Ottawa, ON K1P 1J1

**Attention: Ms. Rochelle Fortier-Lesage**  
**Transportation Project Manager, Infrastructure Approvals**

Dear Ms. Fortier-Lesage:

**Reference: 560 Hazeldean Road**  
**Revised Transportation Impact Assessment**  
**Novatech File No. 100057**

---

We are pleased to submit the following revised Transportation Impact Assessment (TIA), in support of Zoning By-Law Amendment and Draft Plan of Subdivision applications at 560 Hazeldean Road, for your review and signoff. The structure and format of this report is in accordance with the City of Ottawa's *Revised Transportation Impact Assessment Guidelines* (June 2023).

The original TIA was submitted in July 2025, as part of City Application Nos. D02-02-25-0059 and D07-16-25-0014. This revised TIA has been resubmitted to reflect updated plans and address City comments.

If you have any questions or comments regarding this report, please feel free to contact Jennifer Luong, or the undersigned.

Yours truly,

**NOVATECH**

Joshua Audia, P.Eng.  
Project Engineer | Transportation

## **Certification Form for Transportation Impact Assessment (TIA) Study Program Manager**

### **TIA Plan Reports**

On April 14, 2022, the Province's Bill 109 received Royal Assent providing legislative direction to implement the More Homes for Everyone Act, 2022 aiming to increase the supply of a range of housing options to make housing more affordable. Revisions have been made to the TIA guidelines to comply with Bill 109 and streamline the process for applicants and staff.

Individuals submitting TIA reports will be responsible for all aspects of development-related transportation assessment and reporting, and undertaking such work, in accordance and compliance with the City of Ottawa's Official Plan, the Transportation Master Plan and the Transportation Impact Assessment (2017) Guidelines.

By submitting the attached TIA report (and any associated documents) and signing this document, the individual acknowledges that they meet the four criteria listed below.

### **Certification**

- ☒ I have reviewed and have a sound understanding of the objectives, needs and requirements of the City of Ottawa's Official Plan, Transportation Master Plan and the Transportation Impact Assessment (2017) Guidelines (Update Effective July 2023);
- ☒ I have a sound knowledge of industry standard practice with respect to the preparation of transportation impact assessment reports, including multi modal level of service review;
- ☒ I have substantial experience (more than 5 years) in undertaking and delivering transportation impact studies (analysis, reporting and geometric design) with strong background knowledge in transportation planning, engineering or traffic operations; and

## EXECUTIVE SUMMARY

This Transportation Impact Assessment (TIA) has been prepared in support of Zoning By-Law Amendment and Draft Plan of Subdivision applications for the property located at 560 Hazeldean Road. The subject property is approximately 8.65 hectares in area, and is currently occupied by the Kevin Haime Golf Centre. The existing development includes one full-movement access to Hazeldean Road.

The subject site is surrounded by the following:

- Hazeldean Road, followed by commercial uses and the Carp River to the north,
- A stormwater facility, followed by residential uses to the south,
- The Carp River, followed by residential uses to the east, and
- Residential uses, followed by Mantra Street or Bliss Crescent to the west.

The proposed development is a subdivision including 60 single-detached homes, 48 townhomes, an apartment block, and three private roadways. The concept for the block includes 185 apartment dwellings within two six-storey buildings. A total of 216 parking spaces are proposed (i.e. two parking spaces per unit). Access to the proposed development is proposed via one driveway to Hazeldean Road, one driveway to Energy Street, and one driveway to Bliss Crescent.

The development is anticipated to be constructed in two phases. Phase 1 includes the low-density residential and access to Energy Street and Bliss Crescent, with a buildout year of 2029. Phase 2 includes the apartment block and access to Hazeldean Road, with a buildout year of 2031. A subsequent Site Plan Control application will be filed in support of the apartment block. The subject site is designated as 'Corridor – Mainstreet (Hazeldean Road)' and 'Evolving Neighbourhood' on Schedule B5 of the City of Ottawa's *Official Plan*. The implemented zoning for the property is 'Agricultural Zone' (AG[263r]), and the site is located within the Fernbank Community Design Plan (CDP) area. A rezoning is required to permit the proposed residential uses.

The study area for this report includes the boundary roadway Hazeldean Road, as well as the following signalized intersections:

- Hazeldean Road/325m East of Iber Road (future Robert Grant Avenue);
- Hazeldean Road/Roger Griffiths Avenue;
- Hazeldean Road/Mantra Street/Tillage Street;
- Hazeldean Road/Terry Fox Drive;
- Hazeldean Road/Edgewater Street;
- Terry Fox Drive/Edgewater Street/Charlie Rogers Place;
- Terry Fox Drive/Tony Graham Rec Complex;
- Terry Fox Drive/Sobey's Access;
- Terry Fox Drive/Winchester Drive/Halkirk Avenue.

The selected time periods for this report are the weekday AM and PM peak hours, as they represent the 'worst case' combination of site generated traffic and adjacent street traffic. The Phase 1 buildout year 2029, Phase 2 buildout year 2031, and horizon year 2036 have been considered.

The conclusions and recommendations of this TIA are summarized as follows:

#### Access Intersections

- The proposed accesses to Energy Street and Bliss Crescent will be part of Phase 1, and will connect to the existing roadway blocks that have been constructed as part of the adjacent subdivision. The driveway to Hazeldean Road will be part of Phase 2, and is proposed in approximately the same location as the existing driveway serving the golf centre.
- The proposed accesses meet the relevant provisions of the City's *Private Approach By-Law* (PABL) and the Transportation Association of Canada (TAC)'s *Geometric Design Guide for Canadian Roads*. Parameters such as access grades and clear throat length will be confirmed in subsequent Site Plan Control applications.

#### Site-Generated Traffic

- The proposed development is estimated to generate 158 person trips (including 79 vehicle trips) during the AM peak hour, and 164 person trips (including 84 vehicle trips) during the PM peak hour.

#### Development Design

- A 3.0m-wide multi-use pathway (MUP) is proposed along the eastern side of the subject site, which will provide a connection for pedestrians and cyclists to the Carp River Pathway and the existing pathway around the perimeter of the stormwater pond immediately south of the subject site. Another pathway is proposed to run between the apartment block and low-density blocks. A pathway connection is also proposed to Street 3 at the southeast corner of the subdivision.
- Entrances to the low-density dwellings will generally be located within 400m walking distance of stop #1043. The proposed dwellings are anticipated to be located within 800m walking distance (i.e. a 10-minute walk) of stops #1042 and #1043. These stops are served by routes 61, 301, and 303. A future Site Plan Control application will confirm the walking distances between entrances to the proposed apartment dwellings and stops #1042 and #1043.
- Street 1 will connect to Energy Street, and run generally on an east-west alignment from Energy Street to Street 3. Street 1 will have a width of 8.5m, which is wide enough to accommodate a travel lane in each direction and on-street parking on one side.
- Street 2 will connect to Hazeldean Road and Bliss Crescent, and run generally on a north-south alignment from Hazeldean Road to the southern intersection with Street 3, before curving 90 degrees to connect to Bliss Crescent. Street 2 will have a width of 8.5m. The connection to Hazeldean Road will not open as part of Phase 1.
- Street 3 will connect to Street 2 in two locations approximately 185m apart (measuring centre to centre), acting as a crescent loop on a curvilinear alignment. Street 3 will have a width of 8.5m.

- The proposed 8.5m width of each private roadway can accommodate the movements of heavy vehicles, such as fire trucks and garbage trucks. The volumes on the Phase 1 private roadways are projected to be 500 vehicles per day or less, which is consistent with public lanes per TAC's *Geometric Design Guide*. TAC suggests that no special facilities are required for pedestrians or cyclists on these types of roadways.

#### Boundary Streets

- Hazeldean Road does not meet the target pedestrian level of service (PLOS), bicycle level of service (BLOS), or transit level of service (TLOS).
- Hazeldean Road achieves a PLOS B on the north side of the roadway and a PLOS C on the south side (downgrading to a PLOS D at the most critical point). Hazeldean Road can achieve the target PLOS B on the south side by providing a 2.0m-wide sidewalk while providing a minimum offset of 3.0m from the sidewalk to the nearest travel lane. This is identified for the City's consideration.
- The *Ontario Traffic Manual (OTM) – Book 18* identifies that a 'physically separated bikeway' is appropriate for Hazeldean Road, which can include separated bike lanes, cycle tracks, or MUPs. The target BLOS C can be achieved if separated bikeways are implemented. This is identified for the City's consideration.
- Hazeldean Road requires a dedicated facility type to achieve the target TLOS C, which could include curbside lanes exclusive to buses, or restricted to buses and high-occupancy vehicles (HOVs). This is identified for the City's consideration.

#### Transportation Demand Management

- The proponent has agreed to consider the following measures at the sales centre for the low-density residential block:
  - Provide local area maps with walking/cycling access routes and key destinations;
  - Provide relevant transit schedules and route maps;
  - Provide a multimodal travel option information package.

#### Intersection MMLOS

- The results of the intersection MMLOS analysis can be summarized as follows:
  - Five of the nine study area intersections meet the target PLOS B/C;
  - Three of the nine study area intersections meet the target BLOS C;
  - Eight of the nine study area intersections meet the target TLOS C/D;
  - All nine study area intersections meet the target Auto LOS E.
- There is limited opportunity in improving the PLOS at each intersection without reducing the number of travel lanes or restricting turning movements.
- In general, fully protected intersections would be required to achieve the target BLOS, given the high operating speeds and volumes on Hazeldean Road or Terry Fox Drive. This is identified for the City's consideration.

- Transit signal priority measures on Hazeldean Road and Terry Fox Drive could improve transit delays on each approach to achieve the target TLOS C. This is identified as both roadways are designated as Transit Priority Corridors in the City's *2025 Transportation Master Plan (TMP)*.

#### Existing Traffic Operations

- All movements operate at the target Auto LOS E or better during both peak hours.
- There are no average (i.e. 50<sup>th</sup>-percentile) queues that extend to upstream intersections. The northbound through movement at Hazeldean Road/Terry Fox Drive and eastbound through movement at Hazeldean Road/Edgewater Street have maximum (i.e. 95<sup>th</sup>-percentile) queue lengths that extend into upstream intersections during one or both peak hours.
- The maximum westbound through queue at Hazeldean Road/Mantra Street/Tillage Street is 166m, extending through the median break serving the existing golf centre on the subject site. The median break starts approximately 120m east of the westbound stop bar on Hazeldean Road at Mantra Street/Tillage Street. Queueing through this median break is also anticipated in all future conditions.

#### Background Traffic Operations

- By 2036, the westbound through movement at Hazeldean Road/Robert Grant Avenue and the northbound left turn, northbound through, southbound left turn, southbound through, eastbound left turn, and westbound through movements at Hazeldean Road/Terry Fox Drive operate over-capacity during the PM peak hour.
- Synchro does not identify signal timing adjustments at Hazeldean Road/Robert Grant Avenue and Hazeldean Road/Terry Fox Drive that allow all movements to operate at the target Auto LOS E. Traffic throughout the study area may be displaced or alleviated through a combination of increased use of non-auto modes of transportation, alternate travel times for drivers to make use of off-peak capacity, or alternate routes for travel.

#### Total Traffic Operations

- Compared to the background traffic conditions, the addition of site-generated traffic is anticipated to have marginal impacts to traffic operations and queueing within the study area. The proposed access to Hazeldean Road operates acceptably during both peak hours.
- The proposed subdivision is recommended from a transportation perspective.

## 1.0 SCREENING

### 1.1 Introduction

This Transportation Impact Assessment (TIA) has been prepared in support of Zoning By-Law Amendment and Draft Plan of Subdivision applications for the property located at 560 Hazeldean Road. The subject property is approximately 8.65 hectares in area, and is currently occupied by the Kevin Haime Golf Centre. The existing development includes one full-movement access to Hazeldean Road.

The subject site is surrounded by the following:

- Hazeldean Road, followed by commercial uses and the Carp River to the north,
- A stormwater facility, followed by residential uses to the south,
- The Carp River, followed by residential uses to the east, and
- Residential uses, followed by Mantra Street or Bliss Crescent to the west.

An aerial of the vicinity around the subject site is provided in **Figure 1**.

**Figure 1: View of the Subject Site**

## 1.2 Proposed Development

The proposed development is a subdivision including 60 single-detached homes, 48 townhomes, an apartment block, and three private roadways. The concept for the block includes 185 apartment dwellings within two six-storey buildings. A total of 216 parking spaces are proposed (i.e. two parking spaces per unit). Access to the proposed development is proposed via one driveway to Hazeldean Road, one driveway to Energy Street, and one driveway to Bliss Crescent.

The development is anticipated to be constructed in two phases. Phase 1 includes the low-density residential and access to Energy Street and Bliss Crescent, with a buildout year of 2029. Phase 2 includes the apartment block and access to Hazeldean Road, with a buildout year of 2031. A subsequent Site Plan Control application will be filed in support of the apartment block. The subject site is designated as 'Corridor – Mainstreet (Hazeldean Road)' and 'Evolving Neighbourhood' on Schedule B5 of the City of Ottawa's *Official Plan*. The implemented zoning for the property is 'Agricultural Zone' (AG[263r]), and the site is located within the Fernbank Community Design Plan (CDP) area. A rezoning is required to permit the proposed residential uses.

A copy of the concept plan is included in **Appendix A**.

## 1.3 Screening Form

The City's *Revised TIA Guidelines* identify three triggers for completing a TIA report, including trip generation, location, and safety. The criteria for each trigger are outlined in the City's TIA Screening Form, which is included in **Appendix B**. The trigger results are as follows:

- Trip Generation Trigger – The development is anticipated to generate over 60 peak hour person trips; further assessment is **required** based on this trigger.
- Location Triggers – The development proposes a new connection to a designated Transit Priority Corridor, and is located within a Design Priority Area (Hazeldean Road Mainstreet Corridor); further assessment is **required** based on this trigger.
- Safety Triggers – The proposed development proposes an access within 150m of an adjacent signal, within auxiliary lanes of an intersection, and makes use of an existing median break; further assessment is **required** based on this trigger.

## 2.0 SCOPING

### 2.1 Existing Conditions

#### 2.1.1 Roadways

All roadways within the study area fall under the jurisdiction of the City of Ottawa.

**Hazeldean Road** is an arterial roadway that generally runs on an east-west alignment between Spruce Ridge Road and Eagleson Road (continuing east as Robertson Road). Within the study area, Hazeldean Road has a posted speed limit of 60 km/h, and generally has a four-lane divided urban cross-section with concrete sidewalks on both sides of the roadway. Hazeldean Road includes bike lanes in both directions west of Edgewater Street. Hazeldean Road is a truck route, allowing full loads. Street parking is not permitted.

**Terry Fox Drive** is an arterial roadway that generally runs on a north-south alignment between Eagleson Road (continuing east as Hope Side Road) and March Road (continuing as a major collector roadway). Within the study area, Terry Fox Drive has a posted speed limit of 70 km/h, and generally has a four-lane divided urban cross-section. Concrete sidewalks are continuously provided on the east side of Terry Fox Drive within the study area, and concrete sidewalks or asphalt pathways are provided on the west side. Terry Fox includes bike lanes in both directions. Terry Fox Drive is a truck route, allowing full loads. Street parking is not permitted.

**Edgewater Street** is a collector roadway that runs on a curvilinear alignment between Hazeldean Road and Terry Fox Drive (continuing west as Charlie Rogers Place). Within the study area, Edgewater Street has an unposted regulatory speed limit of 50 km/h, and generally has a two-lane undivided rural cross-section that is urbanized within the proximity of Hazeldean Road and Terry Fox Drive. Limited sidewalks are provided on the outside of Edgewater Street within the proximity of Hazeldean Road and Terry Fox Drive. Edgewater Street is not a truck route. Street parking is permitted in select locations on both sides of the roadway.

**Winchester Drive** is a collector roadway that generally runs on an east-west alignment between Terry Fox Drive (continuing west as Halkirk Avenue) and Castlefrank Road. Within the study area, Winchester Drive has a posted speed limit of 40 km/h, and a two-lane undivided urban cross-section. A concrete sidewalk is continuously provided on the south side of the roadway. Painted edge lines are provided in both directions. Winchester Drive is not a truck route. Street parking is generally permitted.

**Roger Griffiths Avenue** is a local roadway that generally runs on a north-south alignment for a distance of approximately 230m north of Hazeldean Road. Roger Griffiths Avenue has also been constructed for a distance of approximately 375m south of Maple Grove Road, however the two sections are currently discontinuous. Within the study area, Roger Griffiths Avenue has an unposted regulatory speed limit of 50 km/h, and a two-lane divided urban cross-section. Concrete sidewalks are provided on both sides of the roadway. Roger Griffiths Avenue is not a truck route. Street parking is not permitted.

**Tillage Street** is a local roadway that generally runs on a north-south alignment for a distance of approximately 230m north of Hazeldean Road (continuing south of Hazeldean Road as Mantra Street). Within the study area, Tillage Street has an unposted regulatory speed limit of 50 km/h, and a two-lane divided urban cross-section. Concrete sidewalks are provided on both sides of the roadway. Tillage Street is not a truck route. Street parking is not permitted.

**Mantra Street** is a local roadway that is partially constructed, and generally runs on a north-south alignment between Energy Street and Hazeldean Road (continuing north as Tillage Street). Within the study area, Mantra Street is planned to have a two-lane, partially-divided urban cross-section, and is assumed to have a speed limit of 50 km/h. Concrete sidewalks are planned for both sides of the roadway. Mantra Street is not a truck route. Based on the width of Mantra Street, it is anticipated that street parking is/will be permitted on one side of the roadway.

**Charlie Rogers Place** is a local roadway that generally runs on an east-west alignment for a distance of approximately 190m west of Terry Fox Drive (continuing east of Terry Fox Drive as Edgewater Street). Within the study area, Charlie Rogers Place has an unposted regulatory speed limit of 50 km/h, and a two-lane cross-section that is partially divided and urbanized from Terry Fox Drive to Ron Maslin Way, and undivided and rural west of Ron Maslin Way. An asphalt sidewalk is provided on the north side of the roadway. Charlie Rogers Place is not a truck route. Street parking is not permitted.

**Halkirk Avenue** is a local roadway that runs on a curvilinear alignment between Kincardine Drive and Terry Fox Drive (continuing east as Winchester Drive). Within the study area, Halkirk Avenue has an unposted regulatory speed limit of 50 km/h, and a two-lane undivided urban cross-section. No sidewalks are provided on Halkirk Avenue. Halkirk Avenue is not a truck route. Street parking is generally permitted.

The roadway network of the greater area surrounding the subject site is illustrated in **Figure 2**.

**Figure 2: Roadway Network**

## 2.1.2 Intersections

The following study area intersections are described based on existing conditions. At the time of writing this TIA, the intersection at Hazeldean Road/325m East of Iber Road is currently under construction, and will be Hazeldean Road/Robert Grant Avenue in future conditions. Further discussion of this intersection is included in Section 2.2.1.

### Hazeldean Road @ 325m East of Iber Road

- Signalized three-legged intersection
- North Approach (The Shoppes at Fairwinds): one left turn lane and one right turn lane
- East Approach (Hazeldean Road): two through lanes, one pocket bike lane, and one channelized right turn lane
- West Approach (Hazeldean Road): one left turn lane, two through lanes, and one bike lane
- Standard crosswalks on all approaches

### Hazeldean Road @ Roger Griffiths Avenue

- Signalized three-legged intersection
- North Approach (Roger Griffiths Avenue): two left turn lanes and one right turn lane
- East Approach (Hazeldean Road): two through lanes, one pocket bike lane, and one channelized right turn lane
- West Approach (Hazeldean Road): one left turn lane, two through lanes, and one bike lane
- Standard crosswalks on all approaches

### Hazeldean Road @ Mantra Street/Tillage Street

- Signalized four-legged intersection
- North Approach (Tillage Street): two left turn lanes and one through/right turn lane
- South Approach (Mantra Street): one left turn lane and one shared through/right turn lane
- East Approach (Hazeldean Road): one left turn lane, two through lanes, and one channelized right turn lane
- West Approach (Hazeldean Road): one left turn lane, one through lane, and one shared through/right turn lane
- Standard crosswalks on all approaches
- Bike boxes on north, south, and east approaches
- Protected intersection on southwest and southeast corners complete with crossside

**Hazeldean Road @ Terry Fox Drive**

- Signalized four-legged intersection
- North Approach (Terry Fox Drive): two left turn lanes, two through lanes, one pocket bike lane, and one channelized right turn lane
- South Approach (Terry Fox Drive): two left turn lanes, two through lanes, one pocket bike lane, and one channelized right turn lane
- East Approach (Hazeldean Road): two left turn lanes, two through lanes, one pocket bike lane, and one channelized right turn lane
- West Approach (Hazeldean Road): two left turn lanes, two through lanes, one pocket bike lane, and one channelized right turn lane
- Standard crosswalks on all approaches

**Hazeldean Road @ Edgewater Street**

- Signalized three-legged intersection
- North Approach (Edgewater Street): one left turn lane and one right turn lane
- East Approach (Hazeldean Road): one through lane and one shared through/right turn lane
- West Approach (Hazeldean Road): one left turn lane, two through lanes, and one bike lane
- Standard crosswalks on all approaches

**Terry Fox Drive @ Edgewater Street/  
Charlie Rogers Place**

- Signalized four-legged intersection
- North Approach (Terry Fox Drive): one left turn lane, two through lanes, one pocket bike lane, and one right turn lane
- South Approach (Terry Fox Drive): one left turn lane, one through lane, one shared through/right turn lane, and one bike lane
- East Approach (Edgewater Street): one left turn lane and one shared through/right turn lane
- West Approach (Charlie Rogers Place): one left turn lane and one shared through/right turn lane
- Standard crosswalks on all approaches

Terry Fox Drive @ Tony Graham Rec Complex

- Signalized four-legged intersection
- North Approach (Terry Fox Drive):  
one left turn lane, one through lane, one shared through/right turn lane, and one bike lane
- South Approach (Terry Fox Drive):  
one left turn lane, one through lane, one shared through/right turn lane, and one bike lane
- East Approach (access to 41 Edgewater):  
one left turn lane and one shared through/right turn lane
- West Approach (access to Tony Graham Rec Complex):  
one left turn lane and one shared through/right turn lane
- Standard crosswalks on all approaches

Terry Fox Drive @ Sobey's Access

- Signalized four-legged intersection
- North Approach (Terry Fox Drive):  
one left turn lane, one through lane, one shared through/right turn lane, and one bike lane
- South Approach (Terry Fox Drive):  
one left turn lane, two through lanes, one shared through/right turn lane, and one bike lane
- East Approach (access to 500 Hazeldean):  
one shared left turn/through lane and one channelized right turn lane
- West Approach (access to Sobey's):  
one shared left turn/through/right turn lane
- Standard crosswalks on all approaches

Terry Fox Drive @ Winchester Drive/Halkirk Avenue

- Signalized four-legged intersection
- North Approach (Terry Fox Drive):  
one left turn lane, two through lanes, one pocket bike lane, and one right turn lane
- South Approach (Terry Fox Drive):  
one left turn lane, one through lane, one shared through/right turn lane, and one bike lane
- East Approach (Winchester Drive):  
one left turn lane and one shared through/right turn lane
- West Approach (Halkirk Avenue):  
one left turn lane and one shared through/right turn lane
- Standard crosswalks on all approaches

### 2.1.3 Driveways

In accordance with the *Revised TIA Guidelines*, a review of the existing adjacent driveways along the boundary roads are provided as follows:

#### Hazeldean Road, north side

- One City maintenance entrance east of 5497 Hazeldean Road.

#### Hazeldean Road, south side

- No adjacent driveways.

### 2.1.4 Pedestrian and Cycling Facilities

Within the study area, pedestrian facilities are currently provided on both sides of Hazeldean Road, Terry Fox Drive, Roger Griffiths Avenue, Tillage Street, on one side of Winchester Drive, Mantra Street, and Charlie Rogers Place. Pedestrian facilities are planned for both sides of Mantra Street.

Within the study area, no existing roadways are identified in the Crosstown Bikeway Network. The existing section and future extension of Robert Grant Avenue is identified in the Crosstown Bikeway Network. Bike lanes are provided on Hazeldean Road and Terry Fox Drive (north of Winchester Drive). The bike lanes on Terry Fox Drive transition to paved shoulders south of Winchester Drive.

The pedestrian and cycling network of the greater area surrounding the subject site is illustrated in **Figure 3**.

**Figure 3: Pedestrian and Cycling Network**

### 2.1.5 Area Traffic Management

Within the study area, there are no Area Traffic Management (ATM) studies that are in progress.

Area speed limit signs of 40 km/h, 'traffic calmed neighbourhood' signage, centreline flex posts and '40 KM/H' pavement markings have been implemented on Winchester Drive.

### 2.1.6 Transit

The locations of OC Transpo bus stops relevant to the subject site are described in **Table 1**, and are shown in **Figure 4**. A summary of the various routes which serve the study area is included in **Table 2**. Detailed route information and an excerpt from the OC Transpo System Map are included in **Appendix C**.

**Table 1: OC Transpo Transit Stops**

| Stop  | Location                                                  | Routes Served                   |
|-------|-----------------------------------------------------------|---------------------------------|
| #1042 | North side of Hazeldean Road,<br>west of Tillage Street   | 61, 301, 303                    |
| #1043 | South side of Hazeldean Road,<br>east of Mantra Street    | 61, 301, 303                    |
| #1201 | South side of Hazeldean Road,<br>east of Kincardine Drive | 61, 301, 303                    |
| #1217 | North side of Hazeldean Road,<br>west of Kincardine Drive | 61, 301, 303                    |
| #2308 | South side of Hazeldean Road,<br>west of Edgewater Street | 61, 68, 301, 303, 646, 667, 668 |
| #3504 | North side of Hazeldean Road,<br>east of Edgewater Street | 61, 68, 301, 303, 646           |
| #7920 | East side of Terry Fox Drive,<br>south of Hazeldean Road  | 67                              |
| #7921 | West side of Terry Fox Drive,<br>south of Hazeldean Road  | 67                              |

**Table 2: OC Transpo Route Information**

| Route      | From ↔ To                                                 | Frequency                                                                       |
|------------|-----------------------------------------------------------|---------------------------------------------------------------------------------|
| <b>61</b>  | Tunney's Pasture ↔<br>Stittsville / Terry Fox             | 30-minute headways;<br>all day and limited overnight service, seven days a week |
| <b>67</b>  | Terry Fox & Tunney's Pasture ↔<br>Cope                    | 30-minute headways;<br>all day service, Monday to Friday                        |
| <b>68</b>  | Baseline ↔<br>Terry Fox                                   | 15- to 30-minute headways;<br>all day service, seven days a week                |
| <b>301</b> | Bayshore / Carlingwood ↔<br>Richmond / Stittsville        | Free rural shopping route;<br>service is inbound in AM and outbound in PM       |
| <b>303</b> | Bayshore / Carlingwood ↔<br>Dunrobin / Carp / Stittsville | Free rural shopping route;<br>service is inbound in AM and outbound in PM       |
| <b>646</b> | Canterbury H.S. ↔<br>Terry Fox                            | School route; service at select times on school days only                       |
| <b>667</b> | Holy Trinity H.S. ↔<br>Hope Side                          | School route; service at select times on school days only                       |
| <b>668</b> | Holy Trinity H.S. ↔<br>Bridlewood                         | School route; service at select times on school days only                       |

Figure 4: OC Transpo Bus Stop Locations

### 2.1.7 Existing Traffic Volumes

Weekday traffic counts completed by the City of Ottawa or Novatech have been used to determine the existing pedestrian, cyclist, and vehicular traffic volumes at the study area intersections. These counts were completed on the dates listed below:

|                                                         |                  |
|---------------------------------------------------------|------------------|
| • Hazeldean Road/325m East of Iber Road                 | March 4, 2020    |
| • Hazeldean Road/Roger Griffiths Avenue                 | April 9, 2025    |
| • Hazeldean Road/Mantra Street/Tillage Street           | April 9, 2025    |
| • Hazeldean Road/Terry Fox Drive                        | October 29, 2024 |
| • Hazeldean Road/Edgewater Street                       | April 10, 2025   |
| • Terry Fox Drive/Edgewater Street/Charlie Rogers Place | April 10, 2025   |
| • Terry Fox Drive/Tony Graham Rec Complex               | January 30, 2024 |
| • Terry Fox Drive/Sobey's Access                        | April 10, 2025   |
| • Terry Fox Drive/Winchester Drive/Halkirk Avenue       | April 10, 2025   |

It is noted that active transportation volumes observed in the above traffic counts may be lower than typical conditions, as the counts were conducted outside of the warmest months. Since Hazeldean Road/325m East of Iber Road was counted prior to the COVID-19 pandemic, peak direction through volumes on Hazeldean Road have been balanced to be within 10% of volumes observed at Roger Griffiths Avenue. Based on the traffic count data, the average annual daily traffic (AADT) of Hazeldean Road across the subject site's frontage is approximately 25,170 vehicles per day (vpd). All traffic count data previously discussed are included in **Appendix D**. Vehicular traffic volumes and active transportation volumes within the study area are shown in **Figure 5** and **Figure 6**, respectively.

Figure 5: Existing Traffic Volumes

Figure 6: Existing Pedestrian and Cyclist Volumes

## 2.1.8 Collision Records

Historical collision data from the last five full years available was obtained from the City's Public Works and Service Department for the study area intersections and midblock segments. Copies of the collision summary reports are included in **Appendix E**.

The collision data has been evaluated to determine if there are any identifiable collision patterns, which are defined in the *Revised TIA Guidelines* as 'more than six collisions in five years' for any one movement. The number of collisions at each intersection from January 1, 2018 to December 31, 2022 is summarized in **Table 3**.

**Table 3: Reported Collisions**

| Location                                                     | Impact Types |          |           |              |                            | Total |
|--------------------------------------------------------------|--------------|----------|-----------|--------------|----------------------------|-------|
|                                                              | Angle        | Rear End | Sideswipe | Turning Mvmt | SMV <sup>(1)</sup> / Other |       |
| Intersections                                                |              |          |           |              |                            |       |
| Hazeldean Rd/<br>325m East of Iber Rd                        | 1            | 1        | -         | 1            | -                          | 3     |
| Hazeldean Rd/<br>Roger Griffiths Ave                         | 1            | 2        | 1         | 2            | 2                          | 8     |
| Hazeldean Rd/<br>Mantra St/Tillage St                        | 1            | 5        | 1         | 3            | 1                          | 11    |
| Hazeldean Rd/<br>Terry Fox Dr                                | 11           | 85       | 13        | 13           | 6                          | 128   |
| Hazeldean Rd/<br>Edgewater St                                | 4            | 6        | 2         | 3            | 3                          | 18    |
| Terry Fox Dr/<br>Edgewater St/Charlie Rogers Pl              | 7            | 13       | 6         | 13           | 1                          | 40    |
| Terry Fox Dr/<br>Tony Graham Rec Complex                     | -            | 1        | 1         | 1            | -                          | 3     |

1. SMV = Single Motor Vehicle

*Hazeldean Road/325m East of Iber Road*

A total of three collisions were reported at this intersection over the last five years, consisting of one angle impact, one rear-end impact, and one turning movement impact. Two collisions resulted in injuries, but no collision caused fatalities. All three collisions (100%) occurred in poor driving conditions. No collisions involved pedestrians or cyclists.

*Hazeldean Road/Roger Griffiths Avenue*

A total of eight collisions were reported at this intersection over the last five years, consisting of one angle impact, two rear-end impacts, one sideswipe impact, two turning movement impacts, and two single vehicle/other impacts. Three collisions resulted in injuries, but no collision caused fatalities. Three of the eight collisions (38%) occurred in poor driving conditions. One collision involved a pedestrian and an eastbound left turning vehicle. No collisions involved cyclists.

*Hazeldean Road/Mantra Street/Tillage Street*

A total of 11 collisions were reported at this intersection over the last five years, consisting of one angle impact, five rear-end impacts, one sideswipe impact, three turning movement impacts, and one single vehicle/other impact. No collisions resulted in injuries or fatalities. Three of the 11 collisions (27%) occurred in poor driving conditions. One collision involved a pedestrian and a southbound right turning vehicle. No collisions involved cyclists.

*Hazeldean Road/Terry Fox Drive*

A total of 128 collisions were reported at this intersection over the last five years, consisting of 11 angle impacts, 85 rear-end impacts, 13 sideswipe impacts, 13 turning movement impacts, and six single vehicle/other impacts. Twenty collisions resulted in injuries, but no collision caused fatalities. Forty-one of the 128 collisions (32%) occurred in poor driving conditions. One collision involved a pedestrian and a southbound right turning vehicle. Two collisions involved cyclists (one angle impact involving a right turning cyclist and vehicle travelling through, and one rear-end impact involving a cyclist and vehicle travelling through).

Of the 11 angle impacts, three involved a northbound vehicle and an eastbound vehicle, one involved a northbound vehicle and a westbound vehicle, three involved a southbound vehicle and an eastbound vehicle, and four involved a southbound vehicle and a westbound vehicle. No one combination meets the threshold of a collision pattern.

Of the 85 rear-end impacts, 24 involved northbound vehicles (18 through incidents, six right turn incidents), 28 involved southbound vehicles (ten through incidents, 18 right turn incidents), 19 involved eastbound vehicles (four left turn incidents, ten through incidents, five right turn incidents), and 14 involved westbound vehicles (ten through incidents, four right turn incidents). Posted speed limits of 60 or 70 km/h and high traffic volumes are likely factors for the frequency of this type of collision. There are no apparent geometric factors to make rear-end impacts at any approach more likely.

Of the 13 sideswipe impacts, four involved northbound vehicles, three involved southbound vehicles, three involved eastbound vehicles, and three involved westbound vehicles. No one approach meets the threshold of a collision pattern.

Of the 13 turning movement impacts, seven involved a northbound vehicle and southbound vehicle (one northbound left turn and southbound right turn, three northbound through and southbound left turn, and three northbound right turn and southbound left turn), four involved multiple southbound vehicles (two southbound through and southbound left turn, one southbound through and southbound right turn, and one with two southbound right turns), and two involved an eastbound vehicle and westbound vehicle (one eastbound right turn and westbound left turn, and one westbound left turn and westbound U-turn). No one combination meets the threshold of a collision pattern.

Of the six single vehicle/other impacts, four involved a vehicle reversing into another vehicle facing the same direction (one at each approach). One involved a southbound right turning vehicle colliding with a pedestrian, and one involved a southbound vehicle impacting a pole (manoeuvre unknown). No one approach meets the threshold of a collision pattern.

#### Hazeldean Road/Edgewater Street

A total of 18 collisions were reported at this intersection over the last five years, consisting of four angle impacts, six rear-end impacts, two sideswipe impacts, three turning movement impacts, and three single vehicle/other impacts. Four collisions resulted in injuries, but no collision caused fatalities. Eight of the 18 collisions (44%) occurred in poor driving conditions. One collision involved a pedestrian and an eastbound left turning vehicle. No collisions involved cyclists.

#### Terry Fox Drive/Edgewater Street/Charlie Rogers Place

A total of 40 collisions were reported at this intersection over the last five years, consisting of seven angle impacts, 13 rear-end impacts, six sideswipe impacts, 13 turning movement impacts, and one single vehicle/other impact. Fourteen collisions resulted in injuries, but no collision caused fatalities. Ten of the 40 collisions (25%) occurred in poor driving conditions. No collisions involved pedestrians. One angle impact involved a right turning cyclist and vehicle travelling through.

Of the seven angle impacts, three involved a northbound vehicle and an eastbound vehicle, one involved a northbound vehicle and a westbound vehicle, two involved a southbound vehicle and an eastbound vehicle, one involved a southbound vehicle and a westbound vehicle, and one involved a southbound vehicle and a westbound bicycle. No one combination meets the threshold of a collision pattern.

Of the 13 rear-end impacts, seven involved northbound vehicles (all through incidents) and six involved southbound vehicles (two left turn incidents, four through incidents). The posted speed limit of 70 km/h and high traffic volumes on Terry Fox Drive are likely factors for the frequency of this type of collision. There are no apparent geometric factors to make rear-end impacts on Terry Fox Drive more likely.

Of the six sideswipe impacts, three involved northbound vehicles and three involved southbound vehicles. No one approach meets the threshold of a collision pattern.

Of the 13 turning movement impacts, 12 involved a northbound vehicle and southbound vehicle (three northbound left turn and southbound through, eight northbound through and southbound left turn, and one northbound through and southbound U-turn), and one involved an eastbound vehicle and westbound vehicle (one eastbound left turn and westbound right turn). The number of collisions including southbound left turns meets the threshold of a collision pattern. A protected plus permitted left turn phase is currently provided for northbound/southbound left turns during the PM peak period, and is fully permitted at all other times. Protected plus permitted left turn phasing during other periods of the day could be considered to mitigate this type of collision.

#### Terry Fox Drive/Tony Graham Rec Complex

A total of three collisions were reported at this intersection over the last five years, consisting of one rear-end impact, one sideswipe impact, and one turning movement impact. No collisions resulted in injuries or fatalities. None of the three collisions (0%) occurred in poor driving conditions. No collisions involved pedestrians or cyclists.

#### Terry Fox Drive/Sobey's Access

A total of 11 collisions were reported at this intersection over the last five years, consisting of five angle impacts, one rear-end impact, one sideswipe impact, two turning movement impacts, and two single vehicle/other impacts. Five collisions resulted in injuries, but no collision caused fatalities. Three of the 11 collisions (27%) occurred in poor driving conditions. Both single vehicle impacts involved a pedestrian and a westbound vehicle (one turning left and one turning right). No collisions involved cyclists.

#### Terry Fox Drive/Winchester Drive/Halkirk Avenue

A total of 21 collisions were reported at this intersection over the last five years, consisting of three angle impacts, 12 rear-end impacts, one sideswipe impact, four turning movement impacts, and one single vehicle/other impact. Five collisions resulted in injuries, but no collision caused fatalities. Eleven of the 21 collisions (52%) occurred in poor driving conditions. No collisions involved pedestrians. One angle impact involved a right turning cyclist and vehicle travelling through.

Of the 12 rear-end impacts, three involved northbound vehicles (all through incidents), seven involved southbound vehicles (all through incidents), one involved eastbound vehicles (a through incident), and one involved westbound vehicles (a through incident). The posted speed limit of 70 km/h and high traffic volumes on Terry Fox Drive are likely factors for the frequency of this type of collision. There are no apparent geometric factors to make rear-end impacts on Terry Fox Drive more likely.

#### Hazeldean Road between 325m of Iber Road & Roger Griffiths Avenue

One collision was reported along this segment over the last five years, which was a rear-end impact involving eastbound vehicles. The collision did not result in injuries or fatalities, and occurred in fair driving conditions. This collision did not involve pedestrians or cyclists.

#### Hazeldean Road between Roger Griffiths Avenue & Mantra Street/Tillage Street

One collision was reported along this segment over the last five years, which was a sideswipe impact involving eastbound vehicles. The collision did not result in injuries or fatalities, and occurred in fair driving conditions. This collision did not involve pedestrians or cyclists.

*Hazeldean Road between Mantra Street/Tillage Street & Terry Fox Drive*

A total of 11 collisions were reported along this segment over the last five years, consisting of five angle impacts, four rear-end impacts, and two sideswipe impacts. Of the 11 collisions, four occurred between Mantra Street/Tillage Street and Kincardine Drive, which is the section of Hazeldean Road that includes the subject site's frontage. The other seven occurred between Kincardine Drive and Terry Fox Drive.

Four collisions resulted in injuries, but no collision caused fatalities. Four of the 11 collisions (36%) occurred in poor driving conditions. No collisions involved pedestrians. One angle impact involved a right turning cyclist and vehicle travelling through.

*Hazeldean Road between Terry Fox Drive & Edgewater Street*

A total of three collisions were reported along this segment over the last five years, consisting of two rear-end impacts and one sideswipe impact. No collisions resulted in injuries or fatalities. None of the three collisions (0%) occurred in poor driving conditions. No collisions involved pedestrians or cyclists.

*Terry Fox Drive between Edgewater Street/Charlie Rogers Place & Tony Graham Rec Complex*

A total of four collisions were reported along this segment over the last five years, consisting of three rear-end impacts and one sideswipe impact. No collisions resulted in injuries or fatalities. None of the four collisions (0%) occurred in poor driving conditions. No collisions involved pedestrians or cyclists.

*Terry Fox Drive between Tony Graham Rec Complex & Hazeldean Road*

A total of three collisions were reported along this segment over the last five years, consisting of one rear-end impact and two sideswipe impacts. No collisions resulted in injuries or fatalities. One of the three collisions (33%) occurred in poor driving conditions. No collisions involved pedestrians or cyclists.

*Terry Fox Drive between Hazeldean Road & Sobeys Access*

A total of five collisions were reported along this segment over the last five years, consisting of two rear-end impacts and three sideswipe impacts. No collisions resulted in injuries or fatalities. Four of the five collisions (80%) occurred in poor driving conditions. No collisions involved pedestrians or cyclists.

*Terry Fox Drive between Sobeys Access & Winchester Drive/Halkirk Avenue*

A total of four collisions were reported along this segment over the last five years, consisting of three rear-end impacts and one sideswipe impact. Three collisions resulted in injuries, but no collisions caused fatalities. Two of the four collisions (50%) occurred in poor driving conditions. No collisions involved pedestrians or cyclists.

## 2.2 Planned Conditions

### 2.2.1 Planned Transportation Projects

#### Transit Projects

Within the study area, the City's *2025 Transportation Master Plan (TMP)* identifies Hazeldean Road west of Eagleson Road and Terry Fox Drive from Hazeldean Road to Highway 417 as Transit Priority Corridors, in both its Needs-Based and Priority Transit Networks. The Needs-Based Transit Network also identifies Robert Grant Avenue south of Hazeldean Road as a Transitway Corridor with median bus rapid transit (BRT). North of Hazeldean Road, it is part of the future O-Train Line 3 extension. The Line 3 extension is also part of the Priority Network.

#### Roadway Projects

At the time of the initial submission, Robert Grant Avenue was being constructed to connect to Hazeldean Road at the existing study area intersection Hazeldean Road/325m East of Iber Road. The planned lane configuration at each approach is described below:

- North Approach (The Shoppes at Fairwinds / future Robert Grant Avenue extension): two left turn lanes, two through lanes, and one right turn lane
- South Approach (Robert Grant Avenue): one slotted left turn lane, two through lanes, and one right turn lane
- East Approach (Hazeldean Road): two left turn lanes, two through lanes, and one right turn lane
- West Approach (Hazeldean Road): two left turn lanes, one through lane, and one shared through/right turn lane
- Zebra-striped crosswalks and crossrides are planned on all approaches
- Cycle tracks are planned for all approaches
- Intersection will be fully protected

The planned Hazeldean Road/Robert Grant Avenue intersection is shown in **Figure 7**.

The City's *2025 TMP* identifies the extension of Robert Grant Avenue from Hazeldean Road to Palladium Drive in its Needs-Based and Priority Road Networks. The *TMP* identifies this extension as a two-lane roadway. It is understood that this section is scheduled for 2027-2028.

South of the study area, the City's *2025 TMP* also identifies a widening of Terry Fox Drive to four lanes from Abbott Street East to Eagleson Road, as part of the Needs-Based Network.

#### Active Transportation Projects

Within the study area, the City's *2025 TMP* does not identify any pedestrian infrastructure projects. The cycling infrastructure projects list identifies a pathway along the east side of the Carp River between Terry Fox Drive and Hazeldean Road (east of the site), and multi-use pathway (MUP) connections along Terry Fox Drive from Westphalian Avenue to Condado Crescent (south of the study area).

Figure 7: Planned Hazeldean Road/Robert Grant Avenue Intersection

## 2.2.2 Other Area Developments

Based on a review of the City's Development Application Search Tool, there are multiple other developments that are in proximity of the subject site, significant enough to include traffic projections that affect the study area, and are under construction, approved, or are in the approval process. These developments are summarized as follows.

### 16 Edgewater Street

A TIA was prepared by Novatech in July 2022, in support of a mixed-use development with 153 apartment dwellings, 23 townhomes, 458 m<sup>2</sup> of office space, and 294 m<sup>2</sup> of commercial space. The TIA estimated buildout to occur in 2022, however this application has not been approved at the time of writing.

### 21 Huntmar Drive

A TIA was prepared by D.J. Halpenny & Associates in June 2021, in support of a residential development with 344 apartment dwellings. The TIA estimated buildout to occur in 2024, however this application has not been approved at the time of writing.

### Trail View Subdivision (950 Terry Fox Drive)

A Transportation Impact Study (TIS) was prepared by Novatech in October 2014, in support of the Trail View subdivision consisting of 108 single-detached homes, 77 condo dwellings, and 60 apartment dwellings. A separate TIA in support of the apartment block was prepared by Novatech in May 2025. Some single-detached and condo dwellings have been built, and construction is ongoing. The TIA estimated buildout of the apartment block (i.e. the final phase of the subdivision) to occur in 2027.

### 5000 Robert Grant Avenue

A TIA was prepared by Parsons in March 2024, in support of a development consisting of 504 mid-rise or high-rise dwellings, and 2,185 ft<sup>2</sup> of retail space. The TIA estimated buildout to occur in 2025.

### Kizell Lands (5618 Hazeldean Road)

A TIA was prepared by Novatech in May 2020, in support of a subdivision consisting of 288 single-detached homes, 469 townhomes, 878 low-rise dwellings, 1,120 apartment dwellings, 351,334 ft<sup>2</sup> of retail space, a 580-student elementary school, and a 375-space park and ride. The TIA estimated buildout to occur in 2030.

### 5707 Hazeldean Road

A TIA was prepared by D.J. Halpenny & Associates in December 2019, in support of additional retail spaces at The Shoppes at Fairwinds. The gross floor area of the proposed additions total approximately 4,546 m<sup>2</sup>. The TIA estimated buildout to occur in 2021, however these additional retail pads have not been constructed at the time of writing.

A map indicating the approximate location of each development is included in **Figure 8**.

Figure 8: Other Area Developments

## 2.3 Study Area and Time Periods

The study area for this report includes the boundary roadway Hazeldean Road, as well as the following signalized intersections:

- Hazeldean Road/325m East of Iber Road (future Robert Grant Avenue);
- Hazeldean Road/Roger Griffiths Avenue;
- Hazeldean Road/Mantra Street/Tillage Street;
- Hazeldean Road/Terry Fox Drive;
- Hazeldean Road/Edgewater Street;
- Terry Fox Drive/Edgewater Street/Charlie Rogers Place;
- Terry Fox Drive/Tony Graham Rec Complex;
- Terry Fox Drive/Sobey's Access;
- Terry Fox Drive/Winchester Drive/Halkirk Avenue.

The selected time periods for this report are the weekday AM and PM peak hours, as they represent the 'worst case' combination of site generated traffic and adjacent street traffic. The Phase 1 buildout year 2029, Phase 2 buildout year 2031, and horizon year 2036 have been considered.

## 2.4 Access Design

Three accesses are proposed as part of the development, with one driveway each to Hazeldean Road, Energy Street, and Bliss Crescent. The driveway to Hazeldean Road will be part of Phase 2, and is proposed in approximately the same location as the existing driveway serving the golf centre.

The proposed accesses have been evaluated using the relevant provisions of the City's *Private Approach By-Law* (PABL) and the Transportation Association of Canada (TAC)'s *Geometric Design Guide for Canadian Roads*.

Section 25(1)(c) of the PABL identifies a maximum width requirement of 9m for any two-way private approach. The proposed accesses are each approximately 8.5m in width, meeting this requirement.

Section 25(1)(m) of the PABL identifies minimum distances between a private approach and the nearest intersecting street line, for sites that abut or are within 46m of an arterial or major collector roadway. For residential developments with more than 300 parking spaces, the minimum distance is 60m (measuring nearest edge to intersecting ROW). TAC's *Geometric Design Guide* identifies a minimum corner clearance of 70m (measuring nearest edge to nearest edge). The western edge of the proposed access to Hazeldean Road is approximately 137m from the ROW of Mantra Street, and approximately 141 from the nearest edge of Mantra Street. Therefore, these requirements are met.

Section 25(1)(p) of the PABL identifies a minimum separation requirement of 3m between a private approach and the nearest property line. The proposed access to Hazeldean Road is approximately 5m at the ROW of Hazeldean Road, meeting this requirement. The proposed accesses to Energy Street and Bliss Crescent will connect to the existing roadway blocks that have been constructed as part of the adjacent subdivision.

Section 25(1)(u) of the PABL identifies a requirement that any private approach serving a parking area with more than 50 parking spaces shall not have a grade exceeding 2% for the first 9m inside the property line. The grade of each proposed access will be confirmed as the concept plan is finalized.

A review of stopping sight distance (SSD) and intersection sight distance (ISD) requirements at the proposed accesses has been conducted, in accordance with the minimum requirements outlined in TAC's *Geometric Design Guide*. For the purposes of this review, a design speed of 70 km/h has been assumed for Hazeldean Road (i.e. 10 km/h greater than the posted speed limit of 60 km/h), and a design speed of 50 km/h has been assumed for Energy Street and Bliss Crescent. Therefore, TAC outlines the following SSD and ISD requirements:

- SSD
  - 105m required for Hazeldean Road;
  - 65m required for Energy Street/Bliss Crescent.
- ISD, looking right to turn left out of access
  - 150m desired for Hazeldean Road;
  - 105m desired for Energy Street/Bliss Crescent.
- ISD, looking left to turn right out of access
  - 130m desired for Hazeldean Road;
  - 95m desired for Energy Street/Bliss Crescent.

Hazeldean Road is a generally straight roadway that has a minor vertical crest east of the proposed development (i.e. at the bridge crossing the Carp River). There are clear sightlines to the crest of the bridge crossing the Carp River to the east (approximately 160m from the access location) and clear sightlines to the intersections with Mantra Street/Tillage Street and Roger Griffiths Avenue to the west. Therefore, the minimum required SSD and desired ISD are provided at the proposed access to Hazeldean Road.

The proposed accesses to Energy Street and Bliss Crescent will connect to the existing roadway blocks that were constructed as part of the adjacent subdivision. At Energy Street, it is anticipated that the required SSD can be provided in both directions, and the desired ISD can be provided for right turns. It is anticipated that the desired ISD for left turns is not provided, based on the 90-degree northeast corner of Bliss Crescent, however the curvature is tight enough that the operating speed is anticipated to be far slower than 50 km/h. Therefore, no concerns are identified.

At Bliss Crescent, it is anticipated that the required SSD can be provided for drivers approaching from the north, and the desired ISD can be provided for left turns. It is anticipated that the required SSD for drivers approaching from the south and the desired ISD for right turns is not provided, based on the 90-degree southeast corner of Bliss Crescent. However, the curvature is tight enough that the operating speed is anticipated to be far slower than 50 km/h. Approximately 40m of SSD is provided, which is acceptable for a design speed of approximately 36 km/h. Therefore, no concerns are identified.

TAC's *Geometric Design Guide* outlines a minimum clear throat length requirement for accesses serving apartments. For arterial accesses serving over 200 units, the *Geometric Design Guide* identifies a minimum clear throat length of 40m. This requirement can be met, as the apartment block has an approximate depth of 115m. The clear throat requirements for the apartment block can be reviewed further as part of the subsequent Site Plan Control application, when more details are known.

## 2.5 Development-Generated Travel Demand

### 2.5.1 Trip Generation

The number of peak hour person trips generated by the proposed development has been estimated using the *TRANS Trip Generation Manual*, which present peak period trip generation rates and mode shares for different types of housing for the AM and PM peak periods. The data is divided into trip generation rates and mode shares for Single-Family Detached Housing, Low-Rise Multifamily Housing (one or two storeys), and High-Rise Multifamily Housing (three or more storeys). The process of converting the trip generation estimates from peak period to peak hour is shown below. Traffic generated by the existing golf centre has not been deducted, as the golf centre is not open year-round.

The *TRANS Trip Generation Manual* identifies the subject site as being located within the Kanata-Stittsville district, which has the following observed mode shares during the peak periods.

**Table 4: Kanata-Stittsville Residential Mode Shares**

| Mode           | Single-Family Detached |         | Low-Rise Multifamily |         | High-Rise Multifamily |         |
|----------------|------------------------|---------|----------------------|---------|-----------------------|---------|
|                | AM Peak                | PM Peak | AM Peak              | PM Peak | AM Peak               | PM Peak |
| Auto Driver    | 52%                    | 56%     | 52%                  | 58%     | 43%                   | 55%     |
| Auto Passenger | 15%                    | 19%     | 14%                  | 17%     | 26%                   | 19%     |
| Transit        | 20%                    | 14%     | 22%                  | 17%     | 28%                   | 21%     |
| Cyclist        | 1%                     | 1%      | 0%                   | 0%      | 0%                    | 0%      |
| Pedestrian     | 12%                    | 9%      | 11%                  | 8%      | 4%                    | 5%      |

The mode shares for this proposed development are assumed to be equal during both peak hours, and generally follow the mode shares observed for the Kanata-Stittsville district. Therefore, the assumed mode shares of the low-density homes and apartment block is summarized as follows:

- Auto Driver: 55% for single-family/low-rise multifamily, 50% for apartments;
- Auto Passenger: 20% for single-family/low-rise multifamily, 20% for apartments;
- Transit: 15% for single-family/low-rise multifamily, 25% for apartments;
- Cyclist: 0% for single-family/low-rise multifamily, 0% for apartments;
- Pedestrian: 10% for single-family/low-rise multifamily, 5% for apartments.

The process of converting the trip generation estimates from peak period to peak hour is shown in the following tables. The estimated number of person trips generated by the proposed development during the AM and PM peak periods are shown in **Table 5**. A breakdown of these trips by mode share is shown in **Table 6**.

It should be noted that the trip generation estimates conducted as part of the original TIA considered 50 single-family detached homes and 48 townhomes. The revised concept plan now considers 60 single-family detached homes and 48 townhomes, resulting in an increase of approximately ten to twelve person trips and six vehicle trips during the peak hours. The increase will not result in significant changes or differences in conclusions and recommendations, and therefore, the tables, figures, and analysis has not been updated.

**Table 5: Proposed Residential – Peak Period Trip Generation**

| Land Use                       | TRANS Rate           | Units | AM Peak Period (ppp <sup>(1)</sup> ) |            |            | PM Peak Period (ppp) |            |            |
|--------------------------------|----------------------|-------|--------------------------------------|------------|------------|----------------------|------------|------------|
|                                |                      |       | IN                                   | OUT        | TOT        | IN                   | OUT        | TOT        |

| Cyclist                           | 0.58        | 0.48 | -            | -          | 0          | -            | -         | 0          |
| Pedestrian                        | 0.58        | 0.52 | 1            | 3          | 4          | 3            | 2         | 5          |
| <b>High-Rise Person Trips</b>     |             |      | <b>22</b>    | <b>51</b>  | <b>73</b>  | <b>44</b>    | <b>31</b> | <b>75</b>  |
| Auto Driver (Total)               |             |      | 24           | 55         | 79         | 50           | 34        | 84         |
| Auto Passenger (Total)            |             |      | 9            | 21         | 30         | 20           | 13        | 33         |
| Transit (Total)                   |             |      | 11           | 24         | 35         | 19           | 13        | 32         |
| Cyclist (Total)                   |             |      | -            | -          | 0          | -            | -         | 0          |
| Pedestrian (Total)                |             |      | 4            | 10         | 14         | 9            | 6         | 15         |
| <b>Total Person Trips</b>         |             |      | <b>48</b>    | <b>110</b> | <b>158</b> | <b>98</b>    | <b>66</b> | <b>164</b> |

From the previous table, the proposed development is estimated to generate 158 person trips (including 79 vehicle trips) during the AM peak hour, and 164 person trips (including 84 vehicle trips) during the PM peak hour.

### 2.5.2 Trip Distribution

The assumed distribution of trips generated by the proposed development is based on the typical commuter patterns. For residential trips, this is considered as outbound during the AM peak hour and inbound during the PM peak hour. As the extension of Robert Grant Avenue to Palladium Drive will be completed by the time the proposed development is built out, a percentage of site-generated trips have been assigned to/from the north and south via Robert Grant Avenue. The distribution can be summarized as follows.

- 35% to/from the north via Terry Fox Drive;
- 25% to/from the north via Robert Grant Avenue;
- 10% to/from the south via Terry Fox Drive;
- 5% to/from the south via Robert Grant Avenue;
- 20% to/from the east via Hazeldean Road;
- 5% to/from the west via Hazeldean Road.

### 2.5.3 Trip Assignment

#### Single-Family/Low-Rise Multifamily Trip Assignment

For the period where only Phase 1 has been constructed, trips generated by those homes have been assigned to the proposed accesses to Energy Street or Bliss Crescent. All trips to/from the south via Robert Grant Avenue are assumed to not travel on Hazeldean Road (connecting to Energy Street directly). All other trips are assumed to use the Hazeldean Road/Mantra Street/Tillage Street intersection to enter and exit the site.

After full buildout, trips generated by the single-family/low-rise multifamily homes have been split between all proposed accesses. All trips to/from the north/south via Terry Fox Drive and east via Hazeldean Road are assumed to use the Hazeldean Road access. All trips to/from the south via Robert Grant Avenue are assumed to use the Energy Street or Bliss Crescent access, and will not travel on Hazeldean Road. All trips to/from the north via Robert Grant Avenue and west via Hazeldean Road are assumed to also use the Energy Street or Bliss Crescent accesses, but will travel on Hazeldean Road to Mantra Street.

#### Apartment Trip Assignment

All trips generated by the apartments have been assigned to the proposed Hazeldean Road access. Trips to/from the south via Robert Grant Avenue are assumed to travel on Hazeldean Road, and will not travel on Energy Street or Mantra Street.

Based on the above, the distribution of site-generated traffic volumes to the study area intersections are shown in the following figures:

- Trips generated by the single-family/low-rise multifamily homes during Phase 1 is shown in **Figure 9**;
- Trips generated by the single-family/low-rise multifamily homes after full buildout is shown in **Figure 10**;
- Trips generated by the apartment block after full buildout is shown in **Figure 11**.

Figure 9: Site-Generated Traffic Volumes (Low-Density Homes, Phase 1)

Figure 10: Site-Generated Traffic Volumes (Low-Density Homes, Full Buildout)

Figure 11: Site-Generated Traffic Volumes (Apartment Block)

## 2.6 Exemptions Review

This module reviews possible exemptions from the final TIA, as outlined in the *Revised TIA Guidelines*. The applicable exemptions for this site are shown in **Table 8**.

**Table 8: TIA Exemptions**

| Module                                      | Element                                | Exemption Criteria                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Status     |

Based on the foregoing, the following modules will be included in the TIA report:

- Module 4.1: Development Design
- Module 4.2: Parking
- Module 4.3: Boundary Streets
- Module 4.5: Transportation Demand Management
- Module 4.7: Transit
- Module 4.9: Intersection Design

### 3.0 FORECASTING

#### 3.1 Other Area Developments

Projected traffic generated by the developments listed in Section 2.2.2 have been added to the background traffic volumes. A summary of these developments is included below, and relevant excerpts of their respective traffic studies are included in **Appendix F**.

##### 16 Edgewater Street

The proposed development is mixed-use, consisting of 153 apartment dwellings, 23 townhomes, 458 m<sup>2</sup> of office space, and 294 m<sup>2</sup> of commercial space. A buildout year of 2022 was estimated, however this application has not been approved at the time of writing. Therefore, projected traffic volumes have been added to the 2029, 2031, and 2036 background volumes.

##### 21 Huntmar Drive

The proposed development is residential, with a total of 344 apartment dwellings. The TIA estimated buildout to occur in 2024, however this application has not been approved at the time of writing. Therefore, projected traffic volumes have been added to the 2029, 2031, and 2036 background volumes.

##### Trail View Subdivision (950 Terry Fox Drive)

The Trail View subdivision consists of 108 single-detached homes, 77 condo dwellings, and 60 apartment dwellings. Some single-detached and condo dwellings have been built, and construction is ongoing. A buildout year of 2027 was estimated for the apartment block. For the purposes of this TIA, it is assumed that 50% of the traffic generated by the subdivision has been captured in the existing traffic volumes. Therefore, 50% of the projected traffic volumes have been added to the 2029, 2031, and 2036 background volumes.

##### 5000 Robert Grant Avenue

The proposed development is mixed-use, consisting of 504 mid-rise or high-rise dwellings and 2,185 ft<sup>2</sup> of retail space. A buildout year of 2025 was estimated. Therefore, projected traffic volumes have been added to the 2029, 2031, and 2036 background volumes.

##### Kizell Lands (5618 Hazeldean Road)

The proposed subdivision consists of 288 single-detached homes, 469 townhomes, 878 low-rise dwellings, 1,120 apartment dwellings, 351,334 ft<sup>2</sup> of retail space, a 580-student elementary school, and a 375-space park and ride. The TIA prepared by Novatech included traffic projections for two scenarios. Scenario One projections, which assumed the subdivision would adhere to the density requirements of the Fernbank CDP, have been considered for this study. A buildout year of 2031 was estimated for this subdivision. Therefore, 80% of the projected traffic volumes have been added to the 2029 background volumes, and 100% of the projected traffic volumes have been added to the 2031 and 2036 background volumes.

##### 5707 Hazeldean Road

The proposed development includes additional retail spaces at The Shoppes at Fairwinds. The gross floor area of the proposed additions total approximately 4,546 m<sup>2</sup>. A buildout year of 2021 was estimated, however these additional retail pads have not been constructed at the time of writing. Therefore, projected traffic volumes have been added to the 2029, 2031, and 2036 background volumes.

In addition to the developments previously listed, the Bradley Commons subdivision accessed by Mantra Street is partially constructed, and traffic generated by the completed residences were captured during the April 2025 traffic count at Hazeldean Road/Mantra Street/Tillage Street. The Transportation Impact Study (TIS) prepared in support of these residences (590 Hazeldean Road, prepared by Stantec in September 2013) included a traffic generation model of the Fernbank Community. The model divided the community into a total of 11 distinct traffic zones, based on physical features (such as the Hydro corridor), planned arterial/collector roadway network, and proposed intersection locations. A figure outlining the traffic zones and table outlining the estimated traffic generation for each zone is included in **Appendix F**.

Based on this model, the partially completed residential and future commercial on both sides of Mantra Street are captured by zones N1 and N6, and the estimated traffic generation at full buildout total approximately 148 vehicle trips during the AM peak hour and 184 vehicle trips during the PM peak hour. The remaining projected trips have been added to the 2029, 2031, and 2036 background volumes, based on the existing distribution observed at Hazeldean Road/Mantra Street/Tillage Street.

### 3.2 General Background Growth Rate

A review of the City's *Strategic Long-Range Model* has been conducted, comparing snapshots of 2022 and 2046 AM peak hour traffic volumes. These snapshots are included in **Appendix G**. The snapshots identify annual growth rates of approximately 0.5% to 1.5% along Hazeldean Road and Terry Fox Drive. Therefore, a conservative annual background growth rate of 2% has been applied to through volumes on the study area arterial roadways (Hazeldean Road, Terry Fox Drive, and Robert Grant Avenue), which is consistent with previous traffic studies within the Fernbank Community. No annual growth rate has been applied to the other study area roadways.

### 3.3 Projected Volumes on Robert Grant Avenue

The Fernbank TMP (prepared in 2009 by Delcan) included screenline analysis which indicated that during the 2031 PM peak hour, Robert Grant Avenue (then referred to as the 'North-South Arterial') was expected to carry northbound 'through' traffic volumes of 110 vehicles and southbound 'through' traffic volumes of 200 vehicles from Hazeldean Road to Fernbank Road, functioning as a bypass for traffic travelling to/from Stittsville that would otherwise use Stittsville Main Street. For the purposes of this study, these PM peak hour traffic volumes are carried in the 2029, 2031, and 2036 background volumes, with the reverse assumed during the AM peak hour.

The 2013 TIS prepared in support of 590 Hazeldean Road included traffic volume projections at Hazeldean Road/Robert Grant Avenue for the horizon year of that TIS, identified as 2025. Consistent with the Fernbank TMP, an assumed development rate of 500 units per year within the Fernbank Community was identified, starting in 2015 and continuing until full buildout (estimated to occur in 2034). This assumed rate of development was carried forward in other traffic studies in support of other developments within the Fernbank Community, including at 5618 Hazeldean Road. The 2025 volume projections for the eastbound left turn and southbound right turn have been added to the background volumes, with an annual growth rate of 2% applied.

### 3.4 Future Traffic Volume Figures

The figures below present the following traffic conditions:

- Other area development volumes in 2029 and 2031/2036 are shown in **Figure 12** and **13**, respectively;
- Background traffic volumes in 2029, 2031, and 2036 are shown in **Figures 14, 15, and 16**, respectively;
- Total traffic volumes in 2029, 2031, and 2036 are shown in **Figure 17, 18, and 19**, respectively.

### 3.5 Demand Rationalization

A review of the existing and background intersection operations has been conducted to determine where traffic volumes exceed capacity within the study area. The intersection parameters used in the analysis are consistent with the *Revised TIA Guidelines* (Saturated Flow Rate: 1,800 vphpl, Peak Hour Factor: 0.9 in existing conditions and 1.0 in future conditions). Per the *2025 Multi-Modal Level of Service (MMLOS) Guidelines Update*, the City-wide target vehicular level of service (Auto LOS) is an Auto LOS E, which includes a maximum vehicle-to-capacity (v/c) ratio of 1.00 at signalized intersections, and a maximum delay of 50 seconds at unsignalized intersections. Signal timing plans have been obtained from the City, and are included in **Appendix H**.

#### 3.5.1 Existing Traffic Conditions

Intersection capacity analysis has been conducted for the existing traffic conditions, using Synchro 11 software. The results of the analysis are summarized in **Table 9** and **Table 10** for the weekday AM and PM peak hours. Detailed Synchro reports are included in **Appendix I**.

**Table 9: Existing Intersection Analysis**

| Intersection                                              | AM Peak Hour |     |       | PM Peak Hour |     |       |

| Terry Fox Dr/<br>Winchester Dr        | NBT  | 710m                   | 0.48 [A]     | 33                              | 91                              | 0.37 [A]     | 24                              | 65                              |
|                                       | SBT  | 320m                   | 0.27 [A]     | 11                              | 59                              | 0.47 [A]     | 84                              | 111                             |

1: Indicates the spacing to the nearest upstream intersection/access for through lanes

#: Volume for the 95<sup>th</sup> percentile cycle exceeds capacity

m: Queue is metered by an upstream signal

~: Approach is above capacity

From the previous tables, all movements operate at the target Auto LOS E or better during both peak hours.

There are no average (i.e. 50<sup>th</sup>-percentile) queues that extend to upstream intersections. The following movements have maximum (i.e. 95<sup>th</sup>-percentile) queue lengths that extend into upstream intersections during one or both peak hours:

- Hazeldean Road/Terry Fox Drive
  - Northbound through: 112m in AM peak hour and 120m in PM peak hour (extends through signalized Sobey's Access).
- Hazeldean Road/Edgewater Street
  - Eastbound through: 133m in PM peak hour (extends through Terry Fox Drive).

It is also noted that the maximum westbound through queue at Hazeldean Road/Mantra Street/Tillage Street is 166m, extending through the median break serving the existing golf centre on the subject site. The median break starts approximately 120m east of the westbound stop bar on Hazeldean Road at Mantra Street/Tillage Street.

### 3.5.2 2029 Background Traffic Conditions

Intersection capacity analysis has been conducted for the 2029 background traffic conditions. For all future conditions, the intersection of Hazeldean Road/325m East of Iber Road is referred to as Hazeldean Road/Robert Grant Avenue, and the intersection of Hazeldean Road/Roger Griffiths Avenue is assumed to include a northbound approach (to be constructed as part of the Kizell Lands development). Signal timings for both intersections have been adjusted and optimized to reflect the new intersection geometries. The PM peak hours cycle lengths at intersections with Hazeldean Road west of Terry Fox Drive have been increased to 130 seconds.

The results of the analysis are summarized in **Table 11** and **Table 12** for the weekday AM and PM peak hours. Detailed Synchro reports are included in **Appendix J**.

**Table 11: 2029 Background Intersection Analysis**

| Intersection                                              | AM Peak Hour |     |       | PM Peak Hour |          |            |
|-----------------------------------------------------------|--------------|-----|-------|--------------|----------|------------|
|                                                           | Max v/c      | LOS | Mvmt  | Max v/c      | LOS      | Mvmt       |

|                                  | SBT  | 320m                               | 0.26 [A]     | 27                              | 60                              | 0.48 [A]     | 88                              | 116                             |

1: Indicates the storage length for auxiliary lanes or the spacing to the nearest upstream intersection/access for through lanes

#: Volume for the 95<sup>th</sup> percentile cycle exceeds capacity

m: Queue is metered by an upstream signal

~: Approach is above capacity

From the previous tables, the southbound through movement at Hazeldean Road/Terry Fox Drive operates at an Auto LOS F during the PM peak hour. All other movements operate at the target Auto LOS E or better during both peak hours.

The following movements have maximum queue lengths that extend into upstream intersections or exceed the provided storage length during the peak hours:

- Hazeldean Road/Terry Fox Drive
  - Northbound through: 116m in AM peak hour and 120m in PM peak hour (extends through signalized Sobey's Access);
  - Westbound through: 143m in PM peak hour (extends through Edgewater Street).
- Hazeldean Road/Edgewater Street
  - Eastbound through: 154m in PM peak hour (extends through Terry Fox Drive).
- Terry Fox Drive/Edgewater Street/Charlie Rogers Place
  - Southbound left turn: 67m in AM peak hour (exceeds 55m storage length).

Synchro does not identify signal timing adjustments at Hazeldean Road/Terry Fox Drive that allow all movements to operate at the target Auto LOS E. Traffic throughout the study area may be displaced or alleviated through a combination of increased use of non-auto modes of transportation, alternate travel times for drivers to make use of off-peak capacity, or alternate routes for travel. Using this demand rationalization, an approximate volume reduction of 10 southbound through vehicles would be required to meet the target Auto LOS during the PM peak hour.

### 3.5.3 2031 Background Traffic Conditions

Intersection capacity analysis has been conducted for the 2031 background traffic conditions. The results of the analysis are summarized in **Table 13** and **Table 14** for the weekday AM and PM peak hours. Detailed Synchro reports are included in **Appendix J**.

Table 13: 2031 Background Intersection Analysis

| Intersection                                              | AM Peak Hour |     |       | PM Peak Hour |          |            |
|-----------------------------------------------------------|--------------|-----|-------|--------------|----------|------------|

|                                       | SBT  | 320m                               | 0.27 [A]     | 34                              | 63                              | 0.49 [A]        | 92                              | 122                             |

1: Indicates the storage length for auxiliary lanes or the spacing to the nearest upstream intersection/access for through lanes

#: Volume for the 95<sup>th</sup> percentile cycle exceeds capacity

m: Queue is metered by an upstream signal

~: Approach is above capacity

From the previous tables, the southbound through movement at Hazeldean Road/Terry Fox Drive operates at an Auto LOS F during the PM peak hour. All other movements operate at the target Auto LOS E or better during both peak hours.

The following movements have maximum queue lengths that extend into upstream intersections or exceed the provided storage length during the peak hours:

- Hazeldean Road/Terry Fox Drive
  - Northbound through: 123m in AM peak hour and 127m in PM peak hour (extends through signalized Sobey's Access);
  - Westbound through: 158m in PM peak hour (extends through Edgewater Street).
- Hazeldean Road/Edgewater Street
  - Eastbound through: 160m in PM peak hour (extends through Terry Fox Drive).
- Terry Fox Drive/Charlie Rogers Place/Edgewater Street
  - Southbound left: 70m in AM peak hour (exceeds 55m storage length provided).

Using demand rationalization, an approximate volume reduction of 60 southbound through vehicles at Hazeldean Road/Terry Fox Drive would be required to meet the target Auto LOS during the PM peak hour.

### 3.5.4 2036 Background Traffic Conditions

Intersection capacity analysis has been conducted for the 2036 background traffic conditions. The results of the analysis are summarized in **Table 15** and **Table 16** for the weekday AM and PM peak hours. Detailed Synchro reports are included in **Appendix J**.

**Table 15: 2036 Background Intersection Analysis**

| Intersection                                              | AM Peak Hour |     |       | PM Peak Hour |          |            |

1: Indicates the storage length for auxiliary lanes or the spacing to the nearest upstream intersection/access for through lanes

#: Volume for the 95<sup>th</sup> percentile cycle exceeds capacity

m: Queue is metered by an upstream signal

~: Approach is above capacity

From the previous tables, the westbound through movement at Hazeldean Road/Robert Grant Avenue and the northbound left turn, northbound through, southbound left turn, southbound through, eastbound left turn, and westbound through movements at Hazeldean Road/Terry Fox Drive operate at an Auto LOS F during the PM peak hour. All other movements operate at the target Auto LOS E or better during both peak hours.

The following movements have maximum queue lengths that extend into upstream intersections or exceed the provided storage length during the peak hours:

- Hazeldean Road/Terry Fox Drive
  - Northbound through: 138m in AM peak hour and 145m in PM peak hour (extends through signalized Sobey's Access);
  - Westbound through: 173m in PM peak hour (extends through Edgewater Street).
- Hazeldean Road/Edgewater Street
  - Eastbound through: 171m in PM peak hour (extends through Terry Fox Drive).

Using demand rationalization, the following approximate volume reductions would be required to meet the target Auto LOS for the over-capacity movements during the PM peak hour:

- Hazeldean Road/Robert Grant Avenue
  - Westbound through: reduction of 80 vehicles.
- Hazeldean Road/Terry Fox Drive
  - Northbound left: reduction of 10 vehicles;
  - Northbound through: reduction of 10 vehicles;
  - Southbound left: reduction of 30 vehicles;
  - Southbound through: reduction of 140 vehicles;
  - Eastbound left: reduction of 20 vehicles;
  - Westbound through: reduction of 30 vehicles.

## 4.0 ANALYSIS

### 4.1 Development Design

#### 4.1.1 Design for Sustainable Modes

Based on the concept plan, a 3.0m-wide MUP is proposed along the eastern side of the subject site, which will provide a connection for pedestrians and cyclists to the Carp River Pathway and the existing pathway around the perimeter of the stormwater pond immediately south of the subject site. Another pathway is proposed to run between the apartment block and low-density blocks. A future Site Plan Control application will confirm the location of on-site pedestrian walkways within the apartment block, as well as the location of bicycle parking spaces for apartment residents and visitors. A pathway connection is also proposed to Street 3 at the southeast corner of the subdivision.

OC Transpo's service design guideline for peak period service is to provide service within a five-minute (400m) walk of home, work, or school for 95% of urban residents. Entrances to the low-density dwellings will generally be located within 400m walking distance of stop #1043. The proposed dwellings are anticipated to be located within 800m walking distance (i.e. a 10-minute walk) of stops #1042 and #1043. These stops are served by routes 61, 301, and 303. A future Site Plan Control application will confirm the walking distances between entrances to the proposed apartment dwellings and stops #1042 and #1043.

A review of the *Transportation Demand Management (TDM)-Supportive Development Design and Infrastructure Checklist* will be conducted in a future Site Plan Control application for the apartment block. A review of this checklist is exempt from Draft Plan of Subdivision applications.

#### 4.1.2 Circulation and Access

The *Revised TIA Guidelines* identify that this element of the Development Design module is required for Site Plan Control and Zoning By-Law Amendment applications. This module will be reviewed as part of a future Site Plan Control application for the apartment block.

### 4.1.3 New Street Networks

This section reviews the proposed on-site private roadways. A summary of each roadway is provided as follows.

#### Street 1

Street 1 will connect to Energy Street, and run generally on an east-west alignment from Energy Street to Street 3. Street 1 will have a width of 8.5m, which is wide enough to accommodate a travel lane in each direction and on-street parking on one side.

#### Street 2

Street 2 will connect to Hazeldean Road and Bliss Crescent, and run generally on a north-south alignment from Hazeldean Road to the southern intersection with Street 3, before curving 90 degrees to connect to Bliss Crescent. Street 2 will have a width of 8.5m. The connection to Hazeldean Road will not open as part of Phase 1.

#### Street 3

Street 3 will connect to Street 2 in two locations approximately 185m apart (measuring centre to centre), acting as a crescent loop on a curvilinear alignment. Street 3 will have a width of 8.5m.

The proposed 8.5m width of each private roadway can accommodate the movements of heavy vehicles, such as fire trucks and garbage trucks. The AADT volumes on the Phase 1 private roadways are projected to be 500 vehicles per day or less, which is consistent with public lanes per TAC's *Geometric Design Guide*. Based on the low volumes and low speed, TAC suggests that no special facilities are required for pedestrians or cyclists on these types of roadways. The design of the proposed private roadways meets the following strategic directions of the City's *Building Better and Smarter Suburbs (BBSS): Strategic Direction and Action Plan* (prepared in February 2015):

- Design the street network based on a modified or offset grid to maximize choices of travel routes and opportunities for utility connections;
- Design the street network in conjunction with the land use and open space system to ensure direct pedestrian and cycling connectivity to key destination in the community (schools, shops, bus stops and stations, etc.);
- Avoid reverse frontage lots (rear yards abutting public streets) within a community.

### 4.2 Parking

The subject site is located within Area C on Schedules 1 and 1A of the City's *Zoning By-Law* (ZBL). The required parking supply for the development based on the number of proposed dwellings are summarized in **Table 17**. The proposed parking supply for the future apartment block will be confirmed as part of a future Site Plan Control application.

**Table 17: Parking Requirements**

| Land Use                                         | Rate                                                                       | Units     | Required |
|--------------------------------------------------|----------------------------------------------------------------------------|-----------|----------|
| Minimum Vehicle Parking (Section 101/102 of ZBL) |                                                                            |           |          |
| Dwelling, Detached /<br>Dwelling, Townhouse      | 1.0 spaces per dwelling unit (resident)                                    | 108 units | 108      |
|                                                  | No visitor parking requirement, as each dwelling has a garage and driveway |           | 0        |
| Dwelling,<br>Mid-Rise Apartment                  | 1.2 spaces per dwelling unit (resident)                                    | 185 units | 222      |
|                                                  | 0.2 spaces per dwelling unit (visitor)                                     |           | 37       |
| Total                                            |                                                                            |           | 367      |
| Minimum Bicycle Parking (Section 111 of ZBL)     |                                                                            |           |          |
| Dwelling, Detached                               | No requirement identified                                                  | 108 units | 0        |
| Dwelling, Apartment                              | 0.5 spaces per dwelling unit                                               | 185 units | 93       |
| Total                                            |                                                                            |           | 93       |

### 4.3 Boundary Streets

This section provides a review of the boundary frontage to Hazeldean Road, using complete streets principles. The *MMLOS Guidelines* were used to evaluate the pedestrian level of service (PLOS), bicycle level of service (BLOS), transit level of service (TLOS), and public realm level of service (PRLOS), based on the targets for Mainstreet Corridors (outside of a Hub).

A detailed segment MMLOS review is included in **Appendix K**. A summary of the MMLOS review is provided in **Table 18**.

**Table 18: Segment MMLOS Summary**

| Segment        | PLOS     |          | BLOS     |          | TLOS     |          | PRLOS    |
|----------------|----------|----------|----------|----------|----------|----------|----------|
|                | Actual   | Target   | Actual   | Target   | Actual   | Target   | Score    |
| Hazeldean Road | <b>C</b> | <b>B</b> | <b>D</b> | <b>C</b> | <b>D</b> | <b>C</b> | <b>C</b> |

From the previous table, Hazeldean Road does not meet the target PLOS, BLOS, or TLOS.

Hazeldean Road achieves a PLOS B on the north side of the roadway and a PLOS C on the south side (downgrading to a PLOS D at the most critical point). Per the *2025 MMLOS Guidelines Update*, Hazeldean Road can achieve the target PLOS B on the south side by providing a 2.0m-wide sidewalk while providing a minimum offset of 3.0m from the sidewalk to the nearest travel lane. This is identified for the City's consideration.

The *Ontario Traffic Manual (OTM) – Book 18* includes a desirable cycling facility pre-selection nomograph, which identifies the desirable facility based on speed limit and AADT. Based on the speed limit of 60 km/h and AADT exceeding 10,000 vpd on Hazeldean Road, the nomograph identifies that a 'physically separated bikeway' is appropriate, which can include separated bike lanes, cycle tracks, or MUPs (as shown in **Figure 20**). The *2025 MMLOS Guidelines Update* identifies that the target BLOS C can be achieved if separated bikeways are implemented. This is identified for the City's consideration.

Hazeldean Road requires a dedicated facility type to achieve the target TLOS C, which could include curbside lanes exclusive to buses, or restricted to buses and high-occupancy vehicles (HOVs). This is identified for the City's consideration.

Figure 20: Desirable Cycling Facility Pre-Selection Nomograph

#### 4.4 Transportation Demand Management

##### 4.4.1 Context for TDM

Based on the concept plan, the proposed development consists of 60 single-detached homes, 48 townhomes, and 185 apartment dwellings. As part of a future Site Plan Control application, the breakdown of apartment dwellings by unit type (i.e. studio, one bedroom, two bedroom, etc.) will be known.

#### 4.4.2 Need and Opportunity

The subject site is designated as 'Corridor – Mainstreet (Hazeldean Road)' and 'Evolving Neighbourhood' on Schedule B5 of the City of Ottawa's *Official Plan*. The implemented zoning for the property is 'Agricultural Zone' (AG[263r]), and the site is located within the Fernbank Community Design Plan (CDP) area.

As first discussed in Section 2.5.1, the assumed mode shares for the proposed development are generally consistent with the surveyed residential mode shares within the Kanata/Stittsville district (as outlined in the *TRANS Trip Generation Manual*). It is anticipated that the target mode shares can be met by the proposed development, as it is located adjacent to a developing neighbourhood and within the proximity of retail businesses, parks, the Tony Graham Rec Complex, and existing pathway network. Failure to meet the target drive share by 10% would result in an additional 15 to 16 vehicle trips during the weekday peak hours.

#### 4.4.3 TDM Program

A review of the City's *TDM Measures Checklist* has been conducted by the proponent. The completed checklist is included in **Appendix L**. While the final list of TDM measures for the apartment block will be confirmed in a future Site Plan Control application, the proponent has agreed to consider the following measures at the sales centre for the low-density residential block:

- Provide local area maps with walking/cycling access routes and key destinations;
- Provide relevant transit schedules and route maps;
- Provide a multimodal travel option information package.

### 4.5 Transit

#### 4.5.1 Transit Route Capacity

Per the Exemptions Review included in Section 2.6, this element is exempt from the TIA, as the proposed development is projected to generate fewer than 75 peak hour transit trips.

#### 4.5.2 Transit Priority Requirements

The City's *Revised TIA Guidelines* identifies that this module shall assess the effect of development driveways and development-generated transit trips to the existing transit service within the study area. The site-generated traffic projections included in Section 2.5.1 estimate approximately 32 to 33 transit trips during the weekday peak hours. This magnitude of site-generated transit volumes is anticipated to have a negligible impact on transit operations on routes that serve the study area.

As discussed in Section 2.2.1, the City's *2025 TMP* identifies Hazeldean Road west of Eagleson Road and Terry Fox Drive from Hazeldean Road to Highway 417 as Transit Priority Corridors, in both its Needs-Based and Priority Transit Networks. The Needs-Based Transit Network also identifies Robert Grant Avenue south of Hazeldean Road as a Transitway Corridor.

## 4.6 Intersection Design

### 4.6.1 Intersection MMLOS

This section provides an existing conditions review of the study area intersections, using complete streets principles. The intersections have been evaluated for PLOS, BLOS, TLOS, and Auto LOS. The full intersection MMLOS analysis is included in **Appendix K**. A summary of the intersection MMLOS review is shown in **Table 19**. Intersections with Hazeldean Road have been evaluated based on the 'Mainstreet Corridors (outside a Hub)' targets, and intersections with Terry Fox Drive (excluding Hazeldean Road) have been evaluated based on the 'Outer Urban or Suburban' targets.

**Table 19: Intersection MMLOS Summary**

| Intersection                           | PLOS     |        | BLOS     |        | TLOS     |        | Auto LOS |        |
|----------------------------------------|----------|--------|----------|--------|----------|--------|----------|--------|
|                                        | Actual   | Target | Actual   | Target | Actual   | Target | Actual   | Target |
| Hazeldean Rd/325m E of Iber Rd         | <b>C</b> | B      | <b>C</b> | C      | <b>A</b> | C      | <b>A</b> | E      |
| Hazeldean Rd/Roger Griffiths Ave       | <b>C</b> |        | <b>D</b> |        | <b>A</b> |        | <b>A</b> |        |
| Hazeldean Rd/Mantra St/Tillage St      | <b>C</b> |        | <b>C</b> |        | <b>B</b> |        | <b>A</b> |        |
| Hazeldean Rd/Terry Fox Dr              | <b>E</b> |        | <b>E</b> |        | <b>D</b> |        | <b>C</b> |        |
| Hazeldean Rd/Edgewater St              | <b>B</b> | C      | <b>D</b> | C      | <b>A</b> | D      | <b>A</b> |        |
| Terry Fox Dr/Charlie Rogers Pl         | <b>C</b> |        | <b>E</b> |        | <b>A</b> |        | <b>A</b> |        |
| Terry Fox Dr/Tony Graham Rec           | <b>B</b> |        | <b>D</b> |        | <b>A</b> |        | <b>A</b> |        |
| Terry Fox Dr/Sobey's Access            | <b>C</b> |        | <b>C</b> |        | <b>A</b> |        | <b>A</b> |        |
| Terry Fox Dr/Winchester Dr/Halkirk Ave | <b>C</b> |        | <b>D</b> |        | <b>A</b> |        | <b>A</b> |        |

The results of the intersection MMLOS analysis can be summarized as follows:

- Five of the nine study area intersections meet the target PLOS B/C;
- Three of the nine study area intersections meet the target BLOS C;
- Eight of the nine study area intersections meet the target TLOS C/D;
- All nine study area intersections meet the target Auto LOS E.

Further discussion for each intersection is included below.

#### Hazeldean Road/325m East of Iber Road (Future Robert Grant Avenue)

This intersection does not meet the target PLOS B.

The east and west approaches achieve a PLOS C. There is limited opportunity in improving the PLOS at each approach without reducing the number of travel lanes. No approaches meet the City's vehicle/pedestrian conflict threshold for zebra-striped crosswalks (greater than 400,000 vehicle/pedestrian conflicts over an eight-hour period).

#### Hazeldean Road/Roger Griffiths Avenue

This intersection does not meet the target PLOS B or BLOS C.

The north and west approaches achieve a PLOS C. There is limited opportunity in improving the PLOS at each approach without reducing the number of travel lanes. No approaches meet the City's vehicle/pedestrian conflict threshold for zebra-striped crosswalks.

The north and west approaches achieve a BLOS D. A fully protected intersection would be required to achieve the target, given the high operating speeds and volumes on Hazeldean Road. This is identified for the City's consideration. Similar to the Hazeldean Road/Mantra Street/Tillage Street intersection, it is possible that some improvements could be made to this intersection when the access to the mixed-use block of the Kizell Lands subdivision (5618 Hazeldean Road) is constructed as the fourth leg.

Hazeldean Road/Mantra Street/Tillage Street

This intersection does not meet the target PLOS B.

The north, east, and west approaches achieve a PLOS C or D. There is limited opportunity in improving the PLOS at each approach without reducing the number of travel lanes or restricting turning movements. No approaches meet the City's vehicle/pedestrian conflict threshold for zebra-striped crosswalks.

Hazeldean Road/Terry Fox Drive

This intersection does not meet the target PLOS B, BLOS C, or TLOS C.

All approaches achieve a PLOS E. There is limited opportunity in improving the PLOS at each approach without reducing the number of travel lanes or restricting turning movements. The north, south, and west approaches meet the City's vehicle/pedestrian conflict threshold for zebra-striped crosswalks.

All approaches achieve a BLOS E. A fully protected intersection would be required to achieve the target, given the high operating speeds and volumes on Hazeldean Road and Terry Fox Drive. This is identified for the City's consideration.

All approaches achieve a TLOS D. Transit signal priority measures on Hazeldean Road and Terry Fox Drive could improve transit delays on each approach to achieve the target TLOS C. This is identified as both roadways are designated as Transit Priority Corridors in the City's 2025 TMP.

Hazeldean Road/Edgewater Street

This intersection does not meet the target BLOS C.

The north and west approaches achieve a BLOS D. A fully protected intersection would be required to achieve the target, given the high operating speeds and volumes on Hazeldean Road. This is identified for the City's consideration.

Terry Fox Drive/Edgewater Street/Charlie Rogers Place

This intersection does not meet the target BLOS C.

All approaches achieve a BLOS D or E. A fully protected intersection would be required to achieve the target, given the high operating speeds and volumes on Terry Fox Drive. This is identified for the City's consideration.

Terry Fox Drive/Tony Graham Rec Complex

This intersection does not meet the target BLOS C.

All approaches achieve a BLOS D. A fully protected intersection would be required to achieve the target, given the high operating speeds and volumes on Terry Fox Drive. This is identified for the City's consideration.

Terry Fox Drive/Winchester Drive/Halkirk Avenue

This intersection does not meet the target BLOS C.

All approaches achieve a BLOS D or E. A fully protected intersection would be required to achieve the target, given the high operating speeds and volumes on Terry Fox Drive. This is identified for the City's consideration.

#### 4.6.2 2029 Total Traffic Conditions

Intersection capacity analysis has been conducted for the 2029 total traffic conditions. The results of the analysis are summarized in **Table 20** and **Table 21** for the weekday AM and PM peak hours. Detailed Synchro reports are included in **Appendix M**.

**Table 20: 2029 Total Intersection Analysis**

| Intersection                                              | AM Peak Hour |     |       | PM Peak Hour |          |            |
|-----------------------------------------------------------|--------------|-----|-------|--------------|----------|------------|
|                                                           | Max v/c      | LOS | Mvmt  | Max v/c      | LOS      | Mvmt       |
| Hazeldean Road/<br>Robert Grant Avenue                    | 0.66         | B   | NBT   | 0.90         | D        | SBL        |
| Hazeldean Road/<br>Roger Griffiths Avenue                 | 0.36         | A   | EBT/R | 0.60         | A        | WBT        |
| Hazeldean Road/<br>Mantra Street/Tillage Street           | 0.45         | A   | EBT/R | 0.66         | B        | WBT        |
| Hazeldean Road/<br>Terry Fox Drive                        | 0.84         | D   | EBT   | <b>1.02</b>  | <b>F</b> | <b>SBT</b> |
| Hazeldean Road/<br>Edgewater Street                       | 0.37         | A   | EBT   | 0.65         | B        | WBT/R      |
| Terry Fox Drive/<br>Edgewater Street/Charlie Rogers Place | 0.75         | C   | SBL   | 0.64         | B        | NBT/R      |
| Terry Fox Drive/<br>Tony Graham Rec Complex               | 0.39         | A   | NBT/R | 0.53         | A        | SBT/R      |

1: Indicates the storage length for auxiliary lanes or the spacing to the nearest upstream intersection/access for through lanes

#: Volume for the 95<sup>th</sup> percentile cycle exceeds capacity

m: Queue is metered by an upstream signal

~: Approach is above capacity

Compared to the 2029 background traffic conditions, the addition of site-generated traffic is anticipated to have marginal impacts to traffic operations and queueing within the study area.

The following movements have maximum queue lengths that extend into upstream intersections or exceed the provided storage length during the peak hours:

- Hazeldean Road/Terry Fox Drive
  - Northbound through: 116m in AM peak hour and 120m in PM peak hour (extends through signalized Sobey's Access);
  - Westbound through: 144m in PM peak hour (extends through Edgewater Street).
- Hazeldean Road/Edgewater Street
  - Eastbound through: 155m in PM peak hour (extends through Terry Fox Drive).
- Terry Fox Drive/Edgewater Street/Charlie Rogers Place
  - Southbound left turn: 68m in AM peak hour (exceeds 55m storage length).

Using demand rationalization, an approximate volume reduction of 20 southbound through vehicles at Hazeldean Road/Terry Fox Drive would be required to meet the target Auto LOS during the PM peak hour.

#### 4.6.3 2031 Total Traffic Conditions

Intersection capacity analysis has been conducted for the 2031 total traffic conditions. The proposed site access to Hazeldean Road is anticipated to be completed with the apartment block in 2031, and is included in the analysis below as an unsignalized intersection. The results of the analysis are summarized in **Table 22** and **Table 23** for the weekday AM and PM peak hours. Detailed Synchro reports are included in **Appendix M**.

Table 22: 2031 Total Intersection Analysis

1: Indicates the storage length for auxiliary lanes or the spacing to the nearest upstream intersection/access for through lanes

#: Volume for the 95<sup>th</sup> percentile cycle exceeds capacity

m: Queue is metered by an upstream signal

~: Approach is above capacity

Compared to the 2031 background traffic conditions, the addition of site-generated traffic is anticipated to have marginal impacts to traffic operations and queueing within the study area. The proposed access to Hazeldean Road operates acceptably during both peak hours.

The following movements have maximum queue lengths that extend into upstream intersections or exceed the provided storage length during the peak hours:

- Hazeldean Road/Terry Fox Drive
  - Northbound through: 123m in AM peak hour and 127m in PM peak hour (extends through signalized Sobey's Access);
  - Westbound through: 161m in PM peak hour (extends through Edgewater Street).
- Hazeldean Road/Edgewater Street
  - Eastbound through: 162m in PM peak hour (extends through Terry Fox Drive).
- Terry Fox Drive/Charlie Rogers Place/Edgewater Street
  - Southbound left: 71m in AM peak hour (exceeds 55m storage length provided).

Using demand rationalization, an approximate volume reduction of 60 southbound through vehicles at Hazeldean Road/Terry Fox Drive would be required to meet the target Auto LOS during the PM peak hour.

#### 4.6.4 2036 Total Traffic Conditions

Intersection capacity analysis has been conducted for the 2036 total traffic conditions. The results of the analysis are summarized in **Table 24** and **Table 25** for the weekday AM and PM peak hours. Detailed Synchro reports are included in **Appendix M**.

Table 24: 2036 Total Intersection Analysis

| Intersection                                              | AM Peak Hour |     |       | PM Peak Hour |          |            |

1: Indicates the storage length for auxiliary lanes or the spacing to the nearest upstream intersection/access for through lanes

#: Volume for the 95<sup>th</sup> percentile cycle exceeds capacity

m: Queue is metered by an upstream signal

~: Approach is above capacity

Compared to the 2036 background traffic conditions, the addition of site-generated traffic is anticipated to have marginal impacts to traffic operations and queueing within the study area. The proposed access to Hazeldean Road operates acceptably during both peak hours. The following movements have maximum queue lengths that extend into upstream intersections or exceed the provided storage length during the peak hours:

- Hazeldean Road/Terry Fox Drive
  - Northbound through: 138m in AM peak hour and 145m in PM peak hour (extends through signalized Sobey's Access);
  - Westbound through: 176m in PM peak hour (extends through Edgewater Street).
- Hazeldean Road/Edgewater Street
  - Eastbound through: 173m in PM peak hour (extends through Terry Fox Drive).

The following approximate volume reductions would be required to meet the target Auto LOS for the over-capacity movements during the PM peak hour:

- Hazeldean Road/Robert Grant Avenue
  - Southbound left: reduction of 10 vehicles;
  - Westbound through: reduction of 80 vehicles.
- Hazeldean Road/Terry Fox Drive
  - Northbound left: reduction of 20 vehicles;
  - Northbound through: reduction of 10 vehicles;
  - Southbound left: reduction of 30 vehicles;
  - Southbound through: reduction of 140 vehicles;
  - Eastbound left: reduction of 30 vehicles;
  - Westbound through: reduction of 40 vehicles.

## 5.0 CONCLUSIONS AND RECOMMENDATIONS

Based on the foregoing, the conclusions and recommendations of this TIA are summarized as follows:

### Access Intersections

- The proposed accesses to Energy Street and Bliss Crescent will be part of Phase 1, and will connect to the existing roadway blocks that have been constructed as part of the adjacent subdivision. The driveway to Hazeldean Road will be part of Phase 2, and is proposed in approximately the same location as the existing driveway serving the golf centre.
- The proposed accesses meet the relevant provisions of the City's *Private Approach By-Law* (PABL) and the Transportation Association of Canada (TAC)'s *Geometric Design Guide for Canadian Roads*. Parameters such as access grades and clear throat length will be confirmed in subsequent Site Plan Control applications.

### Site-Generated Traffic

- The proposed development is estimated to generate 158 person trips (including 79 vehicle trips) during the AM peak hour, and 164 person trips (including 84 vehicle trips) during the PM peak hour.

### Development Design

- A 3.0m-wide multi-use pathway (MUP) is proposed along the eastern side of the subject site, which will provide a connection for pedestrians and cyclists to the Carp River Pathway and the existing pathway around the perimeter of the stormwater pond immediately south of the subject site. Another pathway is proposed to run between the apartment block and low-density blocks. A pathway connection is also proposed to Street 3 at the southeast corner of the subdivision.
- Entrances to the low-density dwellings will generally be located within 400m walking distance of stop #1043. The proposed dwellings are anticipated to be located within 800m walking distance (i.e. a 10-minute walk) of stops #1042 and #1043. These stops are served by routes 61, 301, and 303. A future Site Plan Control application will confirm the walking distances between entrances to the proposed apartment dwellings and stops #1042 and #1043.
- Street 1 will connect to Energy Street, and run generally on an east-west alignment from Energy Street to Street 3. Street 1 will have a width of 8.5m, which is wide enough to accommodate a travel lane in each direction and on-street parking on one side.
- Street 2 will connect to Hazeldean Road and Bliss Crescent, and run generally on a north-south alignment from Hazeldean Road to the southern intersection with Street 3, before curving 90 degrees to connect to Bliss Crescent. Street 2 will have a width of 8.5m. The connection to Hazeldean Road will not open as part of Phase 1.
- Street 3 will connect to Street 2 in two locations approximately 185m apart (measuring centre to centre), acting as a crescent loop on a curvilinear alignment. Street 3 will have a width of 8.5m.

- The proposed 8.5m width of each private roadway can accommodate the movements of heavy vehicles, such as fire trucks and garbage trucks. The volumes on the Phase 1 private roadways are projected to be 500 vehicles per day or less, which is consistent with public lanes per TAC's *Geometric Design Guide*. TAC suggests that no special facilities are required for pedestrians or cyclists on these types of roadways.

#### Boundary Streets

- Hazeldean Road does not meet the target pedestrian level of service (PLOS), bicycle level of service (BLOS), or transit level of service (TLOS).
- Hazeldean Road achieves a PLOS B on the north side of the roadway and a PLOS C on the south side (downgrading to a PLOS D at the most critical point). Hazeldean Road can achieve the target PLOS B on the south side by providing a 2.0m-wide sidewalk while providing a minimum offset of 3.0m from the sidewalk to the nearest travel lane. This is identified for the City's consideration.
- The *Ontario Traffic Manual (OTM) – Book 18* identifies that a 'physically separated bikeway' is appropriate for Hazeldean Road, which can include separated bike lanes, cycle tracks, or MUPs. The target BLOS C can be achieved if separated bikeways are implemented. This is identified for the City's consideration.
- Hazeldean Road requires a dedicated facility type to achieve the target TLOS C, which could include curbside lanes exclusive to buses, or restricted to buses and high-occupancy vehicles (HOVs). This is identified for the City's consideration.

#### Transportation Demand Management

- The proponent has agreed to consider the following measures at the sales centre for the low-density residential block:
  - Provide local area maps with walking/cycling access routes and key destinations;
  - Provide relevant transit schedules and route maps;
  - Provide a multimodal travel option information package.

#### Intersection MMLOS

- The results of the intersection MMLOS analysis can be summarized as follows:
  - Five of the nine study area intersections meet the target PLOS B/C;
  - Three of the nine study area intersections meet the target BLOS C;
  - Eight of the nine study area intersections meet the target TLOS C/D;
  - All nine study area intersections meet the target Auto LOS E.
- There is limited opportunity in improving the PLOS at each intersection without reducing the number of travel lanes or restricting turning movements.
- In general, fully protected intersections would be required to achieve the target BLOS, given the high operating speeds and volumes on Hazeldean Road or Terry Fox Drive. This is identified for the City's consideration.
- Transit signal priority measures on Hazeldean Road and Terry Fox Drive could improve transit delays on each approach to achieve the target TLOS C. This is identified as both roadways are designated as Transit Priority Corridors in the City's *2025 Transportation Master Plan (TMP)*.

Existing Traffic Operations

- All movements operate at the target Auto LOS E or better during both peak hours.
- There are no average (i.e. 50<sup>th</sup>-percentile) queues that extend to upstream intersections. The northbound through movement at Hazeldean Road/Terry Fox Drive and eastbound through movement at Hazeldean Road/Edgewater Street have maximum (i.e. 95<sup>th</sup>-percentile) queue lengths that extend into upstream intersections during one or both peak hours.
- The maximum westbound through queue at Hazeldean Road/Mantra Street/Tillage Street is 166m, extending through the median break serving the existing golf centre on the subject site. The median break starts approximately 120m east of the westbound stop bar on Hazeldean Road at Mantra Street/Tillage Street. Queueing through this median break is also anticipated in all future conditions.

Background Traffic Operations

- By 2036, the westbound through movement at Hazeldean Road/Robert Grant Avenue and the northbound left turn, northbound through, southbound left turn, southbound through, eastbound left turn, and westbound through movements at Hazeldean Road/Terry Fox Drive operate over-capacity during the PM peak hour.
- Synchro does not identify signal timing adjustments at Hazeldean Road/Robert Grant Avenue and Hazeldean Road/Terry Fox Drive that allow all movements to operate at the target Auto LOS E. Traffic throughout the study area may be displaced or alleviated through a combination of increased use of non-auto modes of transportation, alternate travel times for drivers to make use of off-peak capacity, or alternate routes for travel.

Total Traffic Operations

- Compared to the background traffic conditions, the addition of site-generated traffic is anticipated to have marginal impacts to traffic operations and queueing within the study area. The proposed access to Hazeldean Road operates acceptably during both peak hours.

Based on the foregoing, the proposed subdivision is recommended from a transportation perspective.

### TIA Screening Form

City of Ottawa 2017 TIA Guidelines TIA Screening

1. Description of Proposed Development

|                                                 |                                                     |
|-------------------------------------------------|-----------------------------------------------------|
| Municipal Address                               | 560 Hazeldean Road                                  |
| Description of Location                         | South of Hazeldean Rd, east of Mantra St/Tillage St |
| Land Use Classification                         | Residential                                         |
| Development Size (units)                        | 60 singles, 48 towns, 185 apartments                |
| Development Size square metre (m <sup>2</sup> ) | -                                                   |
| Number of Accesses and Locations                | 3 (Hazeldean Rd, Energy St, Bliss Cres)             |
| Phase of Development                            | 2                                                   |
| Buildout Year                                   | 2029 (Phase 1), 2031 (full buildout)                |

If available, please attach a sketch of the development or site plan to this form.

2. Trip Generation Trigger

Considering the Development's Land Use type and Size (as filled out in the previous section), please refer to the Trip Generation Trigger checks below.

Table notes:

1. Table 2, Table 3 & Table 4 TRANS Trip Generation Manual
2. Institute of Transportation Engineers (ITE) Trip Generation Manual 11.1 Ed.

| Land Use Type                                    | Minimum Development Size |
|--------------------------------------------------|--------------------------|
| Single-family homes                              | 60 units                 |
| Multi-Use Family (Low-Rise) <sup>1</sup>         | 90 units                 |
| Multi-Use Family (High-Rise) <sup>1</sup>        | 150 units                |
| Office <sup>2</sup>                              | 1,400 m <sup>2</sup>     |
| Industrial <sup>2</sup>                          | 7,000 m <sup>2</sup>     |
| Fast-food restaurant or coffee shop <sup>2</sup> | 110 m <sup>2</sup>       |
| Destination retail <sup>2</sup>                  | 1,800 m <sup>2</sup>     |
| Gas station or convenience market <sup>2</sup>   | 90 m <sup>2</sup>        |

**If the proposed development size is equal to or greater than the sizes identified above, the Trip Generation Trigger is satisfied.**

### 3. Location Triggers

|                                                                                                                                                                            | Yes                                 | No                                  |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------|-------------------------------------|
| Does the development propose a new driveway to a boundary street that is designated as part of the Transit Priority Network, Rapid Transit network or Cross-Town Bikeways? | <input checked="" type="checkbox"/> | <input type="checkbox"/>            |
| Is the development in a Hub, a Protected Major Transit Station Area (PMTSA), or a Design Priority Area (DPA)? <sup>2</sup>                                                 | <input type="checkbox"/>            | <input checked="" type="checkbox"/> |

**If any of the above questions were answered with ‘Yes,’ the Location Trigger is satisfied.**

### 4. Safety Triggers

|                                                                                                                                                                                                                                   | Yes                                 | No                                  |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------|-------------------------------------|
| Are posted speed limits on a boundary street are 80 kilometers per hour (km/h) or greater?                                                                                                                                        | <input type="checkbox"/>            | <input checked="" type="checkbox"/> |
| Are there any horizontal/vertical curvatures on a boundary street limits sight lines at a proposed driveway?                                                                                                                      | <input type="checkbox"/>            | <input checked="" type="checkbox"/> |
| Is the proposed driveway within the area of influence of an adjacent traffic signal or roundabout (i.e. within 300 metre [m] of intersection in rural conditions, or within 150 m of intersection in urban/ suburban conditions)? | <input checked="" type="checkbox"/> | <input type="checkbox"/>            |
| Is the proposed driveway within auxiliary lanes of an intersection?                                                                                                                                                               | <input checked="" type="checkbox"/> | <input type="checkbox"/>            |
| Does the proposed driveway make use of an existing median break that serves an existing site?                                                                                                                                     | <input checked="" type="checkbox"/> | <input type="checkbox"/>            |

---

<sup>2</sup> Hubs are identified in Schedules B1 to B8 of the City of Ottawa Official Plan. PMTSAs are identified in Schedule C1 of the Official Plan. DPAs are identified in Schedule C7A and C7B of the Official. See Chapter 4 for a list of City of Ottawa Planning and Engineering documents that support the completion of TIA.

## Transportation Impact Assessment Guidelines

|                                                                                                                                    | Yes                      | No                                  |
|------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------------------------|
| Is there is a documented history of traffic operations or safety concerns on the boundary streets within 500 m of the development? | <input type="checkbox"/> | <input checked="" type="checkbox"/> |
| Does the development include a drive-thru facility?                                                                                | <input type="checkbox"/> | <input checked="" type="checkbox"/> |

**If any of the above questions were answered with 'Yes,' the Safety Trigger is satisfied.**

### 5. Summary

| Results of Screening                                      | Yes                                 | No                       |
|-----------------------------------------------------------|-------------------------------------|--------------------------|
| Does the development satisfy the Trip Generation Trigger? | <input checked="" type="checkbox"/> | <input type="checkbox"/> |
| Does the development satisfy the Location Trigger?        | <input checked="" type="checkbox"/> | <input type="checkbox"/> |
| Does the development satisfy the Safety Trigger?          | <input checked="" type="checkbox"/> | <input type="checkbox"/> |

**If none of the triggers are satisfied, the TIA Study is complete. If one or more of the triggers is satisfied, the TIA Study must continue into the next stage (Screening and Scoping).**

| Equivalent 12-hr                                                                                             | 88            | 19 | 306 | 413 | 1,528          | 35 | 941   | 2,506 | 2,919   | 649            | 8,922  | 113 | 9,687  | 256            | 8,706  | 1,630 | 10,592 | 20,279  | 23,198    |
| Expansion Factor: Calculated by multiplying the 8-hour totals by the 8- to 12-hour expansion factor of       |               |    |     |     |                |    |       |       |         |                |        |     |        | 1.39           |        |       |        |         |           |
| Average 12-hr                                                                                                | 79            | 17 | 275 | 372 | 1,375          | 32 | 847   | 2,255 | 2,627   | 584            | 8,030  | 102 | 8,718  | 230            | 7,835  | 1,467 | 9,533  | 18,251  | 20,878    |
| Expansion Factor: Calculated by multiplying the equivalent 12-hour totals by the month AADT factor of        |               |    |     |     |                |    |       |       |         |                |        |     |        | 0.90           |        |       |        |         |           |
| AADT 24-hr                                                                                                   | 103           | 22 | 360 | 487 | 1,801          | 42 | 1,110 | 2,954 | 3,441   | 765            | 10,519 | 134 | 11,421 | 301            | 10,264 | 1,922 | 12,488 | 23,909  | 27,350    |
| Expansion Factor: Calculated by multiplying the avg 12-hour totals by the 12- to 24-hour expansion factor of |               |    |     |     |                |    |       |       |         |                |        |     |        | 1.31           |        |       |        |         |           |

#### Notes

- Volumes include passenger vehicles and heavy vehicles (cyclists and pedestrians excluded)
- Volumes have been rounded where factors are applied (i.e. for the rows displaying equivalent 12-hr, average 12-hr, and AADT 24-hr volumes)

## **APPENDIX F**

---

### Other Area Developments

## 1.0 SCREENING

### 1.1 Introduction

This revised Transportation Impact Assessment (TIA) report has been prepared in support of Zoning Amendment and Site Plan applications for 16 Edgewater Street.

The subject site is surrounded by the following:

- Light industrial uses fronting Edgewater Street to the north;
- Residential uses to the east;
- Fast food restaurant and Hazeldean Road to the south; and
- Edgewater Street and light industrial to the west.

The location and surrounding context are shown in **Figure 1**.

**Figure 1: Key Map of Subject Site**

GeoOttawa

### Residential

- 35% to/from the north via Terry Fox Drive
- 25% to/from the east via Hazeldean Road
- 20% to/from the south via Terry Fox Drive
- 20% to/from the west via Hazeldean Road

### Commercial/Office

- 25% to/from the north via Terry Fox Drive
- 15% to/from the east via Hazeldean Road
- 30% to/from the south via Terry Fox Drive
- 30% to/from the west via Hazeldean Road

Site generated traffic volumes are shown in **Figure 6**.

FIGURE 4

Figure 1: Local Context

The anticipated 'new' auto trips for the proposed development from **Table 8** were then assigned to the road network with the distribution shown above, as shown in **Figure 17**, for the total site-generated traffic for TRANS mode share.

Figure 17: Site-Generated Traffic Using TRANS Mode Shares

## 3.2. Background Network Traffic

### 3.2.1. Transportation Network Plans

Refer to **Section 2.1.3: Planned Conditions**.

### 3.2.2. Background Growth and Other Area Developments

The Stittsville district and areas south of the development are still ripe for future growth, with farm fields and empty lots destined for suburban developments. As described in **Section 2.1.3**, there are significant number of new developments proposed. A large amount of these future developments have been documented and will be layered on individually. Some parcels have a general proposed land use but have not been refined or finalized, with no future traffic volumes forecasted yet.

Overall, all the possible developable areas within a 1km radius have been captured in other area developments as shown in **Section 2.1.3**. Today, there are limited transit options available within the study area, promoting driving behaviors. Once the area matures and transit services increase, it is anticipated that less people will drive within the study area. For this reason, a 0% annual growth rate is considered adequate given that all known other area developments within the 1km radius have been accounted for in background volumes and commuting habits will likely change over time, conducive to other modes of transportation that are not driving.

### 3.2.3. Future Background Volumes

The total number of new other area development vehicle trips projected to use study area intersections have been illustrated in **Figure 18** and **Figure 19** for 2025 and 2030 respectively.

## 1.0 INTRODUCTION

This combined Community Transportation Study (CTS) and Transportation Impact Study (TIS) has been prepared in support of Zoning By-Law Amendment and Draft Plan of Subdivision applications for the lands located at 5618 Hazeldean Road. The subject lands are shown in **Figures 1 and 2** below and are henceforth referred to as the Kizell Lands.

Fernbank Community Traffic Zones**

### 3.4.2 Background Traffic Growth

Consistent with the Fernbank CDP TMP and with other recent transportation studies prepared for development parcels within the Fernbank Community, a 2% annual growth rate was deemed to be appropriate. This rate was then applied to the existing traffic volumes at the study area intersections until the 2025 horizon. In addition, the trips generated by the other areas of the Fernbank Community (i.e. all areas excluding the subject Richcraft site) were added to the boundary road network.

### 3.4.3 Future Background Traffic Conditions

The build-out horizons for the background developments must recognize the scale of the developments under consideration. An absorption rate of 500 units per year was applied to the background

**Table 3**  
**Fernbank Community Traffic Generation**

| Zone                  | Modes                      | Split | Morning Peak Hour |     |       | Afternoon Peak Hour |     |       |

### Long-Range Model Snapshots

# TRANS Regional Model

Version 1.01 - Assigned December 09, 2024

**AM Peak Hour Total Traffic Volume**  
**Hazeldean Road @ Roger Griffiths Avenue**  
2022 Model

User Initials: AJ  
Plot Prepared: March 27, 2025  
EMME Scenario: 22002

## Legend

The TRANS model is continuously refined & maintained, and all information is provided in good faith. However, model outputs are provided "as is", and no warranty or guarantee is provided as to the accuracy, reliability or reasonableness of the results. In using this data, you agree to accept any and all risks arising from any incorrect, incomplete, or misleading information.

Recipients are required to use caution and professional judgement in using and interpreting model outputs. In particular, caution should be used when focusing on a geographically limited area (such as a single road or intersection), as the model is primarily designed to simulate regional-scale phenomena and has been calibrated at a regional level.

As general good practice, it is recommended that the user confirm the network coding within the area of interest, and compare base year forecasts against traffic count data to assess the extent to which the model may be over- or under-estimating the travel demand.

# TRANS Regional Model

Version 1.01 - Assigned December 09, 2024

**AM Peak Hour Total Traffic Volume**  
**Hazeldean Road @ Terry Fox Drive**  
2022 Model

## Phasing Sequence<sup>‡</sup>

Plan: All

**Notes:** 1) The WB U-Turn is prohibited

## Schedule

### Weekday

| Time  | Plan |
|-------|------|
| 0:10  | 4    |
| 6:30  | 1    |
| 9:30  | 2    |
| 15:00 | 3    |
| 19:00 | 2    |
| 23:00 | 4    |

### Saturday

| Time  | Plan |
|-------|------|
| 0:10  | 4    |
| 9:00  | 5    |
| 22:30 | 4    |

### Sunday

| Time  | Plan |
|-------|------|
| 0:10  | 4    |
| 8:00  | 5    |
| 22:30 | 4    |

## Notes

<sup>†</sup>: Time for each direction includes amber and all red intervals

<sup>‡</sup>: Start of first phase should be used as reference point for offset

Asterisk (\*) Indicates actuated phase

(fp): Fully Protected Left Turn

◄.....► Pedestrian signal

Cost is \$62.38 (\$55.20 + HST)

| 19:00   | 2    |          |      |        |      |
| 23:00   | 4    |          |      |        |      |

## Notes

†: Time for each direction includes amber and all red intervals  
‡: Start of first phase should be used as reference point for offset  
Asterisk (\*) Indicates actuated phase  
(fp): Fully Protected Left Turn  
◀.....▶ Pedestrian signal

Cost is \$62.38 (\$55.20 + HST)

# Traffic Signal Timing

City of Ottawa, Public Works Department

## Traffic Signal Operations Unit

Intersection Summary

Area Type: Other

Cycle Length: 115

Actuated Cycle Length: 115

Offset: 101 (88%), Referenced to phase 2:EBTL and 6:WBTL, Start of Green

Natural Cycle: 90

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.32

Intersection Signal Delay: 15.7

Intersection LOS: B

Intersection Capacity Utilization 51.0%

ICU Level of Service A

Analysis Period (min) 15

Splits and Phases: 3: Mantra/Tillage & Hazeldean

Intersection Summary

Area Type: Other

Cycle Length: 110

Actuated Cycle Length: 110

Offset: 76 (69%), Referenced to phase 2:NBT and 6:SBT, Start of Green

Natural Cycle: 95

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.73

Intersection Signal Delay: 31.9

Intersection LOS: C

Intersection Capacity Utilization 71.4%

ICU Level of Service C

Analysis Period (min) 15

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 4: Terry Fox & Hazeldean

#### Intersection Summary

Area Type: Other

Cycle Length: 110

Actuated Cycle Length: 110

Offset: 73 (66%), Referenced to phase 2:EBTL and 6:WBT, Start of Green

Natural Cycle: 70

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.34

Intersection Signal Delay: 10.5

Intersection LOS: B

Intersection Capacity Utilization 57.1%

ICU Level of Service B

Analysis Period (min) 15

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 5: Hazeldean & Edgewater

#### Intersection Summary

Area Type: Other

Cycle Length: 110

Actuated Cycle Length: 110

Offset: 16 (15%), Referenced to phase 2:NBT and 6:SBTL, Start of Green

Natural Cycle: 130

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.79

Intersection Signal Delay: 11.4

Intersection LOS: B

Intersection Capacity Utilization 72.0%

ICU Level of Service C

Analysis Period (min) 15

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 6: Terry Fox & Charlie Rogers/Edgewater

#### Intersection Summary

Area Type: Other

Cycle Length: 110

Actuated Cycle Length: 110

Offset: 26 (24%), Referenced to phase 2:NBTL and 6:SBTL, Start of Green

Natural Cycle: 65

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.39

Intersection Signal Delay: 5.2

Intersection LOS: A

Intersection Capacity Utilization 51.8%

ICU Level of Service A

Analysis Period (min) 15

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 7: Terry Fox & Tony Graham Rec

Intersection Summary

Area Type: Other

Cycle Length: 110

Actuated Cycle Length: 110

Offset: 80 (73%), Referenced to phase 2:NBTL and 6:SBTL, Start of Green

Natural Cycle: 75

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.34

Intersection Signal Delay: 4.5

Intersection LOS: A

Intersection Capacity Utilization 61.7%

ICU Level of Service B

Analysis Period (min) 15

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 8: Terry Fox & Sobey's

#### Intersection Summary

Area Type: Other

Cycle Length: 110

Actuated Cycle Length: 110

Offset: 40 (36%), Referenced to phase 2:NBTL and 6:SBTL, Start of Green

Natural Cycle: 80

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.48

Intersection Signal Delay: 9.4

Intersection LOS: A

Intersection Capacity Utilization 66.3%

ICU Level of Service C

Analysis Period (min) 15

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 9: Terry Fox & Halkirk/Winchester

#### Intersection Summary

Area Type: Other

Cycle Length: 120

Actuated Cycle Length: 120

Offset: 119 (99%), Referenced to phase 2:EBTL and 6:WBTU, Start of Green

Natural Cycle: 75

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.53

Intersection Signal Delay: 5.9

Intersection LOS: A

Intersection Capacity Utilization 55.1%

ICU Level of Service B

Analysis Period (min) 15

Splits and Phases: 1: Hazeldean & 325 E of Iber

#### Intersection Summary

Area Type: Other

Cycle Length: 120

Actuated Cycle Length: 120

Offset: 111 (93%), Referenced to phase 2:EBTL and 6:WBT, Start of Green

Natural Cycle: 80

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.55

Intersection Signal Delay: 7.5

Intersection LOS: A

Intersection Capacity Utilization 68.6%

ICU Level of Service C

Analysis Period (min) 15

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 2: Hazeldean & Roger Griffiths

3: Mantra/Tillage & Hazeldean  
PM Peak Hour

560 Hazeldean Road  
2025 Existing Traffic

Intersection Summary

Area Type: Other

Cycle Length: 120

Actuated Cycle Length: 120

Offset: 106 (88%), Referenced to phase 2:EBTL and 6:WBTL, Start of Green

Natural Cycle: 90

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.59

Intersection Signal Delay: 28.8

Intersection LOS: C

Intersection Capacity Utilization 64.7%

ICU Level of Service C

Analysis Period (min) 15

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 3: Mantra/Tillage & Hazeldean

Area Type: Other

Cycle Length: 120

Actuated Cycle Length: 120

Offset: 32 (27%), Referenced to phase 2:NBT and 6:SBT, Start of Green

Natural Cycle: 105

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.95

Intersection Signal Delay: 50.8

Intersection LOS: D

Intersection Capacity Utilization 86.3%

ICU Level of Service E

Analysis Period (min) 15

~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 4: Terry Fox & Hazeldean

#### Intersection Summary

Area Type: Other

Cycle Length: 120

Actuated Cycle Length: 120

Offset: 46 (38%), Referenced to phase 2:NBT and 6:SBTL, Start of Green

Natural Cycle: 95

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.65

Intersection Signal Delay: 11.6

Intersection LOS: B

Intersection Capacity Utilization 77.6%

ICU Level of Service D

Analysis Period (min) 15

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 6: Terry Fox & Charlie Rogers/Edgewater

|                         |       |

#### Intersection Summary

Area Type: Other

Cycle Length: 120

Actuated Cycle Length: 120

Offset: 40 (33%), Referenced to phase 2:NBTL and 6:SBTL, Start of Green

Natural Cycle: 90

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.55

Intersection Signal Delay: 4.6

Intersection LOS: A

Intersection Capacity Utilization 57.6%

ICU Level of Service B

Analysis Period (min) 15

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 7: Terry Fox & Tony Graham Rec

| Lane Group              | SBT   | SBR |

Intersection Summary

Area Type: Other

Cycle Length: 120

Actuated Cycle Length: 120

Offset: 22 (18%), Referenced to phase 2:NBTL and 6:SBTL, Start of Green

Natural Cycle: 75

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.65

Intersection Signal Delay: 8.4

Intersection LOS: A

Intersection Capacity Utilization 76.6%

ICU Level of Service D

Analysis Period (min) 15

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 8: Terry Fox & Sobey's

Intersection Summary

Area Type: Other

Cycle Length: 120

Actuated Cycle Length: 120

Offset: 115 (96%), Referenced to phase 2:NBTL and 6:SBTL, Start of Green

Natural Cycle: 80

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.47

Intersection Signal Delay: 10.8

Intersection LOS: B

Intersection Capacity Utilization 70.2%

ICU Level of Service C

Analysis Period (min) 15

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 9: Terry Fox & Halkirk/Winchester

#### Intersection Summary

Area Type: Other

Cycle Length: 115

Actuated Cycle Length: 115

Offset: 19 (17%), Referenced to phase 2:EBT and 6:WBT, Start of Green

Natural Cycle: 105

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.66

Intersection Signal Delay: 26.5

Intersection LOS: C

Intersection Capacity Utilization 75.5%

ICU Level of Service D

Analysis Period (min) 15

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 1: Hazeldean & Robert Grant

#### Intersection Summary

Area Type: Other

Cycle Length: 115

Actuated Cycle Length: 115

Offset: 10 (9%), Referenced to phase 2:EBTL and 6:WBTL, Start of Green

Natural Cycle: 75

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.36

Intersection Signal Delay: 7.0

Intersection LOS: A

Intersection Capacity Utilization 68.0%

ICU Level of Service C

Analysis Period (min) 15

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 2: Hazeldean & Roger Griffiths

| Lane Group              | SBR   |
|-------------------------|-------|
| Minimum Initial (s)     | 10.0  |
| Minimum Split (s)       | 31.2  |
| Total Split (s)         | 33.0  |
| Total Split (%)         | 28.7% |
| Maximum Green (s)       | 26.8  |
| Yellow Time (s)         | 3.3   |
| All-Red Time (s)        | 2.9   |
| Lost Time Adjust (s)    | 0.0   |
| Total Lost Time (s)     | 6.2   |
| Lead/Lag                |       |
| Lead-Lag Optimize?      |       |
| Vehicle Extension (s)   | 3.0   |
| Recall Mode             | None  |

Intersection Summary

Area Type: Other

Cycle Length: 115

Actuated Cycle Length: 115

Offset: 98 (85%), Referenced to phase 2:EBTL and 6:WBTL, Start of Green

Natural Cycle: 90

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.43

Intersection Signal Delay: 17.7

Intersection LOS: B

Intersection Capacity Utilization 57.8%

ICU Level of Service B

Analysis Period (min) 15

Splits and Phases: 3: Mantra/Tillage & Hazeldean
