date: January 31, 2023

file: PG6472-MEMO.02

Further to your request and authorization, Paterson Group (Paterson) prepared the current memorandum to provide geotechnical recommendations for the proposed development to be located at the subject site. This memorandum should be read in conjunction with Paterson Group Report PG6472-1 dated November 7, 2022.

Paterson obtained subsurface information from test holes nearby the subject site which contributes to our knowledge of the subsurface soil conditions in the immediate area of the site. Paterson affirms the subsurface information presented in the aforementioned report is factual and accurate.

It is important to note that Paterson will be present during the excavation of the proposed building and will confirm the subsurface conditions below the subject site once exposed. If any information provided in the geotechnical report are observed to be inaccurate, supplemental reports will be issued to discuss the findings during the site excavations and the recommended action plan thereafter.

We trust that the current submission meets your requirements.

Best Regards,

Paterson Group Inc.

Owen R. Canton, EIT

Faisal I. Abou-Seido, P.Eng.
