EXECUTIVE SUMMARY

Pinchin Ltd. (Pinchin) was retained on March 15, 2021 through an Authorization to Proceed, Limitation of Liability and Terms of Engagement contract form signed by Nirav Patel (Client) to conduct a Phase I Environmental Site Assessment (ESA) of the property located at 1545 and 1545A Merivale Road, Ottawa, Ontario (hereafter referred to as the Site).

The Site is developed with two single-storey commercial buildings (Site Buildings A and B).

Pinchin was advised by the Client that the purpose of the Phase I ESA was to assess potential issues of environmental concern in relation to the potential acquisition of the Site.

The Phase I ESA was completed in general accordance with the Canadian Standards Association (CSA) document entitled *"Phase I Environmental Site Assessment, CSA Standard Z768-01"* dated November 2001 (reaffirmed 2016), including a review of readily-available historical records, a review of readily-accessible regulatory records, a Site reconnaissance, interviews, an evaluation of information and reporting, subject to the limitations outlined in Section 8.0 of this report. Exceptions to following CSA Standard Z768-01 include access to historical City Directories, as these were not available for Pinchin's review due to current government information repository closures.

Based on the results of the Phase I ESA completed by Pinchin, The following could result in potential subsurface impacts at the Site:

- The Ontario Spills database indicated that approximately 250 litres of heating oil was released to the ground in the vicinity of Site Building B on April 17, 2000. The source of the release was reportedly the corrosion of an aboveground storage tank. The Environmental Risk Information Service Ltd. (ERIS) report indicated that environmental impact was confirmed as soil contamination and an underground tank was discovered. No evidence of an underground tank (i.e. vent or fill pipes) was identified in the vicinity of Site Building B by Pinchin during the Site reconnaissance. Based on quantity and nature of the release, it is Pinchin's opinion that this historical on-Site spill has the potential to result in subsurface impacts to the Site; and
- A retail fuel outlet (RFO) developed with underground storage tanks has been situated adjacent to the Site's northwest elevation since at least 1991. This property is hydraulically upgradient of the Site relative to the inferred groundwater flow direction. As part of a previous environmental investigation completed at the Site, a groundwater sample collected from a monitoring well on located central-west Site boundary and situated in the immediate vicinity of the above-noted RFO had concentrations of

petroleum hydrocarbons fractions F1 to F2 which exceeded the currently applicable *Table 3 Standards*. Based on the type and duration of operations on this property, the distance between this property and the Site, the results of the previous environmental investigation completed at the Site, as well as the inferred direction of groundwater flow, it is Pinchin's opinion that the presence of an RFO at this property could result in potential subsurface impacts at the Site.

Based on the findings noted above, Pinchin recommends completing a Phase II ESA at the Site.

Given the years of construction of the Site Buildings (approximately 1950s and 1970s), there is a potential for asbestos-containing materials to be present in the Site Buildings. Pinchin did not conduct an asbestos survey, nor was any sampling or inspection for asbestos conducted as part of this Phase I ESA. The Site Representative advised Pinchin that no asbestos surveys have been previously conducted at the Site, and that an Asbestos Management Program has not been developed for or implemented at the Site.

This Executive Summary is subject to the same standard limitations as contained in the report and must be read in conjunction with the entire report.

This report has been issued without having received responses from the Ministry of the Environment, Conservation and Parks or the Technical Standards & Safety Authority. Once responses from these regulatory bodies are received, the information will be reviewed by Pinchin and, if there is any information that represents a potential issue of environmental concern, a copy of the response will be forwarded to the Client under separate cover. Our conclusions and recommendations may be amended based on this information.

In Pinchin's completion of this work, historical City Directories were not available for review due to temporary closures of government information sources. This represents a potential data gap in the historical documentation review process, however; Pinchin has endeavored to provide our very best opinion to meet the Client's current needs.

1.0 INTRODUCTION

1.1 Background

Pinchin Ltd. (Pinchin) was retained on March 15, 2021 through an Authorization to Proceed, Limitation of Liability and Terms of Engagement contract form signed by Nirav Patel (Client) to conduct a Phase I Environmental Site Assessment (ESA) of the property located at 1545 and 1545A Merivale Road, Ottawa, Ontario (hereafter referred to as the Site).

The Site is developed with two single-storey commercial buildings (Site Buildings A and B).

Pinchin was advised by the Client that the purpose of the Phase I ESA was to assess potential issues of environmental concern in relation to the potential acquisition of the Site.

1.2 Scope of Work

The Phase I ESA was completed in general accordance with the Canadian Standards Association (CSA) document entitled "*Phase I Environmental Site Assessment, CSA Standard Z768-01*" dated November 2001 (reaffirmed 2016), including a review of readily available historical and regulatory records, a Site reconnaissance, interviews, an evaluation of information and reporting, all subject to the limitations outlined in Section 8.0 of this report.

Pinchin conducted a Site reconnaissance on March 19, 2021, and was accompanied by the Realtor for the Site, and hereafter referred to as the Site Representative.

In addition, Pinchin reviewed the following documents as provided by the Client:

- Report entitled "Phase I Environmental Site Assessment, 1545 and 1545A Merivale Road, Ottawa, Ontario" prepared by AMEC Earth & Environmental (AMEC) for Chase Estates Limited (Chase), and dated March 17, 2004 (2004 AMEC Phase I ESA Report);
- Report entitled "Phase II Environmental Site Assessment, 1545 and 1545A Merivale Road, Ottawa, Ontario" prepared by AMEC for Chase, and dated April 8, 2004 (2004 AMEC Phase II ESA Report); and
- Report entitled *"Underground Storage Tank Removal, 1545 and 1545A Merivale Road, Ottawa, Ontario"* prepared by AMEC for Chase, and dated May 4, 2004 (2004 AMEC UST Removal Report).

2.0 SITE DESCRIPTION

2.1 Site Location and Physical Description

As indicated on Figure 1 (Key Map), the Site is located on the east side of Merivale Road, approximately 50 metres (m) south of Capilano Drive, in Ottawa, Ontario. The Site is situated in an area that predominantly consists of residential, institutional, community, light industrial and commercial land uses. Figure 2 illustrates the Site and surrounding area.

A summary of the physical description of the Site, including the Site Buildings, is provided below:

Торіс	Details		
Approximate Site Area	0.94 hectares (2.32 acres).		
Buildings on-Site	Site Building A: Located on the north portion of the Site. Site Building B: Located on the southwest portion of the Site.		
Approximate Year of Construction and Significant Additions or Renovations	Site Building A: 1970s. Site Building B: 1950s.		
Number of Floors (Including ground level)	Site Buildings A and B: One.		
Subsurface Levels	None observed and none reported by the Site Representative.		
Approximate Footprint and total Area of Buildings	Site Building A: 325 square metres (m²) (3,530 square feet (ft²)). Site Building B: 1,435 m² (15,465 ft²).		
Heating / Cooling	Site Building A: Natural gas-fired rooftop heating/ventilation/air-conditioning (HVAC) units. Site Building B: Natural gas-fired HVAC units and a wall-mounted air conditioning unit.		
Elevators	None observed and none reported by the Site Representative.		
Emergency Generators	None observed and none reported by the Site Representative.		
Landscaped / Grassed/Bare Ground Areas	Landscaping is present along the northeast and southwest Site boundaries.		
Paved or Other Sealed Surface Materials	The majority of the Site exterior consists of asphalt-paved parking areas and access routes.		

2.2 Topographic, Geologic and Hydrogeological Setting

Торіс	Findings		
Topography of Site and Surrounding Area	The Site and surrounding area are generally flat.		
Site Grade Relative to the Adjoining Properties	The Site is at a similar grade to the adjoining properties.		
Subsurface Soils	The 2004 AMEC Phase II ESA Report noted that subsurface soils at the Site consist of sandy clay to approximately 1.5 m below ground surface (mbgs) overlying sand to a depth of 5.4 mbgs.		
Fill Materials	None observed and none reported by the Site Representative; however, the 2004 AMEC Underground Storage Tank Removal Report noted that clean fill material was backfilled into the excavation area located adjacent to the south elevation of Site Building B following the removal of an underground storage tank (UST) and 51 tonnes of impacted soil. The 2004 AMEC Phase II ESA Report also noted that sand with clay and gravel fill material was encountered at the Site to a depths between 0.8 and 3.0 mbgs (see Section 3.5).		
Bedrock Type	Sedimentary rocks consisting of limestone, dolomite, shale, argillite, sandstone, quartzite, and/or grit.		
Inferred Bedrock Depth	Greater than 5.4 mbgs, based on a review of the 2004 AMEC Phase II ESA Report.		
Inferred Groundwater Depth	The 2004 AMEC Phase II ESA Report noted that the groundwater table at the Site ranged from 1.2 m to 2.4 mbgs.		
Nearest Open Water Body	An unnamed creek is located approximately 1.5 kilometres south of the Site.		
Inferred Groundwater Flow Direction	South based on the nearest body of water.		

2.3 Site Operations

The Site is developed with two single-storey commercial buildings (Site Buildings A and B). Four Season Cookhouse operates a restaurant in Site Building A and Site Building B is vacant.

Parking for the Site is located on the on the central portion of the Site.

Site maintenance activities involve painting, replacement of light fixtures, minor plumbing and electrical work on an as-needed basis.

Further details regarding on-Site operations are provided in Section 5.0.

3.0 HISTORICAL RECORDS REVIEW

3.1 Site Interviews and Records

The Site Representative advised Pinchin of the following with respect to the historical occupancy and operations at the Site:

- Site Buildings A and B were respectfully constructed in approximately the 1950s and 1970s;
- An addition was constructed to the northeast portion o Site Building A in approximately the 1980s;
- No dry cleaning operations have historically taken place at the Site; and
- No retail fuel outlets (RFOs) have operated at the Site.

3.2 Aerial Photographs and Satellite Imagery

Copies of aerial photographs dated 1965, 1976, 1991, 2002, 2007 and 2009 were reviewed on the City of Ottawa e-map website (<u>http://maps.ottawa.ca/geoOttawa/</u>). In addition, Pinchin reviewed Google Earth[™] satellite imagery dated 2013, 2015 and 2019.

A summary of information inferred with respect to the Site is provided in the following table:

Year of Photograph	Site
1965.	A building that was similar in size and configuration to the present-day Site Building B was evident on the Site. An addition to the west elevation appears to be present on Site Building B which extends to property located adjacent to the Site's west elevation.
1976.	Buildings that were similar in size and configuration to the present-day Site Buildings were evident on the Site. Two buildings appear to have been constructed on the east portion of the Site and an addition building appears to have been constructed on the north portion of the Site.
1991, 2002, 2007, 2009, 2013, 2015 and 2019.	Buildings that were similar in size and configuration to the present-day Site Buildings were evident on the Site.

A summary of information inferred with respect to the surrounding area is provided in the following table:

Year of Photograph	North	East	South	West
1965.	A commercial property followed by present day Capilano Drive, an RFO and then commercial and residential dwellings.	Vacant undeveloped land followed by residential dwellings to beyond 200 m from the Site.	A commercial property to beyond 200 m from the Site.	Vacant land and present day Merivale Road followed by additional vacant land, an institutional building and present day Rossland Avenue to beyond 200 m from the Site.
1976.	Similar to 1965.			A commercial property, present day Merivale Road followed by a commercial property, an institutional building and present day Rossland Avenue to beyond 200 m from the Site.
1991 and 2002.	A multi-tenant commercial building, present day Capilano Drive, an RFO and then commercial and residential dwellings.	Similar to 1965 and 1976.	A multi-tenant commercial building to beyond 200 m from the Site, similar to the current configuration.	An RFO, present day Merivale Road followed by an RFO, an institutional building and present day Rossland Avenue to beyond 200 m from the Site, similar to the current configuration.

Year of Photograph	North	East	South	West
2007 and 2009.	Similar to 1991 and 2002 except the RFO appears to have been decommissioned.	Similar 1991 and 2	002	
2013.	A multi-tenant commercial building, present day Capilano Drive, and then commercial and residential dwellings, similar to the current configuration.	Similar 1991, 2002	, 2007 and 2009.	
2013, 2015 and 2019.	Similar to 2013.	A community building followed by residential dwelling to beyond 200 m from the Site, similar to the current configuration.	Similar to 2013.	

An RFO developed with USTs was situated adjacent to the Site's northwest elevation in the 1991 to 2019 aerial photographs. This property situated hydraulically upgradient of the Site relative to the inferred groundwater flow direction. Based on the type and duration of operations on this property, the distance between this property and the Site, as well as the inferred groundwater flow direction, it is Pinchin's opinion that the presence of an RFO at this property could result in potential subsurface impacts at the Site.

An RFO was located approximately 30 m west of the Site and developed with USTs located approximately 60 west of the Site in the 1991 to 2019 aerial photographs. This property situated hydraulically transgradient of the Site relative to the inferred groundwater flow direction. Based on distance between this property and the Site, as well as the inferred groundwater flow direction, it is Pinchin's opinion that the RFO at this property is unlikely to result in potential subsurface impacts at the Site.

An RFO was located approximately 80 m north of the Site in the 1965 to 2002 aerial photographs. Based on distance between this property and the Site, it is Pinchin's opinion that this property is unlikely to result in potential subsurface impacts at the Site.

3.3 Opta Information

Pinchin contacted Opta Information Intelligence (Opta) to obtain copies of Fire Insurance Plans (FIPs) related to the Site and surrounding area, as well as Property Underwriters' Reports (PURs) and Property Underwriters' Plans (PUPs) related to the Site. Opta provided Pinchin with a copy of a FIP dated 1965 (see Appendix I):

Based on Pinchin's review of the 1965 FIP, the following was noted:

- The Site appears to be developed with Site Building B which is occupied by City View Builder Supplies Ltd. An office, warehouse and shipping area are located in the north portion of Site Building and operation in the south portion consist of wood working;
- A&P, a grocery store is situated on the property northwest of the Site and City View Curling Club is located on the property north of the Site. Minto Construction Company is located on the adjacent property south of the Site and operations consist of office administration, lumber retail and storage; and
- Merivale Road is located west of the Site primarily consist of commercial and institutional property. The properties east of the Site were not covered by the FIP.

3.4 City Directories

At the time of writing this report, and due to temporary closures of Public Libraries and the Archives of Canada, City Directories were not available for Pinchin's review. This represents a potential data gap in the historical documentation review process.

3.5 **Previous Environmental Reports**

2004 AMEC Phase I ESA Report

The Phase I ESA completed by AMEC in March 2004 consisted of historical reviews, a review of surrounding properties, a regulatory database search, and interviews as well as an exterior assessment of the Site.

Based on the results of the Phase I ESA, AMEC identified the following which could result in potential subsurface impacts at the Site:

- During the Site reconnaissance AMEC identified a potential fill pipe located adjacent to the south elevation of Site Building B which suggested the presence of an UST. The Site Representative was not aware of purpose of the potential fill pipe;
- An RFO developed with USTs was located adjacent to the Site's northwest property boundary and was reportedly operations since approximately the late 1990s; and

• An RFO was located approximately 50 m west of the Site situated hydraulically upgradient of the Site with respect to the inferred direction of groundwater flow.

Based on the findings noted above, AMEC recommended completing a Phase II ESA at the Site, as well as a geophysical survey to evaluate the presence of an UST adjacent to the south elevation of Site Building B.

2004 AMEC Phase II ESA Report

The purpose of Phase II ESA completed by AMEC in April 2004 was to address potential issues of environment concern identified in the 2004 AMEC Phase I ESA.

A camera scope was completed to assess the presence of a UST in the vicinity of the potential fill pipe, and confirmed the presence of a UST. AMEC was not able to determine the former use of the UST.

The Phase II ESA was completed at the Site by AMEC between March 29, 2004 and April 2, 2004, and consisted of the advancement of four boreholes, all of which were completed as groundwater monitoring wells.

Select "worst case" soil samples collected during the borehole drilling program were submitted for laboratory analysis of benzene, toluene, ethylbenzene and xylenes (collectively referred to as BTEX) and gas and diesel ranges combined total petroleum hydrocarbons (TPH) (gas/diesel)) and for TPH in the heavy oil range (TPH (heavy oils)). Groundwater samples collected from the newly installed monitoring wells were submitted for laboratory analysis of BTEX, TPH (gas/diesel) and TPH (heavy oil).

Based on Site-specific information, the current regulatory criteria for soil and groundwater quality is the Ontario Ministry of the Environment, Conservation and Parks (MECP) Table 3 Standards for industrial/commercial/community land use and coarse-textured soil (*Table 3 Standards*).

At the time of the 2004 AMEC Phase II ESA, the applicable MECP criteria where those provided in Table B of the MECP document *"Guideline for Use at Contaminated Sites in Ontario"*, revised February 1997 (*GUCSO Criteria*), for commercial land use in a non-potable groundwater condition and coarse-textured soils. The *GUSCO Criteria* provided criteria for TPH (gas/diesel) and TPH (heavy oils). There is no direct correlation as to how the measured concentrations of TPH (gas/diesel) and TPH (heavy oils) compare to the current *MECP Standards*, as the *MECP Standards* provide Site Condition Standards for petroleum hydrocarbon (PHC) fractions F1 to F4 (F1-F4) to characterize soil and groundwater. However, the TPH (gas) range and TPH (diesel) range are roughly equivalent to the PHC (F1) and PHC (F2) ranges, respectively.

Reported concentrations in the soil samples submitted for analysis of BTEX satisfied their respective *Table 3 Standards*. The applicable *Table 3 Standard* for PHCs (F1 and F2) in soil are respectively 55 and 230 micrograms per gram (μ g/g), and the maximum soil concentration in the TPH (gas and diesel) ranges were all below 55 μ g/g with the exception of soil collected from borehole MW3, situated adjacent to the on-Site UST, which exhibited concentrations of TPH (diesel) and TPH (gas/diesel) of 760 μ g/g. As such, it is likely that reported concentrations in the soil samples submitted for analysis of TPH (gas) and TPH (diesel) ranges would likely satisfy their respective *Table 3 Standards*, with the exception of the soil sample submitted for laboratory analysis from borehole MW3 which would have likely exceeded the current *Table 3 Standards* for PHCs (F1-F2).

At the time of the 2004 AMEC Phase II ESA, the *GUSCO Criteria* did not provide criteria for TPH (gas/diesel) and TPH (heavy oils) in groundwater. Pinchin compared the concentrations of BTEX, TPH (gas/diesel) and TPH (heavy oils) in groundwater samples submitted for laboratory analysis to the currently applicable *Table 3 Standards*. Reported concentrations in the groundwater samples submitted for analysis of BTEX satisfied their respective *Table 3 Standards*. Groundwater samples from all monitoring wells reportedly exhibited a concentrations of TPH (gas) as being below reportable detection limit of 200 micrograms per litre (µg/L); however, the *Table 3 Standard* for PHCs (F1) is 55 µg/L. As such Pinchin is not able to comment if the concentrations of PHCs (F1) in groundwater samples met the *Table 3 Standard*. Groundwater samples submitted for TPH (gas/diesel) and TPH (heavy oils) analysis met the *Table 3 Standards* with the exception of groundwater sampled from monitoring well MW1, located on the central-west Site boundary, in the vicinity of the adjacent RFO, which exceeded the *Table 3 Standards* for PHCs (F1) (8,000 µg/L vs. the *Table 3 Standard* of 55 µg/L) and PHCs (F2) (1,700 µg/L vs. the *Table 3 Standard* of 230 µg/L).

Based on the findings of this Phase II ESA, it was AMEC's opinion that no further subsurface investigation was required for the Site in relation to the findings of the 2004 AMEC I ESA. AMEC recommended that the City of Ottawa's Health Unit should be contacted to confirm the former use of the UST. Should the UST be associated with a historical septic system, AMEC recommended that the UST should be removed in accordance with the appropriate municipal standards. Should it be confirmed that the UST be removed in compliance with appropriate provincial regulations.

2004 AMEC UST Removal Report

The purpose of UST Removal Report completed by AMEC in April 2004 was to document the removal of a UST identified adjacent to the south elevation of Site Building B.

Triangle Pump Service Ltd. was retained by AMEC to complete the removal. A total of 1,577 litres of liquid was removed from the UST and transported off-Site for disposal. The UST was reported to have been used for the storage of PHCs, of steel construction and exhibited extensive damage prior to removal. PHC impacted soil was identified in the immediate vicinity of the UST and approximately 51 tonnes of impacted soil in the vicinity of borehole/monitoring well MW3 and the UST was removed from the Site for disposal.

Select "worse case" soil samples collected form the final limits of the excavation floor and sidewall were submitted for laboratory analysis for BTEX, TPH (diesel) and TPH (gas/diesel) and were compared to the formerly applicable *GUCSO Criteria*. All soil samples submitted for laboratory analysis me the *GUCSO Criteria* and as such, it was AMEC's opinion that no further environmental concerns existed at the Site.

Pinchin compared concentration Reported concentrations in the soil samples submitted for laboratory analysis of BTEX, TPH (diesel) and TPH (gas/diesel) to the currently applicable *Table 3 Standards*. As previously noted, there is no direct correlation as to how the measured concentrations of TPH (gas/diesel) and TPH (heavy oils) compare to the current *MECP Standards*, as the *MECP Standards* provide Site Condition Standards for PHC (F1-F4) to characterize soil and groundwater. However, the TPH (gas) range and TPH (diesel) range are roughly equivalent to the PHC (F1) and PHC (F2) ranges, respectively.

Reported concentrations in the soil samples submitted for analysis of BTEX satisfied their respective *Table 3 Standards*. The applicable *Table 3 Standards* for PHCs (F1 and F2) in soil are respectively 55 and 230 µg/g, and the maximum soil concentration in the TPH (gas and diesel) ranges were all below 55 µg/g with the exception of soil sample N3 collected from the north wall of the excavation which had a respective concentrations of TPH (gas), TPH (diesel) and TPH (gas/diesel) of 160, 60 and 220 µg/g which would exceed the *Table 3 Standards* for PHCs (F1-F2) . Given that the inferred source zone of contamination has been removed and that natural attenuation has likely occurred due to the amount of time that has elapsed since the UST was removed, it is Pinchin's opinion that no further investigation of the former UST location or remedial work is warranted at this time.

3.6 Historical Summary

Based on the results of the historical review, the following could result in potential subsurface impacts at the Site:

• An RFO developed with USTs has been situated adjacent to the Site's northwest elevation since at least 1991. This property is hydraulically upgradient of the Site relative to the inferred groundwater flow direction. As part of a previous environmental investigation completed at the Site, a groundwater sample collected from a monitoring well on located central-west Site boundary and situated in the immediate vicinity of the

above-noted RFO had concentrations of PHCs (F1-F2) which exceeded the currently applicable *Table 3 Standards*. Based on the type and duration of operations on this property, the distance between this property and the Site, the results of the previous environmental investigation completed at the Site, as well as the inferred direction of groundwater flow, it is Pinchin's opinion that the presence of an RFO at this property could result in potential subsurface impacts at the Site.

4.0 REGULATORY INFORMATION AND CORRESPONDENCE

4.1 Site Regulatory Information

Pinchin requested copies of permits, approvals and registrations from the Client and was advised that there is no regulatory information with respect to the Site.

4.2 Ministry of the Environment, Conservation and Parks

A Freedom of Information request was submitted to the MECP for information on file with respect to the Site. Specifically, the MECP was asked what information it has regarding historical spills, orders, investigations/prosecutions, waste generator numbers/classes, Certificates-of-Approval and Environmental Compliance Approvals. At the time of writing this report, no response had been received from the MECP. When a formal response is received, it will be reviewed by Pinchin. If there is any information that represents a potential issue of environmental concern, a copy of the response will be forwarded to the Client under separate cover. Our conclusions and recommendations may be amended based on this information. A copy of Pinchin's request submitted to the MECP is provided in Appendix II of this report.

Pinchin conducted a search of the MECP Brownfields Environmental Site Registry. Based on the results of Pinchin's search, a Record of Site Condition (RSC) has not been filed for the Site; however, an RSC has been filed for the property located at 1541 Merivale Road which is situated adjacent to the Site northwest property boundary. This property is situated hydraulically upgradient of the Site in relation to the inferred groundwater flow direction. The RSC indicates the following information:

• A remediation was conducted at the property in 2011 which included the removal and disposal of approximately 150 cubic metres of impacted soil and approximately 11,542-L of impacted water for disposal. Soil and groundwater at the property exhibit concentrations of volatile organic compounds (VOCs), polycyclic aromatic hydrocarbons (PAHs), PHCs and metals which exceed the *Table 3 Standards*. A barrier was installed at the property to reduce the release or movement of impacted soil and groundwater on the property. The barrier is to be maintained in accordance with the requirements of the Risk

Assessment and Certificate of Property Use to prevent exposure to the contaminants of concern; and

• A groundwater management plan and site-specific health and safety plan has been prepared and implemented for the property in accordance with the requirements of the Certificate of Property Use prior to any activities that potentially contact with or remove groundwater from the subsurface.

4.3 Technical Standards & Safety Authority

The Technical Standards & Safety Authority (TSSA) was contacted to establish the status of the Site with respect to its files, to identify outstanding instructions, tank registrations, incident reports, fuel/oil spills or contamination records associated with the Site. At the time of writing this report, no response had been received from the TSSA. When a formal response is received, it will be reviewed by Pinchin. If there is any information that represents a potential issue of environmental concern, a copy of the response will be forwarded to the Client under separate cover. Our conclusions and recommendations may be amended based on this information. A copy of Pinchin's request submitted to the TSSA is provided in Appendix II of this report.

4.4 ERIS

Pinchin submitted a request to Environmental Risk Information Service Ltd. (ERIS) for a review of select databases, as they pertain to the Site and surrounding properties:

- "Inventory of PCB Storage Sites";
- "Ontario Regulation 347 Waste Generators Summary";
- "Ontario Spills";
- "Commercial Fuel Oil Tanks";
- "List of TSSA Expired Facilities";
- *"Fuel Storage Tank"*;
- "Fuel Storage Tank Historic";
- "TSSA Historic Incidents";
- "TSSA Incidents";
- *"TSSA Pipeline Incidents"*;
- "Retail Fuel Storage Tanks";
- "Private and Retail Fuel Storage Tanks";
- "TSSA Variances for Abandonment of Underground Storage Tanks";

- *"Waste Disposal Sites MOE CA Inventory*"; and
- "Waste Disposal Sites MOE 1991 Historical Approval Inventory".

Pinchin submitted a request to ERIS for a review of their available databases, as they pertain to the Site and surrounding properties.

In addition, Pinchin reviewed the following publications prepared by Intera Technologies Inc. for the MECP:

- "Inventory of Coal Gasification Plant Waste Sites in Ontario", dated April 1987; and
- *"Inventory of Industrial Sites Producing or Using Coal Tar and Related Tars in Ontario"*, dated November 1988.

A copy of the ERIS report is provided in Appendix III. Based on a review of the information obtained from the above-noted sources, Pinchin notes the following:

- The Site was listed in the following databases:
 - The Ontario Spills database indicated that approximately 250 litres of heating oil was released to the ground in the vicinity of Site Building B on April 17, 2000. The source of the release was reportedly the corrosion of an aboveground storage tank (AST). The ERIS report indicated that environmental impact was confirmed as soil contamination and an underground tank was discovered. No evidence of an underground tank (i.e. vent or fill pipes) was identified in the vicinity of Site Building B by Pinchin during the Site reconnaissance. Based on quantity and nature of the release, it is Pinchin's opinion that this historical on-Site spill has the potential to result in subsurface impacts to the Site; and
 - Steven Kimmel had been registered with the MECP as a generator (Generator #ON8131003) of household wastes in 2004. The waste generated on-Site was likely associated with the UST removed from the Site in 2004 which was documented in the 2004 AMEC UST Removal Report. Based on the results of the 2004 AMEC UST Removal Report, it is Pinchin's opinion that the historical generation of hazardous wastes on-Site is unlikely to result in potential subsurface impacts at the Site.

- The property listed at 1543 Merivale Road was listed in the above noted databases as being developed with an RFO with USTs. This property situated adjacent to the Site's northwest elevation and hydraulically upgradient of the Site relative to the inferred groundwater flow direction. Based on the type of operations on this property, the distance between this property and the Site, as well as the inferred groundwater flow direction, it is Pinchin's opinion that the presence of an RFO at this property could result in potential subsurface impacts at the Site;
- Trow Associates Inc. and 1541 Merivale Road Ltd., located at 1541 Merivale Road, had been registered with the MECP as generators (Generator #'s ON5824723 and ON82211957) of light fuels wastes in 2004, 2001, 2014 and 2015. This property is located adjacent to the Site's north property boundary. Based on a review of Pinchin's inhouse MECP waste generator database, no hazardous waste was generated at this property. Based on the fact that no waste was generated on-Site, it is Pinchin's opinion that the historical generation of hazardous wastes on this property is unlikely to result in potential subsurface impacts at the Site;
- The property located 1548 Merivale Road was listed in the above noted databases as having a RFO developed with USTs, as well as historical a spills of limited quantities of fuel and antifreeze released to the ground. Based on Pinchin's review of the 1991 to 2019 Aerial Photographs (see Section 3.2), the RFO is located approximately 30 m west of the Site and developed with USTs located approximately 60 west of the Site in the aerial photographs. This property situated hydraulically transgradient of the Site relative to the inferred groundwater flow direction. Based on distance between this property and the Site and USTs, as well as the inferred groundwater flow direction, it is Pinchin's opinion that the above-noted listings on this property are unlikely to result in potential subsurface impacts at the Site;
- The property listed at 1537 Merivale Road was listed in the above noted databases as having an RFO developed with USTs. Based on Pinchin's review of the 1965 to 2002 Aerial Photographs (see Section 3.2), the RFO was located approximately 80 north of the Site. Based on distance between this property and the Site, it is Pinchin's opinion that the RFO at this property is unlikely to result in potential subsurface impacts at the Site;

- The property located at 1547 Merivale Road was listed in the following databases:
 - Minto Commercial, W.H. Wayne Dentistry Professional Corporation and 1172256
 Ontario Inc. had been registered with the MECP as generators (Generators #'s ON9697705, ON2713740 and ON8563707) of pathological wastes, pharmaceuticals, aliphatic solvents and paint/pigment/coating residues in 2004, 2001, 2009, 2010, 2012-2014 and 2015; and
 - The property was listed in the Fuel Oil Spills and Leaks database as having a kitchen fire and a release of kitchen grease to a catch basin on February 13, 2015.

This property is located adjacent to the Site's south property boundary and situated downgradient of the Site relative to the inferred direction of groundwater flow. Based on the inferred direction of groundwater flow, it is Pinchin's opinion that the above-noted listings on this property is unlikely to result in potential subsurface impacts at the Site.

 Additional surrounding properties were listed in the above-noted databases; however, based on the information provided within the ERIS report, the locations/distances between these properties and the Site, as well as the inferred groundwater flow direction, it is Pinchin's opinion that the potential issues of concern associated with these listings are unlikely to result in potential subsurface impacts at the Site.

4.5 Regulatory Information Summary

Based on Pinchin's review of the regulatory information reviewed, the following could result in potential subsurface impacts at the Site:

• The Ontario Spills database indicated that approximately 250 litres of heating oil was released to the ground in the vicinity of Site Building B on April 17, 2000. The source of the release was reportedly the corrosion of an AST. The ERIS report indicated that environmental impact was confirmed as soil contamination and an underground tank was discovered. No evidence of an underground tank (i.e. vent or fill pipes) was identified in the vicinity of Site Building B by Pinchin during the Site reconnaissance. Based on quantity and nature of the release, it is Pinchin's opinion that this historical on-Site spill has the potential to result in subsurface impacts to the Site; and

• The ERIS report indicated that the property located at 1543 Merivale Road was developed as an RFO with USTs. This property situated adjacent to the Site's northwest elevation and hydraulically upgradient of the Site relative to the inferred groundwater flow direction. Based on the type of operations on this property, the distance between this property and the Site, as well as the inferred groundwater flow direction, it is Pinchin's opinion that the presence of an RFO at this property could result in potential subsurface impacts at the Site.

5.0 SITE RECONNAISSANCE

Pinchin (see Appendix IV for assessor qualifications) conducted a Site reconnaissance on March 19, 2021, and was accompanied by the Site Representative. The Site reconnaissance included a walk-through of accessible areas of the interior of the Site Buildings and exterior areas. At the time of the Site reconnaissance, the ground surface was partially covered with snow, limiting exterior observations, and the weather was sunny. The Site reconnaissance was documented with notes and photographs. The results of the Site reconnaissance are discussed below. Photographs of some of the features noted during the Site reconnaissance are attached in Appendix V.

Торіс	Findings
Chemicals	Chemicals typically used for general purpose cleaning, and building maintenance (e.g., window cleaners, bleach, paints, deodorizers, etc.) were noted on-Site at the time of the Site reconnaissance. Chemicals observed on-Site were stored within manufacturer-supplied containers in various locations within the Site Building.
Compressed Gases	Carbon dioxide (approximately five steel cylinders) stored in the kitchen of Site Building A.
Hazardous Waste	None observed and none reported by the Site Representative.

5.1 Hazardous Materials

No spills or evidence of historical spills (i.e., staining) were observed in the chemical storage areas noted above. The interior concrete floor slab was observed to be in good condition (i.e., no cracking or pitting) and the chemicals appeared to be stored in an orderly fashion. No floor drains or catch basins were present in the vicinity of the chemical storage areas.

5.2 Storage Tanks

5.2.1 Aboveground Storage Tanks

No ASTs were observed on-Site, and none were reported by the Site Representative. No evidence of former ASTs was observed by Pinchin. The Site Representative has not been associated with the Site since its development; therefore, unable to confirm or deny the presence of a former ASTs located at the Site. The 2004 AMEC Phase I ESA reported that 946-L heating oil ASTs were situated within the central portion of Site Building B and adjacent to the north elevation of Site Building B. AMEC also reported that an empty 946-L AST was located in the central portion of Site Building B and a historical AST was situated in the east portion of Site Building B prior to 1993. Evidence of staining or floor drains were not observed in the vicinity of the above noted ASTs by AMEC. Although ASTs are commonly associated with buildings of this age (i.e., approximately 1950s and 1970s), Pinchin was unable to confirm or refute the presence of additional former on-Site ASTs.

5.2.2 Underground Storage Tanks

No evidence of USTs (i.e., fill/vent pipes) was observed on-Site, and none were reported by the Site Representative. The Site Representative has not been associated with the Site since it's development; therefore, unable to confirm or deny the presence of a former USTs located at the Site. As noted in the Previous Environment Reports (see Section 3.5) a UST was removed from the subsurface located adjacent to the south elevation of Site Building B. Although USTs are commonly associated with buildings of this age (i.e., approximately 1950s and 1970s), Pinchin was unable to confirm or refute the presence of additional former on-Site USTs.

5.3 Water and Wastewater

Торіс	Findings	
Water Supply Source	City of Ottawa. Water is obtained by the City from the Ottawa River. Groundwater is not used as a source of potable water.	
Water Use	Water is primarily used for domestic-related activities, as well as in fire suppression.	
Sanitary/Process Wastewater Receptor	Municipal sanitary sewer system. No process wastewater is generated at the Site. Wastewater is limited to sanitary effluent.	
Pits, Sumps or Lagoons	None observed and none reported by the Site Representative.	
Grease Traps	An above-ground grease trap is located in the kitchen on the Site Building A. The grease trap is cleaned out for off-Site disposal on an as- needed basis by an external contractor.	
Oil/Water Separators	None observed and none reported by the Site Representative.	
Storm Water Flow and Receptor	Storm water would likely run overland to percolate naturally through the soil or discharge into the municipal storm sewers.	
Wells	Evidence of the monitoring wells advanced during the 2004 AMEC Phase II ESA were observed on Site. No additional wells were observed and none reported by the Site Representative.	
Watercourses, Ditches or Standing Water	None observed and none reported by the Site Representative.	

5.4 Hydraulic Equipment

No evidence of hydraulic equipment (i.e., hydraulic hoists, elevators, compactors, dock levels, etc.) was identified at the Site during the Site reconnaissance.

5.5 Polychlorinated Biphenyls

The use of polychlorinated biphenyls (PCBs) in electrical equipment such as transformers, fluorescent lamp ballasts, and capacitors was common until Canada banned its use in 1980. The Federal PCB Regulations, SOR/2008-273, regulate the manufacture, import, export, sale, use and processing of PCBs. These regulations required the decommissioning of equipment containing high levels of PCBs (>500 ppm) in 2009. Additionally, the regulations require decommissioning of light ballasts, pole top transformers, capacitors and electrical equipment containing greater than 50 mg/kg PCBs by December 31, 2025. Cables, pipelines and equipment associated with natural gas, petroleum and petroleum products, and fusion sealed capacitors for use in communication equipment and electrical control equipment are exempt from the decommissioning requirement.

Given the year of construction of the Site Buildings (i.e., approximately 1950s and 1970s), there is a potential that the light ballasts observed on-Site may contain PCBs.

Typical buildings of this age may contain PCBs in paint, caulking and window putties. Testing for the presence of PCBs in these materials is beyond the scope of this Phase I ESA. The potential presence of PCBs in these materials could result in future costs if extensive renovation requiring removal of these materials or demolition activities are undertaken at the Site. The extent of such potential issues could not be assessed as part of this Phase I ESA.

5.6 Asbestos-Containing Materials

Asbestos-containing materials (ACMs) are commonly found in building construction materials (particularly in older buildings). Asbestos use in building products declined in use starting in the 1970s, with the majority of products being phased out by circa 1990. Asbestos use in Canada was formally banned in December 2018.

Friable asbestos (friable is defined as a material that can be crumbled, powdered or pulverized by hand pressure) was widely used in sprayed fireproofing until 1973, and in decorative or finishing plasters, and thermal systems insulation until the early 1980s. Non-friable or manufactured asbestos products were widely used in building construction including in vinyl floor tiles, sheet flooring, ceiling tiles, pipe gaskets, roofing materials, asbestos cement boards, and numerous other products until circa 1990. A limited number of non-friable asbestos products remained in use until the end of 2018; examples include friction materials, gaskets, cement pipes, sealants, adhesives and caulking.

Given the years of construction of the Site Buildings (i.e., approximately 1950s and 1970s), there is a potential for ACMs to be present in the Site Buildings. Pinchin did not conduct an asbestos survey as part of this Phase I ESA, nor was any destructive or intrusive sampling or inspection conducted as part of this Phase I ESA. The Site Representative advised Pinchin that no asbestos surveys have been previously conducted at the Site, and that an Asbestos Management Program (AMP) has not been developed for or implemented at the Site. In accordance with Ontario Regulation 278/05, an asbestos survey should be performed in buildings that are known or suspected of containing ACMs. If an asbestos survey confirms the presence of ACMs, an AMP should be developed and implemented, as per the requirements of Ontario Regulation 278/05.

The potential presence of ACMs could result in management issues and future costs if renovation or demolition activities are undertaken at the Site. The extent of such potential issues could not be assessed as part of this Phase I ESA.

5.7 Lead-Containing Paints

Lead was commonly used as an additive in paints with no restricted level up until the mid-1970s. This included architectural paints used on interior and exterior surfaces, primers and coatings for anti-corrosive purposes, consumer paints, and paint on furniture and other household items. Beginning in 1976, the federal government limited the amount of lead in consumer paints to 5,000 parts per million (ppm) and steadily reduced the lead content, primarily in the interest of public safety. In 2005, the limit was reduced to 600 ppm and in 2010, the limit was further reduced to 90 ppm, however, there is no restriction on lead in paints used for anti-corrosion purposes (e.g., steel primers and exterior coatings) and road and line markings. In June 2016, these exemptions were removed and as of this date, any paint sold should not contain more than 90 ppm, even if sold for anti-corrosion purposes.

Pinchin did not conduct an assessment of lead in painted surfaces as part of this Phase I ESA, and the Site Representative advised Pinchin that no surveys have been previously conducted at the Site. Prior to any demolition or renovation activities, a designated substance (including lead) survey would be required. During Pinchin's Site reconnaissance, painted surfaces (where observed) were in good condition (i.e., no peeling or flaking).

5.8 Ozone-Depleting Substances

The bulk storage of ozone-depleting substances (ODSs) was not observed. The Site Representative reported that the bulk storage of ODSs has not been carried out at the Site.

HVAC units, a wall-mounted air conditioning unit. as well as commercial refrigeration units, were observed on-Site. These units may include refrigerants, such as R22 or R12, that are noted within the phase-out schedules for elimination in both Provincial and Federal regulations. No other sources of ODSs were observed at the time of the Site reconnaissance.

5.9 Radon

Radon is a naturally occurring radioactive gas formed by the breakdown of uranium in soil, rocks and even groundwater. Radon is invisible, odourless and colourless and as such, cannot be detected by humans. Radon escapes from the ground and mixes with outdoor air forming concentrations that are too low to be of concern; however, if radon enters a building the concentrations can increase to higher levels. Health Canada has developed guidelines for acceptable levels of radon in dwellings and public buildings and has indicated that radon levels should not exceed 200 Becquerels per cubic metre (Bq/m³). Testing for radon in the Site Building was beyond the scope of this Phase I ESA. The Site Representative reported that no radon surveys have been carried out at the Site.

5.10 Mould or Microbial Contamination

The presence of mould or other microbiological contamination in buildings has become a concern to building tenants and owners due to potential health effects on occupants and users. Provincial Ministries of Labour have recently issued guidelines on enforced regulations to protect the health of construction workers who are exposed to mould in the course of building renovation. The presence of water leaks or high humidity can cause the growth or amplification of mould within building environments.

A comprehensive inspection for mould, which would require intrusive testing, was not performed as part of this Phase I ESA. Visible mould or water-damaged areas were not observed at the time of the Site reconnaissance. The Site Representative was not aware of the presence of mould in the Site Building. In addition, the Site Representative was not aware of any historical leaks in the Site Buildings or past flooding events.

5.11 Air Emissions

Торіс	Findings	
Washroom Vents	Washroom vent exhausts are discharged through roof stacks.	
Kitchen Vents	Kitchen exhausts are discharged through roof stacks.	
Heating/Cooling	Site Building A: Natural gas-fired rooftop HVAC units. Site Building B: Natural gas-fired HVAC units and a wall-mounted air	
	conditioning unit.	
Emergency Generators	None observed and none reported by the Site Representative.	
Process Vents	Multiple ventilation systems for air circulation were observed throughout kitchen in Site Building A.	
Odours	No strong, pungent or noxious odours were identified.	
Permits / Approvals	The Site Representative advised Pinchin that Site Owner does not hold any permits/approvals for the Site, as related to air emissions or discharges.	

5.12 Staining and Stressed Vegetation

Pinchin notes that the ground surface was snow-covered at the time of the Site reconnaissance and therefore, a thorough assessment for staining/stressed vegetation could not be completed at the time of the Site reconnaissance.

No evidence of historical chemical discharges or releases (i.e., staining or stressed vegetation) was observed during the Site reconnaissance. The Site Representative reported that no known historical chemical spills have occurred on-Site.

5.13 Non-Hazardous Wastes

Торіс	Findings	
Non-hazardous Wastes	Domestic refuse is deposited in metal bin located on the northeast portion of Site and is removed for off-Site disposal on an as-needed basis by Tomlinson.	
Recyclables	None observed and none reported by the Site Representative.	

6.0 ACTIVITIES ON ADJACENT PROPERTIES

The Site is located in an urban area that predominantly consists of residential, institutional, community, light industrial and commercial land uses. A description of the adjacent properties is summarized in the following table, based on Pinchin's observations from the Site and publicly accessible locations:

	North	East	South	West
Operation or Activity	A multi-tenant commercial building, Capilano Drive, and then commercial and residential dwellings.	Vacant undeveloped followed by residential dwellings to beyond 200 m from the Site.	A multi-tenant commercial building to beyond 200 m from the Site.	An RFO, Merivale Road followed by an RFO, an institutional building and Rossland Avenue to beyond 200 m from the Site.
Direction with Respect to Inferred Groundwater Flow	Upgradient.	Transgradient.	Downgradient	Transgradient.
Visible Emissions	None observed.	None observed.	None observed.	None observed.
Visible Outdoor Storage of Hazardous Materials	None observed.	None observed.	None observed.	USTs associated with the off-Site RFOs.

An RFO was located approximately 30 m west of the and developed with UST located approximately 60 west of the Site. This property situated hydraulically transgradient of the Site relative to the inferred groundwater flow direction. Based on distance between this property and the Site, as well as the inferred groundwater flow direction, it is Pinchin's opinion that the RFO at this property is unlikely to result in potential subsurface impacts at the Site.

Based on Pinchin's observations of the adjacent properties at the time of the Site reconnaissance, the following could result in potential subsurface impacts at the Site:

• An RFO developed with USTs was situated adjacent to the Site's northwest elevation. This property situated hydraulically upgradient of the Site relative to the inferred groundwater flow direction. Based on the type and duration of operations on this property, the distance between this property and the Site, as well as the inferred groundwater flow direction, it is Pinchin's opinion that the presence of an RFO at this property could result in potential subsurface impacts at the Site.

7.0 FINDINGS AND RECOMMENDATIONS

Based on the results of the Phase I ESA completed by Pinchin, the following could result in potential subsurface impacts at the Site:

- The Ontario Spills database indicated that approximately 250 litres of heating oil was released to the ground in the vicinity of Site Building B on April 17, 2000. The source of the release was reportedly the corrosion of an AST. The ERIS report indicated that environmental impact was confirmed as soil contamination and an underground tank was discovered. No evidence of an underground tank (i.e. vent or fill pipes) was identified in the vicinity of Site Building B by Pinchin during the Site reconnaissance. Based on quantity and nature of the release, it is Pinchin's opinion that this historical on-Site spill has the potential to result in subsurface impacts to the Site; and
- An RFO developed with underground storage tanks has been situated adjacent to the Site's northwest elevation since at least 1991. This property is hydraulically upgradient of the Site relative to the inferred groundwater flow direction. As part of a previous environmental investigation completed at the Site, a groundwater sample collected from a monitoring well on located central-west Site boundary and situated in the immediate vicinity of the above-noted RFO had concentrations of PHCs (F1-F2) which exceeded the currently applicable *Table 3 Standards*. Based on the type and duration of operations on this property, the distance between this property and the Site, the results of the previous environmental investigation completed at the Site, as well as the inferred direction of groundwater flow, it is Pinchin's opinion that the presence of an RFO at this property could result in potential subsurface impacts at the Site.

Based on the findings noted above, Pinchin recommends completing a Phase II ESA at the Site.

Given the years of construction of the Site Buildings (approximately 1950s and 1970s), there is a potential for asbestos-containing materials to be present in the Site Buildings. Pinchin did not conduct an asbestos survey, nor was any sampling or inspection for asbestos conducted as part of this Phase I ESA. The Site Representative advised Pinchin that no asbestos surveys have been previously conducted at the Site, and that an Asbestos Management Program has not been developed for or implemented at the Site.

In Pinchin's completion of this work, historical City Directories were not available for review due to temporary closures of government information sources. This represents a potential data gap in the historical documentation review process, however; Pinchin has endeavored to provide our very best opinion to meet the Client's current needs.

8.0 TERMS AND LIMITATIONS

This Phase I ESA was performed in order to identify potential issues of environmental concern associated with the Site located at 1545 and 1545A Merivale Road, Ottawa, Ontario, at the time of the Site reconnaissance. This Phase I ESA was performed in general compliance with currently acceptable practices for environmental site investigations, and specific Client requests, as applicable to this Site. Due to current government closures, some historical information typically utilized to ascertain historical activities at the Site and surrounding properties was not available for Pinchin's review (City Directories). The scope of work completed by Pinchin, as part of this Phase I ESA, is not sufficient (in and of itself) to meet the requirements for the submission of an RSC in accordance with Ontario Regulation 153/04 (as amended). If an RSC is an intended end product of work conducted at the Site, further consultation and/or work will be required.

This report was prepared for the exclusive use of Nivra Patel (Client), subject to the terms, conditions and limitations contained within the duly authorized work plan for this project. Any use which a third party makes of this report, or any reliance on or decisions to be made based on it, is the sole responsibility of such third parties. Pinchin accepts no responsibility for damages suffered by any third party as a result of decisions made or actions conducted.

If additional parties require reliance on this report, written authorization from Pinchin will be required. Such reliance will only be provided by Pinchin following written authorization from Client. Pinchin disclaims responsibility of consequential financial effects on transactions or property values, or requirements for follow-up actions and costs. No other warranties are implied or expressed. Furthermore, this report should not be construed as legal advice. Pinchin will not provide results or information to any party unless disclosure by Pinchin is required by law.

The information provided in this report is based upon analysis of available documents, records and drawings, and personal interviews. In evaluating the Site, Pinchin has relied in good faith on information provided by other individuals noted in this report. Pinchin has assumed that the information provided is factual and accurate. In addition, the findings in this report are based, to a large degree, upon information provided by the current owner/occupant. Pinchin accepts no responsibility for any deficiency, misstatement or inaccuracy contained in this report as a result of omissions, misinterpretations or fraudulent acts of persons interviewed or contacted, or contained in reports that were reviewed. The scope of work for this Phase I ESA did not include an intrusive investigation for designated substances (i.e., asbestos, mould, etc.) and, therefore, these materials may be present in concealed areas.

Pinchin makes no other representations whatsoever, including those concerning the legal significance of its findings, or as to other legal matters touched on in this report, including, but not limited to, ownership of any property, or the application of any law to the facts set forth herein. With respect to regulatory compliance issues, regulatory statutes are subject to interpretation and these interpretations may change over time.

The CSA document entitled "*Phase I Environmental Site Assessment, CSA Standard Z768-01*" dated November 2001 (reaffirmed 2016), does not apply to environmental auditing or environmental management systems. Therefore, with respect to Site operations and conditions, compliance with applicable Federal, Provincial or Municipal acts, regulations, laws and/or statutes was not evaluated as part of the Phase I ESA.

Report

The documents (hereinafter referred to as the "Documents") to be released as part of the report (hereinafter referred to as the "Report") to be delivered to the purchaser as set out above are documents in Opta's records relating to the described property (hereinafter referred to as the "Property"). Opta makes no representations or warranties respecting the Documents whatsoever, including, without limitation, with respect to the completeness, accuracy or usefulness of the Documents, and does not represent or warrant that these are the only plans and reports prepared in association with the Property or in Opta's possession at the time of Report delivery to the purchaser. The Documents are current as of the date(s) indicated on them. Interpretation of the Documents, if any, is by inference based upon the information which is apparent and obvious on the face of the Documents only. Opta does not represent, warrant or guarantee that interpretations other than those referred to do not exist from other sources. The Report will be prepared for use by the purchaser of the services as shown above hereof only.

Disclaimer

Opta disclaims responsibility for any losses or damages of any kind whatsoever, whether consequential or other, however caused, incurred or suffered, arising directly or indirectly as a result of the services (which services include, but are not limited to, the preparation of the Report provided hereunder), including but not limited to, any losses or damages arising directly or indirectly from any breach of contract, fundamental or otherwise, from reliance on Opta Reports or from any tortious acts or omissions of Opta's agents, employees or representatives.

Entire Agreement

The parties hereto acknowledge and agree to be bound by the terms and conditions hereof. The request form constitutes the entire agreement between the parties pertaining to the subject matter hereof and supersedes all prior and contemporaneous agreements, negotiations and discussions, whether oral or written, and there are no representations or warranties, or other agreements between the parties in connection with the subject matter hereof except as specifically set forth herein. No supplement, modification, waiver, or termination of the request shall be binding, unless confirmed in writing by the parties hereto.

Governing Document

In the event of any conflicts or inconsistencies between the provisions hereof and the Reports, the rights and obligations of the parties shall be deemed to be governed by the request form, which shall be the paramount document.

Law

This agreement shall be governed by and construed in accordance with the laws of the Province of Ontario and the laws of Canada applicable therein.

OPTA INFORMATION INTELLIGENCE

1994 This document is owned by Opta Information Intelligence Inc. and is subject to copyright protection. Please see the full Terms and Conditions at the front of this document.

NOTE: The sole purpose of this report is to provide insurance pricing and underwriting information about the particular insured and location named. Only the person requesting this survey will receive a copy of the report, and IAO asks that it be kept strictly confidential. This report does not guarantee compliance with any standards or with any federal, provincial or municipal codes, ordinances or regulations. Tests of fire and other protection equipment have not been conducted or witnessed during this survey.

IAO reports, prepared in compliance with commonly accepted risk control standards existing at the time services are rendered, are developed from a survey of the premises and/or from data supplied by or on behalf of the Purchaser. IAO does not purport to list all hazards. While changes and modifications, referred to in the reports are designed to upgrade protection and loss prevention of the premises, IAO assumes no responsibility for management and control of these activities. IAO will not be responsible to the Purchaser for any loss or damages, whether consequential or other, however caused, incurred or suffered, as a result of the services being provided.

NOTE: The sole purpose of this report is to provide insurance pricing and underwriting information about the particular insured and location named. Only the person requesting this survey will receive a copy of the report, and IAO asks that it be kept strictly confidential. This report does not guarantee compliance with any standards or with any federal, provincial or municipal codes, ordinances or regulations. Tests of fire and other protection equipment have not been conducted or witnessed during this survey.

IAO reports, prepared in compliance with commonly accepted risk control standards existing at the time services are rendered, are developed from a survey of the premises and/or from data supplied by or on behalf of the Purchaser. IAO does not purport to list all hazards. While changes and modifications, referred to in the reports are designed to upgrade protection and loss prevention of the premises, IAO assumes no responsibility for management and control of these activities. IAO will not be responsible to the Purchaser for any loss or damages, whether consequential or other, however caused, incurred or suffered, as a result of the services being provided.

M U L T I R I S K R E M A R K S / R E C O M M E N D A T I O N S

REMARKS:

- * Fire, Liability & Basic Crime Risk is older one storey frame and metal clad building. Property appears neglected and slowly deteriorating. Very minimal, if any, interior renovation with exception of primary services. Exterior updated to the point of installing cladding, however, the siding is becoming damaged and deteriorated due to not only some vehicle impact, but also, neglect. Tenant operation quite satisfactory with no housekeeping concerns.
- * Fire, Liability & Basic Crime Exterior parking lot is shared with bingo hall at rear, also, owned by Insured. There are several pot holes within parking area creating substantial trip and fall exposure, considering volume of predestrian traffic to Insured building and bingo hall. Immediate repairs are required (Recommendation made).
- * All Risk The building is highly susceptible to vehicular impact (Recommendation made). There were no other undue "All Risk" hazards noted at the time of survey.

RECOMMENDATIONS:

- * 96-1 Fire, Liability & Basic Crime - Parking lot at Insured location to be inspected by qualified contractor and repairs made/pot holes filled in as required.
- All Risk Siding is damaged in several places. This should be * 96-2 repaired immediately to prevent further damage.
- * 96-3 All Risk - Appropriate curbs/bumpers or other protection should be installed to reduce possibility of vehicular impact with structure.

M U L T I R I S K R E M A R K S / R E C O M M E N D A T I O N S

REMARKS:

* Fire, Liability & Basic Crime - This property is located in a busy commercial area of Nepean. The premises were clean at the time of survey. Housekeeping was found to be satisfactory.

The tenant has provided adequate portable fire extinguishers and they appear to be serviced regularly. A burglar alarm system is also provided.

The parking lot provided for this property is in a deteriorating condition with numerous pot holes creating a substantial "trip and fall" exposure (recommendation made).

The contact was co-operative and readily provided access to the premises.

* All Risk - There is a substantial amount of damage to the metal siding of this building caused by vehicle impact as no protection is provided from vehicle parking (recommendation made).

RECOMMENDATIONS:

- * 00-1 Fire, Liability & Basic Crime The parking lot provided should be repaired or resurfaced immediately to reduce the substantial "trip and fall" premises liability exposure.
- * 00-1 All Risk Appropriate curbs or bumpers should be installed to reduce the potential of further damage to the building from vehicle impact.

COPE (Construction, Occupancy, Protection, Exposure) REPORT

Risk: MORRIS KIMMEL 1545 A/B MERIVALLE ROAD NEPEAN, ONTARIO 2

Reference No. 10581738 / Building No. 01

(Surveyed By P TOMLINSON on 16-JAN-92)

Please note that the information contained in this report was gathered during a physical inspection of the risk by an IAO Loss Control Representative.

If you wish to obtain building or contents rates for this risk, please refer to the Rate Card in the list of products available for this risk. Please call the IAO Help Desk or your local IAO Representative for help in obtaining a rate for this risk, or do it yourself by going to www.iao.ca and using the New X-rate to generate a new rate yourself.

IAO reports, prepared in compliance with commonly accepted risk control standards existing at the time services are rendered, are developed from an

inspection of the premises and/or from data supplied by or on behalf of the Purchaser. IAO does not purport to list all hazards. While changes and modifications referred to in the reports are designed to upgrade protection and loss prevention of the premises, IAO assumes no responsibility for management and control of these activities. IAO will not be responsible to the Purchaser for any loss or damages, whether consequential or other, however caused, incurred or suffered, as a result of the service being provided.

Appendix: Database Descriptions

Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. Note: Databases denoted with " * " indicates that the database will no longer be updated. See the individual database description for more information.

AAGR The MAAP Program maintains a database of abandoned pits and guarries. Please note that the database is only referenced by lot and concession and city/town location. The database provides information regarding the location, type, size, land use, status and general comments.* Government Publication Date: Sept 2002*

Provincial AGR The Ontario Ministry of Natural Resources maintains a database of all active pits and quarries. The database provides information regarding the

Provincial Abandoned Mine Information System: AMIS The Abandoned Mines Information System contains data on known abandoned and inactive mines located on both Crown and privately held lands. The information was provided by the Ministry of Northern Development and Mines (MNDM), with the following disclaimer: "the database provided has been compiled from various sources, and the Ministry of Northern Development and Mines makes no representation and takes no responsibility that such information is accurate, current or complete". Reported information includes official mine name, status, background information, mine start/end date, primary commodity, mine features, hazards and remediation.

Government Publication Date: 1800-Oct 2018

The information provided in this database was collected by examining various historical documents which aimed to characterize the likely position of former waste disposal sites from 1860 to present. The research initiative behind the creation of this database was to identify those sites that are missing from the Ontario MOE Waste Disposal Site Inventory, as well as to provide revisions and corrections to the positions and descriptions of sites currently listed in the MOE inventory. In addition to historic waste disposal facilities, the database also identifies certain auto wreckers and scrap yards that have been extrapolated from documentary sources. Please note that the data is not warranted to be complete, exhaustive or authoritative. The information

Aboveground Storage Tanks:

or petroleum. This dataset has been retired as of September 25, 2014 and will no longer be updated. Government Publication Date: May 31, 2014

Automobile Wrecking & Supplies:

supplies industry. Information is provided on the company name, location and business type. Government Publication Date: 1999-Dec 31, 2020

Borehole: A borehole is the generalized term for any narrow shaft drilled in the ground, either vertically or horizontally. The information here includes geotechnical investigations or environmental site assessments, mineral exploration, or as a pilot hole for installing piers or underground utilities. Information is from many sources such as the Ministry of Transportation (MTO) boreholes from engineering reports and projects from the 1950 to 1990's in Southern Ontario. Boreholes from the Ontario Geological Survey (OGS) including The Urban Geology Analysis Information System (UGAIS) and the York Peel Durham Toronto (YPDT) database of the Conservation Authority Moraine Coalition. This database will include fields such as location, stratigraphy, depth, elevation, year drilled, etc. For all water well data or oil and gas well data for Ontario please refer to WWIS and OOGW.

Government Publication Date: 1875-Jul 2018

123

Abandoned Aggregate Inventory:

Aggregate Inventory:

registered owner/operator, location name, operation type, approval type, and maximum annual tonnage. Government Publication Date: Up to Sep 2020

Anderson's Waste Disposal Sites:

was collected for research purposes only. Government Publication Date: 1860s-Present

Provincial AST Historical listing of aboveground storage tanks made available by the Department of Natural Resources and Forestry. Includes tanks used to hold water

Private This database provides an inventory of known locations that are involved in the scrap metal, automobile wrecking/recycling, and automobile parts &

Provincial

Government Publication Date: 1989-Nov 2020 Certificates of Property Use:

124

This is a subset taken from Ontario's Environmental Registry (EBR) database. It will include all CPU's on the registry such as (EPA s. 168.6) -Certificate of Property Use.

Government Publication Date: 1994-Jan 31, 2020

Certificates of Approval:

Government Publication Date: Jan 2004-Dec 2018

Government Publication Date: 1985-Oct 30, 2011* Dry Cleaning Facilities:

Please refer to those individual databases for any information after Oct.31, 2011.

Federal List of dry cleaning facilities made available by Environment and Climate Change Canada. Environment and Climate Change Canada's Tetrachloroethylene (Use in Dry Cleaning and Reporting Requirements) Regulations (SOR/2003-79) are intended to reduce releases of tetrachloroethylene to the environment from dry cleaning facilities.

Provincial CFOT

Commercial Fuel Oil Tanks: listing is a copy of records of registered commercial underground fuel oil tanks obtained under Access to Public Information.

This database contains the following types of approvals: Air & Noise, Industrial Sewage, Municipal & Private Sewage, Waste Management Systems and Renewable Energy Approvals. The MOE in Ontario states that any facility that releases emissions to the atmosphere, discharges contaminants to ground or surface water, provides potable water supplies, or stores, transports or disposes of waste, must have a Certificate of Approval before it can operate lawfully. Fields include approval number, business name, address, approval date, approval type and status. This database will no longer be updated, as CofA's have been replaced by either Environmental Activity and Sector Registry (EASR) or Environmental Compliance Approval (ECA).

Locations of commercial underground fuel oil tanks. This is not a comprehensive or complete inventory of commercial fuel tanks in the province; this Note that the following types of tanks do not require registration: waste oil tanks in apartments, office buildings, residences, etc.; aboveground gas or

diesel tanks. Records are not verified for accuracy or completeness. Government Publication Date: Jul 31, 2020

Chemical Manufacturers and Distributors: Private CHEM

This database includes information from both a one time study conducted in 1992 and private source and is a listing of facilities that manufacture or distribute chemicals. The production of these chemical substances may involve one or more chemical reactions and/or chemical separation processes (i.e. fractionation, solvent extraction, crystallization, etc.).

Government Publication Date: 1999-Jan 31, 2020

Chemical Register: Private CHM This database includes a listing of locations of facilities within the Province or Territory that either manufacture and/or distributes chemicals.

Government Publication Date: 1999-Dec 31, 2020 Private CNG

Compressed Natural Gas Stations: Canada has a network of public access compressed natural gas (CNG) refuelling stations. These stations dispense natural gas in compressed form at 3,000 pounds per square inch (psi), the pressure which is allowed within the current Canadian codes and standards. The majority of natural gas

refuelling is located at existing retail gasoline that have a separate refuelling island for natural gas. This list of stations is made available by the Canadian Natural Gas Vehicle Alliance. Government Publication Date: Dec 2012 -Dec 2020

Provincial Inventory of Coal Gasification Plants and Coal Tar Sites: COAL This inventory includes both the "Inventory of Coal Gasification Plant Waste Sites in Ontario-April 1987" and the Inventory of Industrial Sites Producing or Using Coal Tar and Related Tars in Ontario-November 1988) collected by the MOE. It identifies industrial sites that produced and continue to produce or use coal tar and other related tars. Detailed information is available and includes: facility type, size, land use, information on adjoining properties, soil

condition, site operators/occupants, site description, potential environmental impacts and historic maps available. This was a one-time inventory.* Government Publication Date: Apr 1987 and Nov 1988*

Compliance and Convictions: Provincial This database summarizes the fines and convictions handed down by the Ontario courts beginning in 1989. Companies and individuals named here have been found guilty of environmental offenses in Ontario courts of law.

Environmental Effects Monitoring:

Government Publication Date: 1999-Oct 31, 2020

Environmental Issues Inventory System:

The Environmental Issues Inventory System was developed through the implementation of the Environmental Issues and Remediation Plan. This plan was established to determine the location and severity of contaminated sites on inhabited First Nation reserves, and where necessary, to remediate those that posed a risk to health and safety; and to prevent future environmental problems. The EIIS provides information on the reserve under investigation, inventory number, name of site, environmental issue, site action (Remediation, Site Assessment), and date investigation completed. Government Publication Date: 1992-2001*

Drill Hole Database: The Ontario Drill Hole Database contains information on more than 113,000 percussion, overburden, sonic and diamond drill holes from assessment

files on record with the department of Mines and Minerals. Please note that limited data is available for southern Ontario, as it was the last area to be completed. The database was created when surveys submitted to the Ministry were converted in the Assessment File Research Image Database (AFRI) project. However, the degree of accuracy (coordinates) as to the exact location of drill holes is dependent upon the source document submitted to the MNDM. Levels of accuracy used to locate holes are: centering on the mining claim; a sketch of the mining claim; a 1:50,000 map; a detailed company map; or from submitted a "Report of Work". Government Publication Date: 1886 - Sep 2020

Delisted Fuel Tanks:

List of fuel storage tank sites that were once found in - and have since been removed from - the list of fuel storage tanks made available by the regulatory agency under Access to Public Information. Government Publication Date: Jul 31, 2020

Environmental Activity and Sector Registry: EASR On October 31, 2011, a smarter, faster environmental approvals system came into effect in Ontario. The EASR allows businesses to register certain activities with the ministry, rather than apply for an approval. The registry is available for common systems and processes, to which preset rules of operation can be applied. The EASR is currently available for: heating systems, standby power systems and automotive refinishing. Businesses whose activities aren't subject to the EASR may apply for an ECA (Environmental Compliance Approval), Please see our ECA database. Government Publication Date: Oct 2011-Jan 31, 2021

The Environmental Registry lists proposals, decisions and exceptions regarding policies, Acts, instruments, or regulations that could significantly affect the environment. Through the Registry, thirteen provincial ministries notify the public of upcoming proposals and invite their comments. For example, if a local business is requesting a permit, license, or certificate of approval to release substances into the air or water; these are notified on the registry. Data includes: Approval for discharge into the natural environment other than water (i.e. Air) - EPA s. 9, Approval for sewage works - OWRA s. 53(1), and EPA s. 27 - Approval for a waste disposal site. For information regarding Permit to Take Water (PTTW), Certificate of Property Use (CPU) and (ORD) Orders please refer to those individual databases.

Government Publication Date: 1994-Jan 31, 2020

Environmental Registry:

Environmental Compliance Approval: On October 31, 2011, a smarter, faster environmental approvals system came into effect in Ontario. In the past, a business had to apply for multiple

approvals (known as certificates of approval) for individual processes and pieces of equipment. Today, a business either registers itself, or applies for a single approval, depending on the types of activities it conducts. Businesses whose activities aren't subject to the EASR may apply for an ECA. A single ECA addresses all of a business's emissions, discharges and wastes. Separate approvals for air, noise and waste are no longer required. This database will also include Renewable Energy Approvals. For certificates of approval prior to Nov 1st, 2011, please refer to the CA database. For all Waste Disposal Sites please refer to the WDS database. Government Publication Date: Oct 2011- Jan 31, 2021

The Environmental Effects Monitoring program assesses the effects of effluent from industrial or other sources on fish, fish habitat and human usage of fisheries resources. Since 1992, pulp and paper mills have been required to conduct EEM studies under the Pulp and Paper Effluent Regulations. This database provides information on the mill name, geographical location and sub-lethal toxicity data.

ERIS has compiled a database of all environmental risk reports completed since March 1999. Available fields for this database include: site location, date of report, type of report, and search radius. As per all other databases, the ERIS database can be referenced on both the map and "Statistical Profile" page.

Federal Convictions:

FCON Environment Canada maintains a database referred to as the "Environmental Registry" that details prosecutions under the Canadian Environmental Protection Act (CEPA) and the Fisheries Act (FA). Information is provided on the company name, location, charge date, offence and penalty. Government Publication Date: 1988-Jun 2007*

List of locations of historical occurrences of emergency events, including those assigned to the Ministry of Natural Resources by Order-In-Council (OIC) under the Emergency Management and Civil Protection Act, as well as events where MNR provided requested emergency response assistance. Many of these events will have involved community evacuations, significant structural loss, and/or involvement of MNR emergency response staff. These

These reports provide information on environmental penalties for land or water violations issued to companies in one of the nine industrial sectors

List of facilities and tanks for which there was once a fuel registration. This is not a comprehensive or complete inventory of expired tanks/tank facilities in the province; this listing is a copy of previously registered tanks and facilities obtained under Access to Public Information. Includes private fuel

Contaminated Sites on Federal Land: The Federal Contaminated Sites Inventory includes information on known federal contaminated sites under the custodianship of departments, agencies

and consolidated Crown corporations as well as those that are being or have been investigated to determine whether they have contamination arising from past use that could pose a risk to human health or the environment. The inventory also includes non-federal contaminated sites for which the Government of Canada has accepted some or all financial responsibility. It does not include sites where contamination has been caused by, and which are under the control of, enterprise Crown corporations, private individuals, firms or other levels of government. Includes fire training sites and sites at which Per- and Polyfluoroalkyl Substances (PFAS) are a concern.

Government Publication Date: Jun 2000-Sep 2020

Federal Identification Registry for Storage Tank Systems (FIRSTS):

Fisheries & Oceans Fuel Tanks:

Fisheries & Oceans Canada maintains an inventory of aboveground & underground fuel storage tanks located on Fisheries & Oceans property or controlled by DFO. Our inventory provides information on the site name, location, tank owner, tank operator, facility type, storage tank location, tank contents & capacity, and date of tank installation. Government Publication Date: 1964-Sep 2019

A list of federally regulated Storage tanks from the Federal Identification Registry for Storage Tank Systems (FIRSTS). FIRSTS is Environment and Climate Change Canada's database of storage tank systems subject to the Storage Tank for Petroleum Products and Allied Petroleum Products Regulations. The main objective of the Regulations is to prevent soil and groundwater contamination from storage tank systems located on federal and aboriginal lands. Storage tank systems that do not have a valid identification number displayed in a readily visible location on or near the storage tank

Fuel Storage Tank - Historic:

The Fuels Safety Branch of the Ontario Ministry of Consumer and Commercial Relations maintained a database of all registered private fuel storage tanks. Public records of private fuel storage tanks are only available since the registration became effective in September 1989. This information is now collected by the Technical Standards and Safety Authority. Government Publication Date: Pre-Jan 2010*

Ontario Regulation 347 Waste Generators Summary: GEN Regulation 347 of the Ontario EPA defines a waste generation site as any site, equipment and/or operation involved in the production, collection, handling and/or storage of regulated wastes. A generator of regulated waste is required to register the waste generation site and each waste produced, collected, handled, or stored at the site. This database contains the registration number, company name and address of registered generators including the types of hazardous wastes generated. It includes data on waste generating facilities such as: drycleaners, waste treatment and disposal facilities, machine shops, electric power distribution etc. This information is a summary of all years from 1986 including the most currently available data. Some records may contain, within the company name, the phrase "See & Use..." followed by a series of letters and numbers. This occurs when one company is amalgamated with or taken over by another registered company. The number listed as "See & Use", refers to the new ownership and the other identification number refers to the original ownership. This phrase serves as a link between the 2 companies until operations have been fully transferred.

Government Publication Date: 1986-Jan 31, 2021

Greenhouse Gas Emissions from Large Facilities:

Government Publication Date: 2013-Dec 2018

dioxide equivalents (kt CO2 eq).

Provincial **TSSA Historic Incidents:** List of historic incidences of spills and leaks of diesel, fuel oil, gasoline, natural gas, propane, and hydrogen recorded by the TSSA in their previous incident tracking system. The TSSA's Fuels Safety Program administers the Technical Standards & Safety Act 2000, providing fuel-related safety services associated with the safe transportation, storage, handling and use of fuels such as gasoline, diesel, propane, natural gas and hydrogen. Under this Act, the TSSA regulates fuel suppliers, storage facilities, transport trucks, pipelines, contractors and equipment or appliances that use fuels. Records are not verified for accuracy or completeness. This is not a comprehensive or complete inventory of historical fuel spills and leaks in the province. This listing is a copy of the data captured at one moment in time and is hence limited by the record date provided here. Government Publication Date: 2006-June 2009*

Indian & Northern Affairs Fuel Tanks: The Department of Indian & Northern Affairs Canada (INAC) maintains an inventory of aboveground & underground fuel storage tanks located on both federal and crown land. Our inventory provides information on the reserve name, location, facility type, site/facility name, tank type, material & ID number, tank contents & capacity, and date of tank installation.

Government Publication Date: 1950-Aug 2003*

Fuel Oil Spills and Leaks:

Listing of spills and leaks of diesel, fuel oil, gasoline, natural gas, propane, and hydrogen reported to the Spills Action Centre (SAC). This is not a comprehensive or complete inventory of fuel-related leaks, spills, and incidents in the province; this listing in a copy of incidents reported to the SAC, obtained under Access to Public Information. Includes incidents from fuel-related hazards such as spills, fires, and explosions. Records are not verified for accuracy or completeness.

Government Publication Date: Jul 31, 2020

Landfill Inventory Management Ontario:

The Landfill Inventory Management Ontario (LIMO) database is updated every year, as the Ministry of the Environment, Conservation and Parks compiles new and updated information. Includes small and large landfills currently operating as well as those which are closed and historic. Operators of larger landfills provide landfill information for the previous operating year to the ministry for LIMO including: estimated amount of total waste received, landfill capacity, estimated total remaining landfill capacity, fill rates, engineering designs, reporting and monitoring details, size of location, service area, approved waste types, leachate of site treatment, contaminant attenuation zone and more. The small landfills include information such as site owner, site location and certificate of approval # and status.

Government Publication Date: Feb 28, 2019

Canadian Mine Locations:

127

MINE This information is collected from the Canadian & American Mines Handbook. The Mines database is a national database that provides over 290 listings on mines (listed as public companies) dealing primarily with precious metals and hard rocks. Listed are mines that are currently in operation, closed, suspended, or are still being developed (advanced projects). Their locations are provided as geographic coordinates (x, y and/or longitude, latitude). As of 2002, data pertaining to Canadian smelters and refineries has been appended to this database.

Mineral Occurrences:

In the early 70's, the Ministry of Northern Development and Mines created an inventory of approximately 19,000 mineral occurrences in Ontario, in regard to metallic and industrial minerals, as well as some information on building stones and aggregate deposits. Please note that the "Horizontal Positional Accuracy" is approximately +/- 200 m. Many reference elements for each record were derived from field sketches using pace or chain/tape measurements against claim posts or topographic features in the area. The primary limiting factor for the level of positional accuracy is the scale of the source material. The testing of horizontal accuracy of the source materials was accomplished by comparing the plan metric (X and Y) coordinates of that point with the coordinates of the same point as defined from a source of higher accuracy.

Government Publication Date: 1846-Dec 2020

National Analysis of Trends in Emergencies System (NATES):

significant spill incidents. The data was to be used to assist in directing the work of the emergencies program. NATES ran from 1974 to 1994. Extensive information is available within this database including company names, place where the spill occurred, date of spill, cause, reason and source of spill, damage incurred, and amount, concentration, and volume of materials released. Government Publication Date: 1974-1994*

Non-Compliance Reports: NCPL The Ministry of the Environment provides information about non-compliant discharges of contaminants to air and water that exceed legal allowable limits, from regulated industrial and municipal facilities. A reported non-compliance failure may be in regard to a Control Order, Certificate of Approval, Sectoral Regulation or specific regulation/act.

Government Publication Date: Dec 31, 2018

National Defense & Canadian Forces Fuel Tanks:

DND lands. Our inventory provides information on the base name, location, tank type & capacity, tank contents, tank class, date of tank installation, date tank last used, and status of tank as of May 2001. This database will no longer be updated due to the new National Security protocols which have prohibited any release of this database. Government Publication Date: Up to May 2001*

The Department of National Defense and the Canadian Forces maintains an inventory of all aboveground & underground fuel storage tanks located on

National Defense & Canadian Forces Spills:

under the "Transportation of Dangerous Goods Act - 1992". Our inventory provides information on the facility name, location, spill ID #, spill date, type of spill, as well as the quantity of substance spilled & recovered. Government Publication Date: Mar 1999-Apr 2018

The Department of National Defence and the Canadian Forces maintains an inventory of waste disposal sites located on DND lands. Where available, our inventory provides information on the base name, location, type of waste received, area of site, depth of site, year site opened/closed and status. Government Publication Date: 2001-Apr 2007*

jurisdiction, does not include incident data related to pipelines under provincial or territorial jurisdiction.

National Energy Board Pipeline Incidents: Locations of pipeline incidents from 2008 to present, made available by the Canada Energy Regulator (CER) - previously the National Energy Board

National Environmental Emergencies System (NEES):

In 2000, the Emergencies program implemented NEES, a reporting system for spills of hazardous substances. For the most part, this system only captured data from the Atlantic Provinces, some from Quebec and Ontario and a portion from British Columbia. Data for Alberta, Saskatchewan, Manitoba and the Territories was not captured. However, NEES is also a repository for previous Environment Canada spill datasets. NEES is composed of the historic datasets ' or Trends ' which dates from approximately 1974 to present. NEES Trends is a compilation of historic databases, which were merged and includes data from NATES (National Analysis of Trends in Emergencies System), ARTS (Atlantic Regional Trends System), and NEES. In 2001, the Emergencies Program determined that variations in reporting regimes and requirements between federal and provincial agencies made national spill reporting and trend analysis difficult to achieve. As a consequence, the department has focused efforts on capturing data on spills of substances which fall under its legislative authority only (CEPA and FA). As such, the NEES database will be decommissioned in December 2004.

Government Publication Date: 1974-2003*

National PCB Inventory:

Environment Canada's National PCB inventory includes information on in-use PCB containing equipment in Canada including federal, provincial and private facilities. Federal out-of-service PCB containing equipment and PCB waste owned by the federal government or by federally regulated industries such as airlines, railway companies, broadcasting companies, telephone and telecommunications companies, pipeline companies, etc. are also listed. Although it is not Environment Canada's mandate to collect data on non-federal PCB waste, the National PCB inventory includes some information on provincial and private PCB waste and storage sites. Some addresses provided may be Head Office addresses and are not necessarily the location of where the waste is being used or stored.

Government Publication Date: 1988-2008*

National Pollutant Release Inventory:

Environment Canada has defined the National Pollutant Release Inventory ("NPRI") as a federal government initiative designed to collect comprehensive national data regarding releases to air, water, or land, and waste transfers for recycling for more than 300 listed substances. Government Publication Date: 1993-May 2017

The Nickle's Energy Group (publisher of the Daily Oil Bulletin) collects information on drilling activity including operator and well statistics. The well information database includes name, location, class, status and depth. The main Nickle's database is updated on a daily basis, however, this database is updated on a monthly basis. More information is available at www.nickles.com.

In 1998, the MNR handed over to the Ontario Oil, Gas and Salt Resources Corporation, the responsibility of maintaining a database of oil and gas wells drilled in Ontario. The OGSR Library has over 20,000+ wells in their database. Information available for all wells in the ERIS database include well owner/operator, location, permit issue date, and well cap date, license No., status, depth and the primary target (rock unit) of the well being drilled. All

Ontario Regulation 347 Waste Receivers Summary:

This is a subset taken from Ontario's Environmental Registry (EBR) database. It will include all PTTW's on the registry such as OWRA s. 34 - Permit to take water.

Part V of the Ontario Environmental Protection Act ("EPA") regulates the disposal of regulated waste through an operating waste management system or a waste disposal site operated or used pursuant to the terms and conditions of a Certificate of Approval or a Provisional Certificate of Approval. Regulation 347 of the Ontario EPA defines a waste receiving site as any site or facility to which waste is transferred by a waste carrier. A receiver of regulated waste is required to register the waste receiving facility. This database represents registered receivers of regulated wastes, identified by registration number, company name and address, and includes receivers of waste such as: landfills, incinerators, transfer stations, PCB storage sites, sludge farms and water pollution control plants. This information is a summary of all years from 1986 including the most currently available data. Government Publication Date: 1986-2016

The Record of Site Condition (RSC) is part of the Ministry of the Environment's Brownfields Environmental Site Registry. Protection from environmental cleanup orders for property owners is contingent upon documentation known as a record of site condition (RSC) being filed in the Environmental Site Registry. In order to file an RSC, the property must have been properly assessed and shown to meet the soil, sediment and groundwater standards appropriate for the use (such as residential) proposed to take place on the property. The Record of Site Condition Regulation (O. Reg. 153/04) details requirements related to site assessment and clean up.

RSCs filed after July 1, 2011 will also be included as part of the new (O.Reg. 511/09).

Government Publication Date: 1997-Sept 2001, Oct 2004-Jan 2021

Retail Fuel Storage Tanks:

or propane storage tanks. Government Publication Date: 1999-Dec 31, 2020

Scott's Directories is a data bank containing information on over 200,000 manufacturers across Canada. Even though Scott's listings are voluntary, it is the most comprehensive database of Canadian manufacturers available. Information concerning a company's address, plant size, and main products are included in this database.

SPL List of spills and incidents made available the Ministry of the Environment, Conservation and Parks. This database identifies information such as location (approximate), type and quantity of contaminant, date of spill, environmental impact, cause, nature of impact, etc. Information from 1988-2002 was part of the ORIS (Occurrence Reporting Information System). The SAC (Spills Action Centre) handles all spills reported in Ontario. Regulations for spills in Ontario are part of the MOE's Environmental Protection Act, Part X.

Government Publication Date: 1988-Mar 2020; Jul 2020 - Aug 2020

The Ontario Ministry of the Environment and Climate Change maintains a database of licensed operators and vendors of registered pesticides.

sampling information is now collected and stored within the Sample Result Data Store (SRDS). Government Publication Date: 1990-Dec 31, 2017

The information provided in this database was collected by examining various historical documents, which identified the location of former storage tanks, containing substances such as fuel, water, gas, oil, and other various types of miscellaneous products. Information is available in regard to business operating at tank site, tank location, permit year, permit & installation type, no. of tanks installed & configuration and tank capacity. Data contained within this database pertains only to the city of Toronto and is not warranted to be complete, exhaustive or authoritative. The information was collected for research purposes only.

Government Publication Date: 1915-1953*

Anderson's Storage Tanks:

Transport Canada Fuel Storage Tanks:

List of fuel storage tanks currently or previously owned or operated by Transport Canada. This inventory also includes tanks on The Pickering Lands, which refers to 7,530 hectares (18,600 acres) of land in Pickering, Markham, and Uxbridge owned by the Government of Canada since 1972; properties on this land has been leased by the government since 1975, and falls under the Site Management Policy of Transport Canada, but is administered by Public Works and Government Services Canada. This inventory provides information on the site name, location, tank age, capacity and fuel type. Government Publication Date: 1970 - Dec 2020

Variances for Abandonment of Underground Storage Tanks:

Listing of variances granted for storage tank abandonment. This is not a comprehensive or complete inventory of tank abandonment variances in the province; this listing is a copy of tank abandonment variance records previously obtained under Access to Public Information. In Ontario, registered underground storage tanks must be removed within two years of disuse; if removal of a tank is not feasible, an application may be sought for a variance from this code requirement. Records are not verified for accuracy or completeness.

Government Publication Date: Jul 31, 2020

Waste Disposal Sites - MOE CA Inventory:

The Ontario Ministry of Environment, Waste Management Branch, maintains an inventory of known open (active or inactive) and closed disposal sites in the Province of Ontario. Active sites maintain a Certificate of Approval, are approved to receive and are receiving waste. Inactive sites maintain Certificate(s) of Approval but are not receiving waste. Closed sites are not receiving waste. The data contained within this database was compiled from the MOE's Certificate of Approval database. Locations of these sites may be cross-referenced to the Anderson database described under ERIS's Private Source Database section, by the CA number. All new Environmental Compliance Approvals handed out after Oct 31, 2011 for Waste Disposal Sites will still be found in this database.

Government Publication Date: Oct 2011-Jan 31, 2021

Waste Disposal Sites - MOE 1991 Historical Approval Inventory:

erisinfo.com | Environmental Risk Information Services

In June 1991, the Ontario Ministry of Environment, Waste Management Branch, published the "June 1991 Waste Disposal Site Inventory", of all known active and closed waste disposal sites as of October 30st, 1990. For each "active" site as of October 31st 1990, information is provided on site location, site/CA number, waste type, site status and site classification. For each "closed" site as of October 31st 1990, information is provided on site location, site/CA number, closure date and site classification. Locations of these sites may be cross-referenced to the Anderson database described under ERIS's Private Source Database section, by the CA number.

Government Publication Date: Up to Oct 1990*

Water Well Information System:

This database describes locations and characteristics of water wells found within Ontario in accordance with Regulation 903. It includes such information as coordinates, construction date, well depth, primary and secondary use, pump rate, static water level, well status, etc. Also included are detailed stratigraphy information, approximate depth to bedrock and the approximate depth to the water table.

Government Publication Date: Apr 30, 2020

Definitions

Database Descriptions: This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

Detail Report: This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

Distance: The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

Direction: The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

Elevation: The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

Executive Summary: This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

<u>Map Key:</u> The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

<u>Unplottables:</u> These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.
