the Site by Rochester Street and its underlying services, it is not considered to be a PCA that will result in an APEC on the Site.
	30. Iron and Steel Manufacturing and Processing Operation; and 34. Metals Fabrication – Former iron works facility and machine shop located approximately 105 m north of the Site at 496 Booth Street.	City of Ottawa HLUI	Given the distance and amount of infrastructure between the Site and this facility, it is not considered to be a PCA that will result in an APEC on the Site.
	34. Metal Fabrication – Former machine shop located approximately 115 m west of the Site at 72 Norman Street.	City of Ottawa HLUI	Given the distance and amount of infrastructure between the Site and this facility and that this facility was located hydraulically cross- and down-gradient with respect to the Site, it is not considered to be a PCA that will result in an APEC on the Site.
	34. Metal Fabrication – Former machine shop located approximately 70 m west of the Site at 66 Norman Street.	City of Ottawa HLUI	Given the distance and amount of infrastructure between the Site and this facility and that this facility was located hydraulically cross- and down-gradient with respect to the Site, it is not considered to be a PCA that will result in an APEC on the Site.

Location	Potentially Contaminating Activity	Information Source	Rationale for Potential Contribution of the PCA to an APEC
	10. Commercial Autobody Shops – Former automotive garage located at 410 Rochester Street; approximately 15 m west of the Site.	City of Ottawa HLUI	Given that this PCA was located hydraulically down-gradient with respect to the Site and separated from the Site by Rochester Street and its underlying services, it is not considered to be a PCA that will result in an APEC on the Site.
	34. Metal Fabrication – Former machine shop located at 93 Norman Street, approximately 240 m west of the Site.	City of Ottawa HLUI	Given the distance and amount of infrastructure between the Site and this facility and that this facility was located hydraulically down-gradient with respect to the Site, it is not considered to be a PCA that will result in an APEC on the Site.
	10. Commercial Autobody Shops – Former automotive garage located at 439 Preston Street; approximately 160 m west of the Site.	City of Ottawa HLUI	Given the distance and amount of infrastructure between the Site and this facility and that this facility was located hydraulically down-gradient with respect to the Site, it is not considered to be a PCA that will result in an APEC on the Site.
	10. Commercial Autobody Shops – Former automotive garage located at 413 Arlington Street; approximately 170 m north of the Site.	City of Ottawa HLUI	Given the distance and amount of infrastructure between the Site and this facility, it is not considered to be a PCA that will result in an APEC on the Site.
	10. Commercial Autobody Shops – Former automotive garage located; approximately 90 m east of the Site at 290 Lebreton Street.	City of Ottawa HLUI	Given the distance and amount of infrastructure between the Site and this facility, it is not considered to be a PCA that will result in an APEC on the Site.

Location	Potentially Contaminating Activity	Information Source	Rationale for Potential Contribution of the PCA to an APEC
	28. Gasoline and Associated Products Storage in Fixed Tanks; 35. Mining, Smelting and Refining; Ore Processing; Tailings Storage; and 10. Commercial Autobody Shops – Former retail fuel outlet with two associated fuel storage tanks, a mica manufacturing facility and Smith Transportation Ltd. located approximately 15 m west of the Site at 450 Rochester Street.	City of Ottawa HLUI, TSSA, ERIS Report	Given that this PCA was located hydraulically down-gradient with respect to the Site and separated from the Site by Rochester Street and its underlying services, it is not considered to be a PCA that will result in an APEC on the Site.
	30. Iron and Steel Manufacturing and Processing Operation – Former iron works facility located approximately 135 m southwest of the Site at 77 Pamilla Street.	City of Ottawa HLUI	Given the distance and amount of infrastructure between the Site and this facility and that this facility was located hydraulically down-gradient with respect to the Site, it is not considered to be a PCA that will result in an APEC on the Site.
	28. Gasoline and Associated Products Storage in Fixed Tanks – Former retail fuel outlet located approximately 150 m west of the Site at 329 Rochester Street.	City of Ottawa HLUI	Given the distance and amount of infrastructure between the Site and this facility and that this facility was located hydraulically cross-gradient with respect to the Site, it is not considered to be a PCA that will result in an APEC on the Site.
	28. Gasoline and Associated Products Storage in Fixed Tanks – Former petroleum products wholesaler located at 24 George Street, approximately 240 m west of the Site.	City of Ottawa HLUI	Given the distance and amount of infrastructure between the Site and this facility, it is not considered to be a PCA that will result in an APEC on the Site.
	57. Vehicle and Associated Parts Manufacturing - Former vehicle parts manufacturer located approximately 60 m west of the Site at 60 Beech Street.	City of Ottawa HLUI	Given the distance and amount of infrastructure between the Site and this facility and that this facility was located hydraulically down-gradient with respect to the Site, it is not considered to be a PCA that will result in an APEC on the Site.

Location	Potentially Contaminating Activity	Information Source	Rationale for Potential Contribution of the PCA to an APEC
	37. Operation of Dry Cleaning Facility (where chemicals are used) – Former dry cleaning facility located at 355 Preston Street; approximately 145 m west of the Site.	City of Ottawa HLUI	Given the distance and amount of infrastructure between the Site and this facility, it is not considered to be a PCA that will result in an APEC on the Site.
	10. Commercial Autobody Shops – Former automotive garage located at 317 Lebreton Street; approximately 125 m east of the Site.	City of Ottawa HLUI	Given the distance and amount of infrastructure between the Site and this facility, it is not considered to be a PCA that will result in an APEC on the Site.
	10. Commercial Autobody Shops – Former automotive garage located at 517 Rochester Street; approximately 45 m south of the Site.	City of Ottawa HLUI	Given that this facility was located hydraulically down-gradient with respect to the Site and separated from the Site by Norman Street and its underlying services, it is not considered to be a PCA that will result in an APEC on the Site.
	39. Paints Manufacturing, Processing and Bulk Storage – Former paint manufacturer located 85 Pamilla Street, approximately 175 m southwest of the Site.	City of Ottawa HLUI	Given the distance and amount of infrastructure between the Site and this facility, it is not considered to be a PCA that will result in an APEC on the Site.
	28. Gasoline and Associated Products Storage in Fixed Tanks – Former fuel storage tank located approximately 75 m east of the Site on the north side of the adjacent government buildings located at 601 Booth Street.	Site Observations	Given the distance and amount of infrastructure between the Site and this facility including Booth Street and its underlying services, it is not considered to be a PCA that will result in an APEC on the Site.
	28. Gasoline and Associated Products Storage in Fixed Tanks – A private and retail fuel outlet with one diesel AST was located at 494 Rochester Street; approximately 15 m west of the Site.	ERIS Report	Given that this PCA was located hydraulically down-gradient with respect to the Site and separated from the Site by Rochester Street and its underlying services, it is not considered to be a PCA that will result in an APEC on the Site.

Location	Potentially Contaminating Activity	Information Source	Rationale for Potential Contribution of the PCA to an APEC
	54. Pulp, Paper and Paperboard Manufacturing and Processing – Former pulp and paper mill located approximately 15 m south of the Site at 580 Booth Street.	ERIS Report	Given that this facility was located hydraulically down-gradient with respect to the Site and separated from the Site by Norman Street and its underlying services, it is not considered to be a PCA that will result in an APEC on the Site.
	46. Rail Yards, Tracks and Spurs – Former railway located approximately 20 m north of the Site.	FIPs, aerial photographs	Given that the railway is located off-Site and that there have been no reported spills along the railway, it is not considered to be a PCA that will result in an APEC on the Site.
	55. Transformer Manufacturing, Processing and Use – Current and/or former presence of transformers in building at 555 Booth Street (approximately 15 m east of the Site).	ERIS Report	Given that the transformers were likely located on concrete floors in the building, that there have been no reported spills from the transformers and that they are separated from the Site by Booth Street and its underlying services, they are not considered to be a PCA that will result in an APEC on the Site.
	55. Transformer Manufacturing, Processing and Use – Current and/or former presence of transformers in building at 615 Booth Street (approximately 15 m east of the Site).	ERIS Report	Given that the transformers were likely located on concrete floors in the building, that there have been no reported spills from the transformers and that they are separated from the Site by Booth Street and its underlying services, they are not considered to be a PCA that will result in an APEC on the Site.

Location	Potentially Contaminating Activity	Information Source	Rationale for Potential Contribution of the PCA to an APEC
	55. Transformer Manufacturing, Processing and Use – Current and/or former presence of transformers in building at 580 Booth Street (approximately 15 m south of the Site).	ERIS Report	Given that the transformers were likely located on concrete floors in the building, that there have been no reported spills from the transformers and they are located hydraulically down-gradient with respect to the Site, they are not considered to be a PCA that will result in an APEC on the Site.
	28. Gasoline and Associated Products Storage in Fixed Tanks – A 10 L fuel oil spill from a fuel oil AST at 245 Plymouth Street, approximately 125 m east of the Site.	ERIS Report	Given the distance and amount of infrastructure between the Site and this facility, it is not considered to be a PCA that will result in an APEC on the Site.
	30. Importation of Fill Material of Unknown Quality – Fill material with documents impacts has been identified across the property at 615 Booth Street, approximately 15 m east of the Site.	Previous Reports,	Given that this PCA is located hydraulically up-gradient with respect to the Site, it is considered to represent an APEC on the Site.

In addition to the aforementioned PCAs, a coal storage shed, contaminated groundwater were identified on the Site is the FIPs and previous reports, respectively, and, at the time of the Site visit, there was evidence of oil spills from air compressors located on the lowest level of three of the Site buildings near floor drains. The FIPs identified a former coal yard on the surrounding properties, the City of Ottawa HLUI identified former commercial printing shops on the surrounding properties and the previous reports identified groundwater impacts across the adjacent property east of the Site at 615 Booth Street. Although a coal storage, contaminated groundwater, fuel spills, and a commercial printing shop not listed PCAs under O.Reg. 153/04, they are activities that could potentially result in an APEC on the Site. The details of these activities are discussed below:

- The FIPs identified a coal storage shed that was located on the eastern formerly located on the Site to the east of the building at 556 booth Street (formerly 49 Division Street). This facility was located on the Site and is therefore considered to result in an APEC on the Site.

- At the time of the Site visit, evidence of oil spills (staining and/or absorbent soaked with oil) was noted from some of the compressors located in close proximity to floor drains in three of the Site buildings, specifically on the sub-basement floor of the northern portion of the 568 Booth Street building, in the southeast corner of the basement of the 550 Booth Street building and on the northern portion of the sub-basement level of the 556 Booth Street building. These oil spills are considered to result in an APEC on the Site given that they were located on the lowest levels of buildings and near floor drains which may be in poor condition due to their age. Similarly, the floor drains are located throughout the basement levels in industrial areas and in chemical storage areas. Given the large amount of chemical use and the duration of operations at the Site (100 years), there is the potential for spills and improper chemical disposal to floor drains and therefore, the floor drains are also considered to represent an APEC for this reason along with the areas of visible oil staining.
- Previous Phase II ESAs identified groundwater with metals impacts above the previous and current applicable site standards were identified across the Site. VOC impacts above the current applicable site standards were also identified at a few locations across the Site. The impacted groundwater was not vertically delineated and is an APEC. The source of the groundwater impacts are likely related to one or more of the on-Site PCAs.
- A previous Phase II ESA identified hydrocarbon impacted groundwater above the current applicable site standards at one monitoring well formerly located on the eastern portion of the Site between the butler hut building and the building at 552 Booth Street. The impacted groundwater was not vertically delineated and is an APEC. The impacts may be related to the former/current fuel storage at the butler hut location.
- The FIPs identified a coal yard that was formerly located approximately 80 m northwest of the Site. However, given the distance and amount of infrastructure between the Site and this facility and that it was located hydraulically cross-gradient with respect to the Site, it is not considered to be a PCA that will result in an APEC on the Site.
- The FIPs and City of Ottawa HLUI identified a commercial printing shop that was formerly located at 401 Preston Street (approximately 160 m west of the Site). However, given the distance and amount of infrastructure between the Site and this facility and that it was located hydraulically down-gradient with respect to the Site, it is not considered to be a PCA that will result in an APEC on the Site.
- The City of Ottawa HLUI identified a commercial printing shop that was formerly located at 440 Preston Street (approximately 230 m southwest of the Site). However, given the distance and amount of infrastructure between the Site and this facility and that it was located hydraulically down-gradient with respect to the Site, it is not considered to be a PCA that will result in an APEC on the Site.
- A previous Phase II ESA indicated that contaminated groundwater was identified across the adjacent property east of the Site at 615 Booth Street, approximately 15 m east of the Site. Given that this property is located hydraulically up-gradient with respect to the Site, the contaminated groundwater present on this property is considered to represent an APEC on the Site.

6.3 Areas of Potential Environmental Concern

The following table summarizes the findings of the Phase One ESA based on the available information. Figure 2C indicates the location of identified APECs.

Area of Potential Environmental Concern	APEC Location	Potentially Contaminating Activity	Location of PCA (on-Site or off-Site)	Chemical of Concern	Media Potentially Impacted
APEC 1 - Potential for subsurface impacts due to the former presence of a machine shop, lumberyard carriage shop and railway located on the northern portion of the Site and a former lumberyard immediately north of the Site.	Northeast corner of the Site.	Former presence of a machine shop, lumberyard carriage shop and railway located on the Site and former lumberyard located immediately north of the Site (PCAs 34, 46, 57 and 59).	On-Site and off-Site	PHC F1 to F4, BTEX, VOCs, PAHs, metals and phenols	Soil and Groundwater
APEC 2 - Potential for subsurface impacts due to the former presence of a coal storage shed located on the eastern portion of the Site, east of the 556 Booth Street building.	Central portion of Site along eastern Site boundary.	Former presence of a coal storage shed on the Site (unlisted PCA).	On-Site	PHC F1 to F4, BTEX and PAHs	Soil
APEC 3 - Documented soil (fill) impacts outside the building footprints on the central and southern portions of the Site.	Central and southern portions of the Site.	Presence of impacted fill material on the Site (PCA 30).	On-Site	PHC F1 to F4, BTEX, VOC, PAHs, and metals	Soil and Groundwater
APEC 4 - Potential for limited areas of soil (fill) impacts due to the presence of residual impacted fill material beneath and adjacent to structures/utilities on the northern portion of the Site.	Northern portion of the Site.	Presence of residual impacted fill material on the Site (PCA 30).	On-Site	PHC F1 to F4, BTEX, PAHs, and metals	Soil

Area of Potential Environmental Concern	APEC Location	Potentially Contaminating Activity	Location of PCA (on-Site or off-Site)	Chemical of Concern	Media Potentially Impacted
APEC 5 - Documented metals and VOC impacts in groundwater across the Site.	Site-wide.	On-Site activities and PCAs all have the potential to contribute to this APEC (unlisted PCA).	On-Site	Metals and VOCs	Groundwater
APEC 6 - Potential for subsurface impacts due to the former presence of a an AST of unknown content south of the 550 Booth Street building and an oil spill in the southeast corner of the 550 Booth Street basement.	Northern portion of Site at the southeast corner of the 550 Booth Street building.	Potential presence of a former AST of unknown content and historic oil spill on the Site (PCA 28).	On-Site	PHCs F1 to F4, BTEX and VOCs.	Soil and Groundwater
APEC 7 - Potential for subsurface impacts due to the former bulk storage of chemicals, former metal fabrication and current transformers in the building at 568 Booth Street.	Southern portion of Site around the building at 568 Booth Street.	Former bulk storage of chemicals, former metal fabrication and current transformers on the Site (PCAs 8, 34 and 55).	On-Site	PHC F1 to F4, BTEX, VOCs, PCBs and metals	Soil and Groundwater
APEC 8 - Potential for subsurface impacts due to the former bulk storage of chemicals and current transformers in the building at 562 Booth Street.	Central and eastern portion of the Site around the building at 562 Booth Street.	Former bulk storage of chemicals and current transformers on the Site (PCAs 8 and 55).	On-Site	PHC F1 to F4, BTEX, VOCs, PCBs and metals	Soil and Groundwater

Area of Potential Environmental Concern	APEC Location	Potentially Contaminating Activity	Location of PCA (on-Site or off-Site)	Chemical of Concern	Media Potentially Impacted
APEC 9 - Potential for subsurface impacts due to the former bulk storage of chemicals, equipment maintenance and current transformers in the building at 556 Booth Street.	Central and western portion of the Site around the building at 556 Booth Street.	Former bulk storage of chemicals, equipment maintenance and current transformers on the Site (PCAs 8 and 55).	On-Site	PHC F1 to F4, BTEX, VOCs, PCBs and metals	Soil and Groundwater
APEC 10 - Potential for subsurface impacts due to the current and/or former presence of fuel USTs in the butler hut building and PHC impacted groundwater identified north of the butler hut building.	Central and western portion of the Site around the butler hut building.	Current and/or former fuel USTs and documented groundwater impacts on the Site (PCA 28).	On-Site	PHC F1 to F4 and BTEX	Soil and Groundwater
APEC 11 - Potential for subsurface impacts due to the former bulk storage of chemicals in the hazardous substances storage shed and an oil spill on the north side of the 556 Booth Street sub-basement floor.	Western portion of the Site around the hazardous substances storage shed and northern portion of the building at 556 Booth Street.	Former bulk storage of chemicals and historical oil spill on the Site (PCAs 8 and 55).	On-Site	PHC F1 to F4, BTEX, VOCs and metals	Soil and Groundwater

Area of Potential Environmental Concern	APEC Location	Potentially Contaminating Activity	Location of PCA (on-Site or off-Site)	Chemical of Concern	Media Potentially Impacted
APEC 12 - Potential for subsurface impacts due to former ore dressing, coal gasification, fuels research and current transformers in the building at 552 Booth Street.	Northern portion of the Site around the building at 552 Booth Street.	Former ore dressing, fuels research, coal gasification and current transformers on the Site (PCAs 9, 35, 55 and unlisted PCA).	On-Site	PHC F1 to F4, BTEX, VOCs, PAHs, PCBs, phenols, metals and inorganics	Soil and Groundwater
APEC 13 - Potential for subsurface impacts due to former ore dressing and current transformers in the building at 550 Booth Street.	Northeast portion of the Site around the building at 550 Booth Street.	Former ore dressing and current transformers on the Site (PCAs 35 and 55).	On-Site	PHC F1 to F4, BTEX, VOCs, PCBs, metals and inorganics	Soil and Groundwater
APEC 14 - Potential for subsurface impacts due to presence of a generator and former day tank located on the northeast corner of the building at 558 Booth Street.	Western portion of the Site at the northeast portion of the building at 558 Booth Street	Current generator and former fuel AST on the Site (PCA 28).	On-Site	PHC F1 to F4 and BTEX	Soil and Groundwater

Area of Potential Environmental Concern	APEC Location	Potentially Contaminating Activity	Location of PCA (on-Site or off-Site)	Chemical of Concern	Media Potentially Impacted
APEC 15 - Potential for subsurface impacts due to presence of a hydraulic hoist, and historic fuel spills in the sub-basement of the northern portion of the 568 Booth Street building and former oil storage shed and current generator with fuel AST located on the south side of the northern portion of the 568 Booth Street building.	Southern portion of the Site at the northwest corner of the 568 Booth Street building.	Current presence of a hydraulic hoist, generator and fuel AST on the Site and former oil storage shed and historic oil spills on the Site (PCAs 8 and 28).	On-Site	PHC F1 to F4 and BTEX	Soil and Groundwater
APEC 16 - Potential for subsurface impacts due to current presence of transformers in the southeast corner of the sub-basement floor at 450 Rochester Street.	Northern portion of the Site at southeast corner of the building at 450 Rochester Street.	Current presence of transformers on the Site (PCA 55).	On-Site	PHC F1 to F4, BTEX and PCBs	Soil and Groundwater
APEC 17 - Potential for subsurface impacts along the east side of the Site due to former off-Site lumber yard and associated rail lines approximately 15 m east of the Site and documented soil and groundwater impacts on the adjacent property east of the Site at 615 Booth Street.	Easternmost portion of the Site.	Former lumberyard and rail lines and impacts soil and ground on the adjacent property east of the Site (PCAs 46, 59 and unlisted PCA).	Off-Site	PHC F1 to F4, BTEX, PAHs, VOCs, phenols and metals	Soil and Groundwater

6.4 Conceptual Site Model

A Conceptual Site Model of the Phase One Study Area (as required by O.Reg. 153/04) is presented in a series of Figures 1 to 8 (Figure 1: Key Plan, Figure 2A: Site Plan, Figure 2B: Detailed Site Plan, Figure 2C: Areas of Potential Environmental Concern (APECs), Figure 3: Topographic Map and Areas of Natural Significance, Figure 4: Surficial Geology, Figure 5: Bedrock Geology, Figure 6: Drift Thickness, Figure 7: Soil Survey Complex (Ontario Soils), and Figure 8: Physiography Map).

The combined set of figures shows:

- Existing buildings and structures;
- Water bodies and Areas of Natural Significance (if present) located in the Phase One Study Area;
- Drinking water wells on the Phase One Property;
- Roads (including names) within the Phase One Study Area;
- Uses of properties adjacent to the Phase One Property; and,
- Location of identified PCAs in the Phase One Study Area (including any storage tanks).

The following describes the Phase One ESA Conception Site Model (CSM) for the Site based on the information obtained and reviewed as part of this Phase One ESA:

- At the time of the Site visit, conducted on June 13 and 20, 2018, the Site consisted of an approximately 6.0 acre parcel of land. The Site was developed with seven former industrial buildings (the main Site buildings), a hazardous substances chemical storage shed and a butler hut building which provided access to an underground service tunnel. Six of the main Site buildings were former NRC facilities including the industrial mines and ceramics laboratory building, ore dressing laboratory buildings, fuel research laboratory buildings, metallurgy laboratory buildings and a mechanical shops and storage building. The other main Site building was the central heating plant that was formerly owned and operated by PWGSC. The butler hut was also formerly owned by PWGSC. All buildings on the Site were unoccupied and mostly vacant aside from some out-of-service mechanical, electrical, laboratory and industrial equipment. No operations were being conducted at the Site at the time of the Site visit;
- The Site is bounded to the north by Orangeville Street, to the east by Booth Street, to the south by Norman Street and to the west by Rochester Street;
- No drinking water wells have been present on the Site;
- The previous reports indicate that fill material is present Site wide. The fill is reported contains construction debris as well as PHC, PAH and metals impacts. Most of the fill on the northernmost portion of the Site (north of 562 Booth Street) has been removed from the Site and was reportedly replaced with clean fill;
- The nearest permanent watercourse is Dow's Lake which is located approximately 375 m south of the Site;
- No areas of natural and scientific interest (ANSI) are known to be located on the Site or on the Phase One Study Area. Based on available information, the Site is not considered to be an environmentally sensitive area. However, a response from the MNRF has not been received to confirm this. As such, the Site is not considered an area of natural significance;

- At the time of the Phase One ESA, the surrounding properties within the Phase One Study Area were comprised of commercial, residential, parkland and institutional land uses;
- The following roads were located within the Phase One Study Area at the time of the Site visit:
 - Booth Street, Norman Street, Orangeville Street, Rochester Street, Plymouth Street, Lebreton Street South, Henry Street, Bell Street South, Maclean Street, Carling Avenue, Adeline Street, Norfolk Avenue, Beech Street, Aberdeen Street, Highway 417, George Street West, Young Street, Arlington Avenue and Raymond Street;
- The geological mapping indicates that the subsurface conditions at the majority of the Site are bedrock, specifically limestone, dolomite, sandstone and local shale, and that ill, plain with local relief (<5m) is expected to be present along the southern half of the western Site boundary. However, based on the review of previous environmental reports, the subsurface conditions at the Site consist of a sandy fill overlying limestone bedrock. The geological mapping indicates that the bedrock at the Site of the Verulam Formation (limestone, and shale). Previous environmental reports indicate that bedrock at the Site consists of limestone;
- Groundwater is anticipated to flow southwest; and,
- The PCAs that may have resulted in an APEC on the Site are presented in Section 6.2 in of this report.

6.4.1 Uncertainty and Absence of Information

At the time of preparation of this report, a response to Golder's request for information had not been received from the Ontario Ministry of Environment and Climate Change or the Ministry of Natural Resources and Forestry. However, based on the body of information acquired, it is considered that the absence of this information should not likely affect the final conclusion of the Phase One ESA. Golder will review the responses to these regulatory requests upon their receipt and should the responses affect the findings of this Phase One ESA, they will be forwarded to the Client. There were no material deviations to the Phase One ESA requirements set out in O.Reg. 153/04 that would cause uncertainty or absence of information that would affect the validity of the Phase One Conceptual Site Model or the findings of this Phase One ESA.

7.0 CONCLUSIONS

Based on the findings of the Phase One ESA, further investigation in the form of a Phase Two ESA is required at the Site in order to assess the potential for soil and groundwater quality impacts and/or delineate the previously identified soil and groundwater impacts in the 17 APECs that were identified on the Site. It is noted that previous Phase Two ESA work did not include investigation in all of the 17 APECs (i.e. interior of Site buildings), did not include all relevant chemical of concerns associated with each APEC and identified soil and groundwater exceedances which may require further delineation (vertically and laterally) to satisfy the requirements of Reg 153/04. Groundwater quality in the area of remediation in the north should be re-evaluated, including vertical delineation, to monitor the effect of contaminated soil removal over time.

Phase Two ESA investigation of building interiors should focus on the floor drain system in the area of chemical storage, staining and industrial equipment use.

If future development plans include the removal of all overburden materials, the Phase Two ESA would still be required to evaluate and delineate the groundwater impacts which would remain following development and would potentially require remediation or risk assessment.

7.1 Record of Site Condition Based on Phase One Environmental Site Assessment Alone

Given that the most recent land use of the Phase One Property was industrial and that the Phase One Property is to be redeveloped with redeveloped with a residential and commercial buildings, there will be a change in the land use from less sensitive to more sensitive. As such, there is a mandatory requirement for a RSC to be filed for the Site.

9.0 LIMITATIONS AND USE OF REPORT

This report (the “Report”) was prepared for the exclusive use Canada Lands Company for the express purpose of providing advice with respect to the environmental condition of the Site. In evaluating the Site, Golder Associates Ltd. (“Golder”) has relied in good faith on information provided by others as noted in the Report. We have assumed that the information provided is factual and accurate. We accept no responsibility for any deficiency, misstatement or inaccuracy contained in this Report as a result of omissions, misinterpretations or fraudulent acts of persons interviewed or contacted, or incomplete or inaccurate historical information from the various agencies. Any use which a third party makes of this Report, or any reliance on or decisions to be made based on it, is the sole responsibility of such third party. If a third party requires reliance on this Report, prior written authorization from Golder is required. Golder disclaims any responsibility of consequential financial effects on transactions or property values, or requirements for follow-up actions and costs.

The scope and the period of Golder’s assessment are described in this Report, and are subject to restrictions, assumptions and limitations. Except as noted herein, the work was conducted in accordance with the scope of work and terms and conditions of Golder’s proposal. Golder did not perform a complete assessment of all possible conditions or circumstances that may exist at the Site referenced in the Report. Conditions may therefore exist which were not detected given the limited nature of the assessment Golder was retained to undertake with respect to the Site and additional environmental studies and actions may be required. In addition, it is recognized that the passage of time affects the information provided in the Report. Golder’s opinions are based upon information that existed at the time of the writing of the Report. It is understood that the services provided for in the scope of work allowed Golder to form no more than an opinion of the actual conditions at the Site at the time the Site was visited, and cannot be used to assess the effect of any subsequent changes in any laws, regulations, the environmental quality of the Site or its surroundings. Asbestos and mould surveys were not performed. If a service is not expressly indicated, do not assume it has been provided.

The results of an assessment of this nature should in no way be construed as a warranty that the Site is free from any and all contamination from past or current practices.

10.0 STATEMENT OF COMPLETION

The undersigned confirm that this Phase One Environmental Site Assessment was conducted in a manner consistent with the expected standard of care for the consulting industry in Ontario and meets the requirements for Phase One ESAs as set out in O.Reg. 153/04, however this report has not been completed with the intent of filing a Record of Site Condition.

11.0 CLOSURE

We trust that the information presented in this report meets your current requirements. Should you have any questions or concerns, please do not hesitate to contact the undersigned.

Off-Site Potentially Contaminating Activities (PCAs)		
Location	Detail	PCA #
1	Wood Treating and Preservative Facility and Bulk Storage of Treated and Preserved Wood Products; and Rail Yards, Tracks and Spurs – Former lumber yard and associated rail lines located approximately 15 m east of the Site.	59, 46
2	Wood Treating and Preservative Facility and Bulk Storage of Treated and Preserved Wood Products; and Rail Yards, Tracks and Spurs – Former lumber yard and an associated rail line located approximately 15 m west of the Site.	59, 46
3	Wood Treating and Preservative Facility and Bulk Storage of Treated and Preserved Wood Products – Former lumber yard located immediately north of the Site.	59
4	Wood Treating and Preservative Facility and Bulk Storage of Treated and Preserved Wood Products – Former lumber yard located approximately 80 m north of the Site.	59
5	Gasoline and Associated Products Storage in Fixed Tanks – Former retail fuel outlet with three associated fuel USTs located approximately 210 m southeast of the Site at 745 Carling Avenue.	28
6	Gasoline and Associated Products Storage in Fixed Tanks; and Commercial Autobody Shops – Former retail fuel outlet and automotive garage with two associated fuel USTs at 765 Carling Avenue; approximately 200 m south of the Site.	28, 10
7	Gasoline and Associated Products Storage in Fixed Tanks; and Commercial Autobody Shops – Former automotive garage with one associated fuel USTs at 773 Carling Avenue; approximately 220 m south of the Site.	28, 10
8	Gasoline and Associated Products Storage in Fixed Tanks; and Commercial Autobody Shops – Former automotive garage with two associated fuel USTs located approximately 230 m south of the Site at 783 Carling Avenue.	28, 10
9	Metal Fabrication – Former machine shop located approximately 115 m south of the Site at 604 Booth Street.	34
10	Operation of Dry Cleaning Facility (where chemicals are used) – Former dry cleaning facility located approximately 215 m south of the Site at 787 Carling Avenue.	37
11	Operation of Dry Cleaning Facility (where chemicals are used) – Former dry cleaning facility located approximately 15 m west of the Site at 506 Rochester Street.	37
12	Commercial Autobody Shops – Former automotive garage located approximately 50 m west of the Site at 20 Beech Street.	10
13	Wood Treating and Preservative Facility and Bulk Storage of Treated and Preserved Wood Products; Metal Fabrication; and Gasoline and Associated Products Storage in Fixed Tanks – Former planing mill and metal fabrication shop with heating oil tank located at 60 Beech Street; approximately 100 m west of the Site.	59, 34, 28
14	Commercial Autobody Shops – Former Smith Transportation Ltd. garage located approximately 15 m west of the Site at 550 Beech Street.	10
15	Glass Manufacturing; and Plastics (Including Fibreglass) Manufacturing and Processing – Former bottle manufacturing facility located at 22 Aberdeen Street; approximately 100 m west of the Site.	29, 43
16	Gasoline and Associated Products Storage in Fixed Tanks; and Commercial Autobody Shops – Former Clark Dairy Ltd. with an associated automotive repair shop and fuel UST located approximately 40 m west of the Site at 5 Aberdeen Street.	28, 10
17	Metal Fabrication – Former machine shop located approximately 100 m west of the Site at 25 Aberdeen Street.	34
18	Commercial Autobody Shops – Former truck repair shop located at 339 Preston Street; approximately 175 m west of the Site.	10
19	Gasoline and Associated Products Storage in Fixed Tanks – Former presence of two fuel USTs and an oil storage shed located approximately 175 m west of the Site at 339 Preston Street.	28
20	Former coal yard located approximately 80 m northwest of the Site.	N/A
21	Gasoline and Associated Products Storage in Fixed Tanks; and Commercial Autobody Shops – Current automotive garage with two fuel USTs and former retail fuel outlet with two fuel USTs at 402 Preston Street; approximately 175 m west of the Site.	28, 10
22	Gasoline and Associated Products Storage in Fixed Tanks; and Commercial Autobody Shops – Former automotive garage with two associated fuel USTs and potential fuel spill at 316 Bell Street; approximately 170 m east of the Site.	28, 10
23	Gasoline and Associated Products Storage in Fixed Tanks – Former fuel UST located at 308 Bell Street; approximately 170 m east of the Site.	28
24	Commercial Autobody Shops – Former automotive garage located at 360 Bell Street; approximately 180 m east of the Site.	10
25	Former commercial printing shop located approximately 160 m west of the Site at 401 Preston Street.	N/A
26	Metal Fabrication – Former machine shop located approximately 65 m north of the Site at the 374 Rochester Street.	34
27	Commercial Autobody Shops – Current automotive garage located at 50 Beech Street; approximately 70 m west of the Site.	10
28	Commercial Autobody Shops – Current automotive garage located at 70 Beech Street; approximately 130 m west of the Site.	10
29	Operation of Dry Cleaning Facility (where chemicals are used); and Gasoline and Associated Products Storage in Fixed Tanks – Current dry cleaning facility with an associated fuel AST located approximately 170 m west of the Site at 391 Preston Street Carling Avenue.	37

Off-Site Potentially Contaminating Activities (PCAs)		
Location	Detail	PCA #
30	Commercial Autobody Shops; and Textile Manufacturing and Processing – Former automotive garage and silk manufacturing company located at 34 Beech Street; approximately 15 m west of the Site.	10, 54
31	Gasoline and Associated Products Storage in Fixed Tanks; and Commercial Autobody Shops – Former automotive garage located approximately 230 m southwest of the Site at 783 Carling Avenue.	28, 10
32	Commercial Autobody Shops – Former automotive garage located at the southwest corner of Rochester Street and Orangeville Street; approximately 15 m west of the Site.	10
33	Iron and Steel Manufacturing and Processing Operation; and Metals Fabrication – Former iron works facility and machine shop located approximately 105 m north of the Site at 496 Booth Street.	30, 34
34	Metal Fabrication – Former machine shop located approximately 115 m west of the Site at 72 Norman Street.	34
35	Metal Fabrication – Former machine shop located approximately 70 m west of the Site at 66 Norman Street.	34
36	Commercial Autobody Shops – Former automotive garage located at 410 Rochester Street; approximately 15 m west of the Site.	10
37	Metal Fabrication – Former machine shop located approximately 80 m west of the Site at 374 Rochester Street.	34
38	Metal Fabrication – Former machine shop located at 93 Norman Street; approximately 240 m west of the Site.	34
39	Commercial Autobody Shops – Former automotive garage located at 439 Preston Street; approximately 160 m west of the Site.	10
40	Commercial Autobody Shops – Former automotive garage located at 413 Arlington Street; approximately 170 m north of the Site.	10
41	Commercial Autobody Shops – Former automotive garage located; approximately 90 m east of the Site at 290 Lebreton Street.	10
42	Gasoline and Associated Products Storage in Fixed Tanks; Mining, Smelting and Refining; Ore Processing; Tailings Storage; and Commercial Autobody Shops – Former retail fuel outlet with two associated fuel storage tanks, a mica manufacturing facility and Smith Transportation Ltd. located approximately 15 m west of the Site at 450 Rochester Street.	28, 35, 10
43	Iron and Steel Manufacturing and Processing Operation – Former iron works facility located approximately 135 m southwest of the Site at 77 Pamilla Street.	30
44	Gasoline and Associated Products Storage in Fixed Tanks – Former retail fuel outlet located approximately 150 m west of the Site at 329 Rochester Street.	28
45	Gasoline and Associated Products Storage in Fixed Tanks – Former petroleum products wholesaler located at 24 George Street; approximately 240 m west of the Site.	28
46	Vehicle and Associated Parts Manufacturing – Former vehicle parts manufacturer located approximately 60 m west of the Site at 60 Beech Street.	57
47	Former commercial printing shop located approximately 230 m southwest of the Site at 440 Preston Street.	N/A
48	Operation of Dry Cleaning Facility (where chemicals are used) – Former dry cleaning facility located at 355 Preston Street; approximately 145 m west of the Site.	37
49	Commercial Autobody Shops – Former automotive garage located at 317 Lebreton Street; approximately 125 m east of the Site.	10
50	Commercial Autobody Shops – Former automotive garage located at 517 Rochester Street; approximately 45 m south of the Site.	10
51	Paints Manufacturing, Processing and Bulk Storage – Former paint manufacturer located 85 Pamilla Street, approximately 175 m southwest of the Site.	39
52	Gasoline and Associated Products Storage in Fixed Tanks – Former fuel storage tank located approximately 75 m east of the Site on the north side of the adjacent government buildings located at 601 Booth Street.	28
53	Gasoline and Associated Products Storage in Fixed Tanks – A private and retail fuel outlet with one diesel AST was located at 494 Rochester Street; approximately 15 m west of the Site.	28
54	Pulp, Paper and Paperboard Manufacturing and Processing – Former pulp and paper mill located approximately 15 m south of the Site at 580 Booth Street.	45
55	Rail Yards, Tracks and Spurs – Former railway located approximately 20 m north of the Site.	46
56	Transformer Manufacturing, Processing and Use – Current and/or former presence of transformers in building at 555 Booth Street (approximately 15 m east of the Site).	55
57	Transformer Manufacturing, Processing and Use – Current and/or former presence of transformers in building at 615 Booth Street (approximately 15 m east of the Site).	55
58	Transformer Manufacturing, Processing and Use – Current and/or former presence of transformers in building at 580 Booth Street (approximately 15 m south of the Site).	55
59	Gasoline and Associated Products Storage in Fixed Tanks – A 10 L fuel oil spill from a fuel oil AST at 245 Plymouth Street, approximately 125 m east of the Site.	28
60	Importation of Fill Material of Unknown Quality – Contaminated fill has been documented across the adjacent property east of the Site at 615 Booth Street.	30
61	Importation of Fill Material of Unknown Quality – Contaminated groundwater has been documented across the adjacent property east of the Site at 615 Booth Street.	N/A

On-Site Potentially Contaminating Activities (PCAs)		
Location	Detail	PCA #
1	Metal Fabrication – Former machine shop located on the northeast corner of the Site at the 11 Lydia Street.	34
2	Wood Treating and Preservative Facility and Bulk Storage of Treated and Preserved Wood Products – Former lumber yard that encroached on the northernmost portion of the Site.	59
3	Vehicle and Associated Parts Manufacturing - Former carriage shop located on the northeast corner of the Site at the former 366 Division.	57
4	Former coal storage shed located on the eastern portion of 556 Booth Street at the former 49 Division Street.	N/A
5	Rail Yards, Tracks and Spurs – Former presence of a railway intersecting the northern portion of the Site.	46
6	Importation of Fill Material of Unknown Quality – Fill material with documents impacts located on the Site outside of the building footprints on the central and southern portions of the Site. This fill material reportedly contains debris.	30
7	Importation of Fill Material of Unknown Quality – Residual fill material with documented impacts is located on the northern portion of the Site beneath and adjacent to structures/utilities. This fill material reportedly contains debris.	30
8	Previously identified impacts in groundwater are present across the Site. Impacts include metals across the Site and VOCs that were identified at a few locations across the Site.	N/A
9	Gasoline and Associated Products Storage in Fixed Tanks – Former AST potentially containing fuel located adjacent to the link between the buildings at 550 and 552 Booth Street.	28
10	Metal Fabrication; Chemical Manufacturing, Processing and Bulk Storage; and Transformer Manufacturing, Processing and Use – Former bulk storage of chemicals and current presence of multiple transformers in the building at 568 Booth Street. Metal fabrication was also formerly conducted in the northern portion of the building.	34, 8, 55
11	Chemical Manufacturing, Processing and Bulk Storage; and Transformer Manufacturing, Processing and Use - Former bulk storage of chemicals and current presence of multiple transformers in the building at 562 Booth Street.	8, 55
12	Chemical Manufacturing, Processing and Bulk Storage; and Transformer Manufacturing, Processing and Use - Current presence of multiple transformers and former bulk storage of chemicals in the basement of the 556 Booth Street building. Equipment maintenance was also formerly conducted in this building.	8, 55
13	Gasoline and Associated Products Storage in Fixed Tanks – Current and/or former fuel USTs in the butler hut building.	28
14	Chemical Manufacturing, Processing and Bulk Storage - Former bulk storage of chemicals in the hazardous substances storage shed.	8
15	Mining, Smelting and Refining; Ore Processing; Tailings Storage; and Chemical Manufacturing, Processing; Bulk Storage; and Transformer Manufacturing, Processing and Use - Current presence of multiple transformers and former ore dressing, coal gasification and ruels research conducted in the building at 552 Booth Street.	35, 55, 9, N/A
16	Mining, Smelting and Refining; Ore Processing; Tailings Storage; and Transformer Manufacturing, Processing and Use - Current presence of multiple transformers and former ore dressing conducted in the building at 550 Booth Street.	35, 55
17	Gasoline and Associated Products Storage in Fixed Tanks – Current generator and former day tank located on the northeast corner of the building at 558 Booth Street.	28
18	Gasoline and Associated Products Storage in Fixed Tanks – Current generator and associated fuel AST located on the southern side of the northern portion of the 568 Booth Street building.	28
19	Gasoline and Associated Products Storage in Fixed Tanks – Current hydraulic hoist located in the sub-basement of the northern portion of the 568 Booth Street building.	28
20	Chemical Manufacturing, Processing and Bulk Storage - Former oil storage in the oil storage room located on the southwest corner of the northern portion of the 568 Booth Street building.	8
21	Gasoline and Associated Products Storage in Fixed Tanks – Former oil spill from a compressor located near a floor drain on the sub-basement floor of the northern portion of the 568 Booth Street building.	28
22	Gasoline and Associated Products Storage in Fixed Tanks – Former oil spill from air compressors located near a floor drain in the southwest corner of the basement at 550 Booth Street.	28
23	Gasoline and Associated Products Storage in Fixed Tanks – Former oil spill from a compressor located near a floor drain on the north side of the sub-basement floor of the building at 556 Booth Street.	28
24	Transformer Manufacturing, Processing and Use - Current presence of multiple transformers in the southeast corner of the sub-basement floor at 405 Rochester Street.	55
25	Hydrocarbon impacts in groundwater above the current applicable site standards at one monitoring well formerly located on the eastern portion of the Site between the butler hut building and the building at 552 Booth Street.	N/A

APPROXIMATE PHASE ONE PROPERTY AND RSC PROPERTY

AREAS OF POTENTIAL ENVIRONMENTAL CONCERN ("APEC")

APEC #	Detail	PCA #
 1	Potential for subsurface impacts due to the former presence of a machine shop, lumberyard carriage shop and railway located on the northern portion of the Site and a former lumberyard immediately north of the Site.	34, 59, 57, 46
 2	Potential for subsurface impacts due to the former presence of a coal storage shed located on the eastern portion of the Site, east of the 556 Booth Street building.	N/A
 3	Documented soil (fill) impacts outside the building footprints on the central and southern portions of the Site.	30
 4	Potential for limited areas of soil (fill) impacts due to the presence of residual impacted fill material beneath and adjacent to structures/ utilities on the northern portion of the Site.	30
 5	Documents metals and VOC impacts in groundwater across the Site.	N/A
 6	Potential for subsurface impacts due to the former presence of an AST of unknown contact south of the 550 Booth Street building and an oil spill in the southeast corner of the 550 Booth Street basement.	28
 7	Potential for subsurface impacts due to the former bulk storage of chemicals, former metal fabrication and current transformers in the building at 568 Booth Street.	34, 8, 55
 8	Potential for subsurface impacts due to the former bulk storage of chemicals and current transformers in the building at 562 Booth Street.	8, 55
 9	Potential for subsurface impacts due to the former bulk storage of chemicals, equipment maintenance and current transformers in the building at 556 Booth Street.	8, 55
 10	Potential for subsurface impacts due to the current and/or former presence of fuel USTs in the butler hut building and PHC impacted groundwater identified north of the butler hut building.	28
 11	Potential for subsurface impacts due to the former bulk storage of chemicals in the hazardous substances storage shed and an oil spill on the north side of the 556 Booth Street sub-basement floor.	8, 28
 12	Potential for subsurface impacts due to former ore dressing, coal gasification, fuels research and current transformers in the building at 552 Booth Street.	9, 35, 55, N/A
 13	Potential for subsurface impacts due to former ore dressing and current transformers in the building at 550 Booth Street.	35, 55
 14	Potential for subsurface impacts due to presence of a generator and former day tank located on the northeast corner of the building at 558 Booth Street.	28
 15	Potential for subsurface impacts due to presence of a hydraulic hoist, and historic fuel spills in the sub-basement of the northern portion of the 568 Booth Street building and former oil storage shed and current generator with fuel AST located on the south side of the northern portion of the 568 Booth Street building.	8, 28
 16	Potential for subsurface impacts due to current presence of transformers in the southeast corner of the sub-basement floor at 450 Rochester Street.	55
 17	Potential for subsurface impacts along the east side of the Site due to former off-Site lumber yard and associated rail lines approximately 15 m east of the Site and documented soil and groundwater impacts on the adjacent property east of the Site at 615 Booth Street.	59, 46, N/A

Request

I would like to request the following information for the property identified above:

I would like to request the following information for the properties located at 405 Rochester Street and 550, 552, 556, 558, 562 and 568 Booth Street in Ottawa, Ontario:

-Information on species at risk on the site and within 250 m of the site boundaries and advice for.

To better respond to your request please briefly outline the purpose for which this information is required (e.g. proposed development, lot severance, etc. or attach details):

The request is needed to comply with Ontario Regulation 153/04 (as amended) for a Phase I Environmental Site Assessment carried out for 405 Rochester Street and 550, 552, 556, 558, 562 and 568 Booth Street in Ottawa, Ontario.

Date of works proposed: ____ / ____ / ____

Personal information contained in this form is collected in order to fulfill your request, respond to your inquiries and for other administration purposes. With regard to the personal information it collects, the ministry is bound by privacy protection rules under the Freedom of Information and Protection of Privacy Act and takes all necessary steps to safeguard personal information collected.

Please Note: This request **MUST** be made by the property owner or by someone acting on their behalf.

Depending on the nature of the request, it may take 6-8 weeks to respond to your inquiry.

If the request does not include the mandatory information, it may delay response time.

☒ I have read the above and agree to all Terms and Conditions

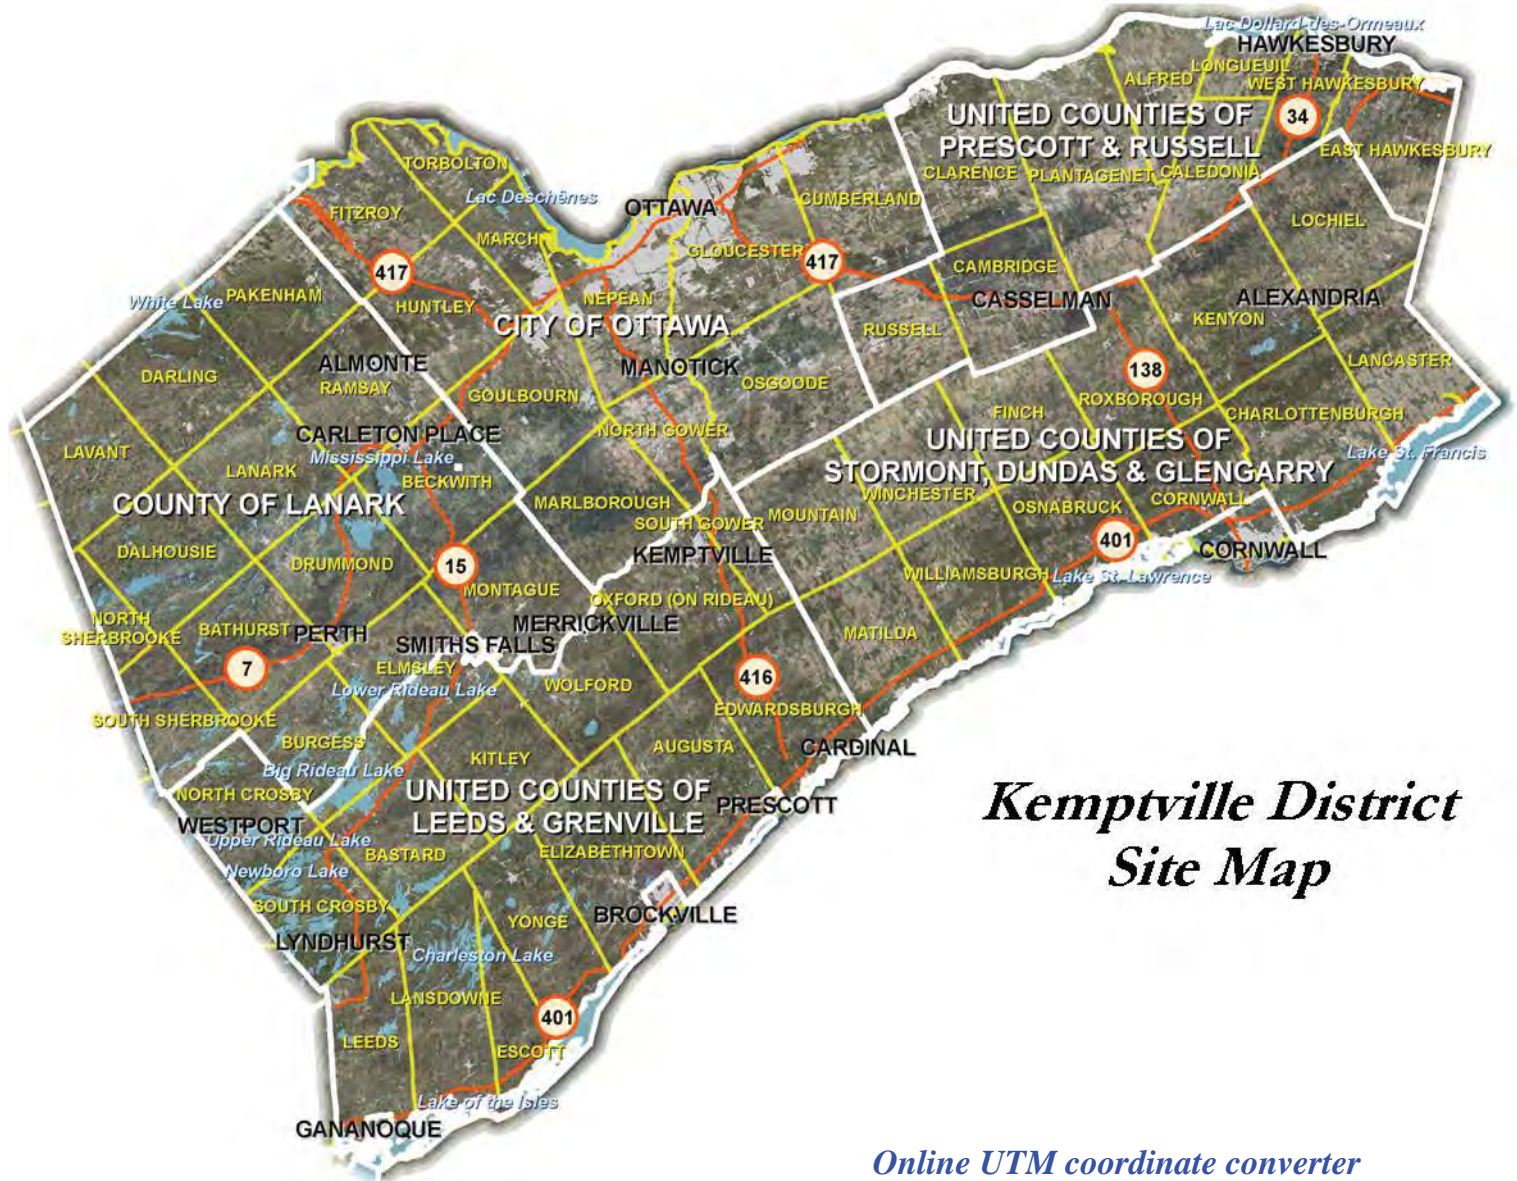

Please forward the completed form to:

[Online UTM coordinate converter](#)

How to get X, Y coordinates from Google Maps (2 options):

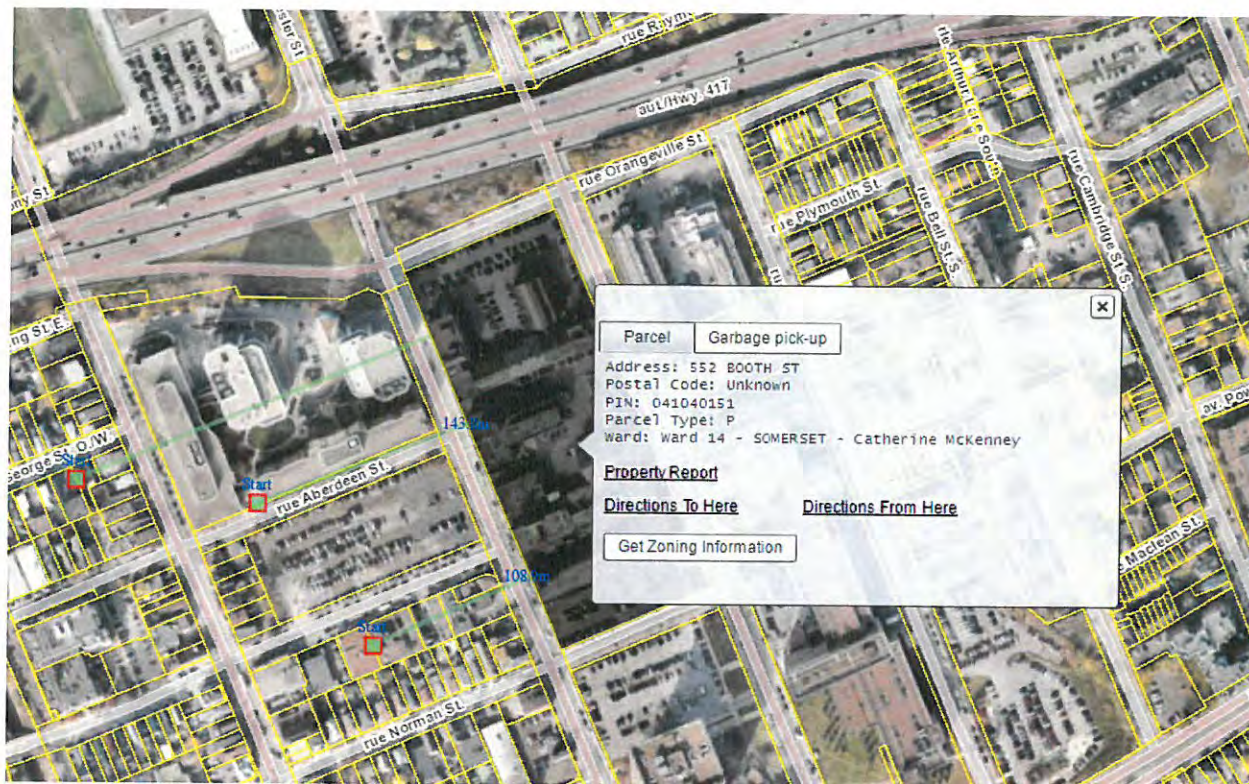

- 1.) Right-click on the map, at the point of interest, and select 'What's here?'.
-The Latitude & Longitude of the mouse click, in decimal degrees, will automatically appear in the Search box.

OR

- 2.) Click on 'Maps Labs' in Google Maps.
-The following window will appear:

- Enable the LatLng Tooltip and then Save Changes.
- Now every time the **SHIFT** button is pressed in Google Maps, a Tool tip will appear with the Latitude and Longitude of the mouse location in decimal degrees.

The Site consists of the following seven municipal addresses: 450 Rochester Street at 550, 552, 556, 558, 562 and 568 Booth Street, Ottawa, ON. The PIN for all addresses is 041040151.

As per the FOI Request Form Guide, adjacent properties with same current owners can be submitted as one request. I have included seven forms since the municipal address varies.

Kindly consider this as a single FOI request.

Please let me know if you have any queries.

Best regards,
Alyssa Troke

From: Public Information Services
To: [Troke, Alyssa](#)
Subject: RE: TSSA Search - Booth Street 1, Ottawa, Ontario
Date: June-18-18 4:16:41 PM

Good afternoon Alyssa,

Thank you for your request for confirmation of public information.

I have searched the below noted addresses and I have located the following record:

Inst Number	Context	Address	City	Province	Postal Code	Status
10176343	FS Compressed Natural Gas Station - SS - FAST FILL	568 BOOTH ST	OTTAWA	ON	K1A 0E4	Active

For a further search in our archives please complete our release of public information form found at https://www.tssa.org/en/about-tssa/release-of-public-information.aspx?_mid_=392 and email the completed form to publicinformationsservices@tssa.org or through mail along with a fee of \$56.50 (including HST) per location. The fee is payable with credit card (Visa or MasterCard) or with a Cheque made payable to TSSA.

Although TSSA believes the information provided pursuant to your request is accurate, please note that TSSA does not warrant this information in any way whatsoever.

Kind regards,

Yalini

Date: June-18-18 4:24:54 PM

Good afternoon Alyssa,

Thank you for your request for confirmation of public information.

I have searched the below noted addresses and I have located the following record:

Inst Number	Context	Address	City	Province	Postal Code	Status
9554092	FS GASOLINE STATION - FULL SERVE	450 ROCHESTER ST	OTTAWA	ON	K1S 4L7	EXPIRED
10906575	FS LIQUID FUEL TANK	450 ROCHESTER ST	OTTAWA	ON	K1S 4L7	EXPIRED
10906593	FS LIQUID FUEL TANK	450 ROCHESTER ST	OTTAWA	ON	K1S 4L7	EXPIRED
10176343	FS Compressed Natural Gas Station - SS - FAST FILL	568 BOOTH ST	OTTAWA	ON	K1A 0E4	Active

For a further search in our archives please complete our release of public information form found at https://www.tssa.org/en/about-tssa/release-of-public-information.aspx?_mid_=392 and email the completed form to publicinformationsservices@tssa.org or through mail along with a fee of \$56.50 (including HST) per location. The fee is payable with credit card (Visa or MasterCard) or with a Cheque made payable to TSSA.

Although TSSA believes the information provided pursuant to your request is accurate, please note that TSSA does not warrant this information in any way whatsoever.

Kind regards,

Yalini

Subject: TSSA Search - Booth Street 2, Ottawa, Ontario

Hello,

Could you please perform a TSSA database search for any underground storage tanks, registered fuel tanks, outstanding instructions, incident reports, fuel oil spills or contaminations records for the following properties:

- 555 Booth Street, Ottawa, ON
- 386 Rochester Street, Ottawa, ON
- 5 Aberdeen Street, Ottawa, ON
- 450 Rochester Street, Ottawa, ON
- 490 Rochester Street, Ottawa, ON

- 492 Rochester Street, Ottawa, ON
- 502 Rochester Street, Ottawa, ON
- 506 Rochester Street, Ottawa, ON
- 580 Booth Street. Ottawa, ON
- 552 Rochester Street, Ottawa, ON

Please let me know if you have any questions.

Kindest Regards,
Alyssa Troke

Alyssa Troke (B.Eng., E.I.T.) | Environmental Consultant | **Golder Associates Ltd.**

Notice: IMPORTANT LIMITATIONS and YOUR LIABILITY

Reliance on information in Report: This report DOES NOT replace a full Phase I Environmental Site Assessment but is solely intended to be used as a database review of environmental records.

License for use of information in Report: No page of this report can be used without this cover page, this notice and the project property identifier. The information in Report(s) may not be modified or re-sold.

Your Liability for misuse: Using this Service and/or its reports in a manner contrary to this Notice or your agreement will be in breach of copyright and contract and ERIS may obtain damages for such mis-use, including damages caused to third parties, and gives ERIS the right to terminate your account, rescind your license to any previous reports and to bar you from future use of the Service.

No warranty of Accuracy or Liability for ERIS: The information contained in this report has been produced by ERIS Information Limited Partnership ("ERIS") using various sources of information, including information provided by Federal and Provincial government departments. The report applies only to the address and up to the date specified on the cover of this report, and any alterations or deviation from this description will require a new report. This report and the data contained herein does not purport to be and does not constitute a guarantee of the accuracy of the information contained herein and does not constitute a legal opinion nor medical advice. Although ERIS has endeavored to present you with information that is accurate, ERIS disclaims, any and all liability for any errors, omissions, or inaccuracies in such information and data, whether attributable to inadvertence, negligence or otherwise, and for any consequences arising therefrom. Liability on the part of ERIS is limited to the monetary value paid for this report.

Trademark and Copyright: You may not use the ERIS trademarks or attribute any work to ERIS other than as outlined above. This Service and Report(s) are protected by copyright owned by ERIS Information Limited Partnership. Copyright in data used in the Service or Report(s) (the "Data") is owned by ERIS or its licensors. The Service, Report(s) and Data may not be copied or reproduced in whole or in any substantial part without prior written consent of ERIS.

COAL	11	1 of 1	SE/67.3	69.9 / 0.00	Dominion of Canada, Fuel Testing

DB	Map Key	Number of Records	Direction/ Distance (m)	Elev/Diff (m)	Site
					Station/Fuel Research Labs 552 and 562 Booth Street Ottawa ON
Facility Type:		Semi-industrial coal gas plant/by-product coke oven			
Size:		1.0 hectare			
NTS Map Sheet:		31 G/5			
Planned Land Use:		Same as present			
Present Land Use:		Commercial/public use			
Landuse Adj Property:		North, south, west, east - Government buildings			
Underground Utilities:		Storm and sanitary sewers, watermain, gas and telephone along Booth St			
Soil Conditions:		Unknown			
Site Access:		Unrestricted during the day, restricted at night			
Operating Period:		Approx 1911-1940, operated intermittently as a research facility			
Surface Water:		Dows Lake			
Surface Water Prox:		500 m south			
Surface Water Use:		Recreational			
Groundwater Prox:		Unknown			
Groundwater Use:		None reported			
Existing Wells Prox:		None			
Historical Map/Photo:		c1910 building plan (Ignatieff, 1981); 1922 fire insurance plan (Public Archives Canada, NMC 10837, sheet 124); several historical photos (Ignatieff, 1981)			
Operators:		Government of Canada -Mines Branch (1911-1940s)			
Present Occupants:		Government of Canada, laboratories and offices			
Excavation History:		Evacuation for construction of current building at 552 Booth (1920s)			
Visible Wastes:		None reported or observed			
Odour:		None reported or observed			
Water Pollution:		None reported or observed			
Site Investigations:		Unknown			
Comments/Remarks:		This site is actually two sites - a coal gas producer was used at 552 Booth St (1920s) and a 2 tone by-product coke oven was used at 562 Booth St (1920s, 30s) in support of Mines Branch carbonization studies of Canadian coals. The Mines Branch of the Federal government operated a fuel testing station and a fuel research laboratory at 552 and 562 Booth St. respectively. These facilities undertook semi-industrial scale coal carbonization studies to assess Canadian coal in the approximate period 1911 to the 1940s. A Westinghouse suction bituminous coal gas producer was operated at 552 Booth St. The original building at 552 Booth St. was rebuilt in the late 1920s. A two ton by-product coke oven was also used at the rear of the building at 562 Booth St. in the 1920s and 1930s. The original building located at 562 booth St. is still in use. Today the buildings at 552 and 562 Booth St. are part of a complex of government buildings used by the Department of Energy, Mines and Resources. The buildings at 552 and 562 Booth are used as government offices and laboratories. There is no groundwater use in the area and the closest water body is Dows lake located 500 m south of the site.			
Site Description:					
Potential Environ Impact:		The potential environmental and human health impact at this site is considered minimal based on the lack of evidence of buried waste, and likely small volume of by-product tars generated by the intermittent use of the gas producer and coke oven. Potential environmental impacts are also mitigated at this site by lack of groundwater use in the area and the distance to Dows Lake. Potential environmental impacts at the site are also complicated by the historic use of the land between 552 and 562 Booth for the underground storage of liquid petroleum fuels.			
Offsite Disposal Areas:

Appendix: Database Descriptions

*Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. **Note:** Databases denoted with " * " indicates that the database will no longer be updated. See the individual database description for more information.*

Abandoned Aggregate Inventory:

Provincial

AGR

The MAAP Program maintains a database of abandoned pits and quarries. Please note that the database is only referenced by lot and concession and city/town location. The database provides information regarding the location, type, size, land use, status and general comments.*

Government Publication Date: Sept 2002*

Aggregate Inventory:

Provincial

AGR

The Ontario Ministry of Natural Resources maintains a database of all active pits and quarries. The database provides information regarding the registered owner/operator, location name, operation type, approval type, and maximum annual tonnage.

Government Publication Date: Up to Sep 2017

Abandoned Mine Information System:

Provincial

AMIS

The Abandoned Mines Information System contains data on known abandoned and inactive mines located on both Crown and privately held lands. The information was provided by the Ministry of Northern Development and Mines (MNDM), with the following disclaimer: "the database provided has been compiled from various sources, and the Ministry of Northern Development and Mines makes no representation and takes no responsibility that such information is accurate, current or complete". Reported information includes official mine name, status, background information, mine start/end date, primary commodity, mine features, hazards and remediation.

Government Publication Date: 1800-Nov 2016

Anderson's Waste Disposal Sites:

Private

ANDR

The information provided in this database was collected by examining various historical documents which aimed to characterize the likely position of former waste disposal sites from 1860 to present. The research initiative behind the creation of this database was to identify those sites that are missing from the Ontario MOE Waste Disposal Site Inventory, as well as to provide revisions and corrections to the positions and descriptions of sites currently listed in the MOE inventory. In addition to historic waste disposal facilities, the database also identifies certain auto wreckers and scrap yards that have been extrapolated from documentary sources. Please note that the data is not warranted to be complete, exhaustive or authoritative. The information was collected for research purposes only.

Government Publication Date: 1860s-Present

Automobile Wrecking & Supplies:

Private

AUWR

This database provides an inventory of known locations that are involved in the scrap metal, automobile wrecking/recycling, and automobile parts & supplies industry. Information is provided on the company name, location and business type.

Government Publication Date: 1999-Jan 31, 2018

Borehole:

Provincial

BORE

A borehole is the generalized term for any narrow shaft drilled in the ground, either vertically or horizontally. The information here includes geotechnical investigations or environmental site assessments, mineral exploration, or as a pilot hole for installing piers or underground utilities. Information is from many sources such as the Ministry of Transportation (MTO) boreholes from engineering reports and projects from the 1950 to 1990's in Southern Ontario. Boreholes from the Ontario Geological Survey (OGS) including The Urban Geology Analysis Information System (UGAIS) and the York Peel Durham Toronto (YPDT) database of the Conservation Authority Moraine Coalition. This database will include fields such as location, stratigraphy, depth, elevation, year drilled, etc. For all water well data or oil and gas well data for Ontario please refer to WWIS and OOGW.

Government Publication Date: 1875-Jul 2014

Certificates of Approval:

Provincial

CA

This database contains the following types of approvals: Air & Noise, Industrial Sewage, Municipal & Private Sewage, Waste Management Systems and Renewable Energy Approvals. The MOE in Ontario states that any facility that releases emissions to the atmosphere, discharges contaminants to ground or surface water, provides potable water supplies, or stores, transports or disposes of waste, must have a Certificate of Approval before it can operate lawfully. Fields include approval number, business name, address, approval date, approval type and status. This database will no longer be updated, as CofA's have been replaced by either Environmental Activity and Sector Registry (EASR) or Environmental Compliance Approval (ECA). Please refer to those individual databases for any information after Oct.31, 2011.

Government Publication Date: 1985-Oct 30, 2011*

Commercial Fuel Oil Tanks:

Provincial

CFOT

Since May 2002, Ontario developed a new act where it became mandatory for fuel oil tanks to be registered with Technical Standards & Safety Authority (TSSA). This data would include all commercial underground fuel oil tanks in Ontario with fields such as location, registration number, tank material, age of tank and tank size.

Government Publication Date: Feb 28, 2017

Chemical Register:

Private

CHEM

This database includes information from both a one time study conducted in 1992 and private source and is a listing of facilities that manufacture or distribute chemicals. The production of these chemical substances may involve one or more chemical reactions and/or chemical separation processes (i.e. fractionation, solvent extraction, crystallization, etc.).

Government Publication Date: 1999-Jan 31, 2018

Compressed Natural Gas Stations:

Private

CNG

Canada has a network of public access compressed natural gas (CNG) refuelling stations. These stations dispense natural gas in compressed form at 3,000 pounds per square inch (psi), the pressure which is allowed within the current Canadian codes and standards. The majority of natural gas refuelling is located at existing retail gasoline that have a separate refuelling island for natural gas. This list of stations is made available by the Canadian Natural Gas Vehicle Alliance.

Government Publication Date: Dec 31, 2012

Inventory of Coal Gasification Plants and Coal Tar Sites:

Provincial

COAL

This inventory includes both the "Inventory of Coal Gasification Plant Waste Sites in Ontario-April 1987" and the Inventory of Industrial Sites Producing or Using Coal Tar and Related Tars in Ontario-November 1988) collected by the MOE. It identifies industrial sites that produced and continue to produce or use coal tar and other related tars. Detailed information is available and includes: facility type, size, land use, information on adjoining properties, soil condition, site operators/occupants, site description, potential environmental impacts and historic maps available. This was a one-time inventory.*

Government Publication Date: Apr 1987 and Nov 1988*

Compliance and Convictions:

Provincial

CONV

This database summarizes the fines and convictions handed down by the Ontario courts beginning in 1989. Companies and individuals named here have been found guilty of environmental offenses in Ontario courts of law.

Government Publication Date: 1989-Nov 2017

Certificates of Property Use:

Provincial

CPU

This is a subset taken from Ontario's Environmental Registry (EBR) database. It will include all CPU's on the registry such as (EPA s. 168.6) - Certificate of Property Use.

Government Publication Date: 1994-Feb 28, 2018

Drill Hole Database:

Provincial

DRL

The Ontario Drill Hole Database contains information on more than 113,000 percussion, overburden, sonic and diamond drill holes from assessment files on record with the department of Mines and Minerals. Please note that limited data is available for southern Ontario, as it was the last area to be completed. The database was created when surveys submitted to the Ministry were converted in the Assessment File Research Image Database (AFRI) project. However, the degree of accuracy (coordinates) as to the exact location of drill holes is dependent upon the source document submitted to the MNDM. Levels of accuracy used to locate holes are: centering on the mining claim; a sketch of the mining claim; a 1:50,000 map; a detailed company map; or from submitted a "Report of Work".

Government Publication Date: 1886-Nov 30, 2017

Dry Cleaning Facilities:

Federal

DRYCLEANERS

List of dry cleaning facilities made available by Environment and Climate Change Canada. Environment and Climate Change Canada's Tetrachloroethylene (Use in Dry Cleaning and Reporting Requirements) Regulations (SOR/2003-79) are intended to reduce releases of tetrachloroethylene to the environment from dry cleaning facilities.

Government Publication Date: Jan 2004-Dec 2016

Environmental Activity and Sector Registry:

Provincial

EASR

On October 31, 2011, a smarter, faster environmental approvals system came into effect in Ontario. The EASR allows businesses to register certain activities with the ministry, rather than apply for an approval. The registry is available for common systems and processes, to which preset rules of operation can be applied. The EASR is currently available for: heating systems, standby power systems and automotive refinishing. Businesses whose activities aren't subject to the EASR may apply for an ECA (Environmental Compliance Approval), Please see our ECA database.

Government Publication Date: Oct 2011-Apr 30, 2018

Environmental Registry:

Provincial

EBR

The Environmental Registry lists proposals, decisions and exceptions regarding policies, Acts, instruments, or regulations that could significantly affect the environment. Through the Registry, thirteen provincial ministries notify the public of upcoming proposals and invite their comments. For example, if a local business is requesting a permit, license, or certificate of approval to release substances into the air or water; these are notified on the registry. Data includes: Approval for discharge into the natural environment other than water (i.e. Air) - EPA s. 9, Approval for sewage works - OWRA s. 53(1), and EPA s. 27 - Approval for a waste disposal site. For information regarding Permit to Take Water (PTTW), Certificate of Property Use (CPU) and (ORD) Orders please refer to those individual databases.

Government Publication Date: 1994-Feb 28, 2018

Environmental Compliance Approval:

Provincial

ECA

On October 31, 2011, a smarter, faster environmental approvals system came into effect in Ontario. In the past, a business had to apply for multiple approvals (known as certificates of approval) for individual processes and pieces of equipment. Today, a business either registers itself, or applies for a single approval, depending on the types of activities it conducts. Businesses whose activities aren't subject to the EASR may apply for an ECA. A single ECA addresses all of a business's emissions, discharges and wastes. Separate approvals for air, noise and waste are no longer required. This database will also include Renewable Energy Approvals. For certificates of approval prior to Nov 1st, 2011, please refer to the CA database. For all Waste Disposal Sites please refer to the WDS database.

Government Publication Date: Oct 2011-Apr 30, 2018

Environmental Effects Monitoring:

Federal

EEM

The Environmental Effects Monitoring program assesses the effects of effluent from industrial or other sources on fish, fish habitat and human usage of fisheries resources. Since 1992, pulp and paper mills have been required to conduct EEM studies under the Pulp and Paper Effluent Regulations. This database provides information on the mill name, geographical location and sub-lethal toxicity data.

Government Publication Date: 1992-2007*

ERIS Historical Searches:

Private

EHS

ERIS has compiled a database of all environmental risk reports completed since March 1999. Available fields for this database include: site location, date of report, type of report, and search radius. As per all other databases, the ERIS database can be referenced on both the map and "Statistical Profile" page.

Government Publication Date: 1999-Feb 28, 2018

Environmental Issues Inventory System:

Federal

EIIS

The Environmental Issues Inventory System was developed through the implementation of the Environmental Issues and Remediation Plan. This plan was established to determine the location and severity of contaminated sites on inhabited First Nation reserves, and where necessary, to remediate those that posed a risk to health and safety; and to prevent future environmental problems. The EIIS provides information on the reserve under investigation, inventory number, name of site, environmental issue, site action (Remediation, Site Assessment), and date investigation completed.

Government Publication Date: 1992-2001*

Emergency Management Historical Event:

Provincial

EMHE

List of locations of historical occurrences of emergency events, including those assigned to the Ministry of Natural Resources by Order-In-Council (OIC) under the Emergency Management and Civil Protection Act, as well as events where MNR provided requested emergency response assistance. Many of these events will have involved community evacuations, significant structural loss, and/or involvement of MNR emergency response staff. These events fall into one of ten (10) type categories: Dam Failure; Drought / Low Water; Erosion; Flood; Forest Fire; Soil and Bedrock Instability; Petroleum Resource Center Event, EMO Requested Assistance, Continuity of Operations Event, Other Requested Assistance. EMHE record details are reproduced by ERIS under License with the Ontario Ministry of Natural Resources © Queen's Printer for Ontario, 2017.

Government Publication Date: Dec 31, 2016

List of TSSA Expired Facilities:

Provincial

EXP

List of facilities with removed tanks which were once registered with the Fuels Safety Program of the Technical Standards and Safety Authority (TSSA). Includes private fuel outlets, bulk plants, fuel oil tanks, gasoline stations, marinas, propane filling stations, liquid fuel tanks, piping systems, etc. Tanks which have been removed automatically fall under the expired facilities inventory held by TSSA.

Government Publication Date: Feb 28, 2017

Federal Convictions:

Federal

FCON

Environment Canada maintains a database referred to as the "Environmental Registry" that details prosecutions under the Canadian Environmental Protection Act (CEPA) and the Fisheries Act (FA). Information is provided on the company name, location, charge date, offence and penalty.

Government Publication Date: 1988-Jun 2007*

Contaminated Sites on Federal Land:

Federal

[FCS](#)

The Federal Contaminated Sites Inventory includes information on known federal contaminated sites under the custodianship of departments, agencies and consolidated Crown corporations as well as those that are being or have been investigated to determine whether they have contamination arising from past use that could pose a risk to human health or the environment. The inventory also includes non-federal contaminated sites for which the Government of Canada has accepted some or all financial responsibility. It does not include sites where contamination has been caused by, and which are under the control of, enterprise Crown corporations, private individuals, firms or other levels of government.

Government Publication Date: Jun 2000-Mar 2018

Fisheries & Oceans Fuel Tanks:

Federal

[FOFT](#)

Fisheries & Oceans Canada maintains an inventory of aboveground & underground fuel storage tanks located on Fisheries & Oceans property or controlled by DFO. Our inventory provides information on the site name, location, tank owner, tank operator, facility type, storage tank location, tank contents & capacity, and date of tank installation.

Government Publication Date: 1964-Sep 2017

Fuel Storage Tank:

Provincial

[FST](#)

The Technical Standards & Safety Authority (TSSA), under the Technical Standards & Safety Act of 2000 maintains a database of registered private and retail fuel storage tanks in Ontario with fields such as location, tank status, license date, tank type, tank capacity, fuel type, installation year and facility type.

Government Publication Date: Feb 28, 2017

Fuel Storage Tank - Historic:

Provincial

[FSTH](#)

The Fuels Safety Branch of the Ontario Ministry of Consumer and Commercial Relations maintained a database of all registered private fuel storage tanks. Public records of private fuel storage tanks are only available since the registration became effective in September 1989. This information is now collected by the Technical Standards and Safety Authority.

Government Publication Date: Pre-Jan 2010*

Ontario Regulation 347 Waste Generators Summary:

Provincial

[GEN](#)

Regulation 347 of the Ontario EPA defines a waste generation site as any site, equipment and/or operation involved in the production, collection, handling and/or storage of regulated wastes. A generator of regulated waste is required to register the waste generation site and each waste produced, collected, handled, or stored at the site. This database contains the registration number, company name and address of registered generators including the types of hazardous wastes generated. It includes data on waste generating facilities such as: drycleaners, waste treatment and disposal facilities, machine shops, electric power distribution etc. This information is a summary of all years from 1986 including the most currently available data. Some records may contain, within the company name, the phrase "See & Use..." followed by a series of letters and numbers. This occurs when one company is amalgamated with or taken over by another registered company. The number listed as "See & Use", refers to the new ownership and the other identification number refers to the original ownership. This phrase serves as a link between the 2 companies until operations have been fully transferred.

Government Publication Date: 1986-December 31, 2017

Greenhouse Gas Emissions from Large Facilities:

Federal

[GHG](#)

List of greenhouse gas emissions from large facilities made available by Environment Canada. Greenhouse gas emissions in kilotonnes of carbon dioxide equivalents (kt CO₂ eq).

Government Publication Date: 2013-Dec 2016

TSSA Historic Incidents:

Provincial

[HINC](#)

This database will cover all incidences recorded by TSSA with their older system, before they moved to their new management system. TSSA's Fuels Safety Program administers the Technical Standards & Safety Act 2000, providing fuel-related safety services associated with the safe transportation, storage, handling and use of fuels such as gasoline, diesel, propane, natural gas and hydrogen. Under this Act, TSSA regulates fuel suppliers, storage facilities, transport trucks, pipelines, contractors and equipment or appliances that use fuels. The TSSA works to protect the public, the environment and property from fuel-related hazards such as spills, fires and explosions. This database will include spills and leaks from pipelines, diesel, fuel oil, gasoline, natural gas, propane and hydrogen recorded by the TSSA.

Government Publication Date: 2006-June 2009*

Indian & Northern Affairs Fuel Tanks:

Federal

[IAFT](#)

The Department of Indian & Northern Affairs Canada (INAC) maintains an inventory of aboveground & underground fuel storage tanks located on both federal and crown land. Our inventory provides information on the reserve name, location, facility type, site/facility name, tank type, material & ID number, tank contents & capacity, and date of tank installation.

Government Publication Date: 1950-Aug 2003*

TSSA Incidents:Provincial **INC**

TSSA's Fuels Safety Program administers the Technical Standards & Safety Act 2000, providing fuel-related safety services associated with the safe transportation, storage, handling and use of fuels such as gasoline, diesel, propane, natural gas and hydrogen. Under this Act, TSSA regulates fuel suppliers, storage facilities, transport trucks, pipelines, contractors and equipment or appliances that use fuels. Includes incidents from fuel-related hazards such as spills, fires and explosions. This database will include spills and leaks from diesel, fuel oil, gasoline, natural gas, propane and hydrogen recorded by the TSSA.

Government Publication Date: Feb 28, 2017

Landfill Inventory Management Ontario:Provincial **LIMO**

The Landfill Inventory Management Ontario (LIMO) database is updated every year, as the ministry compiles new and updated information. The inventory will include small and large landfills. Additionally, each year the ministry will request operators of the larger landfills complete a landfill data collection form that will be used to update LIMO and will include the following information from the previous operating year. This will include additional information such as estimated amount of total waste received, landfill capacity, estimated total remaining landfill capacity, fill rates, engineering designs, reporting and monitoring details, size of location, service area, approved waste types, leachate of site treatment, contaminant attenuation zone and more. The small landfills will include information such as site owner, site location and certificate of approval # and status.

Government Publication Date: Dec 31, 2013

Canadian Mine Locations:Private **MINE**

This information is collected from the Canadian & American Mines Handbook. The Mines database is a national database that provides over 290 listings on mines (listed as public companies) dealing primarily with precious metals and hard rocks. Listed are mines that are currently in operation, closed, suspended, or are still being developed (advanced projects). Their locations are provided as geographic coordinates (x, y and/or longitude, latitude). As of 2002, data pertaining to Canadian smelters and refineries has been appended to this database.

Government Publication Date: 1998-2009*

Environmental Penalty Annual Report:Provincial **MISA PENALTY**

This database contains data from Ontario's annual environmental penalty report published by the Ministry of the Environment and Climate Change. These reports provide information on environmental penalties for land or water violations issued to companies in one of the nine industrial sectors covered by the Municipal Industrial Strategy for Abatement (MISA) regulations.

Government Publication Date: Jan 1, 2011 - Dec 31, 2017

Mineral Occurrences:Provincial **MNR**

In the early 70's, the Ministry of Northern Development and Mines created an inventory of approximately 19,000 mineral occurrences in Ontario, in regard to metallic and industrial minerals, as well as some information on building stones and aggregate deposits. Please note that the "Horizontal Positional Accuracy" is approximately +/- 200 m. Many reference elements for each record were derived from field sketches using pace or chain/tape measurements against claim posts or topographic features in the area. The primary limiting factor for the level of positional accuracy is the scale of the source material. The testing of horizontal accuracy of the source materials was accomplished by comparing the plan metric (X and Y) coordinates of that point with the coordinates of the same point as defined from a source of higher accuracy.

Government Publication Date: 1846-Jan 2018

National Analysis of Trends in Emergencies System (NATES):Federal **NATE**

In 1974 Environment Canada established the National Analysis of Trends in Emergencies System (NATES) database, for the voluntary reporting of significant spill incidents. The data was to be used to assist in directing the work of the emergencies program. NATES ran from 1974 to 1994. Extensive information is available within this database including company names, place where the spill occurred, date of spill, cause, reason and source of spill, damage incurred, and amount, concentration, and volume of materials released.

Government Publication Date: 1974-1994*

Non-Compliance Reports:Provincial **NCPL**

The Ministry of the Environment provides information about non-compliant discharges of contaminants to air and water that exceed legal allowable limits, from regulated industrial and municipal facilities. A reported non-compliance failure may be in regard to a Control Order, Certificate of Approval, Sectoral Regulation or specific regulation/act.

Government Publication Date: Dec 31, 2016

National Defense & Canadian Forces Fuel Tanks:Federal **NDFT**

The Department of National Defense and the Canadian Forces maintains an inventory of all aboveground & underground fuel storage tanks located on DND lands. Our inventory provides information on the base name, location, tank type & capacity, tank contents, tank class, date of tank installation, date tank last used, and status of tank as of May 2001. This database will no longer be updated due to the new National Security protocols which have prohibited any release of this database.

Government Publication Date: Up to May 2001*

National Defense & Canadian Forces Spills:

Federal

NDSP

The Department of National Defense and the Canadian Forces maintains an inventory of spills to land and water. All spill sites have been classified under the "Transportation of Dangerous Goods Act - 1992". Our inventory provides information on the facility name, location, spill ID #, spill date, type of spill, as well as the quantity of substance spilled & recovered.

Government Publication Date: Mar 1999-Aug 2010

National Defence & Canadian Forces Waste Disposal Sites:

Federal

NDWD

The Department of National Defence and the Canadian Forces maintains an inventory of waste disposal sites located on DND lands. Where available, our inventory provides information on the base name, location, type of waste received, area of site, depth of site, year site opened/closed and status.

Government Publication Date: 2001-Apr 2007*

National Energy Board Pipeline Incidents:

Federal

NEBI

Locations of pipeline incidents from 2008 to present, made available by the National Energy Board (NEB). Includes incidents reported under the Onshore Pipeline Regulations and the Processing Plant Regulations related to pipelines under federal jurisdiction, does not include incident data related to pipelines under provincial or territorial jurisdiction.

Government Publication Date: 2008-Mar 31, 2018

National Energy Board Wells:

Federal

NEBW

The NEBW database contains information on onshore & offshore oil and gas wells that are outside provincial jurisdiction(s) and are thereby regulated by the National Energy Board. Data is provided regarding the operator, well name, well ID No./UWI, status, classification, well depth, spud and release date.

Government Publication Date: 1920-Feb 2003*

National Environmental Emergencies System (NEES):

Federal

NEES

In 2000, the Emergencies program implemented NEES, a reporting system for spills of hazardous substances. For the most part, this system only captured data from the Atlantic Provinces, some from Quebec and Ontario and a portion from British Columbia. Data for Alberta, Saskatchewan, Manitoba and the Territories was not captured. However, NEES is also a repository for previous Environment Canada spill datasets. NEES is composed of the historic datasets ' or Trends ' which dates from approximately 1974 to present. NEES Trends is a compilation of historic databases, which were merged and includes data from NATES (National Analysis of Trends in Emergencies System), ARTS (Atlantic Regional Trends System), and NEES. In 2001, the Emergencies Program determined that variations in reporting regimes and requirements between federal and provincial agencies made national spill reporting and trend analysis difficult to achieve. As a consequence, the department has focused efforts on capturing data on spills of substances which fall under its legislative authority only (CEPA and FA). As such, the NEES database will be decommissioned in December 2004.

Government Publication Date: 1974-2003*

National PCB Inventory:

Federal

NPCB

Environment Canada's National PCB inventory includes information on in-use PCB containing equipment in Canada including federal, provincial and private facilities. Federal out-of-service PCB containing equipment and PCB waste owned by the federal government or by federally regulated industries such as airlines, railway companies, broadcasting companies, telephone and telecommunications companies, pipeline companies, etc. are also listed. Although it is not Environment Canada's mandate to collect data on non-federal PCB waste, the National PCB inventory includes some information on provincial and private PCB waste and storage sites. Some addresses provided may be Head Office addresses and are not necessarily the location of where the waste is being used or stored.

Government Publication Date: 1988-2008*

National Pollutant Release Inventory:

Federal

NPRI

Environment Canada has defined the National Pollutant Release Inventory ("NPRI") as a federal government initiative designed to collect comprehensive national data regarding releases to air, water, or land, and waste transfers for recycling for more than 300 listed substances.

Government Publication Date: 1993-May 2017

Oil and Gas Wells:

Private

OGW

The Nickle's Energy Group (publisher of the Daily Oil Bulletin) collects information on drilling activity including operator and well statistics. The well information database includes name, location, class, status and depth. The main Nickle's database is updated on a daily basis, however, this database is updated on a monthly basis. More information is available at www.nickles.com.

Government Publication Date: 1988-December 31, 2017

Ontario Oil and Gas Wells:

Provincial

OOGW

In 1998, the MNR handed over to the Ontario Oil, Gas and Salt Resources Corporation, the responsibility of maintaining a database of oil and gas wells drilled in Ontario. The OGSRL Library has over 20,000+ wells in their database. Information available for all wells in the ERIS database include well owner/operator, location, permit issue date, and well cap date, license No., status, depth and the primary target (rock unit) of the well being drilled. All geology/stratigraphy table information, plus all water table information is also provide for each well record.

Government Publication Date: 1800-Oct 2017

Inventory of PCB Storage Sites:

Provincial

OPCB

The Ontario Ministry of Environment, Waste Management Branch, maintains an inventory of PCB storage sites within the province. Ontario Regulation 11/82 (Waste Management - PCB) and Regulation 347 (Generator Waste Management) under the Ontario EPA requires the registration of inactive PCB storage equipment and/or disposal sites of PCB waste with the Ontario Ministry of Environment. This database contains information on: 1) waste quantities; 2) major and minor sites storing liquid or solid waste; and 3) a waste storage inventory.

Government Publication Date: 1987-Oct 2004; 2012-Dec 2013

Orders:

Provincial

ORD

This is a subset taken from Ontario's Environmental Registry (EBR) database. It will include all Orders on the registry such as (EPA s. 17) - Order for remedial work, (EPA s. 18) - Order for preventative measures, (EPA s. 43) - Order for removal of waste and restoration of site, (EPA s. 44) - Order for conformity with Act for waste disposal sites, (EPA s. 136) - Order for performance of environmental measures.

Government Publication Date: 1994-Feb 28, 2018

Canadian Pulp and Paper:

Private

PAP

This information is part of the Pulp and Paper Canada Directory. The Directory provides a comprehensive listing of the locations of pulp and paper mills and the products that they produce.

Government Publication Date: 1999, 2002, 2004, 2005, 2009-2014

Parks Canada Fuel Storage Tanks:

Federal

PCFT

Canadian Heritage maintains an inventory of known fuel storage tanks operated by Parks Canada, in both National Parks and at National Historic Sites. The database details information on site name, location, tank install/removal date, capacity, fuel type, facility type, tank design and owner/operator.

Government Publication Date: 1920-Jan 2005*

Pesticide Register:

Provincial

PES

The Ontario Ministry of the Environment and Climate Change maintains a database of licensed operators and vendors of registered pesticides.

Government Publication Date: 1988-Mar 2018

TSSA Pipeline Incidents:

Provincial

PINC

TSSA's Fuels Safety Program administers the Technical Standards & Safety Act 2000, providing fuel-related safety services associated with the safe transportation, storage, handling and use of fuels such as gasoline, diesel, propane, natural gas and hydrogen. Under this Act, TSSA regulates fuel suppliers, storage facilities, transport trucks, pipelines, contractors and equipment or appliances that use fuels. This database will include spills, strike and leaks from recorded by the TSSA.

Government Publication Date: Feb 28, 2017

Private and Retail Fuel Storage Tanks:

Provincial

PRT

The Fuels Safety Branch of the Ontario Ministry of Consumer and Commercial Relations maintained a database of all registered private fuel storage tanks and licensed retail fuel outlets. This database includes an inventory of locations that have gasoline, oil, waste oil, natural gas and/or propane storage tanks on their property. The MCCR no longer collects this information. This information is now collected by the Technical Standards and Safety Authority (TSSA).

Government Publication Date: 1989-1996*

Permit to Take Water:

Provincial

PTTW

This is a subset taken from Ontario's Environmental Registry (EBR) database. It will include all PTTW's on the registry such as OWRA s. 34 - Permit to take water.

Government Publication Date: 1994-Feb 28, 2018

Ontario Regulation 347 Waste Receivers Summary:

Provincial

REC

Part V of the Ontario Environmental Protection Act ("EPA") regulates the disposal of regulated waste through an operating waste management system or a waste disposal site operated or used pursuant to the terms and conditions of a Certificate of Approval or a Provisional Certificate of Approval. Regulation 347 of the Ontario EPA defines a waste receiving site as any site or facility to which waste is transferred by a waste carrier. A receiver of regulated waste is required to register the waste receiving facility. This database represents registered receivers of regulated wastes, identified by registration number, company name and address, and includes receivers of waste such as: landfills, incinerators, transfer stations, PCB storage sites, sludge farms and water pollution control plants. This information is a summary of all years from 1986 including the most currently available data.

Government Publication Date: 1986-2016

Record of Site Condition:

Provincial

RSC

The Record of Site Condition (RSC) is part of the Ministry of the Environment's Brownfields Environmental Site Registry. Protection from environmental cleanup orders for property owners is contingent upon documentation known as a record of site condition (RSC) being filed in the Environmental Site Registry. In order to file an RSC, the property must have been properly assessed and shown to meet the soil, sediment and groundwater standards appropriate for the use (such as residential) proposed to take place on the property. The Record of Site Condition Regulation (O. Reg. 153/04) details requirements related to site assessment and clean up.

RSCs filed after July 1, 2011 will also be included as part of the new (O.Reg. 511/09).

Government Publication Date: 1997-Sept 2001, Oct 2004-Apr 2018

Retail Fuel Storage Tanks:

Private

RST

This database includes an inventory of retail fuel outlet locations (including marinas) that have on their property gasoline, oil, waste oil, natural gas and / or propane storage tanks.

Government Publication Date: 1999-Jan 31, 2018

Scott's Manufacturing Directory:

Private

SCT

Scott's Directories is a data bank containing information on over 200,000 manufacturers across Canada. Even though Scott's listings are voluntary, it is the most comprehensive database of Canadian manufacturers available. Information concerning a company's address, plant size, and main products are included in this database.

Government Publication Date: 1992-Mar 2011*

Ontario Spills:

Provincial

SPL

This database identifies information such as location (approximate), type and quantity of contaminant, date of spill, environmental impact, cause, nature of impact, etc. Information from 1988-2002 was part of the ORIS (Occurrence Reporting Information System). The SAC (Spills Action Centre) handles all spills reported in Ontario. Regulations for spills in Ontario are part of the MOE's Environmental Protection Act, Part X.

Government Publication Date: 1988-Feb 2018

Wastewater Discharger Registration Database:

Provincial

SRDS

Information under this heading is combination of the following 2 programs. The Municipal/Industrial Strategy for Abatement (MISA) division of the Ontario Ministry of Environment maintained a database of all direct dischargers of toxic pollutants within nine sectors including: Electric Power Generation; Mining; Petroleum Refining; Organic Chemicals; Inorganic Chemicals; Pulp & Paper; Metal Casting; Iron & Steel; and Quarries. All sampling information is now collected and stored within the Sample Result Data Store (SRDS).

Government Publication Date: 1990-Dec 31, 2016

Anderson's Storage Tanks:

Private

TANK

The information provided in this database was collected by examining various historical documents, which identified the location of former storage tanks, containing substances such as fuel, water, gas, oil, and other various types of miscellaneous products. Information is available in regard to business operating at tank site, tank location, permit year, permit & installation type, no. of tanks installed & configuration and tank capacity. Data contained within this database pertains only to the city of Toronto and is not warranted to be complete, exhaustive or authoritative. The information was collected for research purposes only.

Government Publication Date: 1915-1953*

Transport Canada Fuel Storage Tanks:

Federal

TCFT

List of fuel storage tanks currently or previously owned or operated by Transport Canada. This inventory also includes tanks on The Pickering Lands, which refers to 7,530 hectares (18,600 acres) of land in Pickering, Markham, and Uxbridge owned by the Government of Canada since 1972; properties on this land has been leased by the government since 1975, and falls under the Site Management Policy of Transport Canada, but is administered by Public Works and Government Services Canada. This inventory provides information on the site name, location, tank age, capacity and fuel type.

Government Publication Date: 1970-Aug 2017

TSSA Variances for Abandonment of Underground Storage Tanks:

Provincial

VAR

List of variances granted for abandoned tanks. Under the Technical Standards and Safety Authority (TSSA) Liquid Fuels Handling Code and Fuel Oil Code, all underground storage tanks must be removed within two years of disuse. If removal of a tank is not feasible, an application may be sought for a variance from this code requirement.

Government Publication Date: Feb 28, 2017

Waste Disposal Sites - MOE CA Inventory:

Provincial

WDS

The Ontario Ministry of Environment, Waste Management Branch, maintains an inventory of known open (active or inactive) and closed disposal sites in the Province of Ontario. Active sites maintain a Certificate of Approval, are approved to receive and are receiving waste. Inactive sites maintain Certificate(s) of Approval but are not receiving waste. Closed sites are not receiving waste. The data contained within this database was compiled from the MOE's Certificate of Approval database. Locations of these sites may be cross-referenced to the Anderson database described under ERIS's Private Source Database section, by the CA number. All new Environmental Compliance Approvals handed out after Oct 31, 2011 for Waste Disposal Sites will still be found in this database.

Government Publication Date: Oct 2011-Apr 30, 2018

Waste Disposal Sites - MOE 1991 Historical Approval Inventory:

Provincial

[WDSH](#)

In June 1991, the Ontario Ministry of Environment, Waste Management Branch, published the "June 1991 Waste Disposal Site Inventory", of all known active and closed waste disposal sites as of October 30st, 1990. For each "active" site as of October 31st 1990, information is provided on site location, site/CA number, waste type, site status and site classification. For each "closed" site as of October 31st 1990, information is provided on site location, site/CA number, closure date and site classification. Locations of these sites may be cross-referenced to the Anderson database described under ERIS's Private Source Database section, by the CA number.

Government Publication Date: Up to Oct 1990*

Water Well Information System:

Provincial

[WWIS](#)

This database describes locations and characteristics of water wells found within Ontario in accordance with Regulation 903. It includes such information as coordinates, construction date, well depth, primary and secondary use, pump rate, static water level, well status, etc. Also included are detailed stratigraphy information, approximate depth to bedrock and the approximate depth to the water table.

Government Publication Date: Dec 31, 2017

Definitions

Database Descriptions: This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

Detail Report: This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

Distance: The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

Direction: The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

Elevation: The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

Executive Summary: This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

Map Key: The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

Unplottables: These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.

COAL	11	1 of 1	N/70.7	69.9 / 0.94	Dominion of Canada, Fuel Testing Station/Fuel Research Labs 552 and 562 Booth Street Ottawa ON
Facility Type:		Semi-industrial coal gas plant/by-product coke oven			
Size:		1.0 hectare			
NTS Map Sheet:		31 G/5			
Planned Land Use:		Same as present			
Present Land Use:		Commercial/public use			
Landuse Adj Property:		North, south, west, east - Government buildings			
Underground Utilities:		Storm and sanitary sewers, watermain, gas and telephone along Booth St			
Soil Conditions:		Unknown			
Site Access:		Unrestricted during the day, restricted at night			
Operating Period:		Approx 1911-1940, operated intermittently as a research facility			
Surface Water:		Dows Lake			
Surface Water Prox:		500 m south			
Surface Water Use:		Recreational			
Groundwater Prox:		Unknown			
Groundwater Use:		None reported			
Existing Wells Prox:		None			
Historical Map/Photo:		c1910 building plan (Ignatieff, 1981); 1922 fire insurance plan (Public Archives Canada, NMC 10837, sheet 124); several historical photos (Ignatieff, 1981)			
Operators:		Government of Canada -Mines Branch (1911-1940s)			
Present Occupants:		Government of Canada, laboratories and offices			
Excavation History:		Evacuation for construction of current building at 552 Booth (1920s)			
Visible Wastes:		None reported or observed			
Odour:		None reported or observed			
Water Pollution:		None reported or observed			
Site Investigations:		Unknown			
Comments/Remarks:		This site is actually two sites - a coal gas producer was used at 552 Booth St (1920s) and a 2 tone by-product coke oven was used at 562 Booth St (1920s, 30s) in support of Mines Branch carbonization studies of Canadian coals. The Mines Branch of the Federal government operated a fuel testing station and a fuel research laboratory at 552 and 562 Booth St. respectively. These facilities undertook semi-industrial scale coal carbonization studies to assess Canadian coal in the approximate period 1911 to the 1940s. A Westinghouse suction bituminous coal gas producer was operated at 552 Booth St. The original building at 552 Booth St. was rebuilt in the late 1920s. A two ton by-product coke oven was also used at the rear of the building at 562 Booth St. in the 1920s and 1930s. The original building located at 562 booth St. is still in use. Today the buildings at 552 and 562 Booth St. are part of a complex of government buildings used by the Department of Energy, Mines and Resources. The buildings at 552 and 562 Booth are used as government offices and laboratories. There is no groundwater use in the area and the closest water body is Dows lake located 500 m south of the site.			
Site Description:					
Potential Environ Impact:		The potential environmental and human health impact at this site is considered minimal based on the lack of evidence of buried waste, and likely small volume of by-product tars generated by the intermittent use of the gas producer and coke oven. Potential environmental impacts are also mitigated at this site by lack of groundwater use in the area and the distance to Dows Lake. Potential environmental impacts at the site are also complicated by the historic use of the land between 552 and 562 Booth for the underground storage of liquid petroleum fuels.			
Offsite Disposal Areas:

Appendix: Database Descriptions

*Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. **Note:** Databases denoted with " * " indicates that the database will no longer be updated. See the individual database description for more information.*

Abandoned Aggregate Inventory:

Provincial

AGR

The MAAP Program maintains a database of abandoned pits and quarries. Please note that the database is only referenced by lot and concession and city/town location. The database provides information regarding the location, type, size, land use, status and general comments.*

Government Publication Date: Sept 2002*

Aggregate Inventory:

Provincial

AGR

The Ontario Ministry of Natural Resources maintains a database of all active pits and quarries. The database provides information regarding the registered owner/operator, location name, operation type, approval type, and maximum annual tonnage.

Government Publication Date: Up to Sep 2017

Abandoned Mine Information System:

Provincial

AMIS

The Abandoned Mines Information System contains data on known abandoned and inactive mines located on both Crown and privately held lands. The information was provided by the Ministry of Northern Development and Mines (MNDM), with the following disclaimer: "the database provided has been compiled from various sources, and the Ministry of Northern Development and Mines makes no representation and takes no responsibility that such information is accurate, current or complete". Reported information includes official mine name, status, background information, mine start/end date, primary commodity, mine features, hazards and remediation.

Government Publication Date: 1800-Nov 2016

Anderson's Waste Disposal Sites:

Private

ANDR

The information provided in this database was collected by examining various historical documents which aimed to characterize the likely position of former waste disposal sites from 1860 to present. The research initiative behind the creation of this database was to identify those sites that are missing from the Ontario MOE Waste Disposal Site Inventory, as well as to provide revisions and corrections to the positions and descriptions of sites currently listed in the MOE inventory. In addition to historic waste disposal facilities, the database also identifies certain auto wreckers and scrap yards that have been extrapolated from documentary sources. Please note that the data is not warranted to be complete, exhaustive or authoritative. The information was collected for research purposes only.

Government Publication Date: 1860s-Present

Automobile Wrecking & Supplies:

Private

AUWR

This database provides an inventory of known locations that are involved in the scrap metal, automobile wrecking/recycling, and automobile parts & supplies industry. Information is provided on the company name, location and business type.

Government Publication Date: 1999-Jan 31, 2018

Borehole:

Provincial

BORE

A borehole is the generalized term for any narrow shaft drilled in the ground, either vertically or horizontally. The information here includes geotechnical investigations or environmental site assessments, mineral exploration, or as a pilot hole for installing piers or underground utilities. Information is from many sources such as the Ministry of Transportation (MTO) boreholes from engineering reports and projects from the 1950 to 1990's in Southern Ontario. Boreholes from the Ontario Geological Survey (OGS) including The Urban Geology Analysis Information System (UGAIS) and the York Peel Durham Toronto (YPDT) database of the Conservation Authority Moraine Coalition. This database will include fields such as location, stratigraphy, depth, elevation, year drilled, etc. For all water well data or oil and gas well data for Ontario please refer to WWIS and OOGW.

Government Publication Date: 1875-Jul 2014

Certificates of Approval:

Provincial

CA

This database contains the following types of approvals: Air & Noise, Industrial Sewage, Municipal & Private Sewage, Waste Management Systems and Renewable Energy Approvals. The MOE in Ontario states that any facility that releases emissions to the atmosphere, discharges contaminants to ground or surface water, provides potable water supplies, or stores, transports or disposes of waste, must have a Certificate of Approval before it can operate lawfully. Fields include approval number, business name, address, approval date, approval type and status. This database will no longer be updated, as CofA's have been replaced by either Environmental Activity and Sector Registry (EASR) or Environmental Compliance Approval (ECA). Please refer to those individual databases for any information after Oct.31, 2011.

Government Publication Date: 1985-Oct 30, 2011*

Commercial Fuel Oil Tanks:

Provincial

CFOT

Since May 2002, Ontario developed a new act where it became mandatory for fuel oil tanks to be registered with Technical Standards & Safety Authority (TSSA). This data would include all commercial underground fuel oil tanks in Ontario with fields such as location, registration number, tank material, age of tank and tank size.

Government Publication Date: Feb 28, 2017

Chemical Register:

Private

CHEM

This database includes information from both a one time study conducted in 1992 and private source and is a listing of facilities that manufacture or distribute chemicals. The production of these chemical substances may involve one or more chemical reactions and/or chemical separation processes (i.e. fractionation, solvent extraction, crystallization, etc.).

Government Publication Date: 1999-Jan 31, 2018

Compressed Natural Gas Stations:

Private

CNG

Canada has a network of public access compressed natural gas (CNG) refuelling stations. These stations dispense natural gas in compressed form at 3,000 pounds per square inch (psi), the pressure which is allowed within the current Canadian codes and standards. The majority of natural gas refuelling is located at existing retail gasoline that have a separate refuelling island for natural gas. This list of stations is made available by the Canadian Natural Gas Vehicle Alliance.

Government Publication Date: Dec 31, 2012

Inventory of Coal Gasification Plants and Coal Tar Sites:

Provincial

COAL

This inventory includes both the "Inventory of Coal Gasification Plant Waste Sites in Ontario-April 1987" and the Inventory of Industrial Sites Producing or Using Coal Tar and Related Tars in Ontario-November 1988) collected by the MOE. It identifies industrial sites that produced and continue to produce or use coal tar and other related tars. Detailed information is available and includes: facility type, size, land use, information on adjoining properties, soil condition, site operators/occupants, site description, potential environmental impacts and historic maps available. This was a one-time inventory.*

Government Publication Date: Apr 1987 and Nov 1988*

Compliance and Convictions:

Provincial

CONV

This database summarizes the fines and convictions handed down by the Ontario courts beginning in 1989. Companies and individuals named here have been found guilty of environmental offenses in Ontario courts of law.

Government Publication Date: 1989-Nov 2017

Certificates of Property Use:

Provincial

CPU

This is a subset taken from Ontario's Environmental Registry (EBR) database. It will include all CPU's on the registry such as (EPA s. 168.6) - Certificate of Property Use.

Government Publication Date: 1994-Feb 28, 2018

Drill Hole Database:

Provincial

DRL

The Ontario Drill Hole Database contains information on more than 113,000 percussion, overburden, sonic and diamond drill holes from assessment files on record with the department of Mines and Minerals. Please note that limited data is available for southern Ontario, as it was the last area to be completed. The database was created when surveys submitted to the Ministry were converted in the Assessment File Research Image Database (AFRI) project. However, the degree of accuracy (coordinates) as to the exact location of drill holes is dependent upon the source document submitted to the MNDM. Levels of accuracy used to locate holes are: centering on the mining claim; a sketch of the mining claim; a 1:50,000 map; a detailed company map; or from submitted a "Report of Work".

Government Publication Date: 1886-Nov 30, 2017

Dry Cleaning Facilities:

Federal

DRYCLEANERS

List of dry cleaning facilities made available by Environment and Climate Change Canada. Environment and Climate Change Canada's Tetrachloroethylene (Use in Dry Cleaning and Reporting Requirements) Regulations (SOR/2003-79) are intended to reduce releases of tetrachloroethylene to the environment from dry cleaning facilities.

Government Publication Date: Jan 2004-Dec 2016

Environmental Activity and Sector Registry:

Provincial

EASR

On October 31, 2011, a smarter, faster environmental approvals system came into effect in Ontario. The EASR allows businesses to register certain activities with the ministry, rather than apply for an approval. The registry is available for common systems and processes, to which preset rules of operation can be applied. The EASR is currently available for: heating systems, standby power systems and automotive refinishing. Businesses whose activities aren't subject to the EASR may apply for an ECA (Environmental Compliance Approval), Please see our ECA database.

Government Publication Date: Oct 2011-Apr 30, 2018

Environmental Registry:

Provincial

[EBR](#)

The Environmental Registry lists proposals, decisions and exceptions regarding policies, Acts, instruments, or regulations that could significantly affect the environment. Through the Registry, thirteen provincial ministries notify the public of upcoming proposals and invite their comments. For example, if a local business is requesting a permit, license, or certificate of approval to release substances into the air or water; these are notified on the registry. Data includes: Approval for discharge into the natural environment other than water (i.e. Air) - EPA s. 9, Approval for sewage works - OWRA s. 53(1), and EPA s. 27 - Approval for a waste disposal site. For information regarding Permit to Take Water (PTTW), Certificate of Property Use (CPU) and (ORD) Orders please refer to those individual databases.

Government Publication Date: 1994-Feb 28, 2018

Environmental Compliance Approval:

Provincial

[ECA](#)

On October 31, 2011, a smarter, faster environmental approvals system came into effect in Ontario. In the past, a business had to apply for multiple approvals (known as certificates of approval) for individual processes and pieces of equipment. Today, a business either registers itself, or applies for a single approval, depending on the types of activities it conducts. Businesses whose activities aren't subject to the EASR may apply for an ECA. A single ECA addresses all of a business's emissions, discharges and wastes. Separate approvals for air, noise and waste are no longer required. This database will also include Renewable Energy Approvals. For certificates of approval prior to Nov 1st, 2011, please refer to the CA database. For all Waste Disposal Sites please refer to the WDS database.

Government Publication Date: Oct 2011-Apr 30, 2018

Environmental Effects Monitoring:

Federal

[EEM](#)

The Environmental Effects Monitoring program assesses the effects of effluent from industrial or other sources on fish, fish habitat and human usage of fisheries resources. Since 1992, pulp and paper mills have been required to conduct EEM studies under the Pulp and Paper Effluent Regulations. This database provides information on the mill name, geographical location and sub-lethal toxicity data.

Government Publication Date: 1992-2007*

ERIS Historical Searches:

Private

[EHS](#)

ERIS has compiled a database of all environmental risk reports completed since March 1999. Available fields for this database include: site location, date of report, type of report, and search radius. As per all other databases, the ERIS database can be referenced on both the map and "Statistical Profile" page.

Government Publication Date: 1999-Feb 28, 2018

Environmental Issues Inventory System:

Federal

[EIIS](#)

The Environmental Issues Inventory System was developed through the implementation of the Environmental Issues and Remediation Plan. This plan was established to determine the location and severity of contaminated sites on inhabited First Nation reserves, and where necessary, to remediate those that posed a risk to health and safety; and to prevent future environmental problems. The EIIS provides information on the reserve under investigation, inventory number, name of site, environmental issue, site action (Remediation, Site Assessment), and date investigation completed.

Government Publication Date: 1992-2001*

Emergency Management Historical Event:

Provincial

[EMHE](#)

List of locations of historical occurrences of emergency events, including those assigned to the Ministry of Natural Resources by Order-In-Council (OIC) under the Emergency Management and Civil Protection Act, as well as events where MNR provided requested emergency response assistance. Many of these events will have involved community evacuations, significant structural loss, and/or involvement of MNR emergency response staff. These events fall into one of ten (10) type categories: Dam Failure; Drought / Low Water; Erosion; Flood; Forest Fire; Soil and Bedrock Instability; Petroleum Resource Center Event, EMO Requested Assistance, Continuity of Operations Event, Other Requested Assistance. EMHE record details are reproduced by ERIS under License with the Ontario Ministry of Natural Resources © Queen's Printer for Ontario, 2017.

Government Publication Date: Dec 31, 2016

List of TSSA Expired Facilities:

Provincial

[EXP](#)

List of facilities with removed tanks which were once registered with the Fuels Safety Program of the Technical Standards and Safety Authority (TSSA). Includes private fuel outlets, bulk plants, fuel oil tanks, gasoline stations, marinas, propane filling stations, liquid fuel tanks, piping systems, etc. Tanks which have been removed automatically fall under the expired facilities inventory held by TSSA.

Government Publication Date: Feb 28, 2017

Federal Convictions:

Federal

[FCON](#)

Environment Canada maintains a database referred to as the "Environmental Registry" that details prosecutions under the Canadian Environmental Protection Act (CEPA) and the Fisheries Act (FA). Information is provided on the company name, location, charge date, offence and penalty.

Government Publication Date: 1988-Jun 2007*

Contaminated Sites on Federal Land:

Federal

[FCS](#)

The Federal Contaminated Sites Inventory includes information on known federal contaminated sites under the custodianship of departments, agencies and consolidated Crown corporations as well as those that are being or have been investigated to determine whether they have contamination arising from past use that could pose a risk to human health or the environment. The inventory also includes non-federal contaminated sites for which the Government of Canada has accepted some or all financial responsibility. It does not include sites where contamination has been caused by, and which are under the control of, enterprise Crown corporations, private individuals, firms or other levels of government.

Government Publication Date: Jun 2000-Mar 2018

Fisheries & Oceans Fuel Tanks:

Federal

[FOFT](#)

Fisheries & Oceans Canada maintains an inventory of aboveground & underground fuel storage tanks located on Fisheries & Oceans property or controlled by DFO. Our inventory provides information on the site name, location, tank owner, tank operator, facility type, storage tank location, tank contents & capacity, and date of tank installation.

Government Publication Date: 1964-Sep 2017

Fuel Storage Tank:

Provincial

[FST](#)

The Technical Standards & Safety Authority (TSSA), under the Technical Standards & Safety Act of 2000 maintains a database of registered private and retail fuel storage tanks in Ontario with fields such as location, tank status, license date, tank type, tank capacity, fuel type, installation year and facility type.

Government Publication Date: Feb 28, 2017

Fuel Storage Tank - Historic:

Provincial

[FSTH](#)

The Fuels Safety Branch of the Ontario Ministry of Consumer and Commercial Relations maintained a database of all registered private fuel storage tanks. Public records of private fuel storage tanks are only available since the registration became effective in September 1989. This information is now collected by the Technical Standards and Safety Authority.

Government Publication Date: Pre-Jan 2010*

Ontario Regulation 347 Waste Generators Summary:

Provincial

[GEN](#)

Regulation 347 of the Ontario EPA defines a waste generation site as any site, equipment and/or operation involved in the production, collection, handling and/or storage of regulated wastes. A generator of regulated waste is required to register the waste generation site and each waste produced, collected, handled, or stored at the site. This database contains the registration number, company name and address of registered generators including the types of hazardous wastes generated. It includes data on waste generating facilities such as: drycleaners, waste treatment and disposal facilities, machine shops, electric power distribution etc. This information is a summary of all years from 1986 including the most currently available data. Some records may contain, within the company name, the phrase "See & Use..." followed by a series of letters and numbers. This occurs when one company is amalgamated with or taken over by another registered company. The number listed as "See & Use", refers to the new ownership and the other identification number refers to the original ownership. This phrase serves as a link between the 2 companies until operations have been fully transferred.

Government Publication Date: 1986-December 31, 2017

Greenhouse Gas Emissions from Large Facilities:

Federal

[GHG](#)

List of greenhouse gas emissions from large facilities made available by Environment Canada. Greenhouse gas emissions in kilotonnes of carbon dioxide equivalents (kt CO₂ eq).

Government Publication Date: 2013-Dec 2016

TSSA Historic Incidents:

Provincial

[HINC](#)

This database will cover all incidences recorded by TSSA with their older system, before they moved to their new management system. TSSA's Fuels Safety Program administers the Technical Standards & Safety Act 2000, providing fuel-related safety services associated with the safe transportation, storage, handling and use of fuels such as gasoline, diesel, propane, natural gas and hydrogen. Under this Act, TSSA regulates fuel suppliers, storage facilities, transport trucks, pipelines, contractors and equipment or appliances that use fuels. The TSSA works to protect the public, the environment and property from fuel-related hazards such as spills, fires and explosions. This database will include spills and leaks from pipelines, diesel, fuel oil, gasoline, natural gas, propane and hydrogen recorded by the TSSA.

Government Publication Date: 2006-June 2009*

Indian & Northern Affairs Fuel Tanks:

Federal

[IAFT](#)

The Department of Indian & Northern Affairs Canada (INAC) maintains an inventory of aboveground & underground fuel storage tanks located on both federal and crown land. Our inventory provides information on the reserve name, location, facility type, site/facility name, tank type, material & ID number, tank contents & capacity, and date of tank installation.

Government Publication Date: 1950-Aug 2003*

TSSA Incidents:Provincial **INC**

TSSA's Fuels Safety Program administers the Technical Standards & Safety Act 2000, providing fuel-related safety services associated with the safe transportation, storage, handling and use of fuels such as gasoline, diesel, propane, natural gas and hydrogen. Under this Act, TSSA regulates fuel suppliers, storage facilities, transport trucks, pipelines, contractors and equipment or appliances that use fuels. Includes incidents from fuel-related hazards such as spills, fires and explosions. This database will include spills and leaks from diesel, fuel oil, gasoline, natural gas, propane and hydrogen recorded by the TSSA.

Government Publication Date: Feb 28, 2017

Landfill Inventory Management Ontario:Provincial **LIMO**

The Landfill Inventory Management Ontario (LIMO) database is updated every year, as the ministry compiles new and updated information. The inventory will include small and large landfills. Additionally, each year the ministry will request operators of the larger landfills complete a landfill data collection form that will be used to update LIMO and will include the following information from the previous operating year. This will include additional information such as estimated amount of total waste received, landfill capacity, estimated total remaining landfill capacity, fill rates, engineering designs, reporting and monitoring details, size of location, service area, approved waste types, leachate of site treatment, contaminant attenuation zone and more. The small landfills will include information such as site owner, site location and certificate of approval # and status.

Government Publication Date: Dec 31, 2013

Canadian Mine Locations:Private **MINE**

This information is collected from the Canadian & American Mines Handbook. The Mines database is a national database that provides over 290 listings on mines (listed as public companies) dealing primarily with precious metals and hard rocks. Listed are mines that are currently in operation, closed, suspended, or are still being developed (advanced projects). Their locations are provided as geographic coordinates (x, y and/or longitude, latitude). As of 2002, data pertaining to Canadian smelters and refineries has been appended to this database.

Government Publication Date: 1998-2009*

Environmental Penalty Annual Report:Provincial **MISA PENALTY**

This database contains data from Ontario's annual environmental penalty report published by the Ministry of the Environment and Climate Change. These reports provide information on environmental penalties for land or water violations issued to companies in one of the nine industrial sectors covered by the Municipal Industrial Strategy for Abatement (MISA) regulations.

Government Publication Date: Jan 1, 2011 - Dec 31, 2017

Mineral Occurrences:Provincial **MNR**

In the early 70's, the Ministry of Northern Development and Mines created an inventory of approximately 19,000 mineral occurrences in Ontario, in regard to metallic and industrial minerals, as well as some information on building stones and aggregate deposits. Please note that the "Horizontal Positional Accuracy" is approximately +/- 200 m. Many reference elements for each record were derived from field sketches using pace or chain/tape measurements against claim posts or topographic features in the area. The primary limiting factor for the level of positional accuracy is the scale of the source material. The testing of horizontal accuracy of the source materials was accomplished by comparing the plan metric (X and Y) coordinates of that point with the coordinates of the same point as defined from a source of higher accuracy.

Government Publication Date: 1846-Jan 2018

National Analysis of Trends in Emergencies System (NATES):Federal **NATE**

In 1974 Environment Canada established the National Analysis of Trends in Emergencies System (NATES) database, for the voluntary reporting of significant spill incidents. The data was to be used to assist in directing the work of the emergencies program. NATES ran from 1974 to 1994. Extensive information is available within this database including company names, place where the spill occurred, date of spill, cause, reason and source of spill, damage incurred, and amount, concentration, and volume of materials released.

Government Publication Date: 1974-1994*

Non-Compliance Reports:Provincial **NCPL**

The Ministry of the Environment provides information about non-compliant discharges of contaminants to air and water that exceed legal allowable limits, from regulated industrial and municipal facilities. A reported non-compliance failure may be in regard to a Control Order, Certificate of Approval, Sectoral Regulation or specific regulation/act.

Government Publication Date: Dec 31, 2016

National Defense & Canadian Forces Fuel Tanks:Federal **NDFT**

The Department of National Defense and the Canadian Forces maintains an inventory of all aboveground & underground fuel storage tanks located on DND lands. Our inventory provides information on the base name, location, tank type & capacity, tank contents, tank class, date of tank installation, date tank last used, and status of tank as of May 2001. This database will no longer be updated due to the new National Security protocols which have prohibited any release of this database.

Government Publication Date: Up to May 2001*

National Defense & Canadian Forces Spills:

Federal

NDSP

The Department of National Defense and the Canadian Forces maintains an inventory of spills to land and water. All spill sites have been classified under the "Transportation of Dangerous Goods Act - 1992". Our inventory provides information on the facility name, location, spill ID #, spill date, type of spill, as well as the quantity of substance spilled & recovered.

Government Publication Date: Mar 1999-Aug 2010

National Defence & Canadian Forces Waste Disposal Sites:

Federal

NDWD

The Department of National Defence and the Canadian Forces maintains an inventory of waste disposal sites located on DND lands. Where available, our inventory provides information on the base name, location, type of waste received, area of site, depth of site, year site opened/closed and status.

Government Publication Date: 2001-Apr 2007*

National Energy Board Pipeline Incidents:

Federal

NEBI

Locations of pipeline incidents from 2008 to present, made available by the National Energy Board (NEB). Includes incidents reported under the Onshore Pipeline Regulations and the Processing Plant Regulations related to pipelines under federal jurisdiction, does not include incident data related to pipelines under provincial or territorial jurisdiction.

Government Publication Date: 2008-Mar 31, 2018

National Energy Board Wells:

Federal

NEBW

The NEBW database contains information on onshore & offshore oil and gas wells that are outside provincial jurisdiction(s) and are thereby regulated by the National Energy Board. Data is provided regarding the operator, well name, well ID No./UWI, status, classification, well depth, spud and release date.

Government Publication Date: 1920-Feb 2003*

National Environmental Emergencies System (NEES):

Federal

NEES

In 2000, the Emergencies program implemented NEES, a reporting system for spills of hazardous substances. For the most part, this system only captured data from the Atlantic Provinces, some from Quebec and Ontario and a portion from British Columbia. Data for Alberta, Saskatchewan, Manitoba and the Territories was not captured. However, NEES is also a repository for previous Environment Canada spill datasets. NEES is composed of the historic datasets ' or Trends ' which dates from approximately 1974 to present. NEES Trends is a compilation of historic databases, which were merged and includes data from NATES (National Analysis of Trends in Emergencies System), ARTS (Atlantic Regional Trends System), and NEES. In 2001, the Emergencies Program determined that variations in reporting regimes and requirements between federal and provincial agencies made national spill reporting and trend analysis difficult to achieve. As a consequence, the department has focused efforts on capturing data on spills of substances which fall under its legislative authority only (CEPA and FA). As such, the NEES database will be decommissioned in December 2004.

Government Publication Date: 1974-2003*

National PCB Inventory:

Federal

NPCB

Environment Canada's National PCB inventory includes information on in-use PCB containing equipment in Canada including federal, provincial and private facilities. Federal out-of-service PCB containing equipment and PCB waste owned by the federal government or by federally regulated industries such as airlines, railway companies, broadcasting companies, telephone and telecommunications companies, pipeline companies, etc. are also listed. Although it is not Environment Canada's mandate to collect data on non-federal PCB waste, the National PCB inventory includes some information on provincial and private PCB waste and storage sites. Some addresses provided may be Head Office addresses and are not necessarily the location of where the waste is being used or stored.

Government Publication Date: 1988-2008*

National Pollutant Release Inventory:

Federal

NPRI

Environment Canada has defined the National Pollutant Release Inventory ("NPRI") as a federal government initiative designed to collect comprehensive national data regarding releases to air, water, or land, and waste transfers for recycling for more than 300 listed substances.

Government Publication Date: 1993-May 2017

Oil and Gas Wells:

Private

OGW

The Nickle's Energy Group (publisher of the Daily Oil Bulletin) collects information on drilling activity including operator and well statistics. The well information database includes name, location, class, status and depth. The main Nickle's database is updated on a daily basis, however, this database is updated on a monthly basis. More information is available at www.nickles.com.

Government Publication Date: 1988-December 31, 2017

Ontario Oil and Gas Wells:

Provincial

OOGW

In 1998, the MNR handed over to the Ontario Oil, Gas and Salt Resources Corporation, the responsibility of maintaining a database of oil and gas wells drilled in Ontario. The OGSRL Library has over 20,000+ wells in their database. Information available for all wells in the ERIS database include well owner/operator, location, permit issue date, and well cap date, license No., status, depth and the primary target (rock unit) of the well being drilled. All geology/stratigraphy table information, plus all water table information is also provide for each well record.

Government Publication Date: 1800-Oct 2017

Inventory of PCB Storage Sites:

Provincial

OPCB

The Ontario Ministry of Environment, Waste Management Branch, maintains an inventory of PCB storage sites within the province. Ontario Regulation 11/82 (Waste Management - PCB) and Regulation 347 (Generator Waste Management) under the Ontario EPA requires the registration of inactive PCB storage equipment and/or disposal sites of PCB waste with the Ontario Ministry of Environment. This database contains information on: 1) waste quantities; 2) major and minor sites storing liquid or solid waste; and 3) a waste storage inventory.

Government Publication Date: 1987-Oct 2004; 2012-Dec 2013

Orders:

Provincial

ORD

This is a subset taken from Ontario's Environmental Registry (EBR) database. It will include all Orders on the registry such as (EPA s. 17) - Order for remedial work, (EPA s. 18) - Order for preventative measures, (EPA s. 43) - Order for removal of waste and restoration of site, (EPA s. 44) - Order for conformity with Act for waste disposal sites, (EPA s. 136) - Order for performance of environmental measures.

Government Publication Date: 1994-Feb 28, 2018

Canadian Pulp and Paper:

Private

PAP

This information is part of the Pulp and Paper Canada Directory. The Directory provides a comprehensive listing of the locations of pulp and paper mills and the products that they produce.

Government Publication Date: 1999, 2002, 2004, 2005, 2009-2014

Parks Canada Fuel Storage Tanks:

Federal

PCFT

Canadian Heritage maintains an inventory of known fuel storage tanks operated by Parks Canada, in both National Parks and at National Historic Sites. The database details information on site name, location, tank install/removal date, capacity, fuel type, facility type, tank design and owner/operator.

Government Publication Date: 1920-Jan 2005*

Pesticide Register:

Provincial

PES

The Ontario Ministry of the Environment and Climate Change maintains a database of licensed operators and vendors of registered pesticides.

Government Publication Date: 1988-Mar 2018

TSSA Pipeline Incidents:

Provincial

PINC

TSSA's Fuels Safety Program administers the Technical Standards & Safety Act 2000, providing fuel-related safety services associated with the safe transportation, storage, handling and use of fuels such as gasoline, diesel, propane, natural gas and hydrogen. Under this Act, TSSA regulates fuel suppliers, storage facilities, transport trucks, pipelines, contractors and equipment or appliances that use fuels. This database will include spills, strike and leaks from recorded by the TSSA.

Government Publication Date: Feb 28, 2017

Private and Retail Fuel Storage Tanks:

Provincial

PRT

The Fuels Safety Branch of the Ontario Ministry of Consumer and Commercial Relations maintained a database of all registered private fuel storage tanks and licensed retail fuel outlets. This database includes an inventory of locations that have gasoline, oil, waste oil, natural gas and/or propane storage tanks on their property. The MCCR no longer collects this information. This information is now collected by the Technical Standards and Safety Authority (TSSA).

Government Publication Date: 1989-1996*

Permit to Take Water:

Provincial

PTTW

This is a subset taken from Ontario's Environmental Registry (EBR) database. It will include all PTTW's on the registry such as OWRA s. 34 - Permit to take water.

Government Publication Date: 1994-Feb 28, 2018

Ontario Regulation 347 Waste Receivers Summary:

Provincial

REC

Part V of the Ontario Environmental Protection Act ("EPA") regulates the disposal of regulated waste through an operating waste management system or a waste disposal site operated or used pursuant to the terms and conditions of a Certificate of Approval or a Provisional Certificate of Approval. Regulation 347 of the Ontario EPA defines a waste receiving site as any site or facility to which waste is transferred by a waste carrier. A receiver of regulated waste is required to register the waste receiving facility. This database represents registered receivers of regulated wastes, identified by registration number, company name and address, and includes receivers of waste such as: landfills, incinerators, transfer stations, PCB storage sites, sludge farms and water pollution control plants. This information is a summary of all years from 1986 including the most currently available data.

Government Publication Date: 1986-2016

Record of Site Condition:

Provincial

RSC

The Record of Site Condition (RSC) is part of the Ministry of the Environment's Brownfields Environmental Site Registry. Protection from environmental cleanup orders for property owners is contingent upon documentation known as a record of site condition (RSC) being filed in the Environmental Site Registry. In order to file an RSC, the property must have been properly assessed and shown to meet the soil, sediment and groundwater standards appropriate for the use (such as residential) proposed to take place on the property. The Record of Site Condition Regulation (O. Reg. 153/04) details requirements related to site assessment and clean up.

RSCs filed after July 1, 2011 will also be included as part of the new (O.Reg. 511/09).

Government Publication Date: 1997-Sept 2001, Oct 2004-Apr 2018

Retail Fuel Storage Tanks:

Private

RST

This database includes an inventory of retail fuel outlet locations (including marinas) that have on their property gasoline, oil, waste oil, natural gas and / or propane storage tanks.

Government Publication Date: 1999-Jan 31, 2018

Scott's Manufacturing Directory:

Private

SCT

Scott's Directories is a data bank containing information on over 200,000 manufacturers across Canada. Even though Scott's listings are voluntary, it is the most comprehensive database of Canadian manufacturers available. Information concerning a company's address, plant size, and main products are included in this database.

Government Publication Date: 1992-Mar 2011*

Ontario Spills:

Provincial

SPL

This database identifies information such as location (approximate), type and quantity of contaminant, date of spill, environmental impact, cause, nature of impact, etc. Information from 1988-2002 was part of the ORIS (Occurrence Reporting Information System). The SAC (Spills Action Centre) handles all spills reported in Ontario. Regulations for spills in Ontario are part of the MOE's Environmental Protection Act, Part X.

Government Publication Date: 1988-Feb 2018

Wastewater Discharger Registration Database:

Provincial

SRDS

Information under this heading is combination of the following 2 programs. The Municipal/Industrial Strategy for Abatement (MISA) division of the Ontario Ministry of Environment maintained a database of all direct dischargers of toxic pollutants within nine sectors including: Electric Power Generation; Mining; Petroleum Refining; Organic Chemicals; Inorganic Chemicals; Pulp & Paper; Metal Casting; Iron & Steel; and Quarries. All sampling information is now collected and stored within the Sample Result Data Store (SRDS).

Government Publication Date: 1990-Dec 31, 2016

Anderson's Storage Tanks:

Private

TANK

The information provided in this database was collected by examining various historical documents, which identified the location of former storage tanks, containing substances such as fuel, water, gas, oil, and other various types of miscellaneous products. Information is available in regard to business operating at tank site, tank location, permit year, permit & installation type, no. of tanks installed & configuration and tank capacity. Data contained within this database pertains only to the city of Toronto and is not warranted to be complete, exhaustive or authoritative. The information was collected for research purposes only.

Government Publication Date: 1915-1953*

Transport Canada Fuel Storage Tanks:

Federal

TCFT

List of fuel storage tanks currently or previously owned or operated by Transport Canada. This inventory also includes tanks on The Pickering Lands, which refers to 7,530 hectares (18,600 acres) of land in Pickering, Markham, and Uxbridge owned by the Government of Canada since 1972; properties on this land has been leased by the government since 1975, and falls under the Site Management Policy of Transport Canada, but is administered by Public Works and Government Services Canada. This inventory provides information on the site name, location, tank age, capacity and fuel type.

Government Publication Date: 1970-Aug 2017

TSSA Variances for Abandonment of Underground Storage Tanks:

Provincial

VAR

List of variances granted for abandoned tanks. Under the Technical Standards and Safety Authority (TSSA) Liquid Fuels Handling Code and Fuel Oil Code, all underground storage tanks must be removed within two years of disuse. If removal of a tank is not feasible, an application may be sought for a variance from this code requirement.

Government Publication Date: Feb 28, 2017

Waste Disposal Sites - MOE CA Inventory:

Provincial

WDS

The Ontario Ministry of Environment, Waste Management Branch, maintains an inventory of known open (active or inactive) and closed disposal sites in the Province of Ontario. Active sites maintain a Certificate of Approval, are approved to receive and are receiving waste. Inactive sites maintain Certificate(s) of Approval but are not receiving waste. Closed sites are not receiving waste. The data contained within this database was compiled from the MOE's Certificate of Approval database. Locations of these sites may be cross-referenced to the Anderson database described under ERIS's Private Source Database section, by the CA number. All new Environmental Compliance Approvals handed out after Oct 31, 2011 for Waste Disposal Sites will still be found in this database.

Government Publication Date: Oct 2011-Apr 30, 2018

Waste Disposal Sites - MOE 1991 Historical Approval Inventory:

Provincial

[WDSH](#)

In June 1991, the Ontario Ministry of Environment, Waste Management Branch, published the "June 1991 Waste Disposal Site Inventory", of all known active and closed waste disposal sites as of October 30st, 1990. For each "active" site as of October 31st 1990, information is provided on site location, site/CA number, waste type, site status and site classification. For each "closed" site as of October 31st 1990, information is provided on site location, site/CA number, closure date and site classification. Locations of these sites may be cross-referenced to the Anderson database described under ERIS's Private Source Database section, by the CA number.

Government Publication Date: Up to Oct 1990*

Water Well Information System:

Provincial

[WWIS](#)

This database describes locations and characteristics of water wells found within Ontario in accordance with Regulation 903. It includes such information as coordinates, construction date, well depth, primary and secondary use, pump rate, static water level, well status, etc. Also included are detailed stratigraphy information, approximate depth to bedrock and the approximate depth to the water table.

Government Publication Date: Dec 31, 2017

Definitions

Database Descriptions: This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

Detail Report: This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

Distance: The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

Direction: The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

Elevation: The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

Executive Summary: This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

Map Key: The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

Unplottables: These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.

-All listings for businesses were listed as they are in the city directory.

-Listings that are residential are listed as “residential” with the number of tenants. The name of the residential tenant is not listed in the above city directory

APPENDIX D

Site Photographs

APPENDIX D

Site Photographs

Photo 1: Photo of the three boilers in the central heating plant located on the Site at 558 Booth Street.

Photo 2: Photo of the generator and likely location of former day tank in the northeast corner of the central heating plant.

APPENDIX D

Site Photographs

Photo 3: Two cut pipes in the eastern wall of generator room in the central heating plant this room that were likely fuel supply lines.

Photo 4: Mechanical room on the northeast corner of the central heating plant with door on the far wall that leads to the underground service tunnel on the Site.

APPENDIX D

Site Photographs

Photo 5: *Four drums of unknown content located along the northern exterior wall of the 568 Booth Street building.*

Photo 6: *Looking northeast at the butler hut building located on the eastern portion of the Site.*

APPENDIX D

Site Photographs

Photo 7: Looking west at the main entrance of the building at 562 Booth Street. Building is identified as former Department of Mines fuel research laboratories.

Photo 8: Typical vacant laboratory on the main floor of the 562 Booth Street building.

APPENDIX D

Site Photographs

Photo 9: Sump in the northwest corner of the 562 Booth Street building.

Photo 10: Typical transformers observed in the 562 Booth Street building.

APPENDIX D

Site Photographs

Photo 11: Photo of empty pail labelled "absorbent soaked with radioactive oil" in the basement of the building at 562 Booth Street.

Photo 12: Photo of the a laboratory in the basement of the 562 Booth Street building with plastic doors/shields and emergency lights.

APPENDIX D

Site Photographs

Photo 13: Chemical storage room with hazardous chemical storage locked located on the southeast portion of the 562 Booth Street building basement.

Photo 14: Radioactive laboratory in the sub-basement of the southern portion of the 568 Booth Street building.

APPENDIX D

Site Photographs

Photo 15: *Laboratory in the sub-basement of the southern portion of the 568 Booth Street building.*

Photo 16: *Mechanical equipment and chemicals in the 568 Booth Street building sub-basement*

APPENDIX D

Site Photographs

Photo 17: Looking north at the buried hydraulic hoist and forging press located in the sub-basement level of the northern portion of the 568 Booth Street building.

Photo 18: Leaking compressor located above a floor drain in the sub-basement level of the northern portion of the 568 Booth Street building.

APPENDIX D

Site Photographs

Photo 19: Looking east at various industrial equipment in the basement level of the northern portion of the 568 Booth Street building.

Photo 20: View of the generator with associated fuel AST located on the south side of the northern portion of the 568 Booth Street building.

APPENDIX D

Site Photographs

Photo 21: Oil storage room located on the southwest corner of the northern portion of the 568 Booth Street building.

Photo 22: Photo of transformers located in an hydro vault on the south side of the northern portion of the 568 Booth Street building.

APPENDIX D

Site Photographs

Photo 23: Looking west at the main entrance of the building at 568 Booth Street. Building is identified as former Bureau of Mines metallurgy research laboratories.

Photo 24: Looking east at the exterior portion of the Site between the northern and southern portions of the 568 Booth Street building. The generator is visible.

APPENDIX D

Site Photographs

Photo 25: *Potentially asbestos-containing fibres observed on the floors of the building at 552 Booth Street.*

Photo 26: *Industrial ovens observed in an open area on the sub-basement level of the building at 552 Booth Street.*

APPENDIX D

Site Photographs

Photo 27: A closed waste bin labelled “danger, do not remove” on the sub-basement floor of the 552 Booth Street building. The contents of this waste bin are unknown.

Photo 28: Plan on the Site and underground service tunnel that was located on a wall at 552 Booth Street.

APPENDIX D

Site Photographs

Photo 29: *Hallway on the first floor of the 552 Booth Street building.*

Photo 30: *Looking south at the main entrance of the building at 568 Booth Street. Building is identified as former Bureau of Mines ore dressing laboratories.*

APPENDIX D

Site Photographs

Photo 31: Vacant basement of 550 Booth Street.

Photo 32: Transformers observed in the basement of 550 Booth Street.

APPENDIX D

Site Photographs

Photo 33: Looking north at the open area on the main floor of the 550 Booth Street. Two drums (one of plastic debris and other of water) and chemical storage is present on the northwest corner of this floor.

Photo 34: Oil absorbent located beneath a compressor adjacent to a floor drain in the southeast corner of the basement of the 550 Booth Street building. Other mechanical equipment is visible in this room.

APPENDIX D

Site Photographs

Photo 35: Looking south at the butler hut and northern extern wall of the 552 Booth Street building.

Photo 36: Photo of the building at 556 Booth Street looking southwest.

APPENDIX D

Site Photographs

Photo 37: Looking west at the loading dock with a hydraulic lift on the northern portion of the building at 556 Booth Street. The hazardous substances storage shed is also visible on the north side of this building.

Photo 38: Looking east at the former equipment maintenance workshop on the main floor of the 556 Booth Street building.

APPENDIX D

Site Photographs

Photo 39: View of the parts washer on the main floor of the 556 Booth Street building.

Photo 40: Loading dock with hydraulic lift on the northern portion of the building at 568 Booth Street.

APPENDIX D

Site Photographs

Photo 41: A closed drum of hydraulic fluid and containers of paint, oils, lubricant, primer, cleaners and concrete repair compound located on the main floor of the 556 Booth Street building.

Photo 42: View inside the empty oil storage room located on the northwest corner of the basement of 556 Booth Street.

APPENDIX D

Site Photographs

Photo 43: *Photo of papers on the door of the 556 Booth Street oil room listed types of oils that were stored in the room.*

Photo 44: Compressor, air dryer and drum of ethylene glycol in the sub-basement of 556 Booth Street. Absorbent and staining was observed near the compressor.

APPENDIX D

Site Photographs

Photo 45: Vacant mechanical shop area in sub-basement of 556 Booth Street.

Photo 46: High voltage electrical room with transformers in southern portion of the 556 Booth Street sub-basement.

APPENDIX D

Site Photographs

Photo 47: Looking northwest at the hazardous substances storage shed located on the north side of the 556 Booth Street building.

Photo 48: Mechanical equipment located in the sub-basement of the building at 405 Rochester Street.

APPENDIX D

Site Photographs

Photo 49: *Transformer observed in the southeast corner of the subbasement level of 405 Rochester Street.*

Photo 50: *Typically vacant laboratory in the basement of 405 Rochester Street.*

APPENDIX D

Site Photographs

Photo 51: Looking west at the Site. The buildings at 556, 558 and 568 Booth Street are visible as well as the smoke stack on the south side of the central heating plant.

Photo 52: Looking east at the parking lot located on the northernmost portion of the Site.
